Seasonable Topics.

Haytime. EVERY farmer in the country is busy just now, because we are in the midst of the hay harvest, and no matter which way you look, harvesting operations are going forward. Any bits of recreation at this season have to be literally snatched, and we venture to say that more than one farmer who could not resist the temptation of attending the Royal at Derby had one-half of his mind fixed on the show and the other half on the haymaking at home. As was naturally expected after the cold, late spring, crops generally are not heavy, and there is a lack of bottom grass, which helps so much to fill waggons. We have heard some complaints about the scarcity of labour, or perhaps we ought to say labour of the right sort, for the individuals who shamble along the main roads or slumber under the hedges have little taste for labour in the hayfield. It seems odd that while farmers are in need of additional labour, hundreds of men are tramping about living on charity. But, unfortunately, the latter belong mostly to the useless and undesirable class, and how to deal with them becomes a greater problem every year. The day may come when we shall have to sink a good deal of the sentiment which exists now, and make a law that every able bodied man shall earn his living.

Machinery in the Hayfield. AGRICULTURISTS are said to be a conservative set of men, and they may be in some respects, but show a farmer a device by which he can save labour and reduce his expenses, and you may feel sure that if he has the necessary means he will not be slow in acquiring it. On the labour farms many years ago there were men who prided themselves on their picking, and were proud when evening came, if by loading one more wagon of hay than usual they had created a record. The idea of a machine to take the place of these brawny-armed fellows would have been laughed to scorn, but now it is an everyday sight to see a pitching machine being drawn quickly along the rows loading the waggons at a pace that would have knocked the sturdiest pitchers out of time altogether. It is surprising how quickly hay can be loaded by means of one of these appliances if the ground be fairly level and even, but on hilly and banky fields they are a great strain on the horses, and it is under these circumstances that the human pitcher still rules triumphant. Doubtless it is the man who has a lot of hay to get in who benefits most by machinery, and by the use of mechanical appliances he is able to dispense with a good deal of hand labour. Two or three hundred acres of hay takes a lot of harvesting, particularly if it has all to be done by hand, but as things are, the commodity most eagerly desired is suitable weather. We may get all sorts of

mechanical appliances for haymaking, but sunshine and breeze are still indispensable for the making of good hay, and unless we are favoured in this respect machines are useless, and we are as helpless as in the days prior to their introduction.

Cherry-land. KENT holds the monopoly for cherry culture in England, and in some parts of the county, notably round Sittingbourne, the culture of this delicious fruit in grass orchards is a highly important branch of agriculture. The first red cherries in the market come from France, but the quality is inferior to that of the Kentish fruit, which quickly monopolises the market when it comes in. On the whole, cherry orchards are profitable institutions, and it must be admitted that Kentish farmers do them well, but there are many expenses to put against the returns. Sharp frosts at blossoming time, and heavy storms later, often upset prospects, and when the berries assume their first tinges of colour a watch has to be kept from early dawn to late evening, or the birds would have most of the fruit. Cherry picking is a big business in Kent, and some experience is required to move and fix the long ladders without breaking the trees. The orchards hold out two sources of profit—first the fruit above, and secondly the sweet grass beneath, that is closely cropped by the Kentish sheep, which are the favourite breed in the county.

Strawberry Times. A T first sight this might not appear to be a suitable topic for a journal devoted to agriculture, but it is only a thin line nowadays which divides the two calls—agri and horti—and in certain parts of Kent, Hampshire, and Somerset, the growing of strawberries is closely connected with general farming. The first consignments of ripe fruits are already in the market, and for the next few weeks strawberry growers will be at it ding-dong. Fortunately prospects are good, the recent rains were highly beneficial to the plants, and strawberries are expected to make up for the shortcomings of some other fruit crops. To fully realise what strawberry farming is one should visit one of the great centres of the industry, such as Swanley in Kent, see the hundreds of pickers in the fields, and watch the train loads of fruit that are dispatched while the season lasts. When watching the picking and the packing one might wonder where all the fruit goes to, but when you see strawberries offered in every street in every town in the country you might ask with equally good reason where they all come from.

Work amongst the Roots. NOW that the hay harvest is in full swing there is less time available for work on the arable land, and those people

acted wisely who got their potatoes hoed and their turnips and mangolds cleaned and singled before mowing commenced. In spite of the ravages of the fly we have seen some good pieces of turnip, and the dry weather about the middle of June was favourable for keeping down weeds. Mangolds also are a fairly good plant in most cases, and hot weather is much to the liking of this crop. A little nitrate of soda is a good stimulant for mangolds, and after a dressing has been applied the crop should be well skierred and cleaned. It is early yet to talk much about the prospects of potatoes, but when ridding up some varieties it is easy to detect a good many misses in the rows. In many cases this may be traced to that peculiar disease in the tubers through which the latter either remains quite dormant in the ground or only sends up a growth of a weak and spindling character. It is interesting to observe how many of the potatoes which sold for sensational prices at the time of the boom have dropped out, or appear to have done so, while varieties of the Up-to-date and British Queen order easily hold their own.

Female Labour. IN travelling through the country at this season of the year comparatively few women are seen at work in the hay-

fields, and matters in this respect are very different to what they used to be when the average labourer's wife was a wage earner almost as much as her husband. Of women in villages grow eloquent in their descriptions of the way they toiled in the palm days of agriculture for very little, and all we can say is that the farmers must have got a good picking, for the share of the labouring folk was little enough. Still, hard work and rough fare agreed with the women folk, judging from the healthy appearance of many of the veterans, and one can only attribute this to the fact that in spite of everything they lived a natural life. Perhaps the Kentish hop grower to-day is more dependent on female labour than any other class of farmer, for such work as tying and training the young bine and the picking later on is best done by the deft fingers of women. Except it be in the early morning or late eve it is almost useless calling at a Kentish labourer's cottage during the spring and summer months with the expectation of finding anyone at home. The elder children are, of course, at school, and the mothers take the babies to the hop-garden, where they sleep, play, and cry in turn, but grow up strong and healthy amid the pleasant surroundings of the hop-garden.

ROYAL AGRICULTURAL SOCIETY'S SHOW

An Excellent Display of Stock—Rainy Weather but Splendid Attendances.

On Wednesday the sixty-seventh annual exhibition of the Royal Agricultural Society opened at Derby. This was the first meeting held after three years under the permanent system at Park Royal, consequently a greater interest than usual attached to the event. The day began dull and cheerless, and eventually rain set in persistently, but in spite of this the attendance reached 2,752, a figure which is in all respects satisfactory, and compares favourably with previous years. The judging was got through expeditiously, and the finishing touches were put to a showyard, which for arrangement and compactness achieved almost the ideal. The admission on the first day was 5s. per head, which will have a substantial effect on the financial total, whereas at Park Royal last year there was no day at this figure.

The King's Visit.

Thursday may be described as the day of the show, for H.M. the King paid his promised visit, and it was certainly unfortunate that on this occasion royal weather was not forthcoming. Instead we had rain practically the whole of the time the King was at Derby. This, however, did not dampen the enthusiasm of the visitors, for thousands lined the route taken by His Majesty, and he received a most enthusiastic reception.

The Midland Royal special steamed in punctually at twelve o'clock and His Majesty was greeted by the Duke of Devonshire who then presented in turn the gentlemen who had awaited the Royal arrival. His Majesty, who appeared in the very best of health and spirits, was in light grey morning costume. A procession was formed, and went at a slow trot to the Market Place, the people cheering wholeheartedly, and waving hats, flags, and handkerchiefs.

The Royal carriage drew up underneath a gorgeous canopy, and the Recorder, in gown and full-bottomed wig, read an address from the Corporation. It was in scroll form, and the easel was a choice piece of work prepared by the Royal Crown Derby Porcelain Company.

The King, in the course of his reply, said that agriculture had ever been a subject in which he has taken the warmest personal interest, and he felt that exhibitions of stock and machinery, such as the annual show of the Royal Agricultural Society, were of the greatest utility to the country, serving to stimulate agricultural progress, and to impart information of the greatest service to those engaged in the industry.

Some time before the King was due at the showyard the Royal pavilion was surrounded by visitors, whilst outside the showyard there was quite a forest of umbrellas, while within the rail sat 170 Crimean and Indian Mutiny veterans, whom the King had promised to inspect. They were all members of the Veterans' Association, which exists in the district, and there was a great display of medals by these heroes of many fights. The banner of the association was hoisted on the right flank so that it might strike the King's gaze as he came down the avenue. Despite the downpour all uncovered as his Majesty alighted and greeted the guests of the pavilion. Here the president (Mr. Cornwall) and others were presented. When this formality had been got through, the Duke of Devonshire read an address from the Derbyshire Agricultural Society.

His Majesty on Agriculture.

His Majesty replied as follows:—I heartily thank you for the address with which you have honoured me on behalf of the Derbyshire Agricultural and Horticultural Society, and for the good wishes which you have expressed. I commenced very early in life to take a warm interest in all matters connected with agriculture, and I have long appreciated the difficulties with which farmers are forced to contend in order to carry on their industry. The cultivation of the land is a factor of the highest importance to the prosperity of the country, and much credit is due to the agricultural societies for their strenuous efforts to promote the welfare of the cause they have at heart, by encouraging new processes of cultivation, and by disseminating information of utility to farmers. I have watched with pleasure during many years the improvements which have been introduced in the methods of raising stock. The application of scientific principles to the breeding of horses, cattle, sheep, pigs, and poultry has produced wonderful results, and the extent of the exportation of the best classes of animals to foreign countries shows the high appreciation in which our breeds are held. I cannot persevere without a feeling of pride the sale lists, in which I see so many of our purchasers coming to this country from all parts of the world, and I feel confident that the perseverance and skill of our breeders will enable us to produce as good stock in the future as in the past. I antici-

pate great pleasure from my visit to your show, and I trust it will be thoroughly successful.

His Majesty, after inspecting the veterans, inspected the prize sheep at the rear of the pavilion, after which he re-entered his carriage and drove through the implement department. Luncheon with the president and council of the society followed, and then, as the rain continued to fall rather heavily, the King drove in a closed carriage to inspect the stock. As he passed across the great horse ring the enthusiastic spectators cheered him heartily, and his progress through the different departments was equally as cordial. Shortly after three o'clock His Majesty drove from the showyard, and at half-past left Derby for London by the Midland Railway.

As to the attendance on this day, it was, considering the wretched weather, an extraordinarily good one. At eleven o'clock 7,367 persons paid the half-crown entrance fee, compared with the insignificant number of 1,307 at Park Royal last year. Two hours later there were 18,041 visitors on the ground, an excess of 14,207 above those at the corresponding hour of the 1905 exhibition, and at five o'clock 25,437 had been admitted, against 7,462 at Park Royal. When the show closed for the day, about seven o'clock, the figures had increased to 25,666—a crowd about three and a-half times greater in size than at Park Royal, the exact numbers at the latter place being 7,684. The nearest approach to Thursday's figures for the second day of any one of the last nine shows was registered in 1901 at Cardiff, where at the close of the day 23,745 persons had been admitted to the enclosure.

Third Day.

Friday opened none too well as regards the weather, for it was dull and threatening, but happily improved later, and the afternoon proved fine and enjoyable. It had been feared that the previous day's experience would have a serious effect, but fortunately this did not prove to be the case. In many places the ground was in a very muddy condition, and even though straw had been freely distributed about the bad portions, a tour of the yard was only made with great discomfort. Little heed was, however, paid to this state of things, and the ground recovered wonderfully as the day wore on. The attendance on this the first shilling day was a highly satisfactory one. The first returns, issued at eleven o'clock, showed that they were again highly satisfactory, 11,472 people having passed through the turnstiles. At the three Park Royal shows the figures at the same time were 984, 863, and 1,591 respectively, whilst at Carlisle in 1902 they were 6,788, and at Cardiff the year before, 6,628. It should, however, be mentioned that in all these cases the charge for admission was half a crown, compared with one shilling yesterday. By one o'clock 28,986 people had entered the ground, thus exceeding the previous day's final total of 25,666. All previous records of recent years were thus surpassed, but the 88,000 of Nottingham in 1888 on the first shilling day, and the 100,000 of Manchester in 1897 were still a long way off. The corresponding figures for the Park Royal exhibitions were insignificant, for they only read 2,814, 3,826, and 5,302, whilst those at Carlisle (12,773) and Cardiff (16,148) were left a long way behind. At three o'clock the return showed that 41,946 people were on the ground. This number has not been reached since 1897, when the show was held at Manchester, whilst the closing return showed that 46,055 persons had passed through the turnstiles.

The Concluding Day.

The best weather of the week favoured the concluding day of the show, brilliant sunshine being experienced throughout the day. Naturally the fine weather induced a large attendance of visitors, and so great was the influx at one time, that there was every indication of a record attendance, but though the number of admissions was quite maintained, the final statistics fell far short of those for the closing days of the exhibition at Cardiff in 1901, and York in 1900. At eleven o'clock on Saturday 13,874 persons had passed through the turnstiles, compared with 739 at

the corresponding hour of the 1905 show. Two hours later the attendance had almost doubled, the figure being 26,773, against 2,297 at Park Royal. By three o'clock in the afternoon 39,412 visitors had been admitted during the day, as compared with 4,308 at the last London show. By five o'clock the high-water mark had been reached. At that hour the visitors for the day numbered 44,263, and when the exhibition concluded, the numbers had inappreciably increased to 44,670, a number vastly ahead of the 5,706 persons who paid a visit to the last of the Park Royal displays.

During the four days 119,143 persons were admitted to the enclosure, and though this number is a splendid one almost as many as received for the three shows at Park Royal—it falls short of the totals of Cardiff in 1901 and Manchester in 1897, as the table given below will show. Nevertheless, the Royal Agricultural Society has every reason to be gratified with the success of the show, and as Sir Gilbert Grenall, hon. director of the showyard, stated in a Press interview, most of the members of the Royal Agricultural Society who were adverse to the abandonment of the Park Royal scheme now agree that the return to the migratory system has been abundantly justified.

Comparative Attendances.

The table below shows the various attendances since Manchester in the Jubilee year. The table, which is compiled from the official figures of the Society does not give an accurate financial idea, as where the implement yard only has been open the total paying for admission has been included in the 5s. day.

HORSES.

It is not often that a better collection of our equine friends has been seen in a Royal show than are to be found at Derby this year. The chief feature, however, was the excellent display of the Shire breed, which, after all, it is only reasonable to expect, as Derby is one of the best centres, and is the main county whence this breed may almost be said to have originated. The other heavy horses were not as strongly represented. Hunters, harness horses, Hackneys and ponies, however, combined made up a sufficiency to give quite a good colouring to the picture.

HUNTERS.

The catalogue commenced with the hunter section, the heavy-weight class of brood mares coming first. In these the chief interest centred in Mr. Ernest Robinson's *Lord*, who has been winning well at shows recently, including Richmond, Nottingham, and others, a well-bred mare with quality; another of the same class is Mr. F. B. Wilkinson's *Glossop* by *Glasshampton*; both these mares are good breeders. Mr. Mullen's *Secret Sign* is also another good mare, and these were all in the money as named.

Colt or filly foals were mostly well grown, and from appearance were all by good thoroughbred sires. Mr. Dixon, Mr. Mullen and Mr. Ratcliff had the best of these, the sires being *Fowling Piece*, *Revenue*, and *Triary*. Three-year-old fillies were not numerous, but there were one or two of great merit, including Mr. Mullen's *Paleface* by *Ringalot*, a filly with beautiful bone, and a good lot of it. Mr. J. H. Stokes had also a fine filly up to weight and with good shape and style, *Black Pearl* by *Knights of Ruby*. Two-year-olds were a larger class, and Mr. Hodgson's beautiful filly by the famous Irish sire, *Red Prince II.*, only needs to be seen to be admired, and is practically good also; she was first in the class. *Black Prince* by *Jinks* showed a very good filly, too, full of quality, got by *Barsac*, and *Lord Middleton's* *Symphony*, by *Red Eagle* was another of the good ones. Yearling fillies were rather numerous, *Lord Middleton* having the best in the class in a bay by *Wales*, the leading sire at Islington this year; a filly with good back and quarters as well as bone.

Geldings again favoured *Lord Middleton's* stud, as *Scrambler* by *Red Eagle* was the best in the three-year-old class. Two or three other grand colts up to weight, and with style and quality, were included in this class, shown by Mr. F. B. Wilkinson, the Hon. Alexander Parker, and Mr. Hodgson. Mr. Harold

* There was a third shilling day and the total (22,621) is added here.

SCENES at the ROYAL SHOW, DERBY.

1. Shire Mares with Foals at foot (class 63) going back to their stalls. 2. Milking the Jersey Cows before judging. 3. Judging the Shorthorns. 4. Judging the Shropshire Shearling Rams; the first animal won the first prize for Sir R. Cooper, Bart. 5. Judging the Double-harness Class. 6. Sheep Shearing by machinery.

Watson's Juggler and Mr. Swallow's Red Morn and Vigo were capital representatives in the two-year-old class, and Mr. Nickisson's Ensign, a fine colt by Yard Arm, with the best of style and proportions, made a very good leader in yearling class.

POLO AND RIDING PONIES.

There were a number of very small ponies in these classes, and as practically useful as they were attractive to look at. Miss L. Standish's Silver Star, a bay of the sort of pocket edition of a weight-carrying hunter, was first in the brood mare class, and also champion. Mr. John Barker had also several splendid ponies in the leading places, including Heir, a chestnut gelding by Eheu. The Radnorshire Polo and Riding Pony Company were also successful in carrying off several prizes, including first for the London champion stallion Gowboy, who was looking very fit. Another very good pony of Mr. Barker's was Grecian, a very nice pony with strength by Sandiway.

CLEVELAND BAYS.

These classes did not strike one as showing quite

as much quality as usual, but the wet weather affects the bloom considerably, and the bloom affects the appearance of the animal very much. Most of these horses, however, had plenty of bone apparently, and also, for the most part, very good feet, and their shoulders were right for moving well. Mr. Frank Bateman and Mr. F.H. Stericker had very good stallions in Beadlam Fred and Radium. Mr. George Grandage and Mr. George Elders, as well as Mr. John Lett, were well represented in the brood mare class with such well-known animals as Woodland Briar, Aslaby Beauty, and Madam II. Mr. H. C. Stephens, from his successful stud in the south, contributed a capital filly in Cholderton Blossom, first in the two-year-old class, and also her stable companion, Cholderton Welcome, placed second. Mr. Stericker, Mr. F. Wilson Horsfall, Mr. George Grandage, and Mr. Seoby were amongst the chief in the three classes scheduled for coaches, and these were good animals, with the right kind of feet for the roads.

HACKNEYS.

There was a big and good entry of Hackneys, including the harness section, but the breeding classes were better filled than usual at the Royal. Stallions foaled in 1903 had eight entries, included in which were Mr. Richard Ford's Bingham Radiant, who was first in the class and reserved for champion. Sir Walter Gilbey's Dashing Lad and Mr. A. A. Haley's Yorkshire Squire were also amongst the winners and best movers. Two-year-old stallions were also a very good class. Mr. Arthur Hall's Copmanthorpe Performer was the best of these; Mr. Evans' Gartonius, who also moves capitally, was second. Yearlings of this season were a weak class of three entries, all of which, however, were in their places, and Mr. Thomas Hall's Copmanthorpe was the best of them. Mr. Burnell Tabbs' Rosadora, so well known, carried off the leading honour in the brood mare class over 15 hands 2 in. high. Sir Walter Gilbey's Mitre, and Mr. R. A. de Mancha's Bashful Kate, well-known mares, were also in the money,

and give an impression of the general quality of the section. Mares and foals between 14 and 15 hands 2 in. were a very nice class. Mr. Lysaght's Maudora was best of these; some five of them, however, were honoured by the judges. The best of the foals were sired by Copper King, Royal Danegelt, and Evanthus, and look like moving. Three-year-old fillies and two-year-olds were well represented. Mr. Buttle's Boguham Sunrise, Mr. Evans' Terrington Ruth in the former class, and Mr. C. E. Cooke's Lilladora and Mr. Lysaght's Halcyon in the latter. Yearlings also mustered half-a-dozen or more very smart ones. Sir Walter Gilbey's Lively Beeswing and Mrs. R. H. Angram Queen were the best of them. Hackney geldings shown in hand had a good entry in each of these classes, and made a great show, attracting the public very strongly. Mr. T. C. McKibbin and Mr. Makeague, with Sir Lees Knowles, were the most successful in carrying off prize money.

PONIES.

Under this heading there was a very miscellaneous collection, for Hackneys were largely represented, and several of the Mountain breeds, as well as Moorland and Shetlands, were also well represented. The Sir Horace blood came out well in Mr. Ravenhill's Son of Horace, and Mr. Whitworth had a good stallion in Jack Spratt by His Majesty. These were placed first and reserved as named. Other well-known entries in the pony classes were Mr. Tatem's Mel Valley Princess, Mr. O. T. Price's Gold Fleecy, Mr. Humphrey's Morton Swell, and Mr. Wainwright's Talke Fire King. In Shetlands, Mrs. A. J. Beale, Mr. G. A. Miller, and the Rev. R. S. Mitchinson were successful with beautiful stallions foaled in or previous to 1903, and for mares Mrs. Beale was also first and Mr. Mackenzie second.

The chief stars in the Mountain and Moorland ponies was the Duchess of Newcastle's Linnell Don by Little Wonder II. and Mr. J. Marshall Dugdale's Llyn Snowden and Llyn Nell. Mr. Jones's splendid pony Greyhound, and Sir Walter Gilbey's Shooting Star were both beaten by Linnell Don, and occupied relatively the same positions as at Islington in March.

RIDING AND DRIVING CLASSES.

These classes form a very important feature in the entertaining department of the show, for there is little that attracts the outside public so much as a good riding and driving class. In four-year-old hunters Mr. J. B. Wilkes and Splasher, Sir Merriek Burrell's Surprise, and Mr. J. H. Stokes's Dervische were the winners. In the novice class Mr. Drage and Mr. Stokes again came in for the money. Other good hunters than those named were Mr. J. H. Stokes's Whiskey, said by many to be the best hunter in England to-day; he was champion at Richmond the other day, and is certainly a class by himself. Mr. Stokes's Madrid is another notable, and so also is Mr. Drage's Curate; he was very conspicuous in the fine class at Richmond, and is of very good quality and a very stylish hunter. Riding pony geldings had three winners. Mr. John Barker's Marquis, Mr. Robinson's Mimic, Mr. Price's Moortown, and Mr. Martin's Standard were the chief winners; very smart ponies.

Harness ponies not exceeding 15 hands gave a very good account of themselves, quite a long time of them obtaining honours. Mr. T. B. Sykes' Fyde Forester, Mr. Howard Franks' Burlington Sir Horace, and Mr. Franklin's Little Prudence carried off the money in this class, and better sprinters and movers it would be hard to find. Other winners were third. Six-year-olds were Tubbs's Gengelt, one of the finest show horses at Richmond; Mrs. Hartley Batt's Prince Edward, another of these fine goers; Mr. McKibbin's Langton Gelding, first prize; Mr. J. C. Waud's Ferncliff Fortuna, Mr. Foster's Mel Valley, and Catch of the Season. Mrs. Hartley Batt's fine pair, Hopwood Spark and Hopwood Horace, secured first as a pair; very even goers and with style. Mr. Tennant's Authority and Astonishment were second in the same class, and Mr. Makeague's pair, Luminator and Pink Blossom, were third. Six-year-olds as these go to prove what excellent quality was exhibited, and with so many foreign buyers at the ring side, it is good that such animals were shown.

SHIRES.

As intimated in the introduction to this notice, the Shire classes, on account of their number and excellence, were quite a feature of the show. One hundred and fifty-two were catalogued, and though there were a good number of absentees, yet the classes appeared very strong, and many of the pick of the breed were included in the competitions. The whole of those that the judges selected for competition were passed through the vetting ordeal, which naturally took a good deal of time, and thereby the whole of the first day was taken up with the awarding of the prizes in these classes.

The first class was for stallions foaled in 1903, of which five animals came before the judges. The Right Hon. Victor C. W. Cavendish's fine colt, Holker Menestrel II. by Bridsal Menestrel, bred by his owner, was practically an easy winner in the class; he has developed into one of the best three-year-olds of the year; his size, quality, and build

are most satisfying, and in addition to this his prize he was also given the reserve in the male championship. Mr. John Whitehurst's big colt, Markington Special Brand, which was second at Peterborough in the spring, has also improved in a wonderful manner since that time; he is weighty in bone, and both that and his feather are of very good quality, and he is well put together; he was bred by Mr. Hodson in Derbyshire, and sired by Brandmark. Other good colts worthy of notice and honoured by the judges were Sir P. A. Muntz's Dunsmore Franklin and Dunsmore Regent, both very satisfactory sons by Dunsmore Jameson.

Two-year-old colts followed on, and this class was very strong with Lord Egerton's London winner and junior champion, Tatton Dray King, who has developed into a wide, well-built massive colt, full of quality, and has the best of legs and feet, later on he also carried off the male championship. This colt, we may remind our readers, was bred in Lancashire, and sired by Drayman XXIII. Following him was Mr. Farnsworth's well-known colt Ratcliffe Forest King, who also was first in London as a yearling, but latterly he has had to succumb to the order of things, though he is a capital colt with excellent quality and Shire character, good at the yard, too, and an altogether promising colt; he was sired by Lockinge Forest King. The third colt and the reserve were also quite outstanding specimens. These were Mr. Leopold Salomon's Norbury Menestrel and Dunsmore Commander, shown by the Exors. of the late Mr. J. H. Bryars, of Sheffield.

The yearling stallion class was little, if anything, behind the other classes, and it is not often that three better colts by one sire stand at the top of a class than the three by Lockinge Forest King that carried off the prizes here. The first and second colts to-day, Mr. F. E. Muntz's (partly from his breeder, Mr. Craig) and Mr. F. Farnsworth's were in the same position relatively last September at the great Ashbourne Foal Show. Then in London matters were reversed, but have again adjusted themselves as at the beginning. Both are first-class colts in every way; latterly, however, the first prize one has moved ahead wonderfully; both are weighty, well built, and full of the real characteristics of the Shire. The third colt, Mr. Max Michaelis' King of Tandridge was also a very close competitor, and is daily gaining ground upon his opponent. Other very fine fillies were shown by Mr. Lewis Dodd and Lord Rothschild, as well as Sir P. A. Muntz.

Mares with foal at foot were one of the strongest classes in this section, and the three prize winners have seldom if ever been equalled, or at least beaten. Lord Rothschild's very sweet quality and beautifully moulded mare Blythwood Gelder Rose, which was once a London champion, stood at the top; then came the great, big, weighty, and good mare Childwick Young, bred by the late Sir J. B. Maple; and third, Mr. R. W. Hudson's Blythwood Laurel, who has hitherto had Colts named after her, but fates told against her, and it is probable were due to having had a little too much of the showyard and the railway. She is big and very correct in every way, so that it was rather hard lines upon her. Other famous mares were Mr. John Bradley's Halstead Duchess 3rd, Mr. T. Green's Childwick Moss Rose, and Mr. Peter Coat's Duchess of York. The foal classes were very good ones, both fillies and colts. In the latter several very big grown colts were shown, and very correct in their shape and joints. Lord Egerton's colt by Lockinge Forest King, another of the best, was very pleasing in his limbs, joints, and feet. Mr. Victor C. W. Cavendish's by Holker Menestrel II. followed, also a very promising youngster, and Messrs. Fletcher and Andrews were third with a very perfectly moulded and fine jointed colt by Dunsmore Jameson. The best filly foals were shown by Mr. Thos. Green, Sir P. A. Muntz, and Mr. T. H. Tomlinson, and were the get of Bank Nil Desperandum, Dunsmore Jameson, and Conquering Duke.

Barren mares were the next class in the catalogue, and these made up a very fine lot. Earl Beauchamp obtained first and an h.c. for the well-known London champion in Sussex Bluegown and Monk's Polly, an extraordinary good pair of grey brood mares. Sir Berkeley Sheffield's Yatesbury Flower, also a London topper in her younger days, and a fine mare of the Duke of Sutherland's, Lilleshal Moss Rose, were the winners in the class, and were a very fine lot, and shown in the best of condition.

Three-year-old fillies have been very strong this year, with such an animal as Dunsmore Fuchsia, the London champion, at their head, and this most perfect of Shires added another first to her list as well as another champion (that for best filly), she is moulded to a turn, excessively weighty and good in quality, and moves with the greatest activity. Mr. Max Michaelis followed up not very far away with Pailton Sorais, the well-known daughter of Lockinge Forest King, and a London winner; and H.M. the King also came in for a share of the money with Facionia, well shaped and good in her pasterns and feet, as well as showing quality all round. The

two-year-old class was perhaps even stronger than the three-year-old section, as there were more of them, and they were of the highest standard of quality. Mr. Robert Whitehead was given the post of honour for Peak Dolly, a well-shaped and rare limbed filly by Dunsmore Jameson; then came Earl Egerton with Tatton May Queen, which never knew defeat last season, and a topping filly all round, as well as being a daughter of Lockinge Forest King. Sir P. A. Muntz followed with Aldeby Lady Jameson, and other very choice fillies were shown by Mr. John Whitehurst, H.M. the King, Mr. John Bradley, Mr. Joseph Grimes, Sir E. D. Stern, and Mr. Egerton Orme.

Just upon a score of yearling fillies were catalogued, and these, too, were very keen competitors with one another, a lot of big fillies full of Shire sort and brought out in the pink of condition. Mr. Egerton Orme had a very enviable filly in Combermere Abbess by Tatton Friar, which came fairly easily into the top place; she is well moulded, and with quality and substance. H.M. the King's Buscot Vain Maid, another very level and capital quality filly by Buscot Forester, was awarded the second place, and Mr. W. T. Everard's Ashleigh Royal Duchess, a very early filly by Lockinge Forest King, followed; other first-class fillies being shown by Earl Egerton (2), Mr. Joseph Grimes, Mr. J. J. Lees, Sir P. A. Muntz, Lord Rothschild (reserve) with a very fine quality filly and well put together, got by Birdsal Menestrel, and Mr. John Whitehurst. All of these fillies received cards of honour from the judges.

CLYDESDALES.

This breed was certainly a rather weak section of the heavy horses, both in numbers and quality, or, rather, we may say quantity, for quality was very conspicuous, but the young stock looked a little light in bone. The Seaham Harbour Company secured first, and Major Spencer F. Chichester second for three-year-old stallions with Gamecock by Aivies Prince and Rich and Rare by Hiawatha, both animals full of the best blood. In two-year-old stallions Mr. James Kilpatrick was first and also was champion with Blyth Thomas by Prince Thomas, and Mr. John Townson second with a son of First Life Guard called Baron Thomas. Mr. Kilpatrick was also first in the yearling class for stallions. Mr. Peacock third, and the Seaham Harbour Company third. Only three entries of mare and foal of this breed were catalogued, but they were very nice at the yard and in their quality. Mr. W. M. Woods' Cedrie Princess headed them, and also carried off the medal; the Seaham Harbour Company came second, and Mr. George Gunter third with Rusk and Primrose of Glamis respectively. Some half a dozen fillies appeared in the two classes open to them, and the chief winners were the Seaham Harbour Company's Silver Princess, Sir John S. Maxwell's Wenonah, a filly of Mr. Matthews, and the Seaham Harbour Company's Silver Iris.

SUFFOLKS.

This breed was not at all liberally exhibited, but the general tone of the animals was good, and they were shown in capital condition. Mr. Kenneth M. Clark was first for three-year-old colts with Sudbourne Conqueror, Major A. C. Quilter second with Bentley Cornet, and Mr. A. J. Smith's Redwald third. Two-year-old colts came out in stronger muster; the winners, very good ones in character and build, were shown by Mr. Kenneth M. Clark, Mr. A. T. Pratt, and Major Quilter. There were only two yearling and fillies shown, belonging to Mr. J. M. Smith and Mr. Kenneth M. Clark, and these were placed as named. Mr. R. Eaton White and Sir Cuthbert Quilter exhibited the best of the mares, and Sir Cuthbert Quilter and Mr. Clark had matters pretty well to themselves in the younger fillies, dividing the honours. Altogether only some twenty-nine entries of this breed were catalogued.

ASSES.

These were a new feature for the Royal show, and though they proved interesting they did not receive the support expected, for there were only three stallions entered and two mares, Mr. Harold Sessions showing four of these, and he won first and second prize for stallions and first and second for mares, the other exhibits belonging to Mr. H. W. Wingfield, and he got the second prize for stallions.

CATTLE.

SHORTHORNS.

The Shorthorn classes were altogether quite of an outstanding description. The total entry of Coates' Shorthorns numbered 319, and there were not many absentees. The general quality must be spoken very highly of, for all the best specimens were quite altogether of the best, and there were very few of a moderate stamp. It is quite surprising after the drain upon our breeders' herds that so many high-class bulls are still left in the country; yet the number of first-rate heifers is very large, and when these are mated with such bulls as we have left to us at present, they cannot very well produce inferior different specimens. Then, again, new herds are

being started almost every day, and all this tends to an increase in numbers.

able, or, at least, was so to the writer of these notes—that Shorthorn breeders are not losing size, and this is a great matter. We cannot afford to lose that, so long as our cattle are good enough in quality they will not be found too big. Some of the bulls were of very gigantic dimensions, yet as even as possible in their flesh; indeed, it was commonly remarked that in this respect the Shorthorns as a breed are becoming smoother every day.

The first class of these was for bulls calved in 1902 or 1903. Some twenty-five of these were catalogued, and the first place was filled by a Scotch bred bull of Colonel C. J. Johnston's breeding near Elgin, sired by Scottish Prince, his dam by John Peel. This bull was exhibited by Mr. F. Miller, the well-known Argentine buyer, and will, there is little doubt, be leaving this country shortly for his home beyond the seas. He is called Linkfield Champion, and is a very level, symmetrical, well-fleshed bull with style and size, full of quality, too. In the spring he was first and champion of the Dublin Spring Show, and later on of the Belfast Show also, and now had a rather narrow escape of being champion a third time, being reserved for that honour. The next best bull was Sir George Cooper's white bull Meteor, bred by Mr. Morgan Richardson, and a bull of sweet character, but with plenty of substance; he has developed great weight since last year, and is now very symmetrical and altogether in beautiful form. H.M. the King's Royal Carlisle, also very even in flesh and shape, came third. He is by Carlyle and with some Waterloo blood on the dam's side, and altogether good in quality. Several other very good bulls were honoured with cards. The two-year-old class was also a very powerful one, a great number of the very best stamp being included in this. Mr. A. T. Gordon's Scotch-bred one, Fascination, very good in symmetry and breeding, and with good flesh, was placed first; then came Mr. George Harrison's Charming Victor 2nd, bred by Mr. Eoroyd, and a very well put together bull with the best of quality; and third was another bull from the same herd, Royal Ensign, a white of Mr. Duthie's breeding, got by Royal Edward. Bulls from Lord Polwarth's herd, Mr. Henry Dudding's, and some others were in the minor honour list.

There were something like seventy yearling bulls, a grand class for this age, and it is a great credit to them that this class should

have produced the champion in the shape of Mr. J. Deane Willis's Bapton Viceroy, which was also champion at the Bath and West and other shows; he has grown immensely since the autumn or early winter, when he was champion of Lord Tiedegar's show, and is a good red in colour, with good coat and shape, as well as breeding and quality; he was bred by Mr. Willis and sired by Violet's Fame out of a dam by the famous bull Count Lavender. Linkfield Champion was next to this bull for the champion honour. H.M. the King, Earl Mauvers, Mr. John Handley, and other well-known breeders were also in the substantial honours in this class. Of course, H.M. the King's Sylph was given the leading position for cows; she is a good fleshed daughter of Royal Duke, and was reserved for the female champion prize which was given to Mr. J. Deane Willis' first prize yearling heifer, Golden Garland, a very perfect model of a Shorthorn all round, she is out of a Count Lavender dam, and and sired by Violet's Fame, is nearly full sister to the champion bull. Other winners in this class were Mr. Taylor's Pillivie Rosebud 2nd, Mr. A. E. Bassett's Tethy Queen of Brilliants 2nd, and one or two others. Heifers calved in 1903 and 1904 were not so numerous, but the classes contained several very fine heifers, amongst the winners being Lord Calthorpe's Ruby 4th, Sir Oswald Mosley's Proud Duchess, Mr. Robert Taylor's Silver May, Mr. Atkinson's Takeley Jinny, and three other heifers from Sir Oswald Mosley's herd.

Some very heavy milking Shorthorns were shown in their classes, but the number was not by any means legion. Lord Rothschild carried off a first and second, Mr. Wodehouse a third, and in another class Mr. G. W. Tyser was first and second and Mr. C. R. W. Adeane third; and in heifers Mr. Britten, Lord Rothschild, and Mr. J. T. Hobbs were the only entries.

HEREFORDS.

Considering that Derby is far distant from their chief territory of occupation, the entry of fifty-eight made by this breed was highly creditable. The ruling in the old bull class was similar to that of the Bath and West in the King's grand bull Admiral being first, and Lord Coventry's Lama second; a third prize was won by Mr. Thompson's Fairlad. The three two-year bulls—Cameronian Ramesses and Coronet also held their several positions, as they had previously done, and Mr.

Stephen Robinson's premier yearling Major secured another first.

But it was curious to note how very differently the other yearling bulls were placed at the different shows. At Swindon, after Major came Polestar and Park Royal for the other prizes, and Paragon for reserve. At Bromsgrove the second, third, and fourth bulls were Eaton Wilton, Paragon, Park Royal, and Silver King. At Shrewsbury the second and third were Eaton Wilton and Silver King. The running now was Eaton Wilton, Park Royal, Resister and Paragon. The cow class included three-year heifers, and Irvington Plum and Western Star, of that age, were first and third, Mr. P. C. Coats' older Pearl 15th dividing them. The heifers calved in 1904 had at their head Mr. Lawton Moore's champion female at Bromsgrove, Brampton Agnes 3rd, but Mr. Coats' Pearl, which at the former shows had been second, was now displaced by Mr. Thompson's Beauty 3rd. In the class for yearling heifers Mr. J. Smith's Bellona repeated her Bromsgrove success, and Mr. W. B. Tudge's Princess Beatrice was second to her as at the former show, but the latter won a first at Shrewsbury, and Bellona obtained only a second at Swindon. Mr. Pulley's Daisy 6th was third winner, as she had previously been at Swindon and Bromsgrove.

DEVONS.

The Ruby classes were short-numbered, the entries of this breed numbering only twenty seven altogether. The three senior bulls had Mr. S. Kidner's Bickley Quaker at their head, which was a reversal of Swindon decision, Mr. Huxtable's Duke of Overton the first winner, there being now only reserve Mr. J. C. Williams's Dianthus dividing them. The two-year bulls had at their head Mr. Portman's Pound-Pink-up; but there was another reversal of Swindon in Mr. Morgan's Lord Daws 8th being placed before Mr. Skinner's Pound Royal 2nd. Mr. Skinner won another first with Bellringer in the yearling class, this being at least the fourth chief win this promising Paragon has carried off this season. The ruling otherwise was the same as at Swindon, Overton Ringleader being second, and the King's Larry reserve. The King's grand cow Ruby was first as at the Royal Counties, to which Mr. Morgan's Whimble Beauty 2nd made a creditable second with Mr. Portman's Telltale to take reserve. Heifers calved in 1904 formed a remarkably nice class. Mr. Morgan's Whimble Beauty 5th was at their head as she had been previously at Swindon

TATTON DRAY KING, THE CHAMPION SHIRE STALLION AT THE ROYAL SHOW, DERBY.

The property of EARL EGERTON OF TATTON, Tatton Park, Knutsford.

and Duvlerton. The King's Lucy, the first winner of the Royal County, made an admirable second; Mr. Skinner's Pound Ruby 14th, the second winner at Portsmouth being reserve. The King's Nosegay had also barren honours. The yearling heifers were equally good, and Mr. Morgan secured another first with Whimble Broadhorn 1st, to which Mr. Skuiner's nice heifer Pound Ruby 17th came second, which had been preferred to Broadhorn at Tavistock. The King's Carolina, which got reserve was first at the Royal Counties. Mr. J. C. Williams was h.c. for a nice-quality heifer called 'Lovely Maiden' 2nd.

SOUTH DEVON.

The entries for this breed, so far from native pastures, were not less than might naturally have been expected. Three bulls appeared, two of them belonging to Mr. J. S. Wroth. These were the Coombe two-year winner of last year, now at three years old a very fine, well-shap'd animal. The judge gave preference to him over his herd companion, Star's Duke, which is a year older, and probably a great many would endorse his opinion, while others would deem the affluent rich flesh property of Star's Duke to weigh down the scale in his favour. The other bull was Mr. Vosper's Bickam, the class for females. Mr. Butland's Handsome received first prize, which, judging from the point of good shape, would be right, but as pail-fillers and the possessors of perfect capacious udders, Mr. Vosper's Laura and Mr. Wroth's Lorna Doone 2nd would be preferred.

SUSSEX.

These wealthy cattle of the southern counties made an admirable display though three of the six classes were short-numbered. The total entries were 39, but there were several absences. In the old bull class the Earl of Derby's Mayor and Mr. Lucas' Lord Eric, the Royal Counties' winners had the prizes. In that for two-year-old bulls the two brothers, Lord of Drungewick 5th, and Prince of Drungewick 5th, both bred by Mr. E. E. Braby, but the latter now owned by Mr. A. J. Hickman, were the winners. Six good yearling bulls appeared, and the class was commended entire. Earl Winterton was first and reserve with Shillinglee Gold 2nd and 3rd, the former a Royal Counties' first winner. The second and third prizes were won by Mr. P. Saillard's Bewbush Duke and Mr. Braby's Alfred, the latter was the second winner at Portsmouth. The four cows were distinguished for fine forms and substance, Earl Winterton's Sunlight 5th came first, and Earl Derby's Fancy second, a reversal of the Royal Counties' decision. Mr. Winch's Warden Lady and the Hon. R. P. Nevill's Old Mayflower 8th made a good following for third prize and reserve. Heifers calving in 1904 formed a superior class of eight, commended entire. Earl Winterton won another first with Sunlight 7th, Mr. Nevill's Birling Eleanor being second, Mr. Augier's Gwendolen of Lywrick third, and Mr. Cornwallis' Linton Hepatica fourth reserve. Mr. Saillard, who had two that were highly commended in the class was to the front with his yearling, Bewbush Evelyn, to which Earl Derby's Display came second, and Mr. Augier's Bewbush Rosalind 4th third, Mr. Winch's Tilsden Jessie getting reserve. The two champion prizes for best bull and best cow or heifer were awarded to Lord Derby's Mayor and to Earl Winterton's Sunlight 5th.

WELSH.

The black cattle of the Principality formed a highly-select collection in merit, although few in number. In the old bull class there were five animals, and the two that got no money were h.c. Messrs. Davies won the first prize with Duke of Connaught, bred by Mr. J. C. Yorke. The Czar, belonging to Mr. Greaves, and Lord Harlech's Rhodys winning the other premiums. Only two yearling bulls appeared, Wern Emperor, belonging to Mr. Greaves, and Mr. J. Williams's Derw Lad; but they were worthy prize winners. Mr. Greaves won first and second prizes with two good cows, Glasfryn Cadie and Pyrites 2nd, Madryn Sally of the University College, being third. Mr. R. Roberts was first and reserve with his two heifers, Laura and Jenny. Messrs. Davies being second with Derw Lass, and Madryn Sally 2nd, from the College, third.

RED POLLS.

The entries of the Red Polled breed were forty-nine, and not only were the classes tolerably well filled, but most of the animals which won at the Eastern Counties' shows were amongst them. Mayson 224th, Mr. Hammond's old winner, has been a successful succession of first prizes to his new owner, Mr. Harcourt Dwyer, this season at the Suffolk and Norfolk shows, and again at this Royal one. Second to him came Sir R. Cooper's Ashlyn's Majin, the first winner at Swindon, which also was second to Mr. Daplyn's bull at the Suffolk. Mr. A. J. Smith's Rendlesham Knockin made a good third winner. Sir W. Corbet's Acton Rufus, the first two-year-old bull, also held the premier positions at the Suffolk and Norfolk shows, Lord Amherst's Darius being second to him at the Norfolk and here, but at the Suffolk Sir R. Cooper's Ashlyn's Ben, the third winner here and at the Norfolk, was the second winner. Lord Amherst's Dax,

which was put first in the yearling class, had the like position at the Norfolk, but was only third at the Suffolk, where Sir W. Corbet's Acton Czar and Sir R. Cooper's Ashlyn's Duke which were second and reserve at Derby, were placed above him. This only proves what was apparent to the eye at Derby, that there is remarkably close running amongst three or four of the best yearling bulls of the season. The one which received the third premium was Mr. R. H. Mason's Davyson 289th.

In the class for cows or heifers in milk, Sir W. Corbet was first again with his deep, full-shap'd Tiff 4th which also was made champion female. At Swindon she was placed second to Lord Amherst's Waxlight 2nd, the second winner here, and in competition with Risky B., she was the same at the Essex. Mr. G. D. Lollypop was the third-prize cow, and Biddy 2nd, another exhibit from Acton, had reserve. Sir W. Corbet repeated his previous triumphs with the two-year Davy 280th, his purchase at Mr. Hammond's sale, the heifers placed next her being Lord Amherst's Satanista 6th and Sir R. Cooper's Ashlyn's Flirt. Sharstou Mystery and Acton Primrose, which only had barren honours, had both of them prize-taken at former shows. Sir W. Corbet had entered as many as four in the yearling heifers, two of which, Acton Beryl and Acton Cranberry won first and second prizes. Lord Amherst's Popsey 8th, the third winner, was preferred to both at the Suffolk Show, but at the Norfolk the heifers were placed as at this show.

ABERDEEN-ANGUS.

There were no fewer than seventy-five entries of this breed, the spot being convenient for the Scotch breeders to send some of their animals to. In the senior bull class the first and second prizes went to Mr. G. S. Grant's Prince Forest and to Mr. J. Macpherson's Kartoun, both Scotch bulls, while the third was won by Mr. Bainbridge of Northumberland, with Delamere, so that Mr. Cridlan could only obtain reserve with his celebrated Wizard of Mainsore. In the class for two-year bulls only, the first prize went into Scotland, which was won by Mr. E. Coey with Tam of Ardgair. Mr. W. B. Greenfield was second with Royal Rover of Haynes 2nd, which was first at the Essex and Northampton shows, the Duke of Portland being third with Evason. Again, in the junior bull class only, the first was won by a Scotch breeder, the second and third premiums going to Mr. Cridlan for Everwise and Bengal. In the cow class Mr. Greenfield had premier place with Darling of Haynes 2nd, the first winner at Swindon and at the Essex Show, Barbarina 2nd, Mr. Bridges' grand cow, came next, and Mr. Hudson's Water Lily 5th third, which two had their respective positions reversed at Portsmouth. The best of the two-year heifers was held to be Mr. Grant's Pride of Spey 4th, from Scotland, Mr. J. H. Bridges obtaining the second prize with Laurel, which was also second at Swindon. Mr. Bainbridge's Elvena, which had third place, seemed of great promise, and Mr. Greenfield's reserve heifer, Everance of Haynes, was first winner at the Essex. Three of the yearling heifers were h.c. after the prizes had been awarded, which were to Mr. J. R. Findlay for Prize—likely to prove well named; Sir G. A. Cooper's Evara of Hursley, the first winner at Portsmouth, and Mr. Cridlan's Edaline, which was preferred to Evara at Swindon but came next her at Portsmouth.

The champion prizes were awarded to Mr. Grant's Prince Forest and to Mr. Greenfield's Darling of Haynes 2nd.

GALLOWAY.

There were twenty-nine entries for this breed in the four classes. The first old bull was Mr. J. Cunningham's Clannor, the Countess Carlisle being second at the Grange of Naworth. The junior bulls were considered a prime lot, the judge gave three barren honours after awarding the prizes to Mr. J. Wilson's Warcy, Messrs. Biggers' Javelin, and Mr. T. Graham's Banker. Mr. Cunningham won another first with his cow Doris, to which the Countess of Carlisle's Janet came third, Mr. Cunningham's other cow Netty 32nd being second. Messrs. Biggers came to the front in the heifer class with Bonnie Jean 6th, but Mr. Cunningham won both the other premiums with Louise 5th and Miss Sally 7th.

HIGHLAND.

Only two cows represented this breed, both of which belonged to Mr. H. L. Stephens. These were Lennox 3rd, to which first prize was awarded, and Annag Riabach, which was reserve.

AYRSHIRE.

This Scotch breed was also short-numbered, the bull class having five entries and the female one only three; nevertheless, the three prizes in either class were awarded, Mr. James Howie getting first and third prizes with his bulls Wynlette, Nether Craig and Spicy Sam. These were divided by Mr. Thomas Barr's Monkland Zomo-Sal. In the female class Mr. Alexander Cross was first with his young cow Bright Mary, and second with his heifer Lady Diana, Mr. Thomas Barr being third with Monkland Kate.

JERSEY.

The entries for this breed numbered 125, but as many naturally be supposed, there were some absences owing to Derby being so far distant from the pastures of many of the breeders. In the class for bulls calved in 1902 and 1903, Capt. Gisborne was first with his well-known Glorious Lad, to which Lady de Rothschild's 'Callant made a good second and Mrs. McIntosh's Black Pearl a worthy third; Earl Cadogan was reserve with Topper. Bulls calved in 1904 had at their head Mr. W. B. Roderick's Aurifer, which had previously come out well at several of the other shows this season, Mr. Smith being second, with Smiler, and Sir E. D. Stern third with Silken Pop; the reserve went to Mr. L. Currie's Twylich King. Lord Rothschild's Royal Ensign came to the front as the first yearling bull, followed closely by Mr. A. Miller-Hallett's Alfriston's Pride; Mr. W. A. H. Bass won third prize with Blackthorn, and Lady de Rothschild's Crusader had the reserve ticket. Mr. Miller Hallett came to the front in the cow class with his Island bred Lady Viola of unmistakable dairy property, Mr. Smith-Barry's Lady May coming second, which was also bred in the Island. Lady de Rothschild's Whitewood 5th, which received the third prize, is tolerably well known. Mr. Bruce Ward was reserve with Mrs. Viola, another imported deep-milker, and as many as seven of the other cows were h.c. Heifers calved in 1904 did not form quite so large a class as the preceding one. Mrs. McIntosh was first with a heifer of excellent promise called Frolicsome 5th, Lady de Rothschild's Watercress, Mr. Thomas Butt Miller's My Fancy, and Earl Cadogan's Bee Line coming next in the order named, all apparently very deserving. The yearling heifers were also a very superior collection, as the judge evidently considered as he bestowed seven h.c.'s after the money prizes and the reserve had been awarded. Mr. James Joicey was first with Electress, Captain Gisborne second with Lady Macpac, Mr. L. Currie third with Marjory, and Mrs. McIntosh reserve with Gloriosa 6th.

GUERNSEY.

The old bull class for this breed had only two entries, and the first prize could only be awarded, which was, however, to an animal of great merit, Mr. H. Fitzwalter's Plumtre's Roland of Seaview 10th, bred by the late Mr. Glyn. In the class for bulls calved in 1904, two prizes could be awarded, the first to Mr. Frank Hargreaves for Merton Signet, who also received reserve for Merton Dairyman, the second winner being Mr. H. M. Ozanne's St. Amaut from the Island. The yearling bulls did not form a class large enough for the three prizes to be awarded, but Mr. Hambro won the first and second premiums with Prince Mino and Itchen Oil, two young bulls of great promise, as also is the reserve bull of Mr. F. Hargreaves. The female class was more numerous. In the cow class Mr. Hargreaves was first with Beauty of the Village, second to which was Mr. Ozanne's Lady Roberts, Mr. Hambro coming third and reserve with Mrs. Dreyfus and Express. Heifers calved in 1904 had at their head Mr. Ozanne's Lady Roberts 3rd, Mr. P. T. Fowler being second with the Island-bred Lois of Les Pelles. Mr. Fitzwalter's Plumtre won the third prize with Muriel 15th, and Mr. Cornwallis reserve with Rosemary. In the class for yearling heifers Mr. Hambro won both first and second prizes with Montrose 2nd and Olive 4th, Mr. Hargreaves being third with Rosette of the Gron 3rd, and Mr. Ozanne reserve with Lucassienne 4th. The champion cup for best cow or heifer was won by Mr. Hargreaves with Beauty of the Village, Mr. Ozanne's Lady Roberts 3rd being reserve.

LONGHORNS.

There was a creditable muster of this breed, consisting of ten bulls and nine females. In the senior class for bulls, Mr. W. L. Riley's Wyehorn Prince was first, and Lord Gerard's Malcolm Emperor second, Mr. H. F. Sale's Colman getting reserve. Mr. W. Shaw had taken the third prize premium with Fradley Monarch. In the class for bulls calved in 1905, Mr. Sale came to the front with Arden Conqueror, Lord Gerard being second with Eastwell Elegant, and Mrs. Cheape reserve with Bentley Watchman. In the cow class Mr. Sale won another first with Fradley Queen, Mrs. Cheape getting second prize therein with Phoebe, while Lord Gerard was third and reserve with Malcolm Damsel and Black-Eyed Susan 2nd, these cows being fine handsome matrons, and Mr. H. F. Sale being the winner with another called Dolly Grey. There were only three heifers, two of which, belonging to Lord Gerard styled Bienty Dido and Ethel of Eastwell, obtained the prizes, Mr. W. H. Sale's Arden Dairymaid being reserve.

KERRY.

There were four Kerry bulls and a dozen cows and heifers. Lady Greenall was first in the bull class with Walton Rajah, to which Llantarnam Lackey, belonging to Mr. C. J. Corrie, Mr. W. was second, Mr. Palmer's County third, and Sir G. Walker's Ousston Briton being reserve. The Duchess of Newcastle's Hardwick Flora was the first cow, with Lady Greenall's Walton Joyous second, and

Mr. Corrie's Patricia third, the reserve going to Mr. Palmer's Pretoria. In the heifer class Lucy Greenall was first with Walton Marsupial, Mr. Tait Robinson's La Mancha Cloe being second, Mr. Palmer's Paddy third, and Sir P. Walker's Young Burst reserve. The champion prize was won by the Duchess of Newcastle's Flora.

DEXTER.

There were just forty entries of the Dexter breed and there was no difficulty in getting three winners in each of the classes. The first prize bull was Mr. H. M. Gibb's Brockhampton Count, which also obtained the champion prize. Mr. Chetwynd showed two good bulls, and his Don Gentian was second and Don Geoloram highly commended. Compton Dante and Compton Dash, belonging to the Duchess of Devonshire, received third prize. The Duchess, in the cow class, was first with her well-known Compton Daphno, to which Mr. de Bertodano's Cowbridge Lonia came second, and Mr. Tait Robertson's Sprucefield Edna third, Mr. H. N. Gibbs furnishing the reserve, which was Barrow Gunga. The last-mentioned exhibitor came to the front in the heifer class with Barrow Duchess 2nd. The Countess of Sefton showed two nice heifers, which were second and reserve, called Altcar Sultana and Altcar Cistus. These were divided by Mr. Chetwynd's Donna Gentiana.

SHEEP.

This section of the show was thoroughly representative. It is true the entry was not a record one, but what is most satisfactory, its merit was very choice all through.

The Oxford Downs were a much smaller entry, but one in which the winners were of high merit. There was not much room to question the awards that placed those grand rams owned by Messrs. A. Brassey, J. T. Hobbs, H. W. Stilgoe, and J. Horlick in the order named in the yearling class, nor was there any room to question the correctness of Mr. J. T. Hobbs taking first and third honours for yearling ewes, with Mr. J. Horlick's choice pen as second. As at former shows this year, Mr. G. Adams was easily to the fore in the ram and ewe lamb class with thoroughly typical sheep, Messrs. Hobbs, Horlick, and Stilgoe taking the lower awards.

SHROPSHIRE.

The classification of this breed include a class that no other breed has, namely, a class of yearling rams entered for sale by auction at a certain reserve. Last year the class was very successful, and the entry this year was again eminently satisfactory. The prizes offered are large, £50 in four prizes ranging from £20, which is, of course, an inducement. In this class were found many of the best rams of the year and the com-

petition was one that had a great deal of value because it brought out competitors which were entered in the single ram class and also those entered in the pens of five. Sir Richard Cooper was first, r.n., and three h.e.s., Mr. Victor Cavendish second and c. with two sheep, the Duke of Sutherland was third and h.c., Mr. T. A. Buttar came fourth and c., Mr. H. B. Mander h.c., and Sir W. Corbet c. for two. We have given full award list in this class because it will be of particular utility to the reader for comparison with the sale list, as showing how near to or how far off the judges were to the general opinion of breeders in their awards.

Hurking back to the first class, we are pleased to find that the two-shear ram class was one that was appreciated by the breeders, for its entry was very good indeed. Sir Richard Cooper's deep-fleshed and choice ram was a worthy first prize. Mr. A. S. Berry's disappointment at Shrewsbury was fully atoned for by his fine ram taking second place there. These were the two leading rams of this age. In a particularly good class of yearling rams, Sir R. Cooper's second prize ram at Shrewsbury was put to the top, a suitable acknowledgement of the incorrectness of the former award. The closer contest that took place between this ram and that owned by Sir P. A. Muntz for leading honours was a surprise to many, but when it came to be looked over the merit and type of this ram soon showed how much it had improved. The Hon. Victor Cavendish won a third with a very choicely-bred ram, quite one of the best male entries we have seen from this flock; and in that very typical r.n. sheep owned by Mr. M. Williams was found a real good ram, but somewhat beyond its best. Many other capital sheep were included in the award list. No greater test of the merit of any flock could well be applied than that given by the competition in this class, in which no less than fifteen flocks were represented. A grand lot these were, but probably to the onlooker one of the strongest recommendations such a class gave to the breeder, both at home and abroad, was its fine uniformity of type, its notable excellence and merit. Of course, there were degrees of this general excellence, but taken as a whole no breed save the Lincoln could at the present time produce so good a class. Mr. M. Williams was first with a very grand pen of rams—a pen that is neat, uniform, and choice in quality, and yet having grand masculine powers and type. Mr. T. A. Buttar's Scotch-bred pen was a worthy second, and the third pen, owned by Sir R. Cooper, had specially good flesh, probably the best in the class. Mr. E. Nock's pen had the r.n. a fine well-grown quintette. The yearling ewe class

was one of high merit. Sir Richard Cooper's pen won, and the point upon which the final place was won was, we believe, that great one—namely, quality of flesh—a merit that this pen had to the full. The Hon. Victor Cavendish came in second; here evenness of type and flock likeness were most apparent. The third winners were greatly admired, robustness of character, combined with choice quality, was their great characteristic, and had these sheep been evenly drawn as the winners, even higher honours would probably have been their lot. The Exors. of P. L. Mills took r.n. with a pen of specially choice ewes. The ram lamb and two ewe lamb classes were both very good indeed. Sir Richard Cooper won in each of these classes with very choicely bred and good fleshed lambs. Mr. E. Nock's pen came in second in the ram lamb class, with Mr. M. Williams' very typical pen as third, and Mr. T. S. Minton's as r.n. In the ewe lamb class Sir W. Corbet's pen won second honours; a very choice pen this is—good in fleece and flesh—it ran the winners very close indeed. Mr. E. Nock was third, and a most typical pen of Mr. T. S. Minton's came in for r.n.

SOUTHDOWNS.

A first-class entry of somewhat smaller number than last year represented this grand breed of mutton sheep. The general merit of the exhibits was very good indeed, and there was less of the variation in type than has been seen of late. The old ram class, a valuable one for any breed, had a very capital lot of rams in it. The winner came from Mr. C. Adeane's flock, and though it did not reach champion honours, which it might have done, the r.n. for this award was also given. A deep-fleshed and most typical ram of its breed describes this capital ram. Next came a choice stud ram, owned by the Duke of Northumberland, whose flesh and fleece were of high merit. His Majesty the King's entry took third honours, and Mr. J. Colman's nice ram was r.n. In the strong class of yearlings his Majesty the King took first and championship honours with a ram that showed to great advantage out of his pen, but whose position at the top of the class was very closely pressed by that excellent ram owned by Mr. Adeane, whose choice flesh and touch gained for him many supporters. The excoutors of Colonel H. McCallmont won third honours with the Swinlon ram, a grand ram with special merit, but the high merit and typical character of the Goodwood ram was hardly recognised by the r.n. it received. The class for three yearling rams secured very good support, and amongst the competing rams there were many of high merit. The six yearling rams that were first and r.n. for Mr. C. Adeane were of excellent uniformity, very true to type, and good flesh; and in that beautiful pen of typical rams

BAPTON VICEROY, THE CHAMPION SHORTHORN BULL AT THE ROYAL SHOW, DERBY.

Bred by and the property of Mr. J. DEANE WILLIS, Bapton Manor, Codford, Wilts.

from Goodwood that won second honours for the Duke of Richmond was found three first class rams. The third pen, very uniform, came from Mr. Colman's. The ram lamb class was of great merit. The size, development and quality of that fine pen from Sandringham was well deserving of the first place; and in the second pen, owned by the executors of Col. McCalmont, was found merit and nice type; Mr. C. Adeane's third winner had not quite the scale of this pen, but were choicely bred, handled well. The contest in the yearling ewe class was a thoroughly close one. The Duke of Devonshire won correctly, with a very choice pen indeed, first and champion honours. These moved well, and had the Duke of Richmond's pen followed instead of taking third place to that pen owned by the Earl of Cadogan, which could not do themselves full justice outside the pen, a more correct decision would have been registered. Mr. J. Colman's well-matched pen had again to take the rn. H.M. the King won first honours in the ewe lamb class with a very typical and good pen, that gave good result when critically examined. The executors of Colonel McCalmont were, as in the ram lamb class, correctly placed as second, but in that choice pen of Mr. C. Adeane's that were rn special good merit and quality was found, but third honours went to Mr. J. Colman's pen that were of a somewhat different type, particularly in respect to the fleece, although they came well to the hand.

HAMPSHIRE DOWNS.

An excellent and thoroughly typical entry represented this grand breed of sheep, and the record made by Mr. J. Flower's flock was a remarkable one, namely, he won first in each class and also the champion prize for best pen of lambs. This is one of the best records any breeder can secure, and in all save one class no valid exception could be urged against the winners.

The two shear ram class has been at Mr. Flower's mercy all the season, because in the first and second rams, both of which came from this flock, two of the best rams we have seen for a very long time were found. Typical and masculine, and yet not in the slightest degree coarse, these rams were easily first. Mr. T. F. Buxton came rn and hc for another good pair.

The yearling ram class was a grand one, large in numbers and of very special merit. Here not only was Mr. Flower first, but he also won second, having been first all through the season in this class. Mr. H. C. Stephens had a very excellent and typical ram (forward) that won third honours—a very choice one indeed—Mr. T. F. Buxton again taking the rn. Several other thoroughly typical rams were honoured by hc and c.

The class for ram lambs was one wherein great quality was found. Mr. Flower's, which excelled in all good qualities, were first; Mr. Carey Cole's pen, which were of a very superior type and well brought out, made an excellent second pen, some thought more highly of him than this; Mr. T. F. Buxton's third prize pen was of a very meritorious description, thorough good in the flesh, and Sir W. G. Pearce's pen was very good.

The ewe lamb awards followed in the same order so far as regards first and second places, but here Mr. Flower was very fortunate, for those in his pen was of quality, we consider, taken all in all. Second pen was the better pen. Sir W. G. Pearce had a choice trio of lambs in his third prize pen, and so also had Mr. H. C. Stephens in that pen of his, whose merit the judges so little appreciated that he had to be content with rn.

SUFFOLKS.

There was not a pen of this breed, but it was one of very excellent character. Mr. R. Barclay won for two-shear rams, but the second winner, Mr. S. R. Sherwood, was pretty nearly equal, some thought this ram to handle better. Mr. H. E. Smith had here to be content with rn, a position he improved upon in the next class, for first and second honours were won there with a pair of very capital yearlings, leaving third honours for Mr. R. Barclay's ram that had merit qualities. The single ram lamb class, which is one, we think, ought to be found in each section, had hardly so large a number as ought to have been the case. However, we have to deal only with that which is before us, and Mr. Smith's first prize lamb was worthy to head a very much larger class. Excellent merit and very good quality was found in this beautiful ram lamb; the second winner in the class came from the same flock also, with one of Mr. S. R. Sherwood's in very close attendance. In the next class for pens of three ram lambs, Mr. H. E. Smith's place at the top was closely challenged by Mr. Sherwood, but without avail, the order was as stated above, both pens having very fine merit and type. Mr. Goodchild's pen were third with Mr. Barclay's as rn in close attendance. The yearling ewe class had but three entries, all of very special merit, and the winners of the two leading prizes came from the same flock. Mr. R. Barclay's ewes were brought out in excellent form.

The ewe lamb class was a capital one, very true in type and specially good in touch and skin. Mr. H. E. Smith's trio pen went correctly to the fore, with Mr. Barclay's next; but this was one of

those awards others would have altered, and preference could well have been given to that very level pen from Mr. S. R. Sherwood's flock which showed very good merit.

LINCOLNS.

Probably in no section of the sheep show was greater keenness witnessed than in these classes, certainly in none did the awards in the yearling ram classes carry so much value; in fact, there is no question but that it made fully 500 guineas difference in the sale value to the owner of the winner in this class. Unfortunately there was a marked difference of opinion between the judges; so much so that several of the more important awards, including the champion honours, had to be decided by the referee, in other words, the class in which the awards made probably more difference than in any other, the single judge system had perforce to be adopted.

The two-shear ram class was not a remarkably strong one. Mr. C. E. Howard won first and rn with a very fine ram indeed, which did itself full justice when out of the pen; two level and very uniform sheep from Mr. T. Casswell were second and rn.

The yearling ram class was one in which the contest was most keen, and here, correctly we believe, Mr. H. Dudding secured not only first, but third and fourth honours for his champion honours, but third also with a ram that was almost equally good. Messrs. Wright were second with a very capital and well grown ram, not perhaps quite so even in the fleece as the winner, but for all that a real good ram. Mr. Tom Casswell came in for the rn and c.

The class for five yearling rams secured an entry of sterling merit and quality, herein Mr. Dudding was again first with a specially well woolled pen; but the second pen, from Messrs. Wright, were better when out, and moved with greater freedom, but they were not quite so good for order as we think the award justified. Messrs. S. E. Dean and Sons were third, a win these breeders fully deserved, for they had none the best of luck this year. Mr. Tom Casswell was rn. The ram lamb class was about one of the best of this age and breed we have seen for several years. Messrs. Wright were easy winners here with a trio of beautiful matched lambs of high quality. Mr. C. E. Howard was second. Lambs with a great wealth of flesh but lacking somewhat in respect to the quality of the fleece, Mr. Dudding's pen excelled in this respect, but lacked the touch and handle of this pen.

The Ribby flock's unbeaten record in the yearling ewe class was continued, and, as at the other shows, a real good pen of this flock won first honours. Messrs. Wright were winners of the second prize with a pen that has greatly improved, and which may, if all goes well, be difficult to beat at future shows. Third honours went to Mr. Tom Casswell, whose pen, like all the Pointon sheep, were well matched and most uniform in type and character. The rn went to Messrs. Dean and Sons for a very first-class pen of high merit. The ewe lamb class, so far as descriptions and awards are concerned, was an exact repeat of the ram lamb class with fully as good merit and quality.

LEICESTERS.

This well-known breed was represented this year by an entry of grand merit, the uniformity of the whole of the entry was most noticeable, and the type and merit excellent. Mr. E. F. Jordan was well ahead in the classes for both yearling rams and ewes. In these classes his entries had the better touch, and gave a more satisfactory response when the same were carefully examined in the show pens. Mr. G. Harrison's entries in both these classes were of very choice merit—they were, in fact, just a bit over done. The latter exhibitor, however, more than held his own in the lamb classes, and both the ram lambs and ewe lambs sent forward by this exhibitor were of a very superior merit. Mr. E. F. Jordan took the other awards with typical sheep, but not quite so fully developed.

COTSWOLDS.

This breed's entry was a typical one, but small in number, with excellent merit. Mr. W. T. Garne, who won all through the classes, had a notably fine yearling ram as first in this class, quite one of the best of its breed we have seen for some considerable time; a second entry from this flock was divided from the winner by a well-balanced and typical ram owned by Mr. W. Houlton. The yearling ewes were a choice lot of high merit, and the same remark is equally applicable to those grand pens of lambs that were first and second for Mr. Garne in these two classes.

BORDER LEICESTERS.

A small but thoroughly typical entry represented this popular North Country breed. Mr. A. J. Balfour was owner of most of the winners, and his yearling ram that won had very fine merit; the same remarks are fully applicable to Mr. T. Winter's pen of yearling ewes that secured the first prize; these were of very special merit.

KENT OR ROMNEY MARSH SHEEP.

Never before, except at Maidstone, has this breed made so large an entry at the Royal Show, and it is more than probable that the average of

merit, type, and quality has never been exceeded at any previous Royal Show. No other breed has shown so notably an improvement in so short a time as this has done.

Mr. Charles Eile won first honours in the two-shear ram class with a real good ram. When out of the pen the width of this fine ram, together with its fine type and character, fully entitled it to precedence. Mr. W. Millen's second winner was also of fine merit, and handled well; the third and he went two specially good rams from Mr. H. Rigden. The awards in the yearling ram class were not so generally approved of, particularly Mr. C. Eile's first-prize ram, many giving preference to one that came from the same flock that had to be content with hc.

A notably fine ram, with the best possible flesh and even fleece, won second honours for Mr. J. E. Quessted, being followed by a grandly-fleshed ram from Mr. H. Rigden, to which the third honour went. The ram lamb class was of special merit. In this age, probably more than any other, one sees the immense strides towards early maturity that have been made in this breed in recent years. Mr. W. Millen's trio won without question. It is true the pen was not quite so well matched as some, but this unevenness was occasioned by the marked superiority of one of these lambs, an exceptionally fine and well-grown lamb. Mr. J. B. Palmer, whose first venture at the Royal Show has been successful, won second honours in this class with a pen of very excellent lambs, good in their flesh and very even in size. Mr. J. E. Quessted's pen came well to hand, and were rightly put third. In the ewe lamb class Mr. Millen again won with a beautifully drawn pen; next him came a nice and typical pen owned by Mr. F. Neame, whose closest competitor, Mr. H. Rigden, might have taken the second instead of third place, because this pen, when out, displayed better conformation and heads. The ewe class was one in which the competition was particularly close. Mr. W. Millen won with a real good pen first honours, taking also third honours with his second entry. Mr. F. Neame came in third with a very choice pen of special merit, and Mr. C. Eile was made rn.

WENSLEYDALE.

The executors of Mr. F. Willis were first all through these classes with a notably fine collection of sheep, the three yearling rams from this flock taking all three honours in their class; Messrs. E. Horseman and R. Stuart were the other successful competitors.

DORSET HORNS.

These classes were better filled than we have seen them for some long while, and the merit all through was very good indeed; first, second, and third prizes were won by Mr. W. R. Flower in the yearling ram class with three very good rams, the first sheep being particularly good. Mr. Flower was also leading winner for pens of three yearling ewes; these were of excellent merit and true type. But when the contest for the special prize came up for decision we were pleased to find the award went in favour of that particularly fine and well-grown pen of ram lambs that won deservedly first honours for Mr. James Attrill, who occupied a similar position in the ewe lamb class. Mr. Flower had to be content with second honours in both lamb classes for lambs of good type, but not so well developed as the winners in both classes. Mr. E. A. Hambro was likewise a successful winner.

DEVON LONG WOOL.

Messrs. F. White and A. C. Skinner were the only contestants in these classes, but the whole of the entries were of a very superior merit and real good type.

SOUTH DEVON.

Out of the 218 stock owners two only were found to send out to the largest and most important live stock show in the world entries of their breed to show to the thousands who visit the Royal what a grand breed of mutton sheep this is. Messrs. J. Stooke and J. S. Hallett were the two progressive exhibitors, and they, with thoroughly typical rams and ewes, equally divided the awards offered for their competition.

BLACK FACED MOUNTAIN.

A full and very typical entry was secured of this breed. The winning sheep in each of the classes were of very fine merit and true type, Messrs. John Dargue, John Robson, and John Robson, jun., taking most of the awards in the two classes.

WELSH MOUNTAIN.

A better or more typical entry of this breed has not been seen at the Royal Show for several years. The two classes were large for the breed, and the average of merit so good that in both all the entries appeared in the award list. Mr. Owen Price and the University College of North Wales, with Messrs. J. M. Dugdale and H. O. Ellis, owned the principal winners in each class.

RYELAND.

The entry made by this breed was a good one, and the high quality of the flesh and general excellence of the fleece gain for this breed many admirers from beyond the seas.

Mr. W. T. Barney was to the front in each of the classes with several excellent sheep, all of which were particularly good in respect to both

CHAMPION ANIMALS at the ROYAL SHOW, DERBY.

1. Capt. E. L. A. Heygate's Hereford Bull, Cameronian. 2. H.M. the King's Devon Cow, Ruby. 3. Mr. H. Dudding's Lincoln Shearling Ram. 4. Mr. K. M. Clark's Suffolk Stallion, Sudbourne Conqueror. 5. Messrs Sanders Spencer and Sons' Middle White Sow, Holywell Victoria Duchess. 6. Lord Rothschild's Jersey Bull, Royal Ensign.

fleece and flesh. Mr. W. H. Davies and Mr. F. E. Gough were the other successful competitors.

THE MINOR BREEDS.

The Dartmoor, the Exmoor, and the lunks were represented by small but typical entries, whilst the Cheviots only came under this heading by reason of the fact that there was not, and has not been for many years any real competition in them, the Messrs. Robson generally sharing the honours. This year, however, Mr. Jacob Robson is first in both classes, and Mr. John Robson in the Herdwicks, a very picturesque breed, was represented by a capital entry of high merit but small in number.

PIGS.

This year the pig section was undoubtedly one of the most attractive that has been seen in a Royal showyard for many years. Not only were

the entries numerous, but they were more even and the awards gave less cause for acrimonious complaints. It was not a triumph for one section at the expense of the other. There is evidently a very growing rivalry between the Berkshires and the Large Blacks, whereas it is unquestionable that the Large Whites have seen the Small Whites out, and have anticipation of attaining the same end with the Middle Whites, but that end is not yet. Anyway, place of pre-eminence is given in the catalogue to the Large Whites, and a grand lot they were.

LARGE WHITES.

The old boar class contained over a dozen entries, and neither of these should have been left at home. Here it was a virtual triumph for Sir Gilbert Greenall. He was first with that lengthy yet compact pig, Walton Tartar, bred by Mr. William Hall in Derbyshire, a boar that should

leave an impress on any herd. Sir Gilbert was reserved with Walton King 4th, a heavily fleshed, nice quality boar, which made it first favourite at Swindon; the he was also from Walton Hall, it being Walton King 5th. Sir Gilbert Greenall would not have much anxiety unless Mr. Sanders Spencer happened to be hanging around, and this time he was placed second with Holywell Happy, a very smart pig that has known what it is to be premier favourite, as it slept beneath the champion rosette at Nottingham last year. Mr. C. J. Tong's Shard Roger, which was third, would be a rare addition to any farmer's herd.

If the old boars displayed maturity the young boars excelled them in smartness; these were shown in pens of three and made a total of thirty-three. Once again Mr. R. Daybell was in the lead; he has a marvellous manner all his own, in bringing forward his youngsters, and he

best Hereford bull.—Captain E. L. A. Poygate, Buckland, Leominster (Camroftan); r. S. Robinson, Lythams, Kingston (Herfordshire Major).

Champion prize of the Hereford and Bos Society.—L. Moore, Brampton Bitch, Herefordshire (Brampton Agnes 33rd); r. A. E. Hughes, Wintere, Leominster (Irvington Plum).

Champion prize of the Devon Cattle Breeders' Society for the best Devon cow or heifer.—His Majesty, Windsor Royal Farms (Ruby); r. T. S. Morgan, Whimble, Exeter (Whimble Beauty).

Silver medal of the Sussex Herd Book Society for the best Sussex bull.—R. M. Greaves, Wain, Portsmouth (Wain Major); r. E. E. Dray, Rudgwick, Sussex (Lord of Drungewick 5th).

Silver medal of the Sussex Herd Book Society for the best Sussex cow or heifer.—Earl Winterton, Shillingham Park, Petworth, Sussex (Slaughter 5th); r. P. Sallard, Crawley, Sussex (Bewbush Evelyn).

Champion prize of the Welsh Black Cattle Society for the best Welsh bull.—R. M. Greaves, Wain, Portsmouth (Wain Emperor); r. Davies, Thomas, and Howells, St. Clears, Carmarthenshire (Duke of Connaught).

Champion prize for the best Red Polled bull.—H. Daplyn, Hindingham, Walsingham (Dayson 214th); r. Sir Richard Cooper, Bart., Ashlyns, Berkmansham (Ashlyns Major).

Champion prize for the best Red Polled cow or heifer.—Sir Walter Corbet, Bart., Acton Reynold, Shrewsbury (Tiff 1th);

r. Lord Anheist of Blackney, Stoke Ferry, Norfolk (Waxlight 2nd).

Gold medal of the Polled Cattle Society for the best Aberdeen-Angus animal.—G. S. Grant, Auchrochan, Glenlivet (Prince Forest); r. E. Coey, Drough, Larne (Lam of Ardargie).

Gold medal of the English Aberdeen-Angus Cattle Association for the best animal of the opposite sex to that of the animal awarded the medal of the Polled Cattle Society.—W. B. Greenfield, Haynes Park, Bedford (Darling of Haynes 2nd); r. G. S. Grant (Fridge of Spey 4th).

Champion prize of the Galloway Cattle Society for the best Galloway bull.—J. Cunningham, Tarbreoch, Dalbeattie (Chancellor of Ballyhole); r. J. Wilson, Tundergarth Mains, Lockbie (Warrior of Whitehill).

Champion prize of the Galloway Cattle Society for the best Galloway cow or heifer.—J. Cunningham (Dois of Kilquhanity 1st); r. Cunningham (Nitty 32nd of Tarbreoch).

Champion Cup of the English Guernsey Cattle Society for the best Guernsey cow or heifer.—F. Hargreaves, Gaudingay, Cambridge (Merton Beauty of the Village); r. H. M. Ouzine, Castel, Guernsey (Lady Robert 3rd).

Challenge Cup of the English Kerry and Dexter Cattle Society for the best Kerry animal.—The Duchess of Newcastle, Clumber Worksop (Hardwick Flora); r. Lady Greenall, Walton Hall, Warrington (Walton Rajah).

Challenge Cup of the English Kerry and Dexter Cattle Society for the best Dexter animal.—E. M. Gibbs, Barrow Court, near Birsted (Brookhampton Count); r. the Duchess of Devonshire, Compton Place, Eastbourne (Compton Daphne).

SHEEP.
Gold medal of the Southdown Sheep Society for the best

Southdown ram.—His Majesty, r. C. R. W. Adams, Babraham Hall, Cambridge.
Silver medal of the Southdown Sheep Society for the best pen of ewes or ewe lambs.—The Duke of Devonshire, r. His Majesty.

Champion prize of the Hampshire Down Sheep Breeders' Association for the best pen of Hampshire down ram lambs or ewe lambs.—James Flower, Clonsilla, Dublin; r. Henry Coker, Manor House, Winterbourne Stoke, Salisbury.

Champion medal of the Lincoln Long wool Sheep Breeders' Association for the best Lincoln ram.—Henry Dooling, Ribby Grove, Great Grimby; r. Charles E. Howard, Necton Ris, Lincoln.

Champion prize of the Dorset Horn Sheep Breeders' Association for the best pen of ram lambs, shivering ewes, or ewe lambs.—James Attil, Waytes Court, Bridgwater; r. E. W. Wight; r. Wm. Reginald Flower, West Stafford, Dorchester.

PIGS.
Champion gold medal of the National Pig Breeders' Association for the best Large White Boar or Sow.—Sir Gilbert Greenall, Bart., Walton Hall, Warrington (Linsley 4th); r. R. M. Knowles, Colston Bassett Hall, Bingham, Notts (Colston Lass 13th).

Champion gold medal of the National Pig Breeders' Association for the best Middle White Boar or Sow.—S. Spencer and Son, Holwell Manor, St. Ives, Hunts (Holwell Victoria Duchess); r. S. Spencer and Son (Holwell Royal Count).

Champion gold medal of the National Pig Breeders' Association for the best Tamworth boar or sow.—R. Abbott, Knowle, Warwickshire (Chedderton Buzzard); r. R. Abbott (Tom Hill Mates).

Champion prize of the Large Black Pig Society for the best Large Black Boar.—G. F. Marriener, Thorpe Hall, Haslington, Woodbridge (Haslington Black King 4th); r. T. Warrin, St. Mabyn, Cornwall.

Silver Challenge Cup of the Large Black Pig Society for the best sow.—G. F. Marriener (Haslington Long Lady); r. J. Warrin, St. Mabyn (Trevelyan Hopeful).

Suction Gas Plant Trials.

In the section devoted to the trials of suction gas plants the judges awarded two medals, one gold and one silver. Details are not yet published as to the efficiency of the engines, but it is believed they are quite satisfactory. Taking the entire show, there are no less than twenty suction gas plants on the ground, fourteen in the competitions and six not competing. Those competing range from 15 to 20 h.p., and are priced at from £180 to £280. Those not for competition range from 6 to 65 h.p., and in cost from £98 10s. up to £359.

The gold medal goes to the 20-horse h.p. National Suction Gas Plant, catalogued at £233, shown by the National Gas Engine Company, Limited, of Ashton-under-Lyne. One important feature of this plant is that it has been designed on the heat regenerative principle. All the air used for making the gas is heated by the waste heat from the body of the gas generator; the super-heated steam required for heating the gas is produced entirely by waste heat; while the fuel which is to be converted into gas is heated in a similar manner before it reaches the combustion zone. The engine governs the rate of producing the gas to suit the varying consumption and load. No surplus gas can therefore be made, and as there is a partial vacuum in all parts of the plant and in the piping while the engine is working, there cannot be any escape or waste of gas either, as in all the plants the making of the gas is through the suction caused by the outstroke of the piston, which draws in air through the fire in the gas generator, but before starting the engine this air through the fire in the generator is supplied by a fan or blower. The other points of construction of this plant are fairly common to all gas suction plants, but for the special excellence of the various parts in these trials we must wait until the judges' report is available.

The silver medal was awarded to the smaller of the two plants (15-brake h.p.) shown by Messrs. Crossley Brothers, Openshaw, Manchester. This is the plant having a combined coke and sawdust scrubber as its special feature. This is rather a new departure in suction gas plant practice, the general practice having been hitherto to put in only coke scrubbers, but we understand that the firm has proved the new method to be very successful in practical work, the gas distributed to the engine being very clean. When coke scrubbers only have been used, it was found in some cases that trouble was caused by dust finding its way in the gas into the cylinder of the engine, this causing rapid deterioration in the working parts. The special feature of the silver medal plant is to prevent this.

The General Meeting.

The general meeting of governors and members of the society was held in a large tent near the members' pavilion at eleven on Thursday, and was well attended. Mr. F. S. W. Cornwallis, president of the society, who was in the chair first referred to the inestimable value of the King's support of the society. The council, he said, also acknowledged with great gratitude the efforts of the Mayor and the citizens to give the society a handsome reception. That welcome had been given wholeheartedly, and although the time at their disposal, after the society accepted the invitation, was none too long, yet, thanks to the energy displayed on the one hand by the local committee, and on the other hand by Sir Gilbert Greenall and the staff, they had in the showyard a collection of exhibits well staged and in every way worthy of the society.

Votes of thanks to the Mayor and Corporation

for their cordial reception were moved by the Earl of Coventry, and seconded by Mr. Ailwyn Fellows, and to the Local Committee by Lord Middleton, and unanimously adopted.

The various railway companies were also thanked for the facilities they have afforded. But on this subject Mr. James Watt urged that the companies should extend to the public all round the same privileges as they afforded to the members of the society. He thought they should do as in Scotland, and let the public travel at a fare and a quarter.

Mr. W. P. J. Allsbrook suggested that the council should revive the custom of giving prizes for the best cultivated farm. Mr. Tinniswood (Carlisle) thought the society missed its most important mission in not giving such prizes, as it was largely organised with that object. They gave a lot of money to the professional breeders of stock, but nothing to those who remained at home and made the farms profitable for the landlords and for themselves.

The president said these matters would be carefully considered by the council.

A vote of thanks to the president was also adopted, and in reply Mr. Cornwallis said he hoped the remainder of his term of office might be free from a great deal of that anxiety which hung over the earlier part. Changes of considerable importance had been effected. Those changes necessarily entailed an amount of work on all connected with the society, and especially upon the staff, necessarily reduced as it was, owing to their financial position. But, whatever economies they might effect, they would never consider that the society was established on a firm and lasting basis until it had reached a considerably larger membership.

An Invitation from Lincoln for 1907.

A meeting, convened by the Mayor of Lincoln, in support of the proposed invitation of the Corporation to the Royal Agricultural Society to hold their 1907 show in the city, was held at Lincoln on June 22. The Mayor (Councillor A. C. Newsum) presided, and there was a large and representative attendance. The Mayor said the Corporation received privately an intimation through the medium of Mr. C. W. Tindall, who was unable to be present that day, that the Royal Agricultural Society wished to hold their show next year in the Eastern Counties, and that they would be willing to favourably consider an invitation from Lincoln. That being so, he (the Mayor) called the Council together on Tuesday night. After the Deputy Town Clerk (Mr. Page) had read the resolution of the Corporation, the Mayor said the financial question was, of course, of almost paramount importance, but, as far as they had been able to go, the responses had been so extremely favourable that they felt they need anticipate no difficulty.

Mr. A. S. Leslie-Melville moved a resolution cordially approving the action of the Corporation in inviting the Royal Agricultural Society to hold their 1907 show in Lincoln, and pledging the meeting, if the invitation was accepted, to do all in its power to make the show successful. He said he well remembered the Royal Society holding its show in Lincoln over fifty years ago, and what a cordial reception the society then had, not only from the city but from the county. Since then the county and the city had had very trying times, and perhaps he might add that the Royal Society had also had a very trying time. He hoped that in spite of that they would come to Lincoln, and that if they came they would have as hearty a reception as they had fifty years ago.

Mr. C. Scorer, in seconding the proposition, said he was satisfied it would tend to promote the agricultural prosperity of that the premier agricultural county, and the commercial prosperity of the city. Nothing but good could come of the visit of the Royal Society to Lincoln. He did not think there would be any difficulty in raising the sum required.

Sir John Thorold said that not only would he give the project his own individual support, but as one very largely connected with the Lincolnshire Agricultural Society, he had no doubt the society would be most happy to join the Royal Society in their show at Lincoln. They were in a measure pledged to Sleaford to hold the Lincolnshire show in that town next year, but if Sleaford would allow them to postpone their visit for a year, he had no doubt the society would be glad to join the Royal on the same basis as Derby was doing this year. He was under the impression that Ipswich had been suggested for next year's Royal Show, but if it came to Lincoln he was sure that everybody in the county would give it most hearty support.

The mayor said they understood that an invitation had been sent from Ipswich for the Royal Show to be held there next year, but that preference would be given to Lincoln if an invitation was forthcoming from that city.

Colonel Mason said he had heard that morning that Ipswich was quite satisfied that the Royal Show was going there, and had raised the money and obtained a site.

The resolution was carried unanimously, and the mayor said in the event of the invitation being accepted he would call a further meeting.

Exhibitors' Stands at the Royal Show.

SEEDS.

Messrs. Webb and Sons, Worsley, Stourbridge (Stand No. 2), had an exhibit which was in every way worthy of their position amongst seed growers. All descriptions of seeds, roots, grasses, cereals, &c., were represented, as well as chemical fertilisers—the latter being an important branch of this firm's business. The great services rendered to agriculture by this firm are exemplified in the new wheats, barleys, and oats which they have raised and introduced, whereby it is possible to grow much heavier crops of superior quality than hitherto. Welsh grasses, clovers, and other forage plants for permanent pasture, alternate husbandry, &c., were illustrated by dried specimens, together with their seeds showing the proportions of each for the respective purposes and soils. It is not too much to say that there is scarcely an open root competition in the country where Webb's mangolds and swedes have not been to the front in carrying off the leading honours, and the grand specimens on this stand were from the same crops as those that won premier awards at the principal shows in 1905. Webb's vegetable and flower seeds were also represented by a magnificent exhibit.

Messrs. Dickson's, Ltd., Chester (Stand No. 3), had on view a fine collection of grass and clover seeds for permanent and temporary pasture and rotation cropping; dried mounted specimens of the best grasses for agricultural purposes; seeds of weeds and injurious plants found in uncleaned samples of grasses, clovers, &c.; and a case of specimens practically illustrating the effectiveness of the firm's special cleaning machinery and selective process as applied to their guaranteed seeds; whilst there was also a collection of herbaceous flowers and plants from their nurseries.

Messrs. Harrison and Sons, 33, Market Place, Leicester (Stand No. 4), had a choice selection of their vegetables, including early market carrots, John Harrison beans, Victoria cabbage, &c., also specimens of their Normanton globe mangrel crop, 1905, Nailstone swede crop, 1905, choice new potatoes, natural grasses, dried, and selected clovers.

Messrs. Sutton and Sons, of Reading (Stand No. 158), were to be found immediately on the right of the main entrance to the show ground, and, as usual, they had on view a valuable collection of grasses, roots, potatoes, flowers, vegetables, and other subjects interesting to the agriculturist and horticulturist, as well as to the casual sightseer. Sutton's pedigree stocks of agricultural seeds were represented by some capital roots, as sound as when drawn from the fields last autumn, and they afforded convincing evidence of the robust constitution of the stocks Messrs. Sutton have selected and introduced. For the introduction of many of the best potatoes now grown we are indebted to Messrs. Sutton, and some of the leading sorts were shown, including the famous Sutton's Wonder. A very fine display of flowers from Messrs. Sutton's seed houses illustrated another department of this great seed business, and formed a brilliant centre piece to an altogether interesting stand.

Messrs. Dickson and Robinson, Cathedral Street, Manchester (Stand No. 323). Specimens of natural grasses, growing and dried, adapted for permanent and temporary pastures, &c.; mangolds and swedes; collection of agricultural seeds for present sowing, and specimens of specially selected vegetables and flowers, and potatoes of approved varieties; also specimens of conifers and shrubs. An interesting stand both to agriculturists and horticulturists.

Messrs. Gartons, Ltd., the well-known Warrington firm of seed-growers and experts (Stand No. 324), had a very interesting and artistic display, which included samples of all their new breeds of oats, barleys, and wheats, amongst them being a distinct new white oat named Universal, which they purpose introducing for 1907. The parents of this are the well-known breeds of Abundance and Goldfinder, the cross of which has resulted in a most valuable breed, which may be sown as early as February, and whilst it possesses the high-class qualities of the Guinea and Abundance, it also inherits the valuable quality of the Goldfinder straw. To show the great amount of trouble which Messrs. Gartons go to in the way of cleaning and purifying all the seeds they send out, a case composed of weed seeds as well as weathered and immature seeds which have been extracted from bulks of clovers, grasses, &c., was also exhibited.

Messrs. Dickson, Brown, and Tait, 43 and 45, Corporation Street, Manchester (Stand No. 325). Here we came again to the pasture side of the farm, for this firm's exhibits consisted of a collection of dried specimens of natural grasses and clovers; samples of pure natural grasses and

clovers, seed corn, &c.; and specimens of growing grasses used for laying down land to permanent pasture. Also a variety of mangolds, swedes, potatoes, &c.

Messrs. W. Barron and Son, of Elvaston Nurseries, Borrowash, had two stands, Nos. 348 and 421. At the former the exhibits consisted chiefly of plans, sketches, &c., of work they have carried out, and in this connection we may state that they were responsible for the decoration of the Royal Pavilion. Departing from the ordinary stereotyped style of planting summer bedding stuff they showed what effect in colour can be obtained from hardy evergreens and hardwood foliage plants (most notably the golden cypress, variegated privet, golden tree ivies, and Japanese maples). The common hop as a decorative plant proved its efficiency on the verandah pillars. The same firm also converted the pond opposite the horse ring, which was full of the coarsest and rankest weeds, to a charming water garden, which won general admiration from all who saw it.

VETERINARY FOODS, MEDICINES, &c.

Messrs. W. Cooper and Nephew, Chemical Works, Berkhamstead, Herts, divided their exhibits into two stands (Nos. 331 and 381). At the former they showed their sheep dipping baths and swim baths, and hand baths with drainer, whilst at No. 381 were displayed for exhibition purposes only, models of their well-known dipping baths and a research laboratory exhibit. Here, too, were to be seen samples of their sheep dipping powder, fluid sheep dip, fluid disinfectant, sheep marking liquid, and weedicide, a weed killer.

Messrs. Thomas Pettifer and Co., Eydun, Banbury (Stand No. 334).—Here were shown numerous samples of herbal tonic mixture, white liniment, green oils, drenches, embrocation, colic or gripe mixture, condition powders, halt, ringworm, and mange or scab dressings, physic balls, cough balls, &c., as well as stock keepers' and horsekeepers' medicine chests—in fact, a veritable veterinary medicine shop.

Messrs. F. Cupiss, Ltd., The Wilderness, Diss, Norfolk, had at Stand 335 a comprehensive display of the well-known Cupiss' Constitution Balls for horses, neat cattle, sheep; cough balls for horses, physic balls, diuretic balls, and balling guns.

Waterloo Mills Cake and Warehousing Company, Ltd., Hull, had Stand No. 346, which was occupied with specimens of the popular Waterloo feeding cakes, linseed cakes with a guaranteed purity of over 97 per cent., and under $\frac{1}{2}$ per cent. of sand; and Waterloo pure cottonseed cakes made from Egyptian seed only. Their linseed and cotton cakes are sold on the warranty required by the R.H.S.E.

Messrs. Ayre Brothers, The Avenue, Hull (Stand No. 347), also showed the celebrated Waterloo feeding cakes, and, in addition, samples of locust meals, lamb food, calf meal, concentrated fenagreek; feeding linseed, whole or crushed; Loker meal, a special preparation for feeding calves, pigs, and young stock; Fatanox, feeding meal, specially prepared for rapid feeding, and bringing stock to early maturity at a minimum cost; and Maxilac, dairy meal, for producing and increasing the quantity and quality of milk, butter, and cheese, and keeping the cows in good condition at the same time.

Bovine, Ltd., 14, Devonshire Square, London, E.C., were represented at Stand No. 349 by a large assortment of Bovine horse and cattle food, Saccharum Lactis food for calves, Sucroch, the flesh-forming food for horses and cattle, and an assortment of pig and poultry foods, dog and puppy biscuits, horse drinks, embrocation, and harness composition.

Messrs. Day, Son, and Hewitt, 22, Dorset Street, Baker Street, W. (Stand No. 331) had their usual large display of medicines for horses, cattle, sheep, and pigs, together with specimens of the Original medicine-chests for stock-keepers and horse-keepers, and the Original calving and lambing chests, all valuable aids at times when stock are ailing.

Spratts' Patent, Ltd., 24 and 25, Fenchurch Street, E.C. (Stand No. 354). Spratts' dog biscuits have become practically synonymous terms, but the firm do not deal only in their celebrated biscuits, but also in poultry and game meals. They also manufacture incubators of tested worth, with egg receptacles, and, of course, provide one for each fester. Then, again, they have the champion foster mother's individual brooder for chickens for use in rearing house, and a patent crumbing machine for poultry breeders. All these appliances and food, as well as a collection of sundry small appliances used in the rearing of poultry, chickens, game, &c., were shown at their stand.

Messrs. R. Silcock and Sons, Stanley Hall, Union Street, Liverpool (Stand No. 360).—A display of first-class fattening cake, containing 11 per cent. of oil; rearing cake for young animals; dairy cakes to cause a large flow of milk; Universal cake for grass-feeding; calf meals, and decorated and undercoated cotton cakes.

DAIRY APPLIANCES.

Messrs. Burneister and Wain, Ltd., 105, Middle Abbey Street, Dublin (Stand No. 203),—Dania and Perfect cream separators, Perfect churns, milk testers, conical coolers, and butter workers. Also a new implement, consisting of a combined cooler, strainer, and milking pail for obtaining practically new milk.

Messrs. Watson, Laidlaw, and Company, 98, Dundas Street, Glasgow (Stand 205), showed nothing but cream separators, but there were no fewer than twenty-four on view ranging in capacity from ten to 150 gallons, and for both hand and steam, &c., power. The varieties shown are known as the Princess and Princess Victoria.

Messrs. Thomas Bradford and Co. Crescent Iron Works, Salford, and 140 to 142, High Holborn, London, W.C. (Stand No. 250), showed churns of various sizes and varieties, butter workers and boxes, assortment of milk pails; in fact, dairy utensils and appliances of every description. Also a large display of washing and wringing machines, either separate or combined, and other utensils required in the laundry.

Mr. T. Grayson, 16 and 17, Queen Street, Derby (Stand No. 264) had a large assortment of milk refrigerators, milk pails, and other dairy appliances, and also a new implement, namely, the Eclipse milk filter, to fit railway churns, of which we give an illustration. It costs only from 2s. 6d.

to 6s., and as there are no costly replacements it is cheap, whilst another important point is that it is most easy to clean. The milk passes from the inner bowl through the brass gauge A, and then rising passes out through the finer gauge B, the sediment settling in the recess provided by the inverted bottom C. By this process every particle of sediment is taken out of the milk.

CHAFF CUTTERS, CORN CRUSHERS, &c.

Mr. Robert Maynard, Whittlesford Works, near Cambridge (Stand No. 51), showed amongst other things a chaff cutter, a patent portable riddling and bagging machine with five knives, patent drum safety feeder and carrier, and also fitted with the new patent riddle compensator. This compensator is a simple mechanism attached to the machine, and is so constructed that the oscillatory force of the riddle is quite counterbalanced. On all practical minds this invention will appear with great force, as it quite does away with the shaking of the machine when at work. A partially similar

THE MAYNARD PATENT RIDDLE COMPENSATOR.

result has been obtained before with double riddles, the objection to which being the wear and tear of two riddles, instead of one—complication and expense. The working parts of this new compensator are so simple that it can be easily attached to a Maynard chaff cutter at the small cost of £2 10s. By its use one has a machine standing quite steady when at work, and a smooth-running riddle, consequently less wear.

The Maldon Iron Works Company, Ltd., Maldon, Essex (Stand No. 68), had three chaff cutters on show, two of them being the Long Look'd For, one being for hand power and the other for steam, &c. The latter was fitted with patent folding cover to flywheel safety feeding apparatus and patented forward, stop and reverse

motions. Other exhibits on the stand included oil-cake mills, graters and pulpers, and the Maldon horse rakes.

Messrs. Richmond and Chandler, Ltd., Globe Works, Manchester (Stand No. 124), had a very large display of chaff cutters, including the Climax, which has a patent safety feeder and lift off fly wheel cover. Corn crushers, oat, malt, and seed bruising mills, as well as grinding mills of known sizes, were also shown, whilst amongst other features of this interesting stand were numerous elevators, and what attracted a good deal of attention, the Lawrence Kennedy milking machine.

Messrs. Bamford and Sons, Leighton Ironworks, Uttoxeter (Stand No. 163), last year won in the new implement classes with their improved chaff-cutter, and naturally these machines formed a feature of their stand again this year. They did not, however, secure all the attention, for the well-known and popular Royal mowers and the Lion horse-rakes proved very attractive, as did also the fine collection of grinding-mills, cake-mills, and root cleaners and graters.

Messrs. Samuel Corbett and Son, Park Street Works, Wellington, Shropshire, occupied Stand No. 245, and here displayed a large assortment of patent grinding-mills, these including the X. L. 3 which won a first prize at the Plymouth Royal Show. It is for grinding all kinds of grain to any sample, also chemical, vegetable, and mineral substances. A patent crusher for crushing, knibbling, and bruising by hand, and some horse hoes also figured on the stand.

HARVESTING MACHINES, PLOUGHS, HARROWS, &c.

Mr. E. A. Foley, Bourne, Lincolnshire, was represented at Stand No. 22 a with a straw elevator and stacker and sack lifters, all of up-to-date patterns.

Messrs. Stanford and Company, Colchester (Stand No. 38), had also only two exhibits, but both attracted considerable attention. They were (1) a patent seed thrasher and huller for all kinds of seeds on a large scale, with sieves for removing plantain, docks, &c., fitted with chaff sifting and bagging apparatus, and (2) a patent millet machine for thrashing, dressing, and sifting up millet, linseed, &c., without bruising the straw.

Messrs. Barford and Perkins, Queen Street Iron Works, Peterborough (Stand No. 50), entered as a new implement a motor-roller, with new patent water ballast, for use on grass and for estate work, driven by paraffin motor; and also another new implement in the form of a rake and swather, being a new pattern Tedrake for 1906, and fitted with patented attachments for converting the machine into a swath turner so as to turn single rows when required. The remainder of their comprehensive stand was taken up with hay-rakes and presses, mills of various descriptions and purposes, oil-cake breakers, boilers and steamers for rapid cooking by steam, lawn-mowers and reapers, and a four-furrow balance steam plough and digger, with adjustable beams, so that any width can be ploughed from 9 in. to 12 in., and any depth from 4 in. to 10 in.

Messrs. J. and F. Howard, Britannia Iron Works, Bedford (Stand No. 52), made a feature of

pooses, drays or lorries for market gardeners, and floats for milk and general purposes.

Messrs. Robert Boby, Ltd., St. Andrew's Works, Bury St. Edmunds, are well known, and many of their friends seized the opportunity of paying them a visit at Stand No. 76. Here they showed specimens of their double-action hay makers fitted with either wood or iron wheels, also a dressing machine, a barley dresser, multi-polishers and saws, cut screen and clipper, and a collection of hand hoists, line screws, water pots, &c.

The Martin's Cultivator Company, Lincolnshire Iron Works, Stamford, had Stand No. 89, and when it is said that they had a very fine representation of their manufactures, farmers will know well enough the nature of their exhibits. Mention may, however, be made of their fine show of cultivators of the pattern that won a first prize at the last Royal Show at York, and also of their new implement—a side delivery rake, very light in draught, and stated to be most effective in work.

The Osborne Piano Co., Ltd., 115, Southwark Street, London, S.E. (Stand No. 86), had naturally a good show of the Osborne machines, manufactured in the U.S.A. These consisted of binders, mowers, tedders, rakes, harrows, cultivators, horse hoes, &c. They also showed the Piano harvesters and binders, mowers, horse-rakes, and grinders for the knives. All the machines were of the latest type, and made a most attractive display.

The Frost and Wool Co., Ltd., 24, Southwark Bridge Road, London, S.E. (Stand 88).—Here, too, mowers and binders from abroad were the feature, for all the implements on this stand came from Smith's factories at Ontario, Canada. The Tiger horse-rake, Ideal cultivator, and Simplex horse-hoes were also on view.

Messrs. Samuelson and Co. Ltd., Britannia Works, Banbury (Stand No. 108), exhibited specimens of the Omnium, Europa and Handy reapers, and grass mowers of various sizes to suit different requirements. The Europa reaper, it may be mentioned, has four controllable and two sickles, and is a light but strong machine, being mainly built of malleable iron and steel.

Messrs. F. C. Southwell and Co., 75, Southwark Street, S.E., at Stand No. 146, showed a new implement, this being a harrow manufactured for them in the U.S.A. They also had about half-a-dozen Canadian-manufactured ploughs, these including the Kid Kangaroo, Maple Leaf, and Shamrock double-furrow ploughs, also some single-furrows, and the Kid Kangaroo three-furrow riding plough suitable for three or more horses, or for motor. Other exhibits on this stand were a new boiler for motor lorries, vans, &c., and oil and petrol engines; also a collection of the stock of poultry food, feeding stuffs, and veterinary medicines manufactured by the International Stock Food Company, Toronto Canada. This firm's stock food is rapidly making a name for itself in this country, and has become known as the "Six feeds for a penny" food.

Messrs. Ransomes, Sims and Jefferies, Ltd., Orwell Works, Ipswich, had two stands, Nos. 160 and 336. At the former they showed an 8-horsepower nominal compound road locomotive, mounted on springs, and specially designed for hauling heavy loads on all kinds of roads. Also a 6-N.H.P. compound traction engine, simple in design and construction, very compact, easily handled, and specially adapted for thrashing, sawing, and general farm work. Two finishing thrashing machines, both 54 inches wide, but differing in strength of construction; horse rakes, including their Star rake, which has all the latest improvements; Through Axle rakes; a new pattern self-acting and manual rake; Jarmine's Patent Swath Turner; and a small holdings cultivator, with seven spring tines fixed in two rows on one solid adjustable frame were also included on the stand, whilst at Stand No. 336 they had a large selection of their well-known lawn mowers, in various patterns to suit every requirement.

Messrs. James Coultas, Perseverance Ironworks, Grantham (Stand No. 161), had a large assortment of drills suitable for corn, turnip, mangold, and artificial manures, horse-hoes, and manure distributors, including the Jarmine Royal prize-winner, but the attraction of the stand was undoubtedly the New implement—namely, a broadcast manure distributor with improved clutch device. This was entered for one of the society's prizes.

Messrs. E. and H. Roberts, Ltd., Deanshanger Iron Works, Stony Stratford, Bucks (Stand No. 164), had a good selection of ploughs and horse hoes, and amongst the latter was the James Patent, which has a mechanical back action. It was entered as a new implement. The Premier elevator or stacker and Hercules wind-pumping engine were also shown here.

Messrs. J. Rickerby, of the Crown Implement Works, 37, Botchergate, Carlisle, exhibited at Stand No. 226 no fewer than four new implements as follows:—(1) A seed sower, brush harrow, and land roller combined. It does three operations in the time occupied by one, and is fitted with levels to sower and harrow for "in-and-out" action, at

the will of the operator, and the roller answers as the markers preventing overlapping or missing with seeds. (2) Root-cutting attachment for cutting and spreading roots for live stock in grass fields. It is suspended from any ordinary farm cart end, and is driven automatically off a sprocket fixed by self-centring device to cart wheel nave by chain band. (3) An improved turnip cutter (Gardner's Patent). Fitted with flanges on ends of barrel to prevent choking or bridging over, and reduces risk of accidents to operator's fingers to a minimum, not having occasion to release the turnips in hopper by hand. (4) The Crown rear cut mower, which is fitted with patent double finger, enabling it to cut 1½ in. lower, having two fingers to the usual 3 in. knife section, and the double fingers are fixed to the finger-bar as usual, with only one bolt.

Messrs. P. J. Parmer and Co., Station Works, Tisbury, Wilts, at Stand No. 237, showed patent two-row turnip thinners for regulating two rows of turnips from 7 in. to 15 in. It gives a thin even cut and has a spring lift over thin places, for ridge or flat work. It is also suitable for maize. Harrows and rakes a patent telescopic rake, and hay and corn rick ventilators complete the stand.

Messrs. J. Shores and Co., Trent Iron Works, Oswestry Ferry, Doncaster, were represented at Stand No. 279 by an assortment of potato diggers and sorters, cultivators, ploughs, and grubbers. They also showed a No. 1 Clipper horse hoe, fitted with reversible points, steel shares, sliding blocks for holding tines, lever wheel, and expanding arrangements, and Gorse's patent shares for early hoeing.

Messrs. L. R. Knapp and Co., Thames Valley Iron Works, Farringdon, Berks (Stand No. 287), showed an interesting collection of corn and seed drills; a Monarch drill, cultivator, and broadcast seeding machine combined; and horse hoes of various descriptions.

Mr. T. Hunter and Sons, Alloway Road, Maybole, Ayrshire (Stand No. 298). Improved double mould or drill ploughs, harrows, Hunter patent hoes, drill cultivators, land roller, and improved disc delivery double row drills for turnip and mangold.

Mr. Oliver Rix, Eagle Iron Works, Souththorpe, Fakenham (Stand No. 392), had only two exhibits, but they were interesting. They consisted of the well-known King elevator or stacker, combined with horse works for hay and corn, and an improved iron hurdle, with all-round ends, for folding sheep.

ENGINES.

Messrs. Davey, Paxman and Co., Ltd., Standard Iron Works, Colchester, had two stands, Nos. 8 and 26. At the former they showed a 15 h.p. gas engine with electric ignition and Paxman's patent timing apparatus; also suction gas plant for same, and three cooling tanks, £210. This was entered for competition in the trials of suction gas plants; whilst at Stand 120 they exhibited six and seven horse-power traction engines, some portable engines and horizontal gas engines.

The Campbell Gas Engine Co., Ltd., Halifax, Works (Stand Nos. 10 and 49). The feature of this stand was the two gas engines which took part in the trials of suction gas plants. They were the Campbell 18 h.p. gas engine with lift and miss governor with constant compression and suction gas plant; and the Campbell 20 h.p., with variable cut off. The governor and gear of these reduce the volume of gas and air to suit the load, the engine working with variable compression and suction gas plant. Other kinds of their famous Campbell and Samson oil engines completed their exhibits.

Messrs. E. S. Hindley and Sons, Bourton, Dorset, had Stand No. 13, where they showed the Hindley gas engine, 20 h.p., (two-cylinder vertical), with magneto ignition and variable timing gear, and 20 h.p. suction gas plant. This was entered for competition in the trials of gas suction plant. This firm also had Stand No. 48, and here were to be seen steam engines of various sizes, pumps, hoisting engine, steam lorry, saw benches, &c.

Messrs. Fielding and Platt, Ltd., Atlas Iron Works, Gloucester, were also competitors in the trials of gas suction plant, and at Stand No. 16 they exhibited the gas engine they entered in competition. This was a Field 20 h.p., with electric ignition, and 20 h.p. suction gas plant. Alongside of this was shown a 12½ h.p. stationary oil engine.

Messrs. Cundall, Sons, and Co., Ltd., Airedale Ironworks, Shipley, Yorks, occupied Stand No. 18, and here showed a 27 h.p. gas engine and suction gas plant and two of their patent oil engines, one being of eight and the other four h.p.

Messrs. W. H. Wilcox and Co., Ltd., 23, 32, 34, and 36, Southwark Street, London, S.E. (Stand No. 95) showed practically everything required by engineers in the way of repairs: there were lubricating oils, leather belting, packings, and jointings of every description, asbestos, engine and boiler fittings, and mountings, lathes, vices, spanners, &c.

(Other Stands are unavoidably left over).

POULTRY.

(Continued from page 677).

The Wyandottes.

Partridge Wyandottes.

Then there are those who go in for good class birds to breed a few for sale at good prices and to exhibit at small shows, as well as those who are true fanciers and who do not spare any expense to get the best that are obtainable so that they can compete at the large shows and take their share of the chances of selling birds at high prices.

During the present season quite a number of good Partridge Wyandottes have changed hands at high prices. One breeder sold a pullet for 15 guineas, and another for £30, so that it will be seen that it pays to get good birds of a breed for which there is a demand. We know several successful poultry keepers and exhibitors who have obtained their birds which have been a source of profit to them by purchasing a sitting of good eggs from a reliable breeder.

This is undoubtedly the cheapest way to procure good stock, as breeders can afford to sell eggs from birds worth many pounds each for a reasonable price, and in this way those who wish to purchase good birds but are not prepared to expend the money necessary to secure really typical specimens can secure very good birds for the expenditure of a little money, and they have the pleasure of seeing their young birds grow and develop into the fowls they have been looking forward to possessing.

The Partridge Wyandottes have come to stay, and we consider they well deserve their popularity, as they combine with a very handsome appearance such excellent laying qualities.

The White and Partridge varieties produce larger eggs than any of the other Wyandottes, the complaint having often been made that the drawback of Wyandottes was the smaller size of the eggs produced by them as compared with the size of the birds, but in these two popular varieties this is not as noticeable as in the others.

General Points.

The Wyandottes are the least broody of all the brown-egg-laying breeds, and they have longer periods between wanting to sit, while some of them do not come broody at all. Their eggs are not so large as those of several other breeds, but they lay well in the winter months, when an egg, whether large or small, commands a good price. Eggs which have white shells always look smaller than they really are, while, on the other hand, brown-shelled and tinted eggs look larger, so that Wyandottes are classed as profitable egg producers.

There are many fanciers and poultry keepers who keep Silver and Golden Wyandottes, and would not change their breed on any account, but, as the great army of poultry keepers is always on the increase, there are many who are looking out for breeds suitable for their requirements, and, as pure breeds are in great request on account of their symmetry or form being pleasing to the eye, there is plenty of room for new varieties, which combine beautiful appearance with useful qualities.

There are numbers of people who want to keep fowls in semi-confinement, and are not able to give them a free range on account of the limited space at their command. These generally require birds to lay tinted eggs, and plenty of them. The Partridge Wyandottes are well suited to these on account of the colour of their plumage, which, although beautiful in colouring, does not become soiled by the smoke and dirt frequently found under the conditions mentioned. Wyandottes are active birds, and do not seem so fat internally as fowls of heavier breeds generally do.

SPECIAL TERMS FOR LARGE AREAS.

Midland Notes.

THE thunderstorms of Saturday and Sunday brought, I hear, quite disastrously heavy rains to various Midland districts, oats, for instance, having been badly laid in the Northants and Nottingham, while young fruit suffered severely in orchard and garden. The steady, refreshing downpours of yesterday and to day, however, will do good service to everybody but the haymakers, for the central counties were beginning to look very parched and dry, and the turnips sadly needed a little assistance to help them to grow away from insect enemies. Much or most of the corn is in ear, and it is a subject for congratulation that calm and sunny weather prevailed generally during the critical period of fertilisation.

HAYMAKING is general to-day all over the Midlands, but a recent journey from Warwickshire into Norfolk shows that it is generally a little less forward in the heart of England than one finds it as one travels east. One sees, too, many meadows in the Midland area which have surely stood too long to make the primest hay, and would have been better cut a week ago, before so many of the valuable constituents of the herbage had begun to be deposited in the seed, leaving the green parts stringy and innutritious.

What a change, by the way, has taken place in modern haymaking, and how much less picturesque it is become! A few years ago the fields would have been full at this season of workers with the scythe, rake, and fork; to-day, a rattling mowing machine does all the cutting in an ordinary field, a rotary swath turner on up-to-date farms, or a treading machine of less modern design on others, turns the grass when cut and collects it for the waggon; and even at the stack hand labour is often displaced by the stack elevator. It is well for the farmer that he has been able to adopt mechanical aids in place of the hand power, which might not be available now even if needed. But the fields look very solitary and deserted now compared with what they used to be at this season.

DAIRY farmers in the milk-producing districts of Oxfordshire and Buckinghamshire may be congratulated on the latest enterprise of the L. and N.W. Railway Co., which is putting on two trains, specially constructed for the milk trade for their benefit. A few more of such corridor milk trains with dust-proof, well cooled and ventilated vans are things that other districts could very well do with, and the announcement that these two are shortly to be put into service in the district mentioned reminds one that in this matter of milk, at any rate, the railways have made us some very useful concessions. The big trade in milk which North Stafford does with London is made possible, for instance, by virtue of a special rate, three-farthings per gallon being the price paid for carriage to Birmingham, and only a farthing per gallon more for transit to the metropolis, over a hundred miles further on. As against farmers nearer to London, milk producers in Staffordshire enjoy the advantages of a preferential rate, and by them, at least, it should be counted to the railways for righteousness.

SOME of our cautious and canny friends are already taking steps to protect themselves under the new Land Tenure Bill if it should pass in the form in which it left Committee. Where slag and other lasting manures have been laid down one has seen in several cases small strips left untreated; and on inquiry one finds that has been done not for the purpose of demonstrating the effect of the manure upon the growing crop, but to prove its residual value, if the firm should subsequently change hands. However long a time may have elapsed since the application, the Bill provides that the value of the improvement to the incoming tenant shall be paid for; and it is only by leaving a strip untreated that the actual value to a new owner will be possible to be judged.

June 28, 1906.

A Northern Wool Buying Custom.

The question of giving 14 lb. of wool to the stone came before a special meeting of the Darlington Farmers' Protection Association, held at Darlington the other day, and although the opinion was not altogether unanimous, it was resolved— "That this meeting strongly approves of all wool being sold at 14 lb. to the stone, and no quarter of a pound 'draft' being given; and that this meeting pledges itself to adopt the principle, and individually to support it."

The chairman (Mr. G. Smurthwaite) said that the old custom of giving buyers an extra quarter of a pound was really very unjust, and farmers and sheepbreeders felt that the time had come when they should stop the practice.

CORRESPONDENCE.

Money Instead of Beer.

SIR,—I see in your last week's issue that you mention about giving the men money instead of beer. I have for the last ten years done this, and I can say for a fact that the men to whom I give the money drink a great deal less than those living in the house, and to whom I have to give drink to. I also consider that I get the work done as well, if not better, and with a great deal less grumbling than if I found them with beer.

June 26, 1906.

J. D. W. F.

Nature Study and Other Things.

SIR,—My thanks are due to "Ploughtail" for his courteous reply to my criticisms; but so far as from landing him into lumber street, I am glad the Editor printed what was apparently not intended for publication, and doubly glad that I ventured to criticise, if only for the reason that my letter has drawn, not the badger, but a second of "Ploughtails'" pleasantly-worded contributions.

The Service of the Children.—"Ploughtail" has partly proved his case, but I need hardly remind him that all the children do not live three and a-half miles from school, because perhaps the larger portion are within a quarter of an hour's walk and can run home to dinner. Let us strike a fair average, "Ploughtail," please, and you know in some districts the much-abused education authorities arrange for children living a long distance from school to be taken backwards and forwards by conveyance. We have to pay for it in the rates, I know; but there, it helps the youngsters.

Geese and Buttercups.—This is good, and apparently those good people whose modern views of things have led them to condemn the golden buttercup as being useless, and indeed obnoxious, may evidently rid themselves of the trouble by going in for geese. For my own part, I do not see any strong reasons for signing the death-warrant of the buttercup, which has been with us a fairly long time, and we do not appear to have suffered very much through its presence. Fields infested with buttercups are another matter, and to "Ploughtail" we are indebted for the tip—go in for geese.

The Abuse of the Air.—I don't quite see through that paragraph, so I'll let it alone, or I may be the one to get into lumber street.

I had no intention of inflicting injury on "Ploughtail" when I styled him a farmer. I beg his pardon, and can assure him that when he can find time to describe the process of shearing, killing, and blood drawing which he and his fellow small holders undergo at the hands of officials, no one will read it with greater interest than I.

June 28, 1906.

COUNTRY BUCKIN.

Cheap Food and the Tinned Meat Scandals.

SIR,—"British Beef," at the close of the interesting and straight-to-the-point article, page 696, says that in the national craze for cheap food we have become as much scavengers as the dogs in an Eastern city. I think "British Beef" has missed the point here, because in reality a good deal of the tinned meat which is consumed in such quantity in this country is by no means cheap. On the other hand, it is dear, and the reason why so much of this unwholesome food is consumed is because many people are too idle to cook, and others either have not the time or the ability to do it.

In scores of working and artisan homes not only in towns, but in villages as well, mid-day dinner time comes with nothing prepared. Out goes one of the children for a tin of salmon, meat, or some other prepared concoction, and a so-called meal is made. How such food can be called cheap I cannot think, when for half the money a piece of fresh meat suitable for a stew could be obtained, and this with vegetables would make a wholesome and economical meal. In spite of the so-called cheap food, working people spend more on food than ever they did and look all the worse for it, because it is not food of the right character.

In the old days people earned less and had less to spend on food, but what they had was wholesome and good, and the sturdy countryman now who was reared on bread, milk, bacon and vegetables, with a little fresh meat on rare occasions, can show a different face and frame to his town cousin, who in childhood and youth knew the delights (?) of fried fish and chips, sausage and mash, tinned meats and other messes which are sold at cookshops and relieve housewives of the responsibilities of cooking.

If people will buy all sorts of prepared foods to save the trouble of a little home cooking, they will

be provided, but to call them cheap is making use of a wrong term. Tinned meat, particularly the kind of stuff that finds a sale amongst the labouring and working population is dear, and would be dear at any price, because, apart from what it may or may not contain, there is nothing in it to build up bone and muscle and make sturdy manhood.

June 26, 1906.

RUSTIC.

The English Agricultural Machinery Trade.

SIR,—I am surprised to hear from "Manufacturer," page 696, that the trade for English manufactured agricultural machinery is practically dead, because when I see the elaborate stands belonging to British firms at the leading agricultural shows, the trade strikes me as being very much alive. If it is a waste of money to even try to resuscitate it under present conditions, as your correspondent contends, it is rather surprising that the firms whose names are household words in British agriculture do not close their doors; but they still go on, and presumably make profits. It is easy enough to talk about the dumping of foreign machines into this country to the detriment of British manufacturers, but there is the farmer's side of the question to be considered. He is none too prosperous, and is the victim of a certain amount of dumping, but he must have the machines all the same, and supposing the trade was entirely monopolised by British manufacturers it is not unlikely that the farmer would have to pay more for his implements than he does at present.

It seems to me that the foreigner struck a line by providing light and at the same time strong machines which answer the purpose of the farmer, or he would not use them. British manufacturers can, and some of them do, produce machines equally as good, perhaps better, quite as strong and equally light, as any that are made abroad, and when farmers can get what they want at a reasonable price, as a rule, they prefer home-made implements to imported goods. Doubtless, the home manufacturer has suffered through dumping, but in fairness to the foreigner, it is not unreasonable to ask whether he is not ahead of the Britisher as an agricultural implement maker.

June 23, 1906.

FARMER JOHN.

The Clashing of Shows.

SIR,—I think there ought to be something done to prevent county shows clashing. All societies of the present day seem to be too much on their own for my liking, and a little more good feeling and working together I am sure would be beneficial. Do not you think that an association of agricultural show secretaries could be formed with the idea of fixing dates and a general exchange of ideas on show management?

Why not an association like this be formed, to meet in London, say in December, to fix dates for all societies for the coming year? I feel sure that something of this kind must be done, as when you get five large shows within reasonable distance of each other, how can exhibitors support them all? Take Nottingham and Kettering, both same days, and quite close together.

June 23, 1906.

A SHOW SECRETARY.

Half-Holidays for Farm Labourers.

SIR,—Your correspondent, "Red Rose," hits the right nail on the head when he writes of the everlasting grind of work on the farm driving men from the land. It is especially so with us whose holdings lie near to the great cities; we find it hard to keep men of a good type at all; they leave us to become carters, vanmen, railway workers and what not, probably getting a good deal more money and more leisure than at home, and not discovering until too late that they are worse off upon the higher wages. It is hard to manage, and farm work sometimes suffers from it, but some of us are already discovering that the half holiday for labourers is rapidly becoming an absolutely necessary thing. One must consider it from the man's point of view also. Apart from the monotony of his work, and of his craving to see something of the town and its amusements, there is the fact that a half-holiday gives him his one chance of doing more than a very brief spell of useful work on his own cottage garden or allotment. A little ground of his own is very helpful in keeping a man to the village, but if it is to have any influence at all the owner must enjoy a little opportunity now and then for cultivating it. Too often in this district the farm worker must stand apart and watch the allotments taken up and worked by artisan cultivators, who have more leisure than he can ever hope for.—Yours truly,

MIDLANDER.

SELF-CLEANING FOWL HOUSE, No. 2.

(Improved Patent.)

Roof well tarred, ridged, painted white, sides and ends varnished, portable and stationary.

CORONATION CHICKEN HOUSE, No. 5.

(Patent.)

The most up-to-date Chicken-House and Run on the Market.

SHOW GOSSIP.

The site of next year's Royal Show still remains to be settled, and although the Mayor of Ipswich is confident that his town will be chosen, the Mayor of Lincoln understands that preference will be given to Lincoln if an invitation was forthcoming from that city, and as this invitation has now been sent, it remains to be seen who will win—Ipswich or Lincoln?

The entries for the Doncaster Show on Wednesday and Thursday of this week, have totalled up very satisfactorily. Cattle are twenty above 1905, and the best since 1899. Shires, Hackneys, and Hunters are all an advance from last year, and number 285. Sheep are exactly the same, but the other departments all show an increase, the total number of entries being over 1,100. An attractive programme has been arranged for both days, and the show should be a complete success.

The entries recorded for the Highland and Agricultural Society's schedule at Peebles on Tuesday, July 17, and three following days, are up to the average, but are not so numerous as at Glasgow last year, which is not at all surprising seeing the difference in the two towns. Cattle number 254 as against 311 last year; horses 260 as compared with 470; sheep 290, a decrease of one only, pigs 40 or 21 less; poultry 435, against 531, and dairy produce 71, which shows an increase of one on last year's total. It will be seen that there is a very good entry, and a successful and interesting show is anticipated.

The prize schedule issued for the fifth annual show of the Wem and District Agricultural Association, to be held at Pankymoor, Wem, on Friday, July 27, is interesting for the variety of classes it contains. In addition to the classes found at most shows, such as those for horses, cattle, sheep, pigs, dogs, dairy produce, and poultry, we find in the schedule under notice details of shoeing competitions, premiums for old servants, ploughing, hedging, and ditching competitions, &c., and as in each section more prizes are offered, the entries are usually—and should again this year—be good, whilst such a variety of attraction makes the show a most interesting one. The society is to be congratulated on its enterprise in issuing such a schedule, but their enterprise does not end here, for they run a Shire horse for the benefit of their members at a cost of between £250 and £300 a year. The secretary is Mr. Philip Lee, Wem, Shropshire.

The secretary of the Wirral and Birkenhead Agricultural Society (Mr. A. H. Edmondson, 6, Hamilton Square, Birkenhead) informs us that copies of the prize schedule for their forthcoming

show have been posted to all past exhibitors, but anyone desirous of obtaining a copy can have one on application to him. He also points out the following corrections in the prize list, viz., exhibits in classes 20 to 29 must be entered or be eligible for the Herd Book, and class 70 is for riding hacks not exceeding 15.2 hands. The exhibiting hacks not exceeding 15.2 hands.

SHOW SECRETARIES.

Mr. H. C. ARDRON,
Leicestershire Agricultural Society.

hibits will be stalled, as usual, in the permanently built buildings, which are both light and lofty and well ventilated, without being draughty. In addition to the usual handsome class prizes, which amount to upwards of £2,800, there are a number of valuable challenge bowls for competition varying in value from 10 to 100 guineas. The show-yard is situated in close proximity to the Beblington

Station, which is on the London and North-Western and Great Western Joint Main Line between Crewe, Chester and Birkenhead.

We beg to remind intending exhibitors that entries for the show of the Tring Agricultural Society close on Friday next, July 6, the show day being on August 9. Amongst the sums of money given to various breeds, £230 is assigned to Shires, £270 to Hunters, harness horses, and jumpers, £350 to cattle, and £225 to sheep, pigs, and sheep dog trials. It is possible for a single Shorthorn cow to win as much as £65, and for a single Jersey £80. Mr. F. J. Brown, 41, High Street, Tring, is the secretary.

The Welsh National Agricultural Society are offering the handsome sum of £1,000 for prizes at their show at Aberystwith on August 8 and 9, and such a comprehensive prize schedule should draw a very large entry. Although only established such a short time the society and its show have made wonderful progress, each year marking an improvement, and the show has now become one worthy of the national show of Wales. Entries for this year's event close on the 11th inst., so that those who intend to be represented at this representative show need to hurry up if they have not already sent in their forms. Prize schedules, entry forms, &c., can be had of the secretary, Cambrian Chambers, Aberystwith.

AGRICULTURAL LAW.

A notice of a legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

An Interesting Question.

Sir,—Suppose I rent a farm of a landlord who has had it in hand for several years, then lets it to a tenant farmer, and he in his first year of tenancy loses some store beast by a complaint called "black leg" or "blood poisoning," and upon his inquiring into the matter finds that the landlord lost some young beast precisely in the same way while he worked the farm himself, have I any fair and reasonable claim upon the landlord to ask him to assist me in my loss? Will you kindly answer me this question in your next issue, and keep my name out, but give "Inquirer" instead. H. E.

June 23, 1906.

[You do not state any facts which would lead me to think that the landlord is in any way responsible for the complaint that your beasts suffered from, and subsequently died from. If the landlord allows you anything it will be purely out of good nature.—BARRISTER-AT-LAW.]

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

Patron:
H.M. THE KING.
President:
HERBERT L.
SOREY, Esq., D.L.

By the joint invitation of the Mayors and Corporation of Lancaster and Merseyside, the Society's next EXHIBITION will be held at LANCASTER AUGUST 2, 3, 4, and 5, 1906.

£4,141 IN PRIZES.

LIVE STOCK ENTRIES FINALLY CLOSE JULY 9.

Applications for Prize Lists should state the section, and be made to
EDWARD BOHANE, Secretary,
Miller Arcade, Preston,
An 1 Show Yard, Scale Hall, Lancaster
Telegram: "Bohane, Preston."

WIRRAL AND BIRKENHEAD AGRICULTURAL SOCIETY'S GREAT SHOW, BEHINGTON, BIRKENHEAD, JULY 18 AND 19.

Prizes exceed £2,800.

Exhibits in Classes 20 to 29 must be entered or eligible for the Herd Book. Class 70 should read "not over 15.2 hands."

Entries close July 2, post.
ARTHUR H. EDWARDS, Secretary,
6, Hamilton Square, Birkenhead.

WELSH NATIONAL AGRICULTURAL SOCIETY.

President:
Sir POWELL MILBANK, Bart.

Will hold its
SHOW AT ABERYSTWTH ON
AUGUST 8 AND 9, 1906.

Over £1,000 in Prizes. Entries close July 11. Schedules and particulars from—

THE SECRETARY,
Cambrian Chambers,
Aberystwith.

THE
EAST BERKS HORSE SHOW
will be held at
HAWTHORN HILL RACECOURSE
(between Maidenhead and Bracknell, Berks.) on
THURSDAY, AUGUST 23, 1906.
Entries close July 31, or with double fees, August 7.

Schedules, &c., may be obtained of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C.

WORTHING AND WEST SUSSEX HORSE SHOW and
Jumping and Driving Competition on
WEDNESDAY, AUG. 15, 1906.
Entries close August 1.
Schedules and Entry Forms on application to—WALTER PAINE, Sec.,
Sunner House, Montague St.,
Worthing.

RUBBER EXHIBITION, to be held at the ROYAL BOTANIC GARDENS, PERADEENIA, Ceylon, under the authority of the Ceylon Government, from 13th to 27th SEPTEMBER, 1906.

EXHIBITS OF RUBBER in all forms: Rubber Machinery, Tapping, Collecting, Treating, and Storing Apparatus.

GOLD MEDALS, Diplomas, and Prizes will be awarded. Power for Machinery to be erected in the Exhibition Grounds will be provided.

Free Railway Transport in Ceylon, and exemption from Import Duties for all Machinery to be exhibited. Entries of Machinery close on July 31st. All entries to be sent to

E. B. DEXHAM, C.C.S.,
Secretary to the Rubber Exhibition Committee,
THE SECRETARIAT,
COLOMBO, CEYLON.

Telegraphic Address, "EXHIBITION, COLOMBO," to whom application should be made for Catalogues and any further information.

RYEDALE and PICKERING AGRICULTURAL SHOW, at KIRBYMOORSIDE, AUGUST 14.

Open classes for Leaping, Cleveland Bays, and Implements.
Entries close August 1.

GEORGE FRANK, Secretary,
Kirbymoorside.

TRING AGRICULTURAL SOCIETY.

Patron: His Majesty the King.

The Right Hon. Lord Rothschild.
SHOW DAY, AUGUST 9, 1906.
£230.—SHIRES, 1 Cup and 1 Medal.
£270.—HUNTERS, HARNESS, Jumping, &c. 2 Cups and 6 Medals.
£500.—SHORTHORNS (one cow can win £65), JERSEYS (one cow can win £80), and MILK & BUTTER TESTS, 3 Medals.
£225.—SHEEP, PIGS, and SHEEP DOG TRIALS, &c. 2 Cups and 2 Medals.

ENTRIES CLOSE JULY 6.
For Schedules apply to—F. J. BROWN, Secretary, 41, High Street, Tring.

LUTTERWORTH AND DISTRICT AGRICULTURAL SOCIETY.
ANNUAL SHOW, BANK HOLIDAY, MONDAY, AUGUST 6, 1906.

OPEN CLASSES for Shire Foal, Heavy and Light Weight Hunters, Jumping, Driving.

Shire Horse and Hunter Improvement Society's Silver Medals.
Entries close Monday, July 23, with Double Fees to Saturday, July 28.

For Schedules and particulars apply to
THOS. C. BONYCORE, Secretary,
Lutterworth, June 7, 1906.

MALTON AGRICULTURAL SOCIETY'S SHOW, Wednesday, July 25, 1906. President—Capt. Clive Behrens. Entries Close July 7. Schedules and Entry Forms on application to the Secretary—THOS. MITCHELL, The Mount, Malton.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied; the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, in which case, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Ammonia, organic as in Guano and Bones	15 0	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
“ in Sulphate of Ammonia	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
“ calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	—	1/10-2	—	2 0	2 0	—	—	—
“ assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
“ insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids	2 8	3 0
Oil or fat	2 8	3 0
Carbohydrates	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit of carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1 × 2½	= 55.2
Oil	5.2 × 2½	= 13
Carbohydrates	33.2 × 1	= 33.2

Total feeding units ... 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Fertilisers at the Royal Agricultural Show.

It was the admirable intention of the Royal Agricultural Society to make their show at Derby fully representative of all the different branches of the great agricultural industry, and their efforts have certainly been successful with perhaps one exception. The entries of stock were in excess of those of previous seasons; the entries of implements formed a record; seeds and feeding stuffs were well represented, but we are sorry to record that there were only one or two exhibits of the important fertiliser trade. Now, it will not be denied that no show from which fertilisers are omitted can fully and worthily represent general agricultural interests. The basis of agriculture is the products of the soil in the shape of crops, and the crops in this country under the present system of intensive cultivation cannot be successfully grown without the assistance of artificial manures. Of what use would be the splendid array of reapers, binders, mowers, and threshing machines if the crops were not properly nourished? How could the splendid stock be supported without abundant forage crops? The fertiliser industry being the principal factor in the growth of crops, is one of the foundations of modern agriculture, and as such, should be worthily represented at the show.

We have heard complaints in the past that the society was apt to treat fertiliser exhibitors with a certain amount of superciliousness, and allocate them inferior positions, but we are sure the society would have welcomed them at Derby and done everything possible to satisfy them. As regards the manufacturers, we cannot help thinking that it would have been worth their while to take an active interest in the show. It would have given thousands of farmers an opportunity of examining samples of the different fertilisers in general use, and of making inquiries on any doubtful points from the manufacturers. We hope that next year the leading fertiliser manufacturers will help to increase the usefulness and success of the show by exhibiting their wares in a manner worthy of the important industry in which they are engaged.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume* in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Signs of Impoverishment of Grass Lands.

In gathering their hay crops farmers should carefully observe the character of the grasses, as they afford a guide for the proper treatment of the field with fertilisers.

The impoverishment of the land is more to be seen in the character of the herbage than in the weight of the crop. Weeds of all descriptions increase, and the good grasses and clovers decrease in similar proportions. Mr. Hall, in describing grass land impoverished by continuous cropping without the application of fertilisers at Rothamsted, points out that the weeds constitute nearly one-half of the herbage, the most prominent species among the grasses being quaking grass, so generally taken as a sign of poor land, and sheep's fescue; among leguminous plants, the bird's foot trefoil, and burnet, hawkbit, and black knapweed among the weeds. Such is the appearance of much of the pasture and meadow-land of the country wherever milch-cows and flocks are habitually grazed, and the land sometimes hayed without anything being restored in the shape of artificial food or manure. Such land requires occasional dressings of farmyard manure, and applications of phosphoric acid either as superphosphate or basic slag and potash. When the farmyard manure is omitted, it should also have a dressing of nitrate of soda.

The "Aftermath."

The first cut of hay is this year, in consequence of the prolonged low temperature, a poor crop, so that an effort should be made to make up for the deficiency by stimulating the rapid growth of the grass for the second cutting. It is not usual to apply a fertiliser to the field after the first cutting has been gathered, but on an occasion such as the present it would be judicious to give the field the benefit of a little superphosphate. The plant is naturally weakened by the first growth, and weeds often get the upper hand, so that the good grasses do not get a fair chance, and the hay is consequently poor in quality.

A dressing of 2 to 3 cwt. per acre of superphosphate, applied directly after the first crop has been gathered, is a great help to the best part of the herbage, and will amply repay its cost in most cases.

Somerset County Council.

According to the report of the Agricultural Instruction Committee, fourteen samples of feeding-stuffs and five samples of manures were taken during the quarter for analysis. The former consisted of one ordinary linseed cake and one ordinary cotton cake, both of which were genuine; one special linseed cake and one special cotton cake, both of which were deficient in oil; nine compound cakes and one meal. Of these no less than six were found by Mr. Lloyd to be either deficient in oil or albuminoids, or both where a guarantee was given, and to be of inferior quality where no such guarantee was supplied. The manures, which consisted of one sample of nitrate of soda, two of superphosphate, and two of compound manure, were in each case up to the guarantee, though both the last cost probably more than they were worth.

The committee recommended the Diseases of Animals Committee to take legal proceedings in one case.

A demonstration of spraying with copper sulphate for the destruction of charlock, on the farm of Mr. R. A. Taylor, at Triscombe, Dunstree, is being conducted.

Handling Manure.

All manure, it makes no difference whether it is hauled in the autumn, winter or spring, should be spread at once, and should never be left in piles, even for a short time, if one is to secure the greatest benefit from its application, says the *Farmer's Guide*. This principle in the use of farm manure is one not to be overlooked by the progressive and up-to-date farmer, and on all farms where the best results from manurial fertiliser are obtained the product of the stables is distributed upon the land as fast as it is made. The old-time piling method is an expensive one, not only from the standpoint of the real value of the manure, but in the matter of handling as well. When left in piles the manure is leached by rains and the soil enriched by it is only of limited area, whereas, if it is finely and evenly spread over the entire surface the benefit derived is general and of far greater importance. In spreading manure, the finer it can be made and the more evenly it can be distributed over and through the soil, where it may be of use to the roots of all plants, the better results can be expected from it. Because of this fact the spreading becomes an essential element of the successful use of barnyard manure. In the past, spreading by hand has been the most common, and, in fact, about the only manner of distributing the material over the soil, but now the machine spreader worked by horse power is largely used and with most excellent and profitable results. Where mechanically distributed the manure is made very fine and reaches every foot of the soil, just where it is of the most use and value. Wherever it is possible, we believe, the farmer should use a manure spreader, as it will be found one of the best paying investments ever made upon the farm. It will pay not only because it prepares and distributes the manure in the best possible manner, but because it will save much time and labour in handling. The saving of labour alone, where one has a large quantity of manure to apply annually, will soon go a good way in paying for the machine, to say nothing about the great additional gain secured from the use of the manure itself.

Farmyard Manure.

Farmyard manure constitutes the basis of successful farming and should be cared for as much as any crop on the farm. The main thing is to maintain its quality, as bulk may add nothing to its value. In many respects farmyard manure is the most important factor, because to a considerable extent the yield of the other crops is more or less dependent on it, so that in securing a large quantity of good manure, the farmer is aiding very materially in increasing the yield of the others. Profitable farming must have a foundation, and the best foundation is manure, for it not only influences the yield, but improves the quality of the products of the farm, and as the better quality realises an enhanced price, the aim should be to excel in this respect. The fault of many who accumulate a large manure heap is that they rely too much on the quantity. The more concentrated the plant food in the heap, the lower the cost of spreading; hence quality should be maintained by not allowing of loss from rains or by overheating of the heap.

Adulterated Butter—Stiff Fine.

A Somerset butter merchant has been fined £40 in 150 guineas costs for selling adulterated butter, but as his alleged profits from the use of substitutes amounted to £5,000 a year, he will have to be still kept under observation.

Life History of Bacteria.

Bacteria may be defined as minute vegetable organisms varying in length from one five-thousandth to one twenty-five-thousandth of an inch, some of which are ever present in various forms in or on every substance known. Their shape, says the *Scotsman*, is very different in the different species; some are spherical, others ovoid, others rod shaped, while in some the rod is twisted into a spiral. Some bacteria are always motionless, others are more or less mobile. Under conditions favourable to their growth and development, bacteria multiply with incredible rapidity. Reproduction, which is entirely non-sexual, usually takes place by simple division or fission, a process in which the bacterial cell becomes constricted at its middle, finally separating into two parts, so that two young cells take the place of the parent one. When the conditions are favourable, reproduction may be very rapid, and the number of individuals which might theoretically arise from a single bacterium in three or four days is almost inconceivable and would weigh thousands of tons. Fortunately, however, there are many checks to such rapid multiplication, so that the development is normally confined within very much smaller limits.

THE ECONOMY OF NATURE.

In what may be termed the economy of Nature, micro-organisms are of great importance. Without them there would be no putrefaction, no decay, and the dead remains of animal and vegetable life would so accumulate as to encumber the earth, which would become sterile for the want of the organic matter derived from it and of which there was no return. The higher plants, and indirectly, therefore, animals also, are in fact dependent for their existence on the presence of bacteria in the soil, which split up and render assimilable complex substances presented to them as manure. When organic compounds, such as albuminoids, are applied to the land they are attacked by various groups of organisms, which by successive stages convert the nitrogenous matter into nitrates, the form necessary to allow of the plants obtaining their requisite nitrogen. Thus albuminoid and other nitrogenous matters and ammonium salts which under ordinary conditions are valuable manures for plant life, cease to be so unless bacteria are present.

MAKING CULTURES.

In order to investigate and identify the various organisms, it is necessary to make what are known as cultures. Bacteria, being living organisms, must be supplied with suitable nutritive substances so that their life-processes may be carried on in a normal manner. The carbon, hydrogen, and nitrogen which enter into their composition are derived for the most part from proteids and carbo-hydrates, which nutrient substances must be presented to the bacteria in association with water, without which bacterial activity ceases. The substances used for investigating the growth of micro-organisms are termed culture media. The basis of the more important culture media is an infusion of meat usually prepared from beef; such an infusion is known as a liquid medium. Solid media are prepared by heating some such infusion together with a substance like gelatine, so that the whole on cooling yields a more or less solid jelly. If the surface of a solid medium prepared in this way be inoculated with a trace of a bacterial growth and the whole kept at a suitable temperature, the organism will rapidly develop and spread over the surface of the gelatine. Numerous organisms during their growth produce various coloured pigments, especially the bacteria of air and water, and these colours may be used as a means of identifying the organism in question.

In most cases, however, a microscopical examination is necessary before any definite conclusion can be arrived at.

Artificial Nitrate Beds.

It is claimed by a couple of French scientists that they have solved the problem of fresh and cheap supplies of nitrogen. They do not propose to extract it from the atmosphere, but they have a system of manufacturing it from peat. This material, it is known, contains a small percentage of organic nitrogenous compounds, and this is extracted by a process of distillation. It is said that the peat bogs in France are extensive enough to supply quantities of nitrogen equal to the nitrate beds of Chili. Thus the peat bogs will become immense sources of wealth.

This seems to be a somewhat similar arrangement for the recovery of nitrogen or ammonia from peat to that which is in course of being tried in Ireland, and which, we understand, has passed successfully through the experimental stage and is about to be worked on an extended basis.

Importance of Nitrogen.

In a paper read before the German Society of Electrochemists on the fixation of atmospheric nitrogen, Professor Fehér quoted figures showing the importance of nitrogen to agriculture. In 1900, 1,300,000 tons of Chili saltpetre were used; in 1905, 1,500,000 tons. Of this enormous total, Germany consumed about one-third. In 1900 the total world production of sulphate of ammonia was 500,000 tons, to which total Germany contributed 150,000 tons. Of this total world production of artificial nitrogen compounds, either in the form of nitrates or of ammonia, agriculture absorbs 75 per cent., and the total value of these artificial manures in 1900 amounted to 270,000,000 marks, or £27,000,000.

Fertilisers and Feeding Stuffs Bill.

The Standing Committee on Law of the House of Commons began on last Thursday the consideration of the Bill, presented by Sir Edward Strachey, supported by the Solicitor-General, the object of the Bill being to carry into effect the recommendations of the Departmental Committee appointed in 1903 by the President of the Board of Agriculture and Fisheries to inquire into the working of the Act of 1893. The Bill proposes to repeal said Act and re-enact it with the alterations recommended by the Departmental Committee.

It will be remembered that the proposed new Bill was read a second time without debate before Easter.

On clause 1, subsection 1, there was long discussion, in which Mr. Alexandra Cross, Mr. Channing, and Sir E. Strachey took an active part. The subsection was finally agreed to as proposed in the Bill as follows:—

"Every person who sells for use as a fertiliser of the soil any article which has been subjected to any artificial process in the United Kingdom, or which has been imported from abroad, shall give to the purchaser an invoice stating the name of the article and what is the percentage (if any) of nitrogen, soluble phosphates, insoluble phosphates, and potash contained in the article, and the invoice shall have effect as a warranty by the seller that the actual percentages do not differ from those stated in the invoice beyond the prescribed limits of error."

This is practically the same as the wording of the old Bill, excepting the final words "beyond the prescribed limits of error," which seem intended to accord to the seller a fair margin of latitude in the analysis.

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a perfect milk substitute.

T. GITTINS, Esq., Wrentham Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal, I consider it excellent in every way."

NO OTHER SUGAR FOOD IS EQUAL TO

"MOLASCUIT"

AS IT IS

A PURE PRODUCT OF THE SUGAR CANE.
INVALUABLE FOR

Horses, Cattle, Sheep, and Pigs.

This article differs from other sugar foods, inasmuch as there is no foreign substance used in its manufacture. The solid matter is the soft interior cellulose fibre of the sugar cane, which is food and digestible, and has the property of absorbing four times its weight of pure molasses. This is packed in bags (about 1½ cwt. each), and is in nice dry condition. (See that the bags are marked "MOLASCUIT," Hughes' Patent).

ALL ANIMALS EAT IT GREEDILY.

IT IS MOST USEFUL FOR MIXING WITH ANY FOOD.

Dr. VOELCKER, referring to this process in the *Journal of the Royal Agricultural Society*, says:—"Sugar Cane Molasses is not open to the objection that may be taken to Beet Sugar Molasses, as it is free from the excessive saline matters which the latter contains, and it has also a much more pleasant taste."

FIRST-RATE REPORTS FROM ALL WHO HAVE USED IT.

"PRACTICE WITH SCIENCE"

IT will be generally admitted that unless the findings of science are carefully tested by the experience of actual practice, that science is more likely to hinder than to help the farmer. This is particularly true in relation to the question of the analysis of Feeding Cakes and Meals, although the

this is our testimony to the value we place on analysis, and to the confidence we have in the quality of our goods. After all, however, the analysis is only the finding of science, and if it were conclusive, then the work of both the manufacturer and feeder would be much simplified; but, as we have often pointed out, it is possible to show a high analysis and yet leave the cake or meal at very low feeding value, and it is here that science must be confirmed by practice. It is no secret that unsound materials (unless absolutely perished) will in most cases analyse as well as sound ingredients, although the former may be of very little value for feeding; while in the case of oil, it may also show a high analysis, and yet prove to be of a kind altogether unsuited for fattening purposes. You must test the analysis at the feeding trough, you must combine

Proposed amendments in the Fertilisers and Feeding Stuffs Act of 1893 will tend to give greater protection to the farmer and improve the position of the honest manufacturer. We do not under-rate the value of the chemist's certificate, for we have always insisted on the importance of a good analysis, and have had our guarantees printed on every bag, as well as on the invoice, which, so far as we are aware, has not been done by any other manufacturer. Moreover, we have always asked our customers to have the goods analysed regularly, and in the event of any deficiency being found, we bind ourselves to pay the analyst's fee and three times the value of the deficiency.

The following letter from an esteemed customer, who is a very extensive feeder of stock, is typical of many others received.

[Copy.]

Greengill, Penrith.
25/11/05.

Dear Sirs,

Having used a quantity of your Fattening Cake, averaging up to 100 tons per annum for the last 13 years, I have much pleasure in stating it has given me every satisfaction.

Previous to using your Cake I was a stout believer in pure linseed, but find your quality of Cake gives better results at considerably less cost. Being both a Winter and Summer Feeder, I also see telling results on my grass land, it being both earlier and sweeter where the Cake has been used.

I might say I have used other Compound Cakes costing less money, but find yours the most satisfactory and always analysing according to guarantee.

Yours truly,

(Signed) THOS. MITCHELL.

Messrs. R. Silcock & Sons, Liverpool.

PRACTICE with SCIENCE

if you are to buy to the best advantage as regards price and quality. The feeder's interests are fully protected by our system of doing business, as we not only give a guarantee, but penalise ourselves in the event of any deficiency. Hundreds of farmers bear testimony to the excellence and value of Silcock's Cakes and Meals for Cattle and Sheep.

For particulars of the various Cakes and Meals apply to Local Agent, or to

THE SHOW AT DERBY.

The provinces have welcomed back the repentant "Royal," and nothing is to be said concerning what the predigal expedition on his little jaunt to London. The success of the Derby meeting will go far to make future provincial meetings a success. The venture started with good auspices, for a guarantee by some "sportsman" as was obtained for the Derby Show is held by the superstitious to be a sort of magic charm; the money, it is thought, will not be actually called for. So it has proved; for with a gate of 119,100, including a large attendance on the half-crown day, the expenses have been largely surpassed by the receipts. The hearty co-operation of the Derby County Society had a good deal to do with this very satisfactory issue; for its special tenant farmer and other

county prizes led to an extremely large attendance of county agriculturists. It should be made a rule in the future not to go to any county except upon the invitation of the county society. Heavy local co-operation indeed may be regarded as the footstep to success. The Royal visit also counts for much in parts of England where the Sovereign is an infrequent guest. London is the most loyal of His Majesty's cities precisely because it sees so much of the King, but the R.A.S.E. in making London their headquarters lost this asset. Why should the most loyal of citizens go even as far as Paddington (let alone Ealing) to see what could be seen in Piccadilly or Pall Mall? His Majesty, it is well known, made a special effort in visiting Derby, and the "Royal" executive are doubtless specially grateful. The third feature making for the success at Derby was the emphasis laid on the horse. The London shows were not attended by the horse-loving section of the community, who, in the metropolitan district, are sufficiently catered for by the three great horse shows in the spring. But at Derby the entries of horses were very fine, and the great horsebreeding counties of York and Lincoln poured in their thousands by special trains on both Friday and Saturday. The implement section of the show was very good, and attracted a great many expert mechanics from the great industrial towns, while the machinery in motion pleased a more general crowd. At future shows space might profitably be found for some of the machines as "running concerns." The weather was mostly fine, but Park Royal experiences demonstrated that fine weather alone will not suffice to make a successful show. The beauty of the show-ground was much enhanced by the splendid display of flowers made by leading seedsmen, whose hearty co-operation must not be forgotten when

summing up the chief reasons for a very gratifying success.

NOTE. The figures for the current year are approximate only.

Notes of the Week.

Derby was *en fite* all last week for the dual event of the King's visit and the Royal Show.

It was quite like old times. Plenty of local enthusiasm and decorations.

The latter were exceptionally tasteful and better than any we have seen for a long time.

What a pity the rain came down in such a relentless manner!

Wednesday broke dull and cloudy, and "the oldest inhabitant" said that it had been dull for several days, and that the sun would come through about mid-day.

"The oldest inhabitant" was mistaken, and mackintoshes and umbrellas were in strong request.

In spite of the weather, the attendance was more than satisfactory.

The first day's gate was £688 10s. in hard cash.

On Thursday over a couple of hundred were waiting for the turnstiles to be opened.

How many were at Park Royal before 9 a.m.?

The showyard was a good one, and its beauty lay in its convenience.

There were none of those huge spaces which made Park Royal so bare and desert like.

Will not other societies take a lesson and consolidate their showyards?

The ground wore well considering the wet, although there were a few nasty patches.

The townspeople of Derby gave a hearty welcome to visitors, as also did the corporation.

A cynic was heard to remark that the hearty welcome consisted of charging £d. for a 1d. tram ride.

A little unkind, perhaps, but prices certainly did go up in the district.

How many visitors knew that there were two public entrances to the showyard?

There were two, really—one at either end.

The King's visit was unfortunately not favoured with King's weather.

The rain came down relentlessly, and it was really pitiful to see ladies and children waiting patiently.

Do readers recollect the Carlisle Show in 1902, the second days were remarkably similar.

The ground, too, bid fair to equal that occasion, when parts of it were a swamp.

Battle in the Channel; heavy fighting at Plymouth; two British liners captured; shipping disorganised. Such are the reported results of the opening of the naval manœuvres.

It would be instructive if the manœuvres could be extended so as to illustrate the effect on the corn markets of a sudden outbreak of war with a great naval Power.

Only a few weeks' supply of wheat in the country; the corn markets intensely excited; the price of wheat rushed up to 80s. per quarter, and, if a naval reverse occurred, according to authorities, it would go to 100s. or 150s. per quarter.

We import five-sixths of our supplies of wheat and flour. Try to realise what the position would be, and the folly of being so dependent on imported grain.

And the remedy? Protection, national granaries, or a bounty in wheat growing. Have any of our readers suggestions?

We spend as much on a single battleship as would serve to encourage the growth of wheat on about a million acres!

Mutton on the table at dinner time is in its right place, but the same cannot be said of the dozen sheep which, while being driven along a road at Accrington, entered a garden and jumped through a dining-room window and caused the frightened occupants to escape by the front door.

The German National Agricultural Society's show was held at a suburb of Berlin about a week before the date of our Royal Show, and was fortunate in being favoured by magnificent weather.

It was opened with much ceremony and amid great festivities by the German Crown Prince, who in the course of his opening speech said that: "While his beloved Fatherland was yearly becoming more extensive and powerful, it was more important than ever that it should be founded on a prosperous agricultural development."

This is the right spirit in which to regard agriculture. It is the basis of all permanent prosperity, and when the cultivation of the soil languishes in a country, that country cannot be considered in a healthy state of development.

Our King—God bless him!—has agricultural instincts and feelings strongly developed; but in many of our legislators the bump of manufacturing interests is too prominently marked.

The German show lasted six days, and was visited by 325,906 people. The inhabitants of Berlin flocked to it in thousands.

It was kept open on Sunday, and on that day more than 118,000 people paid for admission.

The entries to it were:—

Horses	...	...	...	709
Cattle	...	...	...	1,147
Sheep	...	...	...	962
Pigs	...	...	...	690
Goats	...	...	...	84
Fish	...	...	...	253
Poultry	...	...	...	401
Implements	...	...	...	10,500

Butter and cheese, dairying utensils, bees, feeding stuffs, and fertilisers were largely represented.

On the opening day of the show the Minister of Agriculture gave a garden-party, to which he invited the chief officials of the society.

Everyone sympathises with the unfortunate position of Mr. Agar-Robartes, who has been obliged to quit Parliament through no fault of his own.

The Land Tenure Bill, of which he is the author would probably have made better progress had he been present.

As matters stand, there is small chance of its getting through the House during this session.

The Farmers' Club had a tent in the ground for the convenience of their members; this is an innovation.

The sums given away in prizes at the different agricultural shows would total up to a large amount, probably between thirty and forty thousand pounds.

It may be questioned whether the farmers get a corresponding benefit. If the shows could be somewhat limited by concentration and concerted action, the result might be equally satisfactory with a smaller expenditure.

The wishes of the hop growers for a small crop will apparently be gratified. The bine is very backward, and the attacks of the fly vigorous all through the districts.

We hope the crop may be equally moderate in other hop-producing countries.

The Government grant in aid of agricultural research is, I believe, considerably smaller in this country than in any other first class country.

Yet progress in agriculture is now dependent on scientific investigation in connection with soil, fertilisers, feeding stuffs, and plant diseases.

Agricultural research for the guidance of practical farmers is of more importance than teaching music to children in provided schools.

Lord Carrington is aware of the importance of the subject, and we hope will be able to put pressure on the Treasury to obtain a larger grant for agricultural investigations.

THE FARMERS' DIARY.

TUESDAY, JULY 3.—Selby Agricultural Show—Peterborough Horse Sale—Birkenhead Cattle Sale—Beverley Live Stock Sale—Penrith Cattle Sale—La Hague Horse Show—Continued—Buckton Hall Farm Sale, Station Hotel, Hull, 4 p.m.—Second day of the Bakers' Conference at Nottingham—Bedford Wool Fair—Leek Hiring Fair—Entries close for the Cambridgeshire Fens Show, at March.

WEDNESDAY, JULY 4.—North Devon Show at Barnstaple—Chatteris Horse Show—Cheadle Cattle Fair—Oswestry Cheese Fair—Scunthorpe Agricultural Show—Haslingden Agricultural Fair—Hertford Agricultural Fair—Doncaster Agricultural Show, first day—East Kent Agricultural Show at Ashford, first day.

THURSDAY, JULY 5.—Ashford Agricultural Show, second day—Ashford Horse Show—Chesterford Cattle and Foal Show—National Sweet Pea Society's Show, Horticultural Hall—Horse and Cattle Fairs at Beverley and Chesterfield—Hertford Agricultural Fair—Pontypool Cheese Fair—Entries close for Lannaston (East Cornwall) Agricultural Show.

FRIDAY, JULY 6.—Thornton's Special Sale of Kerry and Dexter Cattle, Park Hotel, Bletchley—Barnstaple and Fosse Agricultural Show—Entries close for Tring Show—Salisbury Wool Sale—Lichfield Horse Sale—Dorchester Sheep Fair—Blester Wool Fair—Lilcoln Foal Fair.

SATURDAY, JULY 7.—Blandford Wool Sale—Alnwick Wool Fair—Blandford Agricultural Fair—Gloucester Agricultural Fair—Malton Cheese Fair—Penrith Cattle Fair—Brough Horse, Cattle and Foal Show—Ashton-under-Lyne Agricultural Show—Entries close for the Glendale Agricultural Society's Show—Entries close for Cumberland Agricultural Show and for Malton Agricultural Show.

MONDAY, JULY 9.—Oakham Cattle, Sheep and Pig Fair—Alnwick Sheep Fair—Bodmin, Glastonbury, Stockport, and Oldham Agricultural Fairs—Warwick Wool Fair—Dorchester Wool Sale—Elmet (Yorkshire) Agricultural Show, at Sherburn—Entries close for Wainfleet Foal Show, for the Birkenhead Agricultural Show, and for Bielefeld Agricultural Show.

TUESDAY, JULY 10.—Peterborough Great Show, first day—Bishop Auckland Agricultural Show—Yeovil Great Wool Sale—Marsden Cattle Fair—Ringwood Agricultural Fair—Cardmarton Horse Fair—Birmingham Annual Wool Sale (80,000 fleeces entered)—Leeds Horse Fair—Millers Conference at Windsor, first day—Special Sales at Highbridge: Cheese, 10 a.m.—Calves, 3.0 p.m.—Entries close for Border Show and (with double fees) for the Cambridgeshire Fens Show—Marmes—Entries to be sent in for the Welsh Principality Show at Aberystwith, Cardigan.

Proposed Memorial to the late Dr. Fream.

The first day of the Royal Show witnessed a meeting which is probably unique in its character. As briefly announced in our last issue, an influentially signed circular stated that it had been felt that some suitable memorial of Dr. Fream as an eminent agricultural writer and scientific expert should be provided by the very large number of his personal friends and readers of his brilliant books, articles, essays, and agricultural reports.

In pursuance of this a number of personal friends of the late Dr. Fream met in the largest tent in the Derby showyard on Wednesday, and it was resolved:—"That the gentlemen present form themselves into a committee (with power to add to their numbers) for the purpose of raising a fund to provide a suitable memorial to the late Dr. Fream, and to report to a subsequent meeting to be held during the Dairy Show, as to the best form such memorial should take, it being understood that such decision will largely depend upon the amount of money subscribed, and that any money subscribed will be entrusted to some public body having the full confidence of the agriculturists of the United Kingdom."

The resolution was proposed by Dr. Wallace, seconded by Professor Sheldon, and supported by Mr. Martin, J. Sutton (chairman), Professors Malden, Sheldon, Wallace, and Messrs. Arthur Barham, W. Gayner, Charles Macdonald, A. H. H. Matthews, W. A. May, E. Thomas, A. W. Stanton, G. F. Strawson, James Watt, and E. G. F. Walker, as well as a large number who had written approving of the project, but regretting their inability to be present.

Subsequently Mr. G. F. Strawson undertook the duties of hon. secretary, and Sir George Farham was appointed treasurer.

Various projects were broached as to what form the memorial should take, but a definite decision was left over to a subsequent meeting. Any readers who would like to identify themselves with the memorial should communicate with Mr. G. F. Strawson, 71A, Queen Victoria Street, London, E.C., or send direct to the offices of the MARK LANE EXPRESS.

Notes and Jottings.

The supply of milk, though having received a good deal of attention for several years past, still occupies the most prominent place in practically all discussions referring to cattle, and the most profitable way of farming them. It is said by many farmers, and there is no doubt with a considerable degree of truth, that milk has been their salvation. There is no doubt, all things taken into account, that milk production pays more than any other branch of live stock farming, where farming pure and simple is concerned; but where pedigree cattle breeding is consulted, then there comes a very decided difference. The breeder of pedigree Shorthorns, to wit, is making several times over the amount of money of his beef-bred bulls than is realised by the milking bred ones.

As referring to this, a well-known Shorthorn

instances, I also know of instances innumerable in which the offspring of such parents have proved practically worthless, and this I have noticed to be especially the case with excessive milking cows. There may possibly have been a reason for this, in the fact that such a cow was the first of her line that had proved an excessive milker, and that the back breeding, so far as milk concerns it, would not bear investigation, and so the calf of such a cow as it grows up throws back to some of the indifferent milking ancestry, and so proves a great disappointment at the pail. Or it may be that the excessive milking of the dam has so weakened the system that the heifer from her inherits a weaker constitution.

So far as impressing any special points in cattle, milk included, I have always noticed that after the third generation, and not previously, do these especial points aimed at become so impressed upon the cattle breeder as to have a lasting effect. I have also thought that in nineteen cases out of twenty the bull has much greater effect upon the offspring than has the dam, and that the best dam that can be procured, even if of several generations of like breeding, will frequently bring a most indifferent calf if mated with a moderately indifferent bull. This latter, I believe, is equally applicable to both milk and half-bred animals, and proves how very necessary it is to look well to the bull, both as respects his personal merit as well as back breeding.

In one of these notes a week or two since it was mentioned that our beef breeds of cattle might with considerable advantage be bred more

nevertheless has done much to preserve the pastures green and with this to keep up the milk supply a little longer than usual. In spite of this the quarter that is supposed always to be shated at Midsummer is pretty certain to be lost within a fortnight of the time. Most dairies, however, have been blessed with more than has been required to keep up their contracts and to fill the churns, so that even if drier weather and shorter pastures should be forced upon them, it is quite possible they may get through July without feeling the pressure to such an extent as to need to reinforce the members of the dairy or to fall back on stimulating feed.

In these days there are numbers of farmers and cattle breeders who have gone into the business without experience—some from a love of country life, having, perhaps, made a little money in trade in the city; others are recommended, and find it necessary to accept such recommendations for health's sake. From this class of people very frequently comes the question: Which is the best breed of cattle? There are several best breeds of cattle; indeed, it is gratifying to be able to say that amongst the something like seventeen breeds represented in the Royal showyard there is not a single one that is a bad breed under all conditions, and it is equally true to say that there is no breed that is always good under all and varying conditions.

Each breed has its own especial points and properties, both as to the produce it yields to the greatest advantage and profit, as well as to its adaptability to the environment it is called to encounter or to live amongst. If we are to judge by numbers of any breed and countries where a breed thrives, of course the Shorthorn would be altogether the outstanding representative. These are found to breed, thrive, and pay in we may say every country in Great Britain and Ireland, whilst in every country of Europe they are giving equal satisfaction. America, north and south, is full of immense herds of the breed, and herds of the finest breeding and high value. All our colonies and many of the small islands of the sea can also boast of their Shorthorns, which are thriving in tropical heat as well as in zero cold.

In spite, however, of the dual purpose and cosmopolitan character of the Shorthorn as here set forth, there are many purposes and places where one or other of our breeds will pay as well or better. The Hereford comes next, perhaps, as a cosmopolitan breed and capable of making a heavy weight of beef in a little time as well as giving good milk, and they will do their work on inexpensive feeding. For the fowl yard and root and corn feeding, the Angus takes a great deal of beating; whilst on medium rich pastures the North Devon is a great favourite and makes the most saleable beef very quickly. The Galloway and West Highlander, as well as the Welsh breed, are each altogether excellent where an outdoor life all the year round is obligatory, and the latter breed can milk as well as yield a profitable return in beef.

The old Longhorn, too, is very valuable for an outdoor life all the year, and to grow into a heavy weight of high-quality beef, as well as a great yielder of cheese in the dairy. The two Channel Island breeds stand out as producers of butter, or where extra thick cream is needed, and they will do on moderate land where sheltered. Then the Red Poll is a fine dual purpose breed, preferring, perhaps, rather light and dry soils; and the Sussex is a capital all-round beef breed on pasture. Keries and their sister breed, the Dexter Kerry, both dual purpose, it is certain have no equal for hillside grazing and for small holdings; and the Ayrshire as a milker on moderate pasture and to withstand a good amount of cold is also doing well in other countries as well as her native land.

Butter Adulteration: Heavy Fine.—

—At Bristol, on Tuesday, Albert Henry Williams, of London, trading as the Bridgewater Creamery Company, Somerset, was fined £40, with 50 guineas costs, for selling as genuine butter a mixture of butter and lardine. The latter was described as a London concoction skillfully prepared and hoodwink analysis, and impudently offered by the maker as impossible of detection in butter when used up to 17 per cent. On two occasions butter was purchased under guarantees that it was pure butter, but analysis revealed the fact that there was 20 per cent. of lardine, pig's fat, and water. The prosecution, which was conducted at the instance of the Board of Agriculture, alleged that defendant's figures proved that by the adulteration a profit of over £4,000 had been made in fifteen months. The magistrates thought that imprisonment would have been the way to deal with the case, and only withheld their hand on the application of Mr. Wansbrough, on behalf of the Board of Agriculture.

SOUTH DEVON BULL, MERRY BOY.

Winner of First and Challenge Cup at both Devon and Bath and West Shows, 1903, and First Prize at the Royal Cornwall. The property of Mr F. W. ROWE, Trevege, Lostwithtle.

breeder of the beef only type of Shorthorns was heard to say the other day that if his cows failed to give a sufficiency of milk to raise their calves and wet nurses had to be provided, what did that matter when the young stock of these strains can be sold at figures all along the line from £500 up to £2,000 or close upon it? Of course there is sense and reason in all this, and the breeder situated as indicated would be very foolish to abandon his breed of beef-producing Shorthorns in favour of a milking strain, the draft or sale portion of which, whether males or females, he would be considered lucky if he was able to sell at £100, and for which £150 would be considered an out of the way price.

It is more than probable that we shall shortly see the prices of milking Shorthorns and also of other milking breeds of cattle very considerably higher than at present. The great scarcity of milking cattle, even non-pedigree ones, points to such a thing as being quite highly probable, whilst the very few good-milking pedigree cattle of any breed that can be purchased or that find their way to market is so limited that it is well nigh impossible to procure them. There is much uncertainty in the breeding of milk cattle. We are often reading the advice and the theories laid down by breeders of milk cattle, in which the same ends are always obtainable, the theory of these breeders being that a good milking dam mated with a bull out of a good milking breed is certain to produce a milking heifer.

Though I have seen this to be correct in many

for milk than they are. How many puny half-starved calves have we seen trying in vain to get a satisfactory feed from the udders or apologies for udders with which so many of our half-bred cattle are afflicted? How much more valuable these same calves would be at the end of their first year if their dams had given them a good fill of milk for the first seven or eight months, and what an amount of expense it would save in artificial food! Then, too, there is the fact as milk becomes more needed, as it is doing every day, these beef breeds might, and would, become by suitable management quite profitable at the pail.

The Hereford is perhaps best known of any as a milker amongst our beef breeds, many of these cattle, even of the very best, will yield a very fair quantity of milk, and it is almost invariably of excellent quality. With a very little care in the breeding of the Hereford, such as in the selection and mating of the parents, the feeding of the young stock for the first two years, the time and method of getting the heifers into the dairy, and the use of concentrated foods likely to produce milk instead of flesh, a Hereford might in a very brief space of time become very profitable, as their abilities to make beef at the end of their dairying career would be but little affected, whether this career was cut short by abortion or sterility, or whether they had lived on the usual draft age in the herd.

The bulk of the rain that has fallen about the country appears to have been through thunderstorms, and has been very partial in its falling,

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

One thing which must have struck the careful observer at our agricultural shows this year is the great improvement that has been made in our harness horses of late years. The writer does not remember when there was such a good lot of young harness horses coming on as there are at present, and there can be no doubt that harness classes are becoming increasingly popular at agricultural shows. Perhaps one reason of this popularity is that the *tout ensemble* of a horse and a suitable conveyance is such that the general observer thinks himself competent to give an opinion upon. Really there is no class more difficult to judge than a class of good harness horses; but for some reason or other people think they can follow the judging in these classes better than in any other light horse class, and this doubtless accounts for some of their popularity.

It is of the harness horses themselves, however, and not of the popularity of the harness classes that I wish to write at present. Time was when Norbury Squire carried everything before him, and men said we shall not see another like him. But when he dropped out Heathfield Squire took his place and won all over the country. Then when Heathfield Squire was sold, the question was naturally asked: Where shall we find his successor? In one sense of the word he has as yet no successor, for there is no one horse standing out so conspicuously as Norbury Squire and he did in their day.

But there are several very promising young horses coming on. Menella, who was the Islington champion, has not at the time of writing come against any of the notabilities since then, but Radiant has known defeat, and it is fair to say that he was beaten on his merits. Several four-year-olds can be mentioned who are fast working their way to the front if they have not already got there, and at least one three-year-old would appear to have a bright future before her. It is not necessary to particularise all these rising aspirants to fame, but it is very interesting to note that there is one thing in common amongst them, and that is their stylish and blood-like appearance. And though there is still plenty of room for improvement in all but the very best, the shoulder action is much better than it was in the harness classes a few years ago. And that shoulder action is of the greatest importance in a harness horse, as no one needs telling who has driven down a steep hill with plenty of loose stones about, on a dark night.

The training of harness horses, by which I mean the teaching them manners, might be carried out much more artistically than it is. Several times during the season I have seen horses "play up" in the show ring in a way which was decidedly unpleasant, and twice at least I have seen horses actually run away. A runaway horse in a show ring is manifestly a danger to his driver and to everyone else in the class, and even, perhaps, to the outside public as well, and as soon as he can be stopped he should be turned out of the ring. It is no excuse that the excitement of the show ring upsets him. A show horse should not be upset by excitement of this sort, for, after all, it is the everyday life of the show horse, and no animal is so much the creature of habit as the horse. It is a common thing to see horses in harness rear; it is very dangerous, though I must say that, though I have seen many very narrow escapes, I have never seen a serious accident. But all these tricks are contrary to good manners, and I am bound to say that in many cases they are due to want of proper training.

Or shall I say handling? That there is considerable skill required in handling a harness horse we see at every show we visit. And how many horses do we not see whose chances of victory are entirely put out by bad handling? I believe there is scarcely a man who has ever ridden a dozen miles in a dogcart that does not think he can drive. But sitting on the driving-box, the reins and whip in hand, is one thing, and driving is another. If anyone doubts me, let him

compare the style of Mr. Butcher, of Bristol, Mr. F. Vivian Gooch, or other fine drivers with the rank and file of those who drive at shows. It is not going too far to say that the difference between a good driver and a bad one is as marked as between a good rider and a bad one, and that in many a horse that is put back would, with a showman like Mr. Butcher or Mr. Gooch handling the ribbons, make a very different show and occupy a very different place. One very notable instance of this occurred not so long ago.

Light handling is essential to enable a horse to show himself to advantage in harness. Yet how many take hold of the reins as if they were holding on to a rope and pull with might and main. And it is a curious thing that ladies who have proverbially light hands in the saddle frequently transgress in this respect as much as the sterner sex when driving. Perhaps the show harness horse being a little above himself and so inclined to "take hold" has something to do with this. But, again, if show horses are watched carefully it will be seen that those whose mouths are least interfered with make the best show. Certainly there is room for considerable improvement in driving, especially in driving the single harness horse. Pairs, teams, and four-in-hand teams must be well handled, and, generally speaking, there is no fault to be found when these classes are in the ring.

It would be an improvement in the harness classes if the skeleton road wagon, which is so beloved of our American friends, were kept out of the ring except when pace and action classes are shown. The show harness horse is the gentleman's horse, and should be shown in such vehicles as a gentleman would drive in. This I take it is decidedly not a skeleton road wagon or racing buggy. Speed is not the only, or, indeed, the chief, quality of a gentleman's harness horse. It is immaterial whether he goes eight miles an hour or ten. What is of importance is how he goes. Of course he should step out, that goes without saying. His action is faulty if he does not. But few people care to drive a high-class harness horse fast, for the very reason that if they do, he loses his action, and that before long.

On Friday, the day after the Doncaster Show, the whole of the hunting stock of the late Mr. James S. Darrell will be sold by auction at West Ayton. For more than half-a-century this has been one of the most famous hunting establishments in the Kingdom. In the long ago, when Paddy Shiel and his brother used to bring such great strings of hunters to Howden Fair, Mr. Darrell was one of the best customers. Many is the good horse he has bought of them—the best, perhaps, being Snapdragon, a winner at the Royal and most of the leading shows in the country. Snapdragon was not a very big priced one and did remarkably well, but the next lot Mr. Darrell got were dear and also unlucky. So when September came round and brought Paddy Shiel to Howden again with a large string of young hunters, Mr. Darrell tried hard to cheapen the lot he had selected, pleading that the last purchases had done very badly. "Ah, Mister Darrell, it's ashamed o' yez that I am," said Paddy, "You're afther wanting all o' them Snapdragons."

Of late years Mr. Darrell has bred largely, and he had some very good brood mares. At the sale there will be sold some excellent young stock as well as a lot of hunters that know their work thoroughly, and I have no doubt that there will be a representative lot of hunting men gathered round the ringside when Messrs. T. Walker and Sons and Messrs. Boulton and Cooper disperse the stud on Friday next.

As yet not many Hackney sales have been announced, but there is already an important one fixed in Yorkshire for the day before the Yorkshire Show. This is Mr. Robert Whitworth's stud at the Londesborough Stud Farm, Market Weighton. It is some years now since there was a sale at the Londesborough Stud Farm, the last occasion being when the late Lord Londesborough retired from Hackney breeding. At the sale which will take place on August 7, there will be a lot of the old Londesborough Stud blood on offer, many of the lots being by Polonius and Ganyuade, who though he was not bred at the Londesborough Stud, was bred next door. Other sires that will be represented are His Majesty, Edemynag, Aristocrat II., and Rosador. Mr. Whitworth is offering a big lot—no fewer than sixty—and as he is well known as a successful breeder and an exhibitor, his sale will be one of the events of the season.

THE LOOKER ON.

Preparation of Wool for the Market.

Sheep Breeder in Conference.

At Derby, on Tuesday, the day before the opening of the Royal Show, the National Sheep Breeders' Association held their seventh annual conference in the Guildhall, Derby.

The conference was presided over by Mr. James Flower, Chilmark, Salisbury, and the principal business was a paper by Mr. S. B. Hollings, of Bradford, on "The Preparation of Wool for Market." There was a good representative attendance of home breeders, while other countries represented were New Zealand, United States of America, Uruguay, Queensland, Victoria, and South Africa.

Mr. Hollings spoke of the change in the conditions obtaining in the wool world during the last four or five years. A marvellous transformation in price had taken place. On every hand there was an incentive for all sheep breeders to look at their growing fleeces with feelings of pride, and manufacturers could urge, with some degree of reason, the necessity of preparing wool for market in a real, practical, and up-to-date manner. In order to obtain good prices, it must be borne in mind that buyers looked out for the cleanest and the best. Preparing wool for market as their grandfathers did, would not do in these days. Hence the need there was to look at the question in a plain, practical, and commonsense way. The sheep farmers of the Colonies set their English brethren a good example of how to prepare wool for market. Uniformity of quality was a very valuable feature in any parcel of wool. It was a great mistake to bale together fine and coarse fleeces, and even when handling fleeces of the medium breed, it paid to bale separately fine, medium, and coarse fleeces. The evils of false packing could not be over-estimated, and wherever practised it was bound to reflect discredit on the wool-grower who did it. The worst element in connection with our home-grown fleeces was the bad way they were prepared for market, while Cape wools were notorious for the excessive wastiness and falseness in which they were sent to market.

No strongly advocated cleanliness in baling wool. Let shearing be done on a clean swept floor, and by no means let the operation be conducted on a bed of straw. The floor swept clean would prevent vegetable matter from becoming entangled with the wool. He urged them to see that everything was clean, and the whole fleece carefully gathered up before the shearer commenced to shear the next sheep. False packing could not be justified at all, but was decidedly injurious to the sheep-farmer who practised the habit.

In conclusion, Mr. Hollings said the outlook was still highly encouraging from the wool-grower's standpoint, but in every sheep-breeding country great efforts were being made to increase the number of sheep. The larger the production, the more would wools of each country compete with each other in consuming markets. Those growers' clips in the future would command the most ready support which were the best grown, and which were prepared for market in a real business-like way.

Mr. W. J. Birch (New Zealand Sheep Breeders' Association) remarked that wool was the most important product that the large New Zealand sheep farmers had to rely upon, and naturally they took very great care with the clips. With the division of land and the increase of small flocks, however, they were getting into the same position as England, and the same difficulty had arisen. The small sheep owner found it difficult to do his classing—he did not know what to do with his bellies and locks, and so they all went together. Whereas in England a great deal of sheep washing was done, in New Zealand they did not wash the sheep, but sheared in the grease or else scoured the wools before sending them to this country.

Several speakers disagreed with Mr. Hollings' strong criticisms of the methods of English breeders.

Mr. Sam Kidner (Somerset) said he was careful not to put any tags or extraneous matter in his wool, but he found that the careless man who did everything otherwise made just the same price as himself. (Applause.)

Mr. S. P. Fraser suggested that the manufacturers should be asked to singe the bales. He felt sure this would do a lot of good.

Mr. T. Casswell (Pointon, Lincolnshire) said there was no advantage to sellers in being at all

The Right Hon. Earl Carrington (president of the Board of Agriculture) will open the new buildings at the South-Eastern Agricultural College, Wye, and distribute the diplomas and prizes on Wednesday, the 18th inst., at 3.15 p.m.

the extra pains recommended by the lecturer. They delivered their wool in the best way they could, but never got paid any more for it. As for sorting, he would rather leave that to the wool sorters of Bradford.

Mr. G. McKerrow, taking the side of Mr. Holling against his critics, said such papers did not hit the men who were progressive enough to attend those meetings, but the average wool producer of Great Britain, who did not attend.

The Chairman did not think that the best English breeders would "fake" their wool.

Mr. Hollings, in reply, contended that there were thousands of English farmers preparing their fleeces for market in a way far different from what they ought to do.

SHEEP SCAB.

Mr. Birch introduced a brief discussion on the question of sheep scab, and brought forward the following resolution:—"That in the opinion of the New Zealand Sheep Breeders' Association it is of the utmost importance that the disease known as sheep scab should be eradicated from the flocks of Great Britain, and that the Council of the National Sheep Breeders' Association should urge the Government to take such effectual steps, through a proper system of inspection and compulsory dipping, as will lead to its extinction."

The Chairman undertook to bring the resolution before the council.

Sudbury Lamb Sale.

The first of this year's lamb sales in East Anglia took place at Sudbury on Monday and was unusually attended, whilst trade, as a whole, was somewhat more animated than a year ago. There was about an average entry, totalling close on 2,000 lambs and sheep, and the consignment of 93 Suffolk lambs by the Hon. E. G. Strutt, from the Hill Farm, Ridgwell, brought the highest price, 30 ewe (the pick of 53) going at 37s. 6d., and 125 out of 45 wether at 35s. Mr. Stebbing and Mr. James Hines were the respective purchasers. The other lot of ewe made 27s., and of wether 26s. 6d. Another consignor whose best lambs, 30 first cross (Lincoln and Suffolk) ewe, made 35s., was Col. W. St. George Burke, The Auberries, and his best 40 wether tied at 34s., with 30 Suffolk mixed from Mr. M. M. Blacker, Goldingham Hall, and 35 first cross mixed from Mr. E. H. Sikes, Great Henny. Messrs. Boardman and Oliver conducted the sale.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

The fair at Newtownstewart, co. Tyrone, on Monday was an average sized one; and the demand was brisk for cattle in fair condition, a good clearance being effected. Prices:—Yearlings, 2nd class, £6 3s. 4d. to £7 5s., 3rd class, £3 1s. to £5 7s. 6d.; two-year-olds, 1st class, £11 5s. to £12 15s., 2nd class, £7 17s. 3d. to £10, 3rd class, £6 5s. to £7 2s. 6d. Springers, 1st class, £16 to £16 15s., 2nd class, £12 to £14, 3rd class, £9 to £10 10s. Young pigs, eight to ten weeks old, 24s. to 28s. 6d. each.

There was an average sized fair at Killeagh, co. Cork, on Monday, and a good demand. Prices: Yearlings, 1st class, £8 to £8 15s.; 2nd class, £6 5s. to £7 12s. 6d.; 3rd class, £5 to £6. Two-year-olds, 1st class, £10 15s. to £12 15s.; 2nd class, £8 7s. 6d. to £10 5s.; 3rd class, £7 to £8 2s. 6d. Springers, 1st class, £15 to £15 10s.; 2nd class, £11 15s. to £14 10s.; 3rd class, £9 10s. to £10 5s. Lambs, 1st class, £1 5s. to £1 10s.; 2nd class, £1 0s. 6d. to £1 3s. 6d. Over twelve and under twenty-four months old, 1st class, £1 18s. to £2 5s.; 2nd class, £1 10s. to £1 15s.

Tipperary Town Fair was held on Monday, when there was a small supply and a very good demand, nearly all the cattle being sold. Springers were in fair demand. Prices: Yearlings, 1st class, £8 to £8 15s.; second class, £6 to £7 10s.; third class, £3 10s. to £5. Two-year-olds, 1st class, £11 to £12 10s.; second class, £8 to £10 15s.; third class, £6 to £7 15s. Three-year-olds, 1st class, £14 to £14 15s.; second class, £12 to £13 13s. 4d. Springers, second class, £10 to £14; third class, £7 15s. to £10 5s. Lambs met a good demand, and all were sold. First class sold for £10 to £11 15s. 6d.; second class, £1 1s. to £1 8s. Young pigs, eight to ten weeks old, were scarce, and sold well at from 22s. to 27s. each.

Royal Cornwall Show.—Our attention has been called to an error which appeared in our report of the South Devon classes at the Royal Cornwall Show. Our reporter stated that Mr. F. W. Rowe's Merry Boy had to give place to Mr. Sparrow Wroth's Stars Duke, but such was not the case. These two bulls have met three times this year, before three different judges, and Merry Boy has won first prize each time, whereas Stars Duke has had second, third, and fourth prizes respectively.

WENSLEYDALE BLUE FACED TWO SHEAR RAM.
Winner of numerous prizes, including the Breed Society's Challenge Bowl (twice).
The property of the Executors of the late Mr. T. WILLIS, Carperby, S.O. Yorkshire.

PEN OF WENSLEYDALE BLUE FACED SHEARLING EWES.
Winners of several prizes, and never defeated. The property of the Executors of the late
Mr. T. WILLIS, Carperby, S.O. Yorks.

CHAMPION WENSLEYDALE BLUE FACED SHEARLING EWE.
This ewe's fleece won a first prize at the Royal Show last year, whilst the ewe has never been beaten in the showyard. The property of the Executors of the late Mr. T. WILLIS, Carperby, S.O. Yorks.

The Live Stock Sales at Derby.

The institution of these sales at the Royal Show has been a success in respect to the Shorthorn cattle, the Shropshire and Hampshire Down sheep, and the various breeds of pigs, but with the other breeds its success has yet to be made.

Messrs. Sexton, Grimwade, and Beck sold the horses, and out of the eighteen offered only three sold. Two of these were two-year-old hunter geldings sent by Mrs. Kindrick and C. Murlin, which made 43 and 27 guineas respectively, to Messrs. Parr and Wilson, and a Shire colt from Mr. Camp's at 48 guineas.

Messrs. J. Thornton and Co. sold the cattle, Mr. J. Webb taking the breeds other than the Shorthorns, out of which but a very few were sold, there being practically no demand. With the Shorthorns which Mr. J. Thornton offered, the result was just the contrary, for the demand was a grand one, and few were left unsold, these in nearly every case being animals upon which high reserves had been placed.

The top price for bulls was 610 guineas, as against 1,000 guineas last year, and for females 270 guineas, as against 200 in 1905. The average for the seventy bulls sold was £101 14s. 1d., and for the thirty-nine females £96 5s., making a general average of £99 13s. for 100 animals sold as against £101 8s. 3d. for sixty head last year. The following is a detailed list of the sale:—

Bulls.

Mr G Cooke's Chester Master Butterfly	Mr Hughes 100
Mr J T Hobbs' Near Gone	Mr Casares 130
Messrs Dyke's Royal Marquis	Mr Casares 45
Mr H C Lewis's Bapton Sceptre	Mr Potter 170
Mr R Shelton's Maragon	Mr F Cash 35
Average £101 17s.	

Two-Year-Old Bulls.

Mr F Appleyard's Duke of Buckingham 2nd	Mr Sidney 50

Mr Milner's Maria Medora	Mr FitzHerbert 29

SHEEP SALES.

Messrs. Mansell and Co. sold the sheep, and the result of the sale was, so far as regards the Shropshire, very satisfactory; and in a measure the same may be said of the Hampshire, but for the other breeds offered there was no demand. The number of sheep sold was ninety-seven, and these gave an average of £21 4s. The Shropshires were first disposed of, commencing with the two-shear ram class. Two were sold which gave an average of £30 19s 6d. Mr. Minton's ram, purchased by Dr. Davidson, making best price, 35 guineas. Amongst the better prices realised for the Shropshire yearling rams were the following:—Sir R. Cooper's first prize ram to Mr. Davenport, for New

Zealand, at 115 guineas; Mr. Victor Cavendish's ram to Duke of Sutherland for 73 guineas; Sir R. P. Cooper's Nottingham winner to Mr. E. Ewen at 42 guineas; 30 guineas to Lord Falmouth for one of Mrs. Inge's; 38 guineas, 30 guineas, 29 guineas, and two at 25 guineas each from Mr. T. S. Minton's flock to Mrs. Inge, T. A. Buttar, R. Millar, Canada, and Dr. Davidson, U.S.A. Three of Mr. E. Nock's to Mr. McKerrrow at 45 and 30 guineas, and one to Mr. Fair at 21 guineas; two others from Sir R. P. Cooper's at 30 guineas each to Australia and Monte Video; one from Sir W. Corbett at 35 guineas, another at 28 guineas to Mr. Simmons, the average for the sixty-six being £23 19s.

Six yearling ewes were sold, Mr. Victor Cavendish's second prize pen making 25 guineas each, to Mr. R. Miller, Canada, and those of Mr. J. T. Cole, 10 guineas each, to Dr. Davidson, of New York, the average here being £18 7s. 6d.

The Hampshire Down two-shear rams averaged £10 8s. 3d. for six, Mr. Carey Cokes making the top price, £14 14s.

There were ten yearling Hampshire Downs sold, Mr. C. Cokes making 25 and 20 guineas each for two to Mr. J. Milton, U.S.A., and Mr. Fair. Mr. J. Judd made 17 guineas of one to Mr. Webb, and the whole lot made an average of £15 12s. 10d.

Seven ram lambs were sold, but the demand was not at all good. Mr. J. A.K. Falconer realised 30 guineas for one, and the other six that came from Mr. R. S. Ovey were made over at poor prices, the seven giving an average of £11 17s. each.

PIGS.

The demand was good for all the best, and a fair proportion were sold, the total number so disposed of was sixty-nine, whose average was £8 4s. 2d., a very satisfactory result, for many of those sold were young pigs.

Mr. Marshall paid 21 guineas for a Large White sow of Mr. Spencer's, the best price for this breed, of which three were sold at an average of £16 16s.

Three Middle Whites were sold, all from Messrs. Spencer's herd; 8 guineas was top price, and the average £7 14s. The Berkshires were in good request, Mr. James's boar making 21 guineas to the Rev. Mr. Cannon. A pen of three boars from Mr. J. A. Fricker's made 21, 13, and 6 guineas, to the Hon. A. Portman, Mr. A. Field, and Mr. FitzHerbert. Mr. R. W. Hudson's pen of three boars, the first price ones, realised 31 guineas to Lord Middleton, the top price of the pig sale, 21 guineas to Mr. Hubbard, and 13 guineas to Mr. J. Milton, for America. Mr. J. A. Fricker sold six sow pigs at from 15 guineas to Mr. Hubbard, and two others at 10 guineas each to Mr. Blyth. The twenty-nine of this breed made £10 10s. 5d. The Tamworths were not in great request, five were sold for an average of £6 8s. 1d. The Large Blacks were in fair demand; twenty-nine of them were sold for an average of £5 7s. 9d., the prices ranging from 15 guineas.

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

"Red" Worm in Horses: Parasitic Diarrhoea.

(Continued from page 678.)

A well-known authority, Mr. Dunstan, in commenting on this peculiar characteristic of the "red" worm, says:—"The worms appear to be hatched, or, at any rate, the adults seem to become detached from the mucous membrane and pass away with the faeces in successive crops, as frequently an animal may be seen passing large numbers to-day, then for a time—which may be a week or even more—the most diligent search fails to reveal a single one; then, without any warning, the next stool may be simply swarming with them. In a very bad case, if the intestines be open immediately after death, the whole of the mucous membrane of the colon and caecum will appear one seething mass of worms, and the whole of the intestine contained therein in a similar condition."

If the mucous membrane be scraped clear, numerous little dark spots will be visible on the surface, varying in size from a small pin's head to a pea. Each of these, on opening by means of a scalpel, will be found containing a worm coiled on itself. It may be in a very early stage of development or the full-grown parasite ready to find its way to the surface."

As these worms are blood-suckers we can easily understand how, when they are present in hundreds of thousands, it is that their host wastes in flesh so rapidly.

The Strongylus tetraacanthus is usually of a bright, blood-red colour, hence its popular designation, but it may vary from a dirty white to a dark brownish red in the dead specimen, the shade

depending on the amount and condition of the blood it contains, and which it has sucked from the capillaries of the intestinal mucous membrane.

The body of the worm is round, tapering towards the head. The "red" worm varies in length from an eighth to three-quarters of an inch, the females, as is usual with worms, being the largest. The "red" worm is very often associated with another strongyle—popularly known as the "pallisade" worm, and technically as *Schlerostomum equinum*, *Strongylus armatus*, or armed strongyle. This association is so common that it has led some observers to conclude that, if not actually the same parasite in some unknown phase of its existence, the life-histories of the two parasites are in some unexplained way very closely intermingled.

As to the habits of the "red" worm, it is supposed that they are taken in by the horse with food or water, that they bore into the blood vessels of the bowels, become adult, and return to the intestine when sexually mature. Eggs are deposited in little pouches or closed cysts in the mucous membrane, and the young worms when hatched bore their way beneath it, where they lie coiled up, head and tail together, until fully developed. Then they come out again to the surface of the mucous membrane, to which they attach themselves by means of the suckers with which the head is furnished. The habits of the armed strongyle or "pallisade" worm appear to be similar. They also infest the lining membrane of the bowels, bore the intestines, make nests in the punctures of blood vessels of the bowels, and return to the intestines when a certain stage of existence is attained. How the worm finds its way into the body of the host in the first instance is tolerably clear. It is well known that certain pastures are sure to cause colts turned out on them to become infested, and it is generally the kind of land—rich, low lying ground—we associate with fluke and lungworm. Cases are most frequent on land liable to flooding, when the ova, or, perhaps, impregnated females, may be water-borne, but cases have occurred among stabled horses, which must have been attributed to fodder out from an infected source, or to the water supply. It is, however, at grass that the trouble generally occurs, particularly in colts grazed near a stream and left out late in the season.

(To be concluded.)

Reducing a Splint.

Would you tell me the best thing to do to cure or reduce a splint on three-year-old Hackney colt?—COON.

Answer: The owner of a young and valuable animal, particularly if intended for sale, is not unnaturally anxious to remove any cause of unsoundness or blemish, but very often the efforts to do so prove disastrous, and the result of active treatment is that inflammation is set up, and lameness is occasioned that did not exist before. This is especially the case where splints and spavins are concerned. Personally I am always in favour of letting bony enlargements that do not cause lameness alone, and I am very doubtful if they are removable by treatment to the extent that many horsemen suppose. No doubt a portion of the abnormal growth is absorbed in time, and that this is assisted by artificial stimulation, but the more consolidated part of the deposit is not affected. With reference to treatment when there is no lameness I am strongly of the opinion of Lieutenant-General Sir F. Fitzwygram, who, besides being a horseman and distinguished cavalry leader, is F.R.C.V.S. He earnestly recommends the owner of a horse with a splint to let it alone if it does not cause lameness, stating that "the eyesore is not great, and blemishes more serious than the splint are often produced in the attempt to remove it. If, after this, you will try treatment, use a trial of iodine. Clip the hair closely from over the exostosis, and once or twice a week rub it with an ointment of:—Resublimed iodine, $\frac{1}{2}$ drachm; iodide of potassium, 10 grains; lanolin, $\frac{3}{4}$ oz. Use only a small quantity of ointment, rub it only over the splint, and stop the application when the skin gets scurfy and tender, resuming it again when the part has hardened."

Norfolk Show.—In the lettering to our illustrations of winners at the Norfolk Show, the shire station Billington Ajax was given as Mrs. R. W. Hudson's instead of Mr. R. Hudson, of Beck Hall, Billington, East Dereham, Norfolk. **Sheep Worried by Dogs.**—A bad case of sheep worrying by dogs is reported from Aisle, Norfolk, a flock of sheep feeding on the marsh being subjected to such vicious attacks that seven were discovered dead, and seven more so badly injured that they had to be killed. A number of others, badly bitten and lamed, had been chased into dykes. The flock was owned by Mr. Henry Read, of Kirkley Hall, who estimates his loss at £60. Two dogs, one of which received a charge of shot when detected, have been traced, and it is alleged the same animals also drove a herd of bullocks into a field of corn, causing further serious damage.

THE 'BIBBY' CAKE IN THE FORM OF 'CAKETTES.'

"Send me two tons o' they nob's same as Mr. Brown is a using," was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cakes that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

BEWARE OF IMITATIONS.

Agricultural Politics.

BY A LOBBYIST.

Liberal and Rural Education.

I thank Earl Carrington for the amicably wise attitude he has adopted in regard to agricultural grants. Lord Barnard—whose judicious interposition elicited so generous an appreciation of an actual necessity from the Minister of Agriculture—did not achieve his object, but he certainly achieved something. The Treasury is not a milch-cow—whose fount is never destined to be completely parched. True, the sum needed for agricultural research would not be overwhelmingly large as national sums go which are conceded for national purposes; but it is the last straw after all which may break the camel's back. Earl Carrington, if he preferred a demand upon the Treasury, would immediately have the clamant, vociferously-dogged demands which are being preferred by the urban interests contrasted with the dulcet acquiescence in neglect—or, for the matter of that, in anything—of the rural interests, and asked to show wherein the latter reveal an absorbing anxiety. The Minister's suggestion of an inquiry into the character of our agricultural education was not intended as a procrastinating move. It was designed—I believe this to be a proper interpretation—to be an appeal to the Party in which Earl Carrington is a distinctive personality—to the most sensitive part of the Party's intelligence and sympathies. The Liberals profess to be progressive-educationists. If agricultural education is held to be below the standard of practical agricultural necessities, then—*ergo*—the Liberal Party ought to improve it. That it is below that standard the excellent suggestions in the Bill of Mr. Jesse Collings sufficiently shows.

Are These Politicians Wise?

Frankly, I am of opinion that the antagonists of the Land Tenure Bill made a mistake in the character of their opposition when the measure returned to the Commons from the committee. Probably, my assertion will be criticised; but I am writing from the point of view of an observer, who despite his sympathy with the main provisions of the measure, can claim to have, by mere reason of Parliamentary training, a dispassionate outlook. Some of that antagonism to the Bill was apparently instinct with little but a desire to wreck it or to emasculate it to the depth of innocuity and even absurdity. One concession in the direction, as I hold, of weakening the Bill—a concession made, in one case, on the suggestion of Mr. Walter Long, who himself evidenced a spirit that was certainly very different from mere inanevolence, and was always characterised by courteous appreciation—was at once made the excuse for demanding a further impossible concession. The authors of this policy—I need not distinguish them—for the time being succeeded; but if I mistake not, they will find their victory, if not as bitter to the taste as Dead Sea fruit, an exasperatingly annoying one. It may help (I am alluding, of course, to Friday week's debate) to the very undoing of the cause they have at heart.

Arousing Labour M.P.'s to Interest.

Now, take one important section of the membership of the House of Commons whose lay sympathies have, I believe, been quickened into an active interest. I do not mean the members of the Land Law Reform Association, the real authors of the Bill, who certainly are, however, more vivaciously resolute than ever. I refer rather to the Labour M.P.'s. Now, if truth be told, these Parliamentarians did not at first seriously concern themselves with the Bill. The fact is that it does not go far enough for them—it is not, in a word, a sufficient offering (indeed, it is no offering at all) on the altar of nationalisation. But this method of baulking the obvious design of the Bill, and, it must be confessed, the obvious desire of the majority of the House, offended their unconventionally business-like methods. They are sufficiently inexperienced of Parliamentary usage as to be as yet unaffected by the numbing and dulling miasma that at last chloroforms the brain to waste and delay and procrastination and thwarting garrulity. The

game, too, was so openly played in certain instances—I must always exempt Mr. Walter Long and the men who particularly follow him—that only the obtuse could have failed to detect its purposes. These Labour Parliamentarians have thus in a measure lost their indifference, and have been stimulated with friendship. Can this be wisdom?

An Opportunity for Assertion.

These Labour M.P.'s do not like the Bill because in their view it will accomplish little. As a fact, with many of them the improvement of the system of tenure is objectionable because they hold that such an improvement and the obvious sanction which the system would thus obtain at the hands of the community would be a barrier to nationalisation. A wiser policy infinitely in this prefatory antagonism would have been, not one of thwarting, baffling antagonism (spiced occasionally by malice), but one of moderate anxiety to preserve the real rights of landlordism, whilst sympathetic towards the modern conceptions of tenant-right, this spirit having associated with it a desire for a fair compromise. Then the Labour Party—and they are nowadays levers in the Parliamentary world—would have remained still a body apart. Don't say "The Labour Party have naught to do with us." They will have naught to do with anything and anybody they choose. They are the Brabazon's of our political life—willing occasionally to run in harness, but preferring infinitely independent self-assertion, and, in fact, welcoming an opportunity for it. I fear they have been given one.

Those Objections to the Amended Bill.

Take, too, those objections which have been urged against the Bill in its amended form, and acceptance of which amended form is the best exhibition of the concessional spirit which had been bred in its promoters. Especially, in this connection, allude to Mr. Soares, who took charge of the Bill in the absence of Mr. Agar-Robartes. Now, the postponement of the operation of the Bill until January 1, 1908, is held to make the landlord (in all excepting Lady-day tenancies) terminate present engagements, whilst it provides the opportunity for the imposition of more onerous conditions on the tenant. Again, it is now being urged that the Bill as amended does not give the tenant power to have his rent reconsidered if he had, as a condition of the renewal of his tenancy before the Bill came into operation, agreed ("he is thus compelled by circumstances to agree" is the phrase used) to pay an increased rent. "Why," ask the authors of this objection, "should not the Bill apply to existing tenancies, and tenants have a right of appeal for compensation for disturbance?" Once more, a tenant under Clause 4 may have legal restrictions imposed on him in the last year of his tenancy as to the disposal of his produce, though the landlord will not—thus it is contended—have imposed upon him the obligation to pay for it to the outgoing tenant. Upon these points a good deal of attention is being concentrated, and they are being advanced as a stern reason for strengthening the Bill. Indeed, I have already heard it urged as a reason for a supplementary measure—a suggestion which, I woen, we should not have heard of but for the character of this not too sagacious Opposition. When you disguise your antagonism so that it hath the guise of friendship, you are astute. When that antagonism flouts itself aloud and unashamed, it is often innocuous.

The Government and its Honours.

The King's birthday honours' list permits of the suggestion that this Government is really desirous of persuading the world that its concerns are chiefly with the urban interests. You cannot point to one man, be he among the new peers, new baronets, or new knights, and hail him a representative of the country interest. True, you have none among the new recipients of the national dignities who are great landowners, men of many manors and two

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Land. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.

or three parks; but they are like their fellows, the embodiment of the urban industrial spirit. True, again, Mr. Wentworth Beaumont (one of the new peers) has a name honoured in the landlordism of the North; but somehow I used to regard him, when he was in the House of Commons, as being so little an arcanist that he was an excellent representative of the colliery interests of Northumberland. The squirearchical country gentleman element—and, after all, Liberalism has not been entirely bereft of the traditional Whig following—has been as sedulously disregarded as though it were a negligible or decadent influence in the State. I suppose we must continue to expect this. When Liberalism works the machinery of the firmament of London, the sun of destruction will only shine on the magnates of the towns. Still, is this well in the interest of Liberalism itself—of that Liberalism which occasionally plays so fascinatingly to the small holders and the agricultural labourers? After all, these have an interest in their class.

Mr. Haggard and Rural Housing.

Mr. Rider Haggard so many times arms himself up a pie to play the part of the hero knight—designed to rid Arcadia of another dragon that would despoil her—that I am half afraid his pectusness is sometimes unheeded. However, there can be no doubt that the pitifully lurid story of unhealthy rural housing which he presented to the Select Committee on the Housing of the Working Classes has evoked a deep and tense feeling. 'Tis, in all sooth, a pitiful story, and would do naught to detract from its dramatic pathos. Mr. Rider Haggard is himself simply victimised by malignant patriotism when publicists of the anti-landlord cult reproduce this story in order to persuade their following that rural landlordism is a hateful, soulless merciless creed which is an enemy to individual happiness and domestic decency. May I suggest, however, to those of less dispassionate mind, that the time has come for the formulation of policies and the education of popular sentiment, and that the time for the recapitulation of the evil is past. Let us accept the housing evil as a deplorable one. Mr. Rider Haggard did propound a policy. We want, however the popular sentiment educated up to the fact that this housing problem provides more or less a national duty, that the State which can be extravagantly generous towards agrarian Ireland should be moderately generous in the assistance of rural authorities and landlords in fulfilling the duties of rebuilding; that the terms of repayment should be easy; that the interest should be small, even nominal, to permit of moderate rents, and that the local regulations should be inspired not by the vainglory of petty councillors but by practical common sense. This I will say—that never had we a Minister for Agriculture more anxious for wise building reforms. A condition precedent to those reforms is, it must be understood that the nation holding the purse will exact not a return suggested by huckstering avarice, but a return which would safeguard the national coffers, or, at all events, permit of but a minimum of loss.

An intimation has been conveyed to the Poole District Council by the solicitor to the Canford estate, to the effect that Lord Wimborne is contemplating the provision of land for the purpose of small holdings, upon which the tenants would require to build cottages. Lord Wimborne has been much struck by the prosperity of a small holding estate near Verwood, where the cottages are largely mud-built, without any reference, so far as could be seen, to building by-laws, but they appeared to be comfortable.

The Coming Crops.

There is no doubt that the combined effects of the sunshine, the more genial atmosphere and the rains during the past few days, are seen in our plantations, and we may safely report progress sufficiently marked to give us some encouragement. But an anomalous condition is found almost everywhere, as while the bine is apparently healthy and fairly strong in most of our gardens, the fly and lice are persistent, and at present are stoutly resisting the washing that has been constantly applied. An Oregon planter who has visited some of our Kent districts this week told me that he had never seen such a quantity of blight, and that if his hops were covered to that extent he should give up all hope of a crop, as he should consider they must be entirely ruined. This remark, coming from an impartial and experienced observer is significant, although I am not inclined to take the same dependent view of the situation. But we have before us facts which should make us ponder over the possibilities of the future, and infuse renewed energy into our planters who desire to cope successfully with the difficulties surrounding them.

The following extracts from reports received within the last week will confirm my general estimate of the position:—

KENT.—In the Canterbury district improvement is manifest as regards growth, but blight is hanging on and reappears after every washing. It is hoped that the better climatic conditions will assist planters in getting rid of the pest. The plants are generally backward, but will soon reach the normal if favoured by the weather. Round Maidstone, the plantations are making fair progress under present favourable influences, but repeated washings have thus far failed to clear the bine of lice, and fresh broods appear in quick succession. It does not seem possible that more than a very moderate crop can be harvested. Through the Faversham, one observes some grounds that are in splendid condition, despite the attacks of blight to which they have been, and still are, subject, and others that are in very poor form, their

prospects being most unpromising. It is said by some of the older residents, that this year the attack of fly and lice is the most severe they have seen for a long time. The gardens in the Rochester district appear to be in about the same position, and although growth is evident, the plant has not arrived at the point of safety, and there is still much room for anxiety. Round Yalding and Paddock Wood the bine is growing rapidly, and much improvement has been effected recently. Washing is, however, still necessary, as the blight sticks closely to the leaves, and appears to be gifted with extraordinary vitality this season. Reports to the same effect are to hand from other parts of the county: there is health and growth accompanied by blight and washing, and it remains to be seen which will gain the day.

SUSSEX.—A fair average harvest seems to be probable, supposing that the elements continue to be helpful, but in this county also the blight is universal and continuous, and must be got rid of before any definite opinion can be pronounced.

HANTS.—These districts are suffering from the persistence of the blight, it being many years since so severe an attack has been experienced. Planters are persevering with washing, hoping to succeed eventually, though their patience and their pockets are being sorely tried in the meantime. The outlook is nothing like so good as at this time last year, and a moderate crop is all that is anticipated.

SURREY.—My previous reports led me to think that the Farnham grounds had fortunately escaped from the evils that have visited other districts, but I now hear that they have not only a taste of the same bitter draught, but are compelled to swallow such a mouthful as far exceeds their average allowance. The effects of washing thus far are hardly perceptible, and the main hope of growers rests upon the weather, and especially upon a good supply of sunshine with occasional thunder and its accompanying rain.

WORCESTER.—Many of the best plantations are showing some clearance of vermin as the result of persistent washing and improvement in the weather, and some growers are now more hopeful. But where the necessary work has not been done, the blight sticks and leaves are beginning to curl. The pest has not been got rid of, and still causes anxiety. The bine is on the whole making good progress, and, apart from the blight, is sound and healthy.

HEREFORD.—Warm rains and sunshine have favoured the plantations, they are looking much more promising, and but for the persistence of the vermin, the outlook would be generally satisfactory. But the growers are compelled to persevere with washing, and are grumbling about the cost, which will seriously discount the results of the crop, be it ever so good. At present the general outlook for this county is fairly satisfactory.

Concerning foreign affairs, I have the following news:—

Bavaria.

SPALT.—The development of the plant is very irregular; some of them have reached the half of the poles, but those which were attacked by the earth flea are still in arrears. The continued rain has hindered the growth, but the bine is generally healthy.

WINDSACH.—The recent continued damp, cold weather has not been favourable, and the plants consequently look yellow. Warmer atmosphere is much needed.

ANSBACH.—The growth commenced very well, but the bad weather from the middle of May to June 10 hindered it. Since then there has been remarkable progress, and the plants are free from insect pests.

GROSSWEINGARTEN.—We have had many cold days and nights during June, and our plantations have been thereby injured, and unless the weather improves we fear that they will become unsound.

SCHNITTACH.—Our plants, which are already half-way up the poles, have benefited by the warmer damp weather of the last few days. At present we have no report to make about vermin, but some of our surrounding districts have been troubled by the earth flea, the growth being thus retarded.

NEUSTADT.—The plants are somewhat backward as compared with last year, and the new plantations have suffered considerably from the too abundant rain, so that some of the bine will come to nothing.

BAWBERG.—The plants are not growing well on account of the unkindly weather, but they vary according to position and cultivation. The young plants are good on the whole, but older, transplanted ones are not so good.

ALT.—The unfavourable weather has not left our hops without injury, but the general condition is fairly good; most of them have already passed the half of the poles.

WOLZACH.—The bine has generally reached two-thirds of the height of the poles, and is still making good progress. It is healthy and free from blight, but some gardens are in arrears.

Wurttemberg.

ROTTENBURG.—On account of the cold, wet

weather our plants are generally backward, and look yellow and thin. The last few days have been bright and sunny, and it is hoped that under the improved conditions better progress will soon be evident.

BOBBINGEN.—The plants on the whole look well, and are already 15 to 18 ft. high. The wet weather has hindered the cultivation.

HORR.—The much-needed warm weather has commenced, but we have too little sunshine. The plants may improve after the rain, but the present warmth makes them all the more sensitive to cold, and one cold night may be most injurious. Many have suffered from it, and are much in arrears.

TETTING.—Continued bad weather, with rain every day, has hindered growth, so that it will be some days before the bine has arrived at its normal height. Warmer weather is essential if the crop is not to be deficient.

Baden.

SCHWETZINGEN.—Our hops look generally well at present. They have been hindered by the wet weather, but are now showing signs of fresh growth. They are quite sound thus far.

HART.—Since the recent continuous rain, we have had warm sunshine, which has done the plants much good. They are well up the poles, are healthy, and of good light green colour. In the neighbouring districts the condition is, in general, medium to good.

Nassau.

GRENZHAUFEN.—The weather has now improved, but we get much fog in the mornings. The mildew in the valley has not done any harm thus far, as the hops have been well attended to, and are therefore strong, and have power to resist the attacks of disease.

Bohemia.

SACHSENELD.—Rain has delayed the work in the plantations, and on account of the low temperature, the development, especially of the early sorts, is backward. But the plants are healthy and are now growing well. Some vermin is present, but as yet no harm has been done.

SAAZ.—The bad weather has not done much harm to the plants. The early cut roots have grown well, only a small proportion being backward. Growers complain of blight, but their complaints are not justified, as when better weather arrives the fly will disappear.

POLEPP.—The condition of the plants is unequal on account of the sudden changes in temperature. We had an attack of earth lice, followed by hop lice, but the latter are not increasing. Some washing has been done.

Russia.

WARSAW.—The condition of the hop plantations is generally very satisfactory. They made but slow progress during the spring, as the weather was cold and wet, but within the last few weeks a favourable change has taken place, and the bine is growing in most districts with sufficient rapidity, and in such a healthy condition, that we may look for a fair crop of good quality.

France.

DIJON.—The continuance of strong, cold north winds has hindered the start of the young plants, and the bine is at present somewhat weak, the general aspect of the plantations being much more unsatisfactory than is usual at this period. Some vermin are attacking the plants, but thus far, no alarm is felt on this account.

Belgium.

BRUSSELS.—All reports from the country districts refer to the very severe attack of blight from which the hop plants are suffering. There is no regular system of washing here, planters being generally unable to meet the necessary expense. If Nature comes to the rescue, well and good, but this being the only remedy, there is much uncertainty as to the result, and growers are kept in a very anxious state of mind. The present crop outlook is not favourable, and it seems most probable that the harvest will be much smaller than last year.

America.

From a letter dated June 9, I learn that at that date the crop conditions were very satisfactory. Lice had made their appearance in Oregon and Washington to about the usual extent, and growers were making preparations for washing, but they generally wait for further developments, and delay their actual operations until the end of June or the beginning of July. A cable message received to-day (June 29), says:—"Crop prospects are very favourable, promising a large yield." My Oregon friend, previously referred to, confirms this outlook by his personal knowledge and his subsequent advices from the other side, anticipating that they will have a considerable surplus to spare for shipment to England.

Professor William Hunting, formerly Professor of Veterinary Science and Practice at the Royal Agricultural College, and now president of the Royal College of Veterinary Surgeons, and examiner for the Royal Veterinary College, has accepted the post of honorary professor and examiner for the diploma at the Royal Agricultural College, in succession to the late Sir George Brown, C.B.

Northern Notes.

IS the agricultural labourer thrifty? Judging by the number of club anniversaries held at this time of the year in the villages of Yorkshire one is inclined to answer affirmatively. These societies have in some instances existed for sixty years and upwards, and have done a good work among the labourers, by whom they are mainly supported, and officered. One grave factor militating against their stability may be mentioned. Probably two out of every three of these village sick clubs do not submit to registration, and are not affiliated with the great parent societies. The result is that the majority of them are insolvent, measured by the standard of sound societies placed on a proper financial basis. Many of the unregistered societies pay out annually for sickness and death more than they receive, and the drain on the funds at the bank goes on year after year, the result in a few years being inevitably a crash. The club's spare the poor rates, and enable the labourers and their families to escape the taint of pauperisation.

WELCOME and much-needed rains on two days of last week, followed by showers the last few days, have set things on their feet, and everything is growing quickly (weeds especially are making a spurt amongst potatoes and the root crops). Early potatoes are showing a variable yield, but it is premature to predict with any accuracy what the general crop will produce. Clovers and meadow hay are in vigorous growth; and the corn crops are well set up and of excellent colour. Wheat is a remarkably strong and healthy plant, and has already burst into ear. Some very good barley will be produced in the North if all goes well from now. There is practically nothing doing in home-grown wheat in northern markets; factors say they are waiting until harvest, and merely attend local markets for customers' sake. A good sample of home-grown oats is worth over a guinea per quarter, and of wheat 30s. and 31s. delivery.

ALL eyes are centred on Derby this week, the Mecca of the agricultural world for a few eventful exciting days. It seems idle to discuss the utility of agricultural shows; and yet, during the early days of this present season one has heard people declaiming against the small exhibitions of stock, which we contend, have their uses and are equally important, relatively, as the bigger meetings. The small farmer finds his own local society a means of advertising his goods, and he has quite as much right to a puff in the newspapers as any other trader with something good to place before the public eye. The small farmer at these small shows can take part in an interesting and healthy rivalry amongst themselves, and no one is any the worse, but a good deal better for the annual meeting, which is, as a matter of fact, in many an instance, the trial ground leading up to future successes in better company. We should vastly like to see a small show run on lines where the prizes were in honours and not in cash. This was a feature in the early history of some societies. We now live in times when gold is paramount, and honours, as such, are but lightly esteemed.

THE energetic gentleman who writes numerous letters to the papers advocating the free importation of Canadian live cattle into this country meets with very generous treatment from the editors of newspapers. He usually receives, we note, a Roland for his Oliver, at the hands of some other quick-witted controversialist. He is still irrepressible. The mistake he makes is in constant reiteration of his belief that the question is entirely one of free trade; and that any person who fails to put implicit confidence in his proposals cannot possibly be a consistent free trader. A Yorkshire Liberal M.P. and a Tory landlord have lately been taken severely to task by Mr. Gray for their alleged "inconsistencies." What is admirable in Mr. Gray is his pertinacity in what appears to many of us to be an indefensible cause.

AS a rule the prosperous districts are those where farms remain in the hands of families over long periods of time. On an estate which embraces thousands of acres of wold land, a family paid nearly £40,000 in rent during their tenancy, and it is interesting just to note the varying rents that were paid during the eighty years of occupancy. At the beginning of last century 13s. an acre was paid, and it continued at that figure for thirty-two years. Then six more shillings were added per acre for thirty years; then the rent became 22s. for ten more years, and a further shilling was put on for the next decade. In the year 1812 wheat was making as much as 60 per quarter, and the agent intimated to the tenant that his rent would be raised for that one year to 25s. an acre. The tenant refused to pay an advance, although he could well have afforded to do so. The farmers of those days were more free-

quently brought into contact with their landlords, and a greater community of interest existed between them. Has no one heard of tenants who have never exchanged a word with the owner of the soil which they cultivate?

ONE regrets to say that a drop has occurred in the price of sheep. This was not altogether unexpected at this time of year, when the supplies at market are frequently made up of culls, the primer animals having already gone off the farms at highly remunerative prices, leaving their wool as another valuable asset. Sheep of first quality that will cut up into small lean joints have not fallen so much in price; it is the coarser sort of meat that has declined. Farmers have no cause for grumbling about the sheep trade; if everything on their holdings had brought as good returns as sheep, they would be on the high road to making fortunes. The paper read by Mr. Hollings on the preparation of wool for market at the International Conference of Sheep Breeders, cannot fail to exert a beneficial influence upon the shepherds who hitherto have exhibited slackness in tying up their fleeces. Many of them have, no doubt, in their inmost hearts pleaded "not guilty" to the charges of carelessness. Deception once practised against a buyer brings the author into disrepute. Buyers have their wits about them, and soon know their clients and their ways. Good useful wool is bringing about 17s. 6d. per stone up here, and we calculate that this is better by 2s. per stone than the general run last year; but then this is only half the price some of our farmers recollect. The clips are not being parted with hurriedly, as farmers are well aware of the hand-to-mouth policy which manufacturers are pursuing.

June 29, 1903.

Royal Agricultural Benevolent Institution.

The report presented at the forty-sixth annual meeting of this Institution showed that the receipts from subscriptions, donations, and church collections for year ending Dec 31, 1905, amounted to £22,076, 9s. 9d., as against £21,368 18s. 4d. in the previous year, being an increase of £707 11s. 5d., mainly derived from new annual subscriptions. As the council have from time to time called attention to the stationary condition of subscriptions, they are gratified with this response to their appeal, particularly as it enables them to recommend the election of a large number of pensioners than last year.

There are now on the books of the institution 218 married pensioners (109 couples), costing £4,360 per annum; 210 male pensioners, costing £7,610 per annum; 606 female pensioners, costing £12,120 per annum. At this year's election were added twelve married couples, thirty males, and forty-six females, thereby increasing the annual charge to £24,276, exclusive of octogenarians and grantees qualified under the rules. The trustees of the Queen Victoria Gifts Fund also kindly allow, as last year, fifteen grants of £10 each to the five male, five female, and five married unsuccessful candidates who poll the highest number of votes in their respective classes, and are not in receipt of grants from any other source.

Weather, Crops and Stock.

Crops between Birmingham and Norfolk.

A RECENT journey from Warwickshire, through Leicester, Rutland, corners of Huntingdon and Lincoln, and to the Norfolk coast, afforded a rapid view of crops over a very wide area. Haymaking is a little more forward in the east than in the heart of England, and grass generally better there, for during the drought of June it was the central counties beyond the influence of the sea which suffered most. Clovers and mixed grasses in Huntingdon and further east are, however, light, especially on the higher lands. Wheat and oats on the great fertile plain of the East Midlands are generally sturdy, of capital colour, and fairly well grown. In the case of barley everything seems to have depended on the date of sowing, and the difference in promise between crops on similar land in the same district is sometimes very striking. Root crops, patchily in Warwick and Leicester, improve as one goes east, and as the dyke and windmill country is reached fodder crops generally begin to put on a more promising and thriving appearance. The potatoes are very healthy and flourishing, but of course it is early yet for disease to be making an appearance. Field beans in many parts look surprisingly well, and one sees more of them in the Midlands proper than there were a few years ago.

The Outlook in Cambridgeshire.

A CAMBRIDGESHIRE farmer sends us the following account of the present farming outlook in that county:—The prospects on the whole may be deemed fairly satisfactory to the end of June. Hay crops are deficient, to all appearance, throughout the county, owing to a dry May and the cutting cast winds with occasional frosts. The genial showers we are having are probably partial, but where they do fall it is hoped the grasses will thicken at the bottom. The hay harvest will be late, and where the showers have fallen cannot materially alter the light crops now. The corn crops are looking most promising now we are having warmer nights and gentle rains. The wheat and barley are mostly out in the field, and fortunately no very heavy storms have yet visited this particular part; the corn crops are all standing and promise well, providing storms do not knock them down later on. Root crops are also quite up to the average. Mangolds and kohlrabi have escaped the fly fairly well, and a good plant of all kinds of roots may be anticipated. Sainfoin and clover layers are light, but what has been already gathered has been got in in good condition.

Crops and Stock in Cornwall.

THE dry, cold spring, writes a Cornish correspondent, cleared out all the roots and hay very early, and cattle had to be kept on the seeds too late, hence the shares of hay will be very slight. Corn is growing better than one would expect this dry weather. Wheat especially is looking well. Mangolds are growing well, in some fields the rows are almost touching. Swedes are also up in spite of the dry tilling. The price of beef is improving, but I don't know if this is owing to the scandal about tinned meat. Shearing is in full swing, most farmers are shearing with a machine so as to get all the wool possible, which will pay for looking after now. Sheep and lambs, which were looking very bad, have picked up wonderfully during the last two months. Pigs are still selling well, and in great demand. Farmers who are fortunate enough to have any old hay left, have no difficulty in getting £5 a ton for it. Early potatoes are selling fairly well, and there are some splendid crops. The last month has been a grand time for cleaning mangolds, cabbage, &c., and gardens, and if this hot weather continues without much rain I think we shall have an early harvest.

Aberdeenshire Prospects.

THE following interesting report on the crops, &c., of Aberdeenshire has come to hand from a well-known farmer in that county:—The weather in Aberdeenshire has been remarkably dry during the past few weeks, and, therefore, quite suitable for the preparation of the ground for laying down the turnip seed. Most farmers with dirty land have taken advantage of the weather for cleaning the land and have removed as many weeds as possible.

The turnip seed season throughout the county is drawing to a close, which, on the whole, has been fairly favourable except during the early portion, when great difficulty was experienced in getting a commencement made with the drill plough. Those farmers who did not exercise patience but rushed in the seed

when the land was in a sodden and water-logged condition have already regretted their rashness, as almost every acre that was sown in such a condition has had to be resown. The ordinary yellow turnips have thus taken the place of swedes, of which there was only a very small area put in this season on account of lateness. Cereal crops are greatly in need of a good shower to refresh the earth; but, on the whole, they are doing wonderfully well considering the excessive dryness of the past few weeks. The prospects at present are quite a fortnight behind an average season. There are yet many possibilities, as everything depends on the character of the weather that is to follow, and it is generally after the turn of the day before the best portion of the season for growth is entered upon in this region. Grass is everywhere plentiful, but many fields do not appear to be so heavily stocked with cattle as they frequently are at this period of the year. Feeding cattle has been such an unremunerative job that a few farmers have partially given up the business and turned their attention to sheep in the hope that the fleecy flocks will give better returns for food consumed. During the past two years sheep have done well, and it is to be hoped that the time of pay is not yet over.

Fruit Culture in Gloucestershire.

THE annual report of the Gloucestershire County Council (Mr. G. G. Bellingworth, F.R.H.S.) just issued, states that the applications for lectures last winter were so numerous that a large number had to be consigned to the reserve list. There is, he says, no lack of evidence to prove that Gloucestershire is naturally adapted for fruit culture, and the many old orchards in the county indicate that its possibilities in this direction were fully realised by a generation of growers in the past. Some ground has doubtless been lost, but the outlook is hopeful, and agriculturists are becoming alive to the fact that if the orchard is to be profitable it must be given the same amount of care as any other department on the farm. Every year, thanks to the instruction given by the County Council, growers realise more and more the necessity of planting good trees of recognised varieties, keeping them clean, and attending to the important items of pruning, protecting, and manuring. Hundreds of trees have been planted during the past winter, and hundreds of others, planted previously, are coming into a state of bearing. In due course the result of this wakening up must be seen, and he hopes Gloucestershire will uphold its time-honoured reputation as one of the leading fruit-growing counties in the West of England.

At a meeting of the Hexham Farmers' Protection Association held at Hexham on Tuesday the following resolution was carried unanimously:—“That in the opinion of this meeting of the Hexham Farmers' Protection Association the new dipping order issued by the Board of Agriculture is unnecessary, impossible of being carried out, and will be a serious matter for the farmers of this district.”

A course of demonstrations and practical work in field and laboratory, on the applications of science to rural life and outdoor industries, will be held at the South-Eastern Agricultural College, Wye, Kent, on a convenient date (about the last week in July or first week in August) during the summer of 1906. The course will last a fortnight, and will be designed to meet the needs of those masters who, already trained in some branch of pure science, have to teach such subjects as chemistry, botany, zoology, mechanics, physics, &c., to scholars whose homes and lives are in the country, and to whom the teaching of science, as applied to and illustrated by things of importance in country life, will be of greater interest and educational value. Full particulars can be had of the principal of the college.

We regret to see that the Midland Counties Agricultural Supply Association, Ltd., which was formed to meet the combine of the National Federation of Implement Makers, and was so successful that it broke up that combine, has fallen on evil days, an order for the compulsory winding up of the association having been made at Kildminster County Court. It appears that after the break up of the combine mentioned farmers began to support the combine, which naturally got into difficulties, and a resolution was passed by the members of the association that it was desirable to reconstruct the company, and that it should be wound up voluntarily. Mr. C. G. Macpherson, of Colmore Row, Birmingham, was appointed liquidator, and this was duly confirmed. To meet certain legal requirements it was decided to apply for a compulsory winding up order, which, as stated above, has been granted.

EFFICIENCY! RELIABILITY! SIMPLICITY!

Farmers of Great Britain, Read this, Think over it, and Act upon it. By this we wish to remind you that we are still in the market, and now more than ever before, whether you see our "Ads." in all the papers, and our stands at all the shows or not. Our 1906 Model Eagle Separators have beaten, and are constantly beating all previous records in the combination of Efficiency, Reliability, and Simplicity. Easily turned, easily cleaned, absolutely safe.

He is on a wonderful trial and only received the other day. A Mrs. Cooper, of Warwickshire, who had ordered a new 1906 Model style "K.W.", a week or two ago, writes:—
"June 15, 1906.—Dear Sir, I got the Separator on Monday last, and up to now we are well satisfied with it in all ways, it skins clean, works easily, no noise, and very simple and easy to clean, and nothing can be better. Yours faithfully, (Signed) S. C. COOPER." It should be noted that this lady had another Separator of a rival make, which did not give her satisfaction, for, on March 27, she wrote us as follows: "Please send price list of your Separators. I have one which I am not very fond of, and from what I have seen of yours, think it would suit me better. She has evidently been thinking in discarding the other Separator for one of ours, as our new Model Machines are actually in and away ahead of any other style."

Sent on a two weeks' FREE TRIAL, carriage paid. If you have but 2 or 3 cows buy a Little Eagle, £3, complete. That our system of driving with a cord instead of with cog gear is the best and only correct and absolutely safe method we can easily prove. However, we also make several unexcelled styles of cog gear Separators (the "Condor," etc.). Write us if you are interested. None so durable and cheap. Gold Medal, Paris, 1900. Please note also, we supply all spare parts and effect repairs for the old model cord driven "Fram" Separators. These "Fram" and old model "Eagle" exchanged for new 1906 models at exceptionally favourable terms. Write us at once for lists and particulars, mentioning this paper.

 and Crewe Agricultural Show, August, 1897.

T. NEWTON'S PATENT SPARROW & RAT TRAP.

This Trap is available for Catching
 Sparrows, Rats, Weasels, and
 Stoats. 60 Sparrows have been
 caught in one hour and 27 Rats in
 two hours. Over 4,000 Sparrows
 caught in one of Newton's Traps in
 one season. See *Field*, March 12,
 and April 9, 1898.

Price 10/6 each. Cash with order.

If made Rat-proof (lined with zinc) for Rats and Sparrows, 13/- each.
 Sudden Death Wild Animal Traps, 10/6 each. Humane Automatic Run
 Traps, for catching alive Wild Cats, Rabbits, Stoats and Weasels. Just
 invented for the suppression of steel traps. Price 5/- each for Rabbits,
 &c.; 10/- for large animals. Cash with order.

THE ECLIPSE MILK FILTER.

(PATENT)

This new invention supplies a long-felt want amongst Dairywomen and Farmers generally, as it supplies a **PERFECT FILTER** at a little cost. There are no costly replacements, and it is most easy to clean. The milk passes from the inner bowl through the brass gauze A, and then rising passes out through the finer gauze B, the sediment settling in the recess provided by the inverted bottom C.

By this process every particle of sediment is taken out of the milk.

Price, 7 in. diam., for family use, 2/6 each; 10 in., 4/6; 11 in., to fit Railway Churns, 5/-; 12 in., to fit Receiving Pans, 6/-.

Sole Maker:
T. GRAYSON, 16 & 17, Queen St., DERBY.

OGLE'S Patent Paragon Horse Hay Fork

Is by far the Simplest and most Improved Implement for the Building of Hay, Clover, or Loose Straw Stacks. By its use Stacks can be Built Cheaper and in Less time than by any other Implement in use. The Low First Cost and Simplicity of the Fork is a great recommendation in itself. It is Light, Portable, and can be quickly erected. With this Fork we guarantee to deliver 35 feet high a large 2-horse cart load of hay in less than four minutes. We also guarantee our Elevator to do more work in less time and with considerable less labour than any other appliance made for the purpose of elevating hay or straw. It will work equally well on a load of hay that is sweating as on one that has been newly built.

Can be sent anywhere on approval.

Further particulars had on application to
G. C. OGLE & SON, Perseverance Works, Ripley, Derbyshire.

MARTIN'S

PATENT FIRST PRIZE

SWATH TURNER.

WHEN BUYING A SWATH TURNER, YOU WANT one that will handle the crop gently, without damaging the leaf, or knocking the seed out, and one that will pick up the swath from the butt end, turn it all over bottom upwards on to fresh ground with the butts spread out in a fan shape in proper form for drying. MARTIN'S is the only SWATH TURNER that carries out these operations, and is sent out on free trial.

Martin's Swath Turner will windrow as well as any other, but no Swath Turner can collect four swaths into one windrow in two operations. The only machine that will do this properly is

Seasonable Topics.

Midland Enthusiasm. THE story of Derby's triumph has been told, and everyone has read an account of the great and successful show which, we hope, has been the means of inspiring fresh confidence in the Royal Agricultural Society and retrieving its somewhat shattered fortunes. We venture to grant space for one more paragraph, this time in praise of the enthusiasm of the Midlands. It is thorough, whole-hearted, and genuine, and when the Midlander sets his heart on doing anything you may depend on him bringing his whole energy to bear upon it. The clerk of the weather might have set out to do his worst on the day that His Majesty visited the show, but what did that matter? The weather was not too bad to stop the best-loved man in Britain from attending, and it had no power to keep at home thousands of his people who were given the opportunity of seeing the King and a Royal show on the same day. Who says that agricultural shows have ceased to be attractive to the million? While we give all credit to the society, the exhibitors, the Press, and the citizens of Derby for their combined efforts to make the show a success, do not let us forget the inhabitants of Midland towns, villages, and country places, who flocked in their thousands to the show and gave to the exhibition that animated aspect of enthusiasm which was never seen at Park Royal.

Ricking. IN every grass-growing district a farm without a haybarn is not only incomplete, and there can be no doubt about the utility of these structures. It is a fine thing to be able to draw your hay into a barn, unload it, and know it is safe from wet, without the trouble and expense of having to provide poles and a rick cloth. Just so, and in addition to this, when the hay is in the barn it is done with, and there is no alter trouble and expense of thatching, which is a consideration in these days when many farmers grow so little straw. The only thing to be regretted about these introductions is that they have been the means of lowering the standard of expert labour. There is no great art in stacking hay under the corrugated roof of a barn, with the pillars to guide you; but the building of a haystack is a different matter. Just as some men excelled at mowing or pitching in the old days, there were also expert rickers who always played this part in the harvesting operations, and were to their reputations if through some accident or misjudgment the stack presented a lopsided appearance when completed. Then came the thresher—likewise an expert—who knew how to lay the straw on to keep the wet out, and also look neat and workmanlike. The hay-barn does away with all this labour and expense, which is a good thing; but it also

reduces the scope for an expert labourer to display his ability.

The June Rainstorm. JUST at the moment when thousands of loyal Britons were shouting themselves hoarse at Derby over the pleasure of seeing their King, it was raining. This is a very mild way of expressing it, and it would be more correct to say that it was pouring. In many parts of the country it began in the form of a shower, and it rained, rained, rained for a matter of thirty-six hours or so, and provided copy for the daily newspapers as well as a topic for general conversation. In fact, the extraordinary downpour afforded one more illustration of what the British climate is capable of doing when in a freakish humour, and various opinions were expressed as to the beneficial or other effects of the lengthy shower. Farmers who left their haymaking, perhaps reluctantly, to visit the Royal show, felt a certain redeeming degree of satisfaction in knowing that they could not have done much had they stopped at home, and gardens and root crops certainly benefited by the lengthy downpour; but this is only part of the story.

The Effects on the Corn, &c. WE made a long journey on June 29 through a rather low lying part of the country, and observed several farmers disconsolately surveying meadows where the grass was submerged half-way up in water. They had not much to trouble about in this fact alone, for the flood quickly subsided, but it left mud and grit behind it which is bad for machines, and reduces the value of the hay considerably. The sight was novel, and it took us back to that series of wet summers nearly thirty years ago, when floods in haytime were general and more than one farmer was ruined. After all, a dry summer in this country is better than a wet one. It was comforting to hear some people say that the rain would do good; but pitiable, nevertheless, to see fields of oats and wheat which the day before stood erect and upright, beaten down to the ground as flat as if a roller had been put over it. It is too much to expect that the corn will ever regain its perpendicular position in many instances, and considering that cutting time is yet some weeks ahead, corn growers have reasons to complain of the lengthy and severe nature of the June rainstorm.

Work in the Hayfield. LOOKING back over a period of less than half a century, one observes the various inventions that have been made for the purpose of reducing manual labour in the hayfield. The mowing machine

rattles its way round the field, swath-turners and tedders do the necessary knocking about, the raker gets the hay together, and we have an arrangement for hoisting it on the stack. Of course, we must have horses to draw the implements and men to load waggons and build ricks, but there are prospects of the former being replaced by motors, and perhaps in the fertile brain of some inventor there is a plan of an automatic appliance that will take the place of humanity in the hayfield. How different it all seems to the old days when we, as children, watched for the gangs of big burly Irishmen who used to stride into the village with their scythes on their shoulders and the blue bundles under their arms which contained their worldly belongings. Goodness, how those fellows could work! Talk about Pat being lazy; he might have been in Ireland, but not when he came here for harvesting, for he would swing his scythe from early till late in a manner that would shame many a present day labourer, and do it, mind you, on rough fare, with a truss of straw on a barn floor for a bed. The advent of machinery has robbed Pat of a good deal of his summer harvesting, and the various labour-saving devices have lightened the work in the hayfield considerably. Perhaps it is as well it should be, for if we had to look for the men to-day who could get through the same amount of slogging manual labour as the harvesters of old, should we find them? The question is doubtful.

Correspondence. OF late a good many interesting letters have appeared in the MARK LANE EXPRESS on varied topics connected with agriculture, and we have received congratulations on this feature. Agriculture is such a wide field and presents scope for so many expressions of opinion that it seems to us that one of the best means of education is discussion and mutual interchange of views on the part of practical men. A farmer is a man who can never quite become master of his business, because he has always got something more to learn. But while he always remains a pupil he can also be a teacher by giving to his fellows the benefit of his experience, and, after all, knowledge gained by experience is the most reliable. In its own particular sphere the MARK LANE EXPRESS presents itself as a medium for the interchange of opinion and the distribution of knowledge, and its readers are cordially invited to give their views in our correspondence columns on matters of mutual interest and concern.

What Next? IN our issue of June 23 a cable-gram was quoted to the effect that Mr. Luther Burbank, called by some the plant-wizard of America, is experi-

menting in the hope of giving to the world a new potato, more prolific than any known, and impervious to disease. Quite so, and the sooner it comes the better, perhaps potato growers will say, but we must wait a bit. People have not got so much faith in wonderful new potatoes as they had before the recent boom, and Mr. Burbank is one of those individuals who have had greatness thrust upon them by an enterprising press. He may have made some interesting and useful introductions; possibly he has, but if he had given to the world one half the wonderful things that he is credited with, he would be a veritable Maskelyne and Cook in the plant world, and, of course, would be honoured accordingly. At any rate, it will suffice to say that Burbank's creations have not caused a great sensation on this side amongst the people who know, and we would suggest that the latest dose about the prospective wonderful potato be taken with a grain of salt.

The Turn of Days.

THIS is the term used by country folk to describe the season when the longest day is past, and we are again on the downward grade, so to speak. It is not without some feelings of regret that we write of this, for though we shall note scarcely any difference for some weeks to come, we know that the days can never be longer, and gradually the shadows of evening will gather in to shade earlier one day than they did the day before. With the farmer, in the spring and early summer seasonable work is of a preparatory and hopeful character. Sowing and planting are done in anticipation of harvest, but when the time of the turn of days comes round we can see what progress has been made, and form some estimate of what the final result will be. From an agricultural point of view the first half of the year might have been better, and, on the other hand, it might have been worse. We have suffered a rough some of the inconveniences of a late spring, and Jack Frost thought fit to give us one sharp sting before he departed for the season. In spite of this, however, we have had a further illustration of the fact that east wind is a greater enemy in the spring than frost, and of late years these conditions have prevailed at a critical time. Taking a broader view of the situation, and speaking generally of agriculture, the turn of days finds it in a fairly healthy and vigorous condition, and we have learnt from experience to be thankful for small mercies.

Agricultural Labour—an Employer's Views.

THE other day we heard a farmer giving vent to his feelings regarding the agricultural labour question. He deplored the fact that good labourers who take an interest in their master's affairs are difficult to obtain, and drew ugly comparisons between the time when really good men were content to work for half the wages than the biggest duffers want now. The system of education was blamed for putting false notions into the heads of the children, and making them discontented with the lot of their parents; and the man went on to describe how, when farmers were doing pretty well, they could get labour for half the money that they have to pay now, in spite of the fact that they have difficulty in making good men. The comparisons made between the past and present were by no means complimentary to the labouring fraternity of to-day, though in fairness to the speaker it must be said that he blamed the system rather than the individual. His arguments, from a farmer's point of view, contained a good deal of logic, and also some truth, but there are two sides to every question, and an intelligent labourer, who was present, gave his views of the situation when the farmer had done speaking.

What a Labourer Thinks.

"IT'S all very well," said the man, "but after all we are only getting our own back a bit. People talk of the palmy days of agriculture when wheat was thirty shillings a quarter, and farmers made fortunes, but what was the labourer's position then? Did he share the prosperity of the farmer, or reap any benefit from the good times? Not a bit of it; for, in too many cases, he was treated like a dog, and paid barely enough to keep life and soul together." The man did not talk without knowing something about it, for he was one of a large family, the father of which earned 9s. a week, and mother and children had to turn out and work to get the common necessities of life, for luxuries were unknown. "Talk about the good old days," observed the man with scorn, "they might have been good for the farmer, but they were bad for the labourer, and they would probably be as bad now if other opportunities had not come by which labourers are less dependent on agriculture." In this argument we hold no brief for either farmer or labourer, for whereas the former has claims on our sympathy, the latter also has a case.

Agricultural Politics.

BY A LOBBYIST.

Provoking their Own Nemesis.

Frankly, the method with which the Land Tenure Bill has been met in the House of Commons does not afford so gratifying an object of contemplation that one would recur to it. Remember that this Bill had received in a considerable degree the benison of the Central Chambers of Agriculture—not a body which is easily misled by the torrential platitudes of demagoguism or by the oratorical phantoms of the land nationalists and the like. It is a body whose native instincts are conservative, and whose action is invariably marked by moderation. This method has, as I prophesied it would, provoked its own Nemesis. What profiteth it to extreme landlordism if, by yielding a ceaseless stream of meandering talk which blocks up the Parliamentary channel, as a sequel it invokes the violent strength of a Government whose force is equal to rushing the barriers verbosity and garrulity have constructed? The first result of the two Fridays' debate in the House has not been to prevent legislation, but to render it assured in a more effective guise. First, the Labour Party, as I reported last week, revolted at what, in its inexperience of the House of Commons, it could only regard as a heretical and jaundiced waste of public time. Next, the whole body of Liberals rose in revolt against a Bill—and, for the first time for many years, they found themselves almost in harmony with the position of the Central Chambers of Committee—so manifestly in harmony with the overwhelming majority of the House being thwarted by a few Parliamentarians whom I heard one of their number describe as "the last articulate remnants of a moss growth of landlordism." As a fact, landlords were, as a class, unfairly dragged into the controversy. Those personally excellent politicians who adopted this opposition attitude—an opposition which watchfully extended to the comma, the semi-colon, and the much misunderstood colon—had no mandate for their relentless infinitesimal anxiety from the class. They played their own hand, and played it, I must say, with none the less enjoyments because they were without commission or credentials.

What if Channing's Bill be Preferred?

Now, the result will be that the Bill will pass the Commons. I should say that seldom has more insistent language been addressed to a Prime Minister than was addressed to Sir Henry Campbell-Bannerman (true he was absent) by the hundred and odd Liberal members who met on Wednesday in order to demand that the Government should adopt the measure as its own. It was not the language of entreaty so much as it was the language—this, by the way, is the characteristic manner of the heuchmen of Radicalism to its leaders nowadays—of pre-emptory command. Liberal statecraft is as clay to the hands of the potter before the commands of its following. Of course, it may be that with the preoccupations of the Government—with the Education Bill dragging it into the deeper depths of the morass of difficulty, and with the Workmen's Compensation Bill a source of endless legal disputation and petty dialectics—it will not be able to provide facilities for the discussion of the measure during the present normal session. I do not say it will not be possible. As a fact, these Liberals declare that two days' debate would settle the business if it were under Ministerial auspices, and if the eleven o'clock rule were suspended. However, even if this be not possible the Government will be ready—of this I am assured—to set aside two days, or even three, or even four, in the autumn session. Put not thy faith in princes or peers, messieurs of the landlord opposition! If there be an autumn session there will be a lax attendance of peers. Consider the rival attractions, and weigh the prospect of anything like a vitalised and close criticism of the Bill. Lord Wemyss will, of course, be there; but I would aver that even he is half afraid that if this Bill be mutilated it will be supplanted by a more forbidding Parliamentary embodiment, Mr. Channing's Bill, which has now but a spectral possibility associated with it.

What is the Interest Doing?

A member of the House of Commons—a distinctive personality in himself, and not without influence in the inner councils of the Government—assured me that, in view of the revelations made as to the character of the Chicago meat traffic, and of the extent of the trade in putrescence with England, and the consequent introduction of disease into the domestic homes of our land, he was astounded at the calm indifference of the British farming interest. How far he was justified in his statement I cannot say, but he assured me that not only had Mr. John Burns, as President of the Local Government Board, received no organised or authoritative evidence of the existence of an indignant feeling in agriculture against British meat being ousted from British markets by cheap offal and by filth masquerading as flesh, but that Lord Carrington, the Minister for Agriculture, is himself absolutely unaware, unless as a sequel to his own present observation, of any particularly keen or vivifying feeling in the agricultural interest in reference to the matter. True, Mr. John Burns is active; true, certain other authorities are; but not as a sequel to any specific advice or deliberate representations from the great rural interests of this country. "Oh," it may be urged, "if this rivalry does not have its genesis in the cupidity of the United States traders, it will have its genesis in Argentina, in Canada, or in Australasia." These are the apologies of sloth, of economic ne'er-do-wellism, of pitiful indifference. Here is a condition of things revealed in the United States meat-yards which may be declared to be the apotheosis of the poet Coleridge's experience at Cologne:

"I counted two-and-seventy stenchens,
All well defined, and several stinks."

This revelation reopens the market from which British agriculturists had been partially ousted. This revelation in itself predisposes the British mind to the patriotic duty of buying from the British producer. To thus leave that market to the more active foreigner or the more vigilant colonist is folly—nay, is much worse than folly with the authorities actually sympathetic.

Who will Succeed Sir Frederick?

I heartily felicitate Mr. Channing on the clear and cogent arguments which he advanced in the hope of persuading the President of the Board of Trade to appoint as successor to Sir Frederick Peel on the Railway Commission a man having some conception of rural necessities and who sympathises with them. If this column had been the means of suggesting this action to the hon. gentleman, I shall naturally be possessed by a deepened sentiment of appreciation. This much is apparently certain—that if the Minister for Agriculture is consulted in this matter he will seek to accentuate the impression which I am persuaded Mr. Channing made upon the receptive mind of Mr. Lloyd-George. I opine this from the answer which Lord Carrington made to the deputation representative of rural and commercial interests, which suggested to him the setting up of an inexpensive, practical, and expeditious tribunal for dealing with increases of rates or the withdrawal of railway facilities. Of course, there is a Bill on the stocks having this object in view. Lord Carrington is in a large measure in sympathy with this suggestion; but, after all, soft words butter no parsnips, and the promise that the Board of Agriculture, which has no executive authority, is willing to investigate special grievances, and as a consequence to make representations to the Board of Trade, is only a kind of academic expression of friendliness, is only the outward and visible sign of an inherent incoquity. What would be of much more value would be the presence of a man on the Railway Commission who would be on the side of the angels rather than of—well, the railway companies.

An Echo from Bodmin.

I had deliberately made up my mind to proffer no remarks upon the contest in the Bodmin division. I conceived that the feeling

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

which had been generated in regard to the treatment meted out to the Land Tenure Bill—of which, of course, we must not forget that Mr. Agar-Robartes was the original sponsor—would embitter the atmosphere and inevitably lead to to misconceptions. I had persisted in this resolve, even though I knew of the tense sympathies which Mr. Freeman Thomas has with the agrarian interest, and his active participation in it. However, when I read that Mr. Freeman Thomas's antagonist had girded at his political foes because this Government had not done more for agriculture than it has done—"What," said he in effect, "had the Government done but extended a kind of academic sympathy—to Mr. Agar Robartes's Land Tenure Bill?"—I could not but recall the famous speech of Professor James Long to the Central Chambers of Agriculture, when he declared that Mr. Balfour would apparently rather have his head off than do anything for agriculture. And Mr. Balfour had then been head of a Ministry, possessing one of the most powerful majorities on record, for six years. I am by no means a pro-Ministerialist—I deplore, as my readers know, its attitude of invincible antagonism to all that smacks of clericalism in rural education and the fantastic self-limited pictures of an impossible rural tyranny by which it giddies its own brain; but at least in this particular instance the gibe is not effectively barbed, and is peculiarly maladroitness. I will go so far as to add—though I admit that this is due to the individuality of the man rather than to his fellows—that Earl Carrington is one of the most sympathetic Ministers we have ever had at the Board of Agriculture; he has all the practical sympathy of Mr. Ailwyn Fellowes and a greater readiness of initiative.

Are exemptions for the tax upon sheep-dogs secured too easily? This was the statement made on the Committee stage of the Dogs' Bill. The question, perhaps, should rather assume this form: Who is a farmer and who is not a farmer? It was actually averred—with what fidelity to truth I cannot say—that a man owning a cow or a colt would call himself a farmer in order to elaim exemption for his dog. Well, frankly, I think the law ought to include a clear definition of a farmer. I do not see why it should not say the number of acres of land required to be farmed, and the number of cattle or sheep. Of course, in the famous case of Graham v. Haig—the Board refused to grant an exemption where the applicant had six acres of pasture land and three cows. Perhaps this was too drastic an example, and with the development of the application of the small holdings principle it will be held to work a hurt to a desirable section of the farming community. For the life of me, however, I do not see why Clause 5 of the Dogs' Bill—which suggests that exemption shall require the assent of a petty sessional court—should not include some descriptive identifying terminology. But, perhaps, we are unduly fashing ourselves over the matter. Even so optimistic a statesman as Sir Henry Campbell-Bannerman is not possessed by any confident, optimistic belief in the Bill passing this session. The whole business is on the knees of the gods, and their chief characteristic nowadays is sympathy for garrulity and yielding to its purpose.

Chester Cheese Fair.

Concerning the fair held on Wednesday, Mr. Chailinor reports as follows:—Pitch, 60 tons. The attendance of buyers was large, which brought about a quick sale; finest lots making 55s. to 60s.; medium, 50s. to 54s.; lower qualities down to 47s. 6d. A good clearance was effected,

Half-Holidays for Farm Labourers.

SIR,—Your correspondent, "Red Rose," wishes to know what others of your readers have to say respecting weekly half-holidays for farm hands. My opinion is this, that a more absurd proposition was never conceived. With regard to moving with the times, a line must be drawn by all practical men at entertaining such an idea by both farmers and labourers.

All such good men, known to "Red Rose," who have left farms in order to work in some other capacity where they could knock off work at one o'clock on Saturdays, can be very well dispensed with in farming.

Good commonsense labourers can see for themselves the utter futility of such a proposition, and would banish from their minds, as readily as the practical farmer, such an absurd idea.

With regard to the perpetual and everlasting grind to which your correspondent attributes the cause of discontent, I must enter a protest. My experience has been that no class of labourers are happier or more content than the genuine farm labourer, and he would be loth to change places (all things considered) with the artisan and mechanic, and in many cases is much better off than the latter.

With regard to the freedom of the agricultural labourer, compared with the labourers of other vocations, your correspondent is lamentably misinformed or unpractical.—Yours respectfully,
June 28, 1906. WHITE ROSE.

SIR,—I am pleased to observe that your correspondent "Midlander" is in accordance with me as to the reasonableness of the farm labourer having a weekly half-holiday. The need may not be yet felt in out-of-the-way and purely agricultural districts, but farmers who live near to towns and manufacturing centres know how difficult it is to get and keep good labourers, and the reason why many of them leave farm labour is because they get more freedom and less restraint than in other occupations. I fully agree with "Midlander" that a little ground of his own is very helpful in keeping a man to the village, and where cottages are not provided with good gardens, allotments should be available. It is sometimes urged that allotments in many villages have turned out a white elephant, but where this is so it often turns out that the worst bit of ground about the place has been turned into allotments, and they are fixed in some far distant and inaccessible spot. I am quite convinced that it is to the interest of farmers to help their labourers in the matter of home gardening, even to the extent of giving them a load or two of manure and drawing it out for them in the winter when work is not pressing.

Turning to the half-holiday question, I was talking the other day to a farm labourer who has a large garden of his own and nearly a quarter of an acre of allotment besides. The ground was in the pink of cultivation, and cropped with a useful variety of vegetables, yet all the work is done before six in the morning and after six in the evening. Would a man of his character appreciate half a day a week to call his own, and would his employer be much worse off if he had it? The question needs no answering, and in these days good labourers are worth cherishing.

If we are to keep the best men on the land they must be granted concessions, or they will go, and I don't know who can blame them, because, when everything is taken into consideration—the long, drudging hours, the low wage, and hard work—the farm labourer's lot is not all sunshine, and it is a life that many would not be very willing to take on who prate glibly enough about back to the land.
RED ROSE.

July 6, 1906.

Women in the Fields.

SIR,—It is not likely that our reformers will induce many men to come back to the land in the capacity of labourers, but if they did, is it so certain that work could be found for many more hands than are at present available? These are busy days, when the hay harvest has to be dealt with without delay, and roots stand simultaneously in need of cleaning and singeing, yet, thanks to mechanical help, there was never a period when the stress and anxiety at this season were less. One of the most significant signs of the times may be seen in the almost entire vanishing of female labour from the fields. The men at work are fewer than ever before—but they suffice; the women nowadays are hardly called upon at all, save in exceptional districts. The writer, who had to make a journey of 100 miles last week across some of the most purely agricultural parts of England, occupied in farm work only in two places, and one of these apparently a cottage holding where no hired labour would be

employed. It is a change for the better which one is not sorry to see.—Yours faithfully, D.
June 29, 1906.

Shire Horses at the Canadian National Exhibition.

SIR,—I have been favoured with the schedule of prizes of the Canadian National Exhibition, which takes place at Toronto from August 27 to September 10, 1906. Twelve classes are devoted to Shire Horses (imported or Canadian bred), viz.:

	1st	2nd	3rd	4th
Stallion, 4 years old and upwards	£20	£12	£8	£4
Stallion, 3 years old	£8	£5	£2	£1
Stallion, 2 years old	£4	£2	£1	—
Stallion, 1 year old	£3	£2	£1	—
Stallion, any age	—	—	—	Silver Medal.
Filly, 3 years old	£6	£3	£2	£1
Filly, 2 years old	£4	£2	£1	—
Filly, 1 year old	£3	£2	£1	—
Brood mare, with foal of the same breed, by her side	£6	£4	£2	£1
Foal of 1906	£2 10s.	£1 5s.	12s. 6d.	—
Mare with two of her progeny	£4	£2	£1	—
Best mare of any age	—	—	—	Silver Medal.

The Shire Horse Society offer two Gold Medals, value £10 each, for the best Shire stallion and 1 the best Shire mare exhibited.

Entries close August 4 to the Manager and Secretary, Dr. J. O. Orr, City Hall, Toronto, Canada.

Dr. Orr urges upon Shire horse breeders the advisability of making an exhibit of Shire horses at the principal Canadian and American fairs for the purpose of showing the farmers of those countries the points of the Shire horse in comparison with other heavy draft breeds. He adds that there never was a better time in the history of the horse-breeding industry of Canada to show farmers a first-class Shire horse than at the present time, and his association would strongly impress upon English breeders the advisability of contributing a representative entry and representative exhibits.

In his opinion the Canadian National Exhibition is the best horse market in America, as buyers come to it from all parts of the United States as well as Canada, including the West and North-West. Everything points this year towards a most successful show, as inquiries are much more numerous, and in the interests of Shire horse breeders on both sides of the Atlantic he earnestly invites the co-operation of English exhibitors.

J. SLOUGHROVE,

Secretary, Shire Horse Society.

12, Hanover Square, London, W.

The American Machinery Question.

SIR,—I am afraid this correspondence has not been so helpful as it should have been, considering the mass of experience both of American and English machinery which your many readers must possess. The cute American set us an example in providing light and easy-running machines. (Granted. But our own manufacturers very soon learned their lesson, and to-day are turning out appliances as light as anything need be. So, at least, it seems to me, but what I, and many of our farmers, would like to know is, where in particular is it alleged that the American is beating us to-day? What implement do we buy from the States that is not equalled in workmanlike and durable qualities by others of home manufacture?)

Is there any foreign swath-turner, for instance, on the market that will do better work than the best of those we make in England? Can anyone name a manure distributor more serviceable than the English one to which the R.A.S.E. silver medal has been granted? Or any potato-raiser more efficient than the Scotch machine which won the R.A.S.E. £20 prize at Leicester and the Royal Society of Ireland's gold medal? I much doubt it; but if any reader can give us specific instances where the foreign machine has proved the best or where he has obtained American appliances as good as British and at a lower price he would be doing many of us a considerable service, for we shall be glad to follow in his footsteps.

In regard to the question of lightness, by the way, there is at least one implement, I think, on which some manufacturers on both sides have pushed this quality to an extreme. Some of our horse hoes to-day are much too springy and wanting in weight to give a good account of land in really bad and cloddy order, as some of us on stiff and heavy soils are finding out to-day.—Yours truly,
W. W. K. SHIRE.

July 6, 1906.

Literary Luxury.

SIR,—I was much pleased with the poetic lines in the MARK LANE EXPRESS a fortnight since, and the writer will do well to further persevere.

especially as we have lost our amusing rhyme, Sir Wilfrid Lawson, and the humour at the present time is very feeble and not a small portion obtained from folk lore. The title of your paper leaves not much choice for illustration of the letter X, but that difficulty may be surmounted by consultation with a friend, especially if it is "Xenophon," who is an adept at that exercise.—Yours truly,
July 6, 1906. W. T.

The Canadian Cattle Question.

SIR,—Recent revelations have brought prominently before the meat consumers of the country the matter of the sources and nature of our supplies. The effect of our Legislation in 1896, whereby we have excluded healthy Canadian store cattle which could have been fed and fattened in this country under the strictest system of inspection, has been to render us more and more dependent upon dead meat in its various forms, chilled, frozen, tinned, &c., without on our part any inspection at the points of origin. In our groundless fears as to the unhealthy conditions of the Canadian herds, we have taken a course which, as shown by recent events, has caused us to strain at the gnat and swallow the camel.

The supply of fresh killed nutritious and healthy meat must occupy our serious attention, and in this connection I beg to enclose you herewith a communication from the Hon. Sydney Fisher, Minister of Agriculture to the Dominion of Canada, addressed by him to Mr. P. L. Gray, a member of the executive of the Free Importation Canadian Cattle Association of Great Britain, which deals fully and frankly with the condition of the Canadian herds and must prove of real interest to your readers.—Faithfully yours,
THOS. CAIRNS.
House of Commons, Westminster, S.W.
July 4, 1906.

[The letter referred to, which is too long to give in full, traverses the old argument as to the freedom of Canadian cattle from disease, and the writer states that contagious pleuro-pneumonia does not exist and never has existed in Canada.—Ed.]

Nature Study—The Children—and Other Things.

SIR,—Will you kindly allow me space, when convenient, to remove the doubt (or suspicion) from "Country Bumpkin's" mind, as there is no room for doubt in a true husbandman's line of labour.

The cruelty to the children: I too, with "Country Bumpkin," know of Section 23 (1) of the Education Act of 1902, but when I quoted that against the "foster parents" they denied their liability to provide a vehicle, and rather than make provision under the section, they are refusing to educate (book learning meant) my children, though I am heavily rated for education.

There used to be a by-expression amongst the old hands, viz., "The nearer church the further from God." I think my case is more of "The more I see justice the less I get," as I live within sight of the town-hall on one side, and the Cathedral on the other side of the county town—justice administered in one, and right doing taught in the other.

But to return again to the children. The officials of education, if they had provided to keep my children dry when attending school, I should not have had my second girl crippled for life, or the third girl have gone to the puny child she is now, nor the second boy the small slim object he is. What do officials hereabouts care for the children's lives? If my children had been treated as human, it would have put a block to the living murder that they have undergone at the hands of the different officials, and the children and myself have been spared the suffering and affliction of nine cases of two infectious diseases, throwing the breeding and seedling all awry, to be followed by the consequent losses.

I trust "Country Bumpkin" will ever be thankful that his lot is cast amongst pleasant child's life than being here where the "regulated families" element dominates everything; whether socially the one with a family of children, only fit to be an outcast of or from their circular society, condemned to a reclusive life because he cannot keep an entertaining open house, whether as to national payments of rates and taxes. O, tax him, he cannot appeal, his family expenses are too great to allow of his erecting the national idol (gold) on his premises. Crush him we must through his children now; but when a dark cloud overhangs us we must have his sons to defend us, because he has taught his children to use the gun.

True manhood and womanhood can only be fully developed by having the care, anxiety, tier, and everyday trouble that refine the mind through rearing the young families.

In taking my leave for a few weeks, allow me, sir, to thank you for the effort made to place the MARK LANE EXPRESS in every country household.
Yours truly,
July 6, 1906. "PLOUGHTAIL."

THE ROYAL SHOW AT DERBY.

Its Value to Live Stock Breeders.

Following the practice of former years, we have, as a result of inquiries made on our behalf, been able to gather together a very large amount of information that has been brought about, either directly or indirectly, by the holding of the Royal Agricultural Show.

It is possible that the above statement is somewhat ambiguous, but what is meant is that, as more than one of the live stock transactions mentioned below, these were brought about mainly, if not entirely, owing to the Royal Show being held, because had this fixture been abandoned, as some few would have recommended, more than one who purchased stud stock for export would not have been over here to do so, for it was with a dual object in view that the larger majority of our colonial and foreign visitors came—namely, to see at the Royal Show a collection of the best of England's live stock, and to secure for themselves as much of it as they could, either previous to or at the show, or subsequently.

There were croakers who said that to return to the country was to court failure in more ways than one. However, the result of the Derby Show, whatever it may be financially, is such that has proved once again, no matter where the Royal Show may be, there the buyers will be found; or, in other words, wherever the sale-ground of the best stud stock in the world is, for that is what the Royal has become—there the buyers will go.

The auction sales have been fully dealt with; these were in all sections, save those for horses and cattle other than Shorthorns, eminently successful, and there can be no question but that the present arrangements for holding these sales are correct, save that the sales of Shorthorns ought to commence at 9.30, and be followed by those for other breeds of cattle and horses; 3,000 guineas is a big price for a yearling bull, but this price has been given by Mr. F. Miller for Mr. J. Deane Willis's champion bull, whose champion yearling heifer has also been sold for despatch to Canada.

Mr. T. Battar, whose Shropshire sheep sold so well at the sheep sale, reports that he has sold eighty rams and all the yearling ewes he has to spare by private treaty, leaving himself only that number of both sexes that he has for many years reserved for his annual sale.

The transactions amongst the Lincoln sheep have not been so numerous as last year, not because the demand was any less keen, but because there have been quite a number secured before the show, how many we are unable to tell, but these transactions will doubtless appear at a later date. As is usual, Mr. F. Miller was early on the look-out for the best. The Riby rams and ewes were not on offer, for these are reserved for the home sale on July 12 next, therefore Mr. Miller, in securing Messrs. Wright's second prize yearling ram and his second prize pen of five yearling rams, got the best that was on sale; 500 guineas for the single ram and 200 guineas for each of the others is the reported selling price, and the same buyer has also secured 108 other yearling rams at home, thus taking the whole Messrs. Wright's flock to dispose of this season. Mr. C. E. Houghton's champion and first prize two ewe ram, an excellent specimen of its breed, has been secured by Mr. Casares for the Argentine. This well-known buyer has also secured, either at the auction or by private treaty, a large number of Shorthorns and other live stock, also for the Argentine.

Mr. R. Miller, from Ontario, Canada, an almost annual visitor at this show, has made a grand selection this year. At the sheep sale several of the best Shropshire rams fell to his bid, as did also that grand pair of ewes that were second in their class, from Mr. V. Cavendish's flock. This buyer has also purchased a very excellent lot of Shorthorn cattle and some Hackneys, Clydesdales and Welsh ponies. Amongst the more notable selections made in the sheep classes, Mr. Miller secured the champion shearing ram from Sandringham, a very fine lamb this is, two yearling show ewes, with twelve Lincolns and two ewe lambs. A very choice ram lamb and yearling ram from Mr. C. Adeane's flock go to the same purchaser, a Dorset ram lamb, the pick of Mr. C. A. Hambro's third prize pen. This year's prime Cotswold sheep, from Mr. W. T. Eames' flock, including nearly all his show sheep, go with Mr. R. Miller to Canada, and nine others of the same breed from Mr. W. Houlton accompany them. Two beautiful ewe lambs from Mr. T. S. Minton's choice and evenly matched trio go to the same destination, and these will be accompanied by Mr. Walford's first prize pen of ram lambs, Mr. Simms' first prize pen of ewe lambs, and four yearling ewes from Mr. J. Cordon. A pair of specially good ewe lambs, the pick of Mr. G. Adam's pen of Canada, and the remainder of Mr. G. Adam's ewe lambs, together with a selection from those left at home, with a

large selection of yearling rams, go to the Argentine pen messrs. Poels, who were large buyers at the sheep auction.

Mr. McEerrow, one of America's keenest judges, has selected during his visit here something well over 200 head of sheep, and these include many specimens of high merit of the Hampshire Downs from Mr. H. C. Stephen's flock, which number thirteen ewes, two ewe lambs, a ram lamb, and a shearing ram, and several of this age from that capital flock owned by the Marquis of Winchester. Amongst the Southdown sheep purchased by this breeder are the following:—A yearling ram and two ewes from the Duke of Richmond, two ewe lambs and a ram lamb from executors of Colonel McCalmont, and a very choice ewe from the Earl of Cadogan's flock. The Shropshires include several of good merit purchased at the sale, and three ewes and a ram from Mr. E. Nock's flock, and a choice ewe out of Sir Richard Cooper's first prize pen. Messrs. Cooper Nephews have secured a very choice selection of Hampshires from Mr. H. C. Stephen's flock. These include his third prize yearling ram, five yearling ewes, and a specially good ram lamb.

Mr. C. Adeane's agent reports a very excellent demand for all the sheep he had for sale, and the same is the tenor of Messrs. Mansell and Co.'s report, quite a keen demand being experienced from Australia and Tasmania.

Mr. J. Milton, another of those Americans who pays us an annual visit, has this year bought a very choice lot of sheep. The King's two-shear ram goes with Mr. Milton, and he has taken out about one of the best Southdown ewes sent to the States for a long while, namely, the pick of that grand champion pen owned by the Duke of Devonshire, and then another grand selection was made, namely, that beautiful yearling ram which won third for the executors of Colonel McCalmont. A first prize Dorset ram lamb from Mr. J. Attrill has been secured, as has also a ewe lamb from Mr. E. A. Hambro's third prize pen, and a whole show lot of Cheviots has been secured from Mr. J. Robson, these consisting of an aged ram, a yearling ram, a ram lamb, and a ewe of the three ages—i.e., two shear, yearling, and ewe lamb. Mr. Goodwin Preece, as in former years, assisted Mr. Milton in his selections, and this authority reports that there has been a thoroughly good demand all through the live stock section of the show.

Dairy Produce.

Owing to the exigencies of space and time, some of the most important of the Royal Agricultural Society's successful show at Derby were not dealt with in our last issue, and we now make good the omissions. First of all, we may take the dairy produce sections, and the first of these in the catalogue was the butter, for which two classes were provided and attracted seventy-four entries. The quality all round was very good indeed, and, as may be imagined, with so many entries competition was keen. In the class for a box of twelve 2lb. rolls of butter made with not more than 1 per cent. of salt, there were fifty entries. The chief award went to Sir Charles Seeley, for a choice lot, Miss M. G. Pridaux was second, and Mr. A. F. Hurt third. The other class was for 2 lb. of fresh butter, slightly salted, made up in pounds, there were nearly sixty entries and the competition was most keen. Twelve prizes were offered, and the first was secured by Mrs. L. Baines, Henfield, Sussex, with a splendid sample. She was, however, closely followed by Mrs. L. R. Mildon. So good were the remaining samples, that no fewer than ten other cash prizes were awarded, whilst twelve others received barren awards.

There was one class for cream in which one dozen quarter pint jars had to be shown, and this attracted thirteen entries. Much to the satisfaction of local visitors a Derbyite came out at the head of the class—namely, Mr. W. Spalton, The Creameries, King Street, Derby—the third ticket also going to a man of Derby, in the person of Mr. W. H. Williamson, Bridge Gate, the second prize being taken by the second prize winner in the first butter class, Miss M. G. Pridaux, The Grange, Motcombe, Dorset.

The class for Cheddar cheese, as a whole, was somewhat irregular, and suffered from being new and not quite ready for market. The first prize cheese was, however, a credit to the maker, Mr. W. C. Speucer, Crewkerne, Somerset. There was a good class of Cheshire cheese, and here Mr. W. H. Hobson, Blakenhall, Nantwich, took the premier award with three splendid cheeses, which were particularly mild, fatty, and flaky. The second and third winners, Mrs. M. A. Munroley, Whitechurch, Salford, and S. Charlesworth, Redhall, Leighton, were very little behind the winner—in fact, it was no disgrace to the other exhibitors in the class to have not gained a prize. The

quality all round was excellent, and deserved an award.

The Stilton cheese was very good, and the flavour was all that could be desired. In this class the competition was very keen, and the judges had a difficulty in making the awards. Finally, they gave the first to Mr. A. Hull, Billenden, Leicester, for three nice cheeses, the second to Mr. J. Smith, Gaddesby, also of Leicester, and the third to Mr. Wm. Miller, of Plungar, Bottesford. The last two exhibits were not so ripe as the first prize winners. There were four entries in the Wensleydale cheese (Stilton shape) class, but the judges considered the exhibits good enough for two awards, the first being given to Mr. H. Harker, Carperby, S.O., Yorks, and the third to Mrs. Willis, also of Carperby.

The three double Gloucester class attracted a better entry, there being ten exhibits, and here Messrs. Hiscock and Co., Stourton, took the first prize with three splendid cheeses, whilst that exhibited by Mr. N. J. Sims, Pitcombe Bruton, and the Croxden Dairy Association, Croxden, Rochester, second and third respectively, were very useful. The cheese shown in the class for Cheddar Trunk cheese was rather of a poor flavour, and the class for three Staffordshire or Derbyshire cheeses was very disappointing. As the two counties are purely dairy counties it was somewhat disappointing to see such a small entry. Both the first and second prize cheese were made at Derbyshire factories—viz., the Gratton Farmers' Association, Gratton, Winstler, and the Mayfield Dairy Association, Mayfield, Ashbourne. The third prize cheese was made at a factory at Ashby-de-la-Zouch, by Mr. J. W. Fowler. There were four entries for cream cheese, and here Messrs. F. W. Gilbert and Co., Swarkestone, near Derby, came to the front, closely pressed by the exhibit of Lady de Rothschild, whilst the Egginton Dairy Company were third.

Cider and Perry.

The four classes of cider and perry drew sixty-five entries, and taken as a whole, the quality was

The short wool fleeces also made a good display. In the class for Southdowns Mr. Dockravy was fortunate enough to beat the Duke of Richmond and Gordon, whilst Lord Calthorpe had to be content with the third award. The Shropshire class proved an easy one for Mr. R. Bach, who took both first and third prizes, Messrs. W. Gibbs and Son beating him for the second; whilst the winners in the class for any other short-wool were Mr. W. Flower (Dorset Horn yearling hoggs), Mr. D. J. Thomas, and Mr. W. H. Davies, both the latter showing Ryeland yearling rams' fleeces. Five entries were received for the Welsh class, and two prizes were given, the recipients being Mrs. Wynne Finch and Mr. T. Leathers respectively, whilst in the Scotch class Messrs. Dargue, Dowson and Dobson showed the best exhibits and were placed in the order named.

Bees and Honey.

The display of bees, honey, bee appliances, &c., was a particularly interesting one, and as indicating the industry it was pleasing to note the large entry secured this year, and the high standard that characterised most of the exhibits. The hives and appliances exhibited by manufacturers formed a capital collection, and the framed hives for general use and the use of cottagers were excellent.

Butter Test and Milk Yield Competition.

The awards in the butter test section and in the milk yield competitions were made known on the concluding day. The animals entered were milked dry on Wednesday evening, and the milk of the next twenty-four hours was taken for the trials. The three Shorthorn milk yield prizes were bestowed upon Mr. C. R. W. Adeane's Lady Crystal Bates, Mr. James T. Hobbs's Orange Blossom 13th, and Mr. W. A. H. Bass's Lady Dorothy 50th. Mr. John Evans, of Burton, Lincoln, was first and second in the class open to Lincolnshire Red Shorthorns, whilst for Kerry cows and heifers Lady Greenall took the two principal honours.

medal, the three prizes being confined to the Jersey breed.

A Correction.

Our attention has been called to a couple of errors which crept into our Royal Show report of last week. By a slip of the pen our reporter wrote that in the two-year-old bull class for Aberdeen-Angus "the first prize went to Scotland." It should have been "Ireland," for the winning exhibitor was Mr. Edward Coey, of Droghda, Larnie, Co. Antrim.

Then in the description of the class for a pen of Berkshire sows farrowed in 1906, it was stated that the Duchess of Devonshire won first prize. This was due to an error in the official prize list before our reporter in which the award was thus given, but a corrected list shows that Mr. Julius A. Fricker was the first prize winner with a pen by Hightide F.B., her Grace being commended.

Meetings of Breed Societies.

As usual, a number of the breed societies held meetings in the show-yard, it proving a most convenient centre, for numbers of the societies' members were naturally present at the show.

The Shorthorn

Society's annual meeting was amongst these, and the report presented proved most satisfactory, for it showed that the society now consists of 563 life members and 975 annual members, making a total of 1,538 on the register, whilst the number of exportation certificates issued during the past year exceeded all previous records, the total number being 2,409, viz., Australia, twenty-four; Canada, thirty-four; France, five; Germany, ten; New Zealand, one; Russia, three; Spain, three; Sweden, ten; South Africa, twenty-seven; South America, 2,285; United States, seven. Further, despite the fact that the fifty-first volume of Coates's Herd Book, issued last year, was the largest volume published by the society, and contained the pedigree of 2,827 bulls and 5,149 cows, with produce, these numbers have been exceeded for the forthcoming volume, the entries being 3,411 bulls and 6,200 cows, with produce. As to the financial side, it was stated that the balance in hand on June 1 was £1,123 on the current account, and £1,300 on deposit, the reserve fund being £7,650 and £305, the latter sum having accrued during the present year. It will thus be seen that the Shorthorn Society is in a most flourishing condition from every point of view.

English Aberdeen-Angus.

At the meeting of the English Aberdeen-Angus Cattle Society the recommendation of the Committee that the spring show and sale be held at Bingley Hall on February 5 was discussed, and it was eventually resolved to rescind the resolution on the ground that they could not possibly hold their sale until after that of the Shorthorn Society. The date was therefore fixed for March 12. The meeting then considered the question of fixing a minimum reserve, the committee having suggested £15 15s. The chairman (the Rev. C. Boden) supported this on the ground that it would have the effect of excluding inferior beasts, which had a tendency to bring discredit on the breed, but on a vote it was decided to fix no reserve.

Large Black Pig

Mr. C. F. Marriner, who presided so conspicuously in the prize list for Large Blacks, presided at the meeting of the Large Black Pig Society, at which the secretary made the satisfactory announcement that the export trade had shown a considerable increase, animals having been sent to Argentina, United States, South Africa, Chili, Germany, and Australia, as well as lately to Spain, Madeira, and Italy. The question of a cup to replace that won by Mr. Marriner being raised by members, Mr. J. Oscar Muutz, of Goodameavey, Yelverton, Devon, kindly undertook to supply what was required. As souvenirs were also required in the shape of medals, Mr. Marriner announced that he would defray the initial expense connected with the purchase of dies. Considerable discussion arose concerning the Herd Book, the secretary announcing that insufficient entries had been received to warrant its being published. It was, however, agreed that there should be a fixed date for sending in entries, in order that the book might be published yearly.

National Pig Breeders.

The annual general meeting of the National Pig Breeders Association was held on the Wednesday, and a most satisfactory report was presented. The membership shows a slight increase over the previous year, and the financial position is still good, the balance in hand at the end of the year being £84 15s., with £700 invested in securities. After the adoption of the report, the Hon. D. P. Bouvier was elected president, and Sir G. Greenall president elect.

Mr. Howard Taylor then moved the resolution standing in his name, "That it be a recommendation to the council to decide as to the length of time which should elapse after a member (owning a prefix) resigns membership, before the same prefix can be registered by another member." Mr. Ibbotson seconded. After considerable dis-

Manby House, Otley.

JUDGES OF WOOL AT THE ROYAL SHOW.

of a very high class, for most of the well-known cider manufacturers were represented. For casks of not less than eighteen and not more than thirty gallons, made in the autumn of 1905, Messrs. D. J. Crofts and Son were awarded first prize, Mr. J. Bazley being second, and Mr. T. Stone third, but the last named came to the front for one dozen bottles of cider made before 1905, Mr. Bazley again being second, and Messrs. Tilley Brothers third. For the same number of bottles of cider made in 1905, Messrs. Slater and Co. won premier honours, beating Messrs. Ridler and Son and Mr. J. Bazley. Of perry there was but one class, and here Messrs. the Eardiston Farming Company, Ltd., took both second and third prizes, Mr. H. Thomson, Southdens, Newent, beating them for the first position.

Wool.

Although the wool classes are of comparative recent introduction, they have grown wonderfully and now form a most interesting section of the show, and one which attracts considerable attention. This year there were sixty-one entries and some of the largest sheep breeders were represented. Several of the classes might have been better filled, but most of the wool was well got up, the Leicester, Lincoln, Southdown, and Shropshire fleeces being by far the best. For Leicester wool Mr. George Harrison, of Darlington, took both prizes, whilst Mr. Dudding, Grimby, took all before him in the class for Lincoln wool. Three well-known breeders were represented in the Kent or Romney Marsh class—Messrs. H. Rigden, C. Fife, and F. Neume, and they were placed in the order named. There was another class for fleeces of any other long-wool, and here the exponents of the late Mr. T. Willis followed up their successes in the sheep section with another win with excellent fleeces from their Wensleydale hoggs.

with Aime Gold and Walton Joyous, the third ticket going to Mr. R. Tait Robertson, of County Dublin, with Belvedere Nora.

The butter test class was divided into two, the first division being for cows of any age, breed or cross, exceeding 900 lb. live weight, and the second for animals under 900 lb. In the heavy division the Shorthorn breed, as represented by Mr. Reuben Shelton's Lady Mainstay, triumphed over Dr. Herbert Watney's Red Maple, a Jersey, which was second, whilst a South Devon cow, the property of Mr. W. P. Vosper, of Plympton, was third, with a Lincoln Red Shorthorn (Mr. John Evans's Burton Vic 2nd) reserve. Mr. Evans was also highly commended for Burton 4th. All the winners of prizes in the division under 900 lb. were Jerseys—viz., 1, Major Tennant's Daisy; 2, Dr. Herbert Watney's Violette; 3, Mr. J. H. Smith-Barry's Marigold. After the reserve number five highly commended tickets were bestowed.

Special prizes of £20, £10, and £5 were offered by the English Jersey Cattle Society for the three cows obtaining the greatest number of points in the competition, and they were awarded as follows:—1, Mr. Reuben Shelton's Lady Mainstay; 2, Major Tennant's Daisy; 3, Mr. J. H. Smith-Barry's Marigold. Lady Mainstay further showed her superiority in the special milk yield competition, taking the principal award, and her triple victory proved highly gratifying to Shorthorn breeders. The admirers of the Lincolnshire Red Shorthorns had also cause for satisfaction, in that Mr. Evans supplied the second winner in Burton 4th, and the reserve number in Burton Primrose 2nd, Mr. Vosper's Primula 2nd, Jersey being third. The high standard of the class will be gauged from the fact that sixteen animals were highly commended. Daisy took the English Jersey Cattle Society's gold medal, or £10 in money, Violette the silver medal, and Red Maple the bronze

cussion Mr. Hughes moved as an amendment, "That in the opinion of this meeting any prefix and affix once registered should remain the property of such person, and cannot subsequently be used except with the written consent of such person." A further amendment, moved by Mr. Owtram, viz.:—"That any prefix which has been registered by a member shall not again be registered in the name of any other member without the written consent of the owner for the time being of such prefix," was withdrawn. Mr. Hughes' amendment having been seconded was accepted, and upon being put to the meeting as a substantive motion, was carried *unanimously*.

At the conclusion of the general meeting a council meeting was held (Mr. Owtram in the chair), at which it was resolved that gold medals be offered in 1907 to the same societies as in the present year, but that the question of silver medals stand over till next meeting, to be held on Dec. 11 at the Smithfield Show.

Cotswold Sheep.

Satisfactory reports from the Council and Finance and Editing Committees were also presented at the annual general meeting of the Cotswold Sheep Society held on the showground on the second day of the show, and they were all adopted.

New Implements.

Although close on sixty new implements were entered for the society's silver medals, the judges after due deliberation on their various merits decided to award only two medals, giving one to Messrs. H. P. Sanderson and Co., Ltd., Bedford, for their universal motor, and the other to Messrs. W. Eddington and Co., Plaistow, E., for a section remover, for removing root sections from knife backs of mowers and reapers.

This section remover, of which we give an illustration, consists of a block of iron, slotted to take the knife, and having a peg in the centre of slot to hold the section in position. When the knife has been placed in the slot the operator takes a cast-steel tool having a shoulder near the base which takes its seat on the top of the section and drives the latter down, shearing the rivet flush with the knife-bar. It matters not on which side the rivet head is nor whether the rivet is counter-sunk, or whether the section is flush with the knife-bar or stands slightly above it—the tool operates equally well.

The Universal Motor we also illustrate, and we may mention that our photograph was taken just before it started for the Royal Show at Derby. It had a good load, and travelled by road both going to and coming back from the show. It is of 30 b.h.p., can burn common oil, petrol, or alcohol, is mounted on springs, and has three speeds forward and reverse combinations. It can be used for quite a variety of purposes. For instance, it can be used as a fore-carriage for attaching to and working binders, mowers, ploughs, wagons, &c.; as an ordinary motor lorry to carry four tons; or as a three-wheeled agricultural tractor, all three wheels propelling for hauling and driving machinery. It will haul and work a threshing drum, and has been used under the conditions enumerated with the greatest success.

Exhibitors' Stands.

(Continued from page 1.)

Engines, &c.

Messrs. T. Glover and Co., Ltd., Eagle Works, Warwick, occupied two stands, No. 102 and 119, and at the latter they showed oil engines of various horse power, a carriage for lifting and transporting pipes, timber, &c., and a model of patent hoisting and traversing gear; whilst at Stand 102 there was a representative display of carts, including milk floats, water carts, brewers' drays and floats, scavenging hand-carts, and carts for several purposes.

Messrs. Brown and May, Ltd., North Wilts Foundry, Devizes, Wilts (Stand No. 113). Steam engines were the attraction here, there being shown a 8 n.h.p. portable steam engine with Pickering governors, cylinder and crankshaft bearings bolted to wrought-iron supports, with patent feed water heater, patent steam blast boiler tube cleaner, patent grease separator, &c.; another portable of 2½ n.h.p. mounted on wheels, with high-speed Pickering governor; and a two-wheel portable 3 n.h.p., with high-speed Pickering governor, patent steam blast boiler tube cleaner, &c.

Messrs. J. P. Petter and Sons, Ltd., Nantyls Works, Yeovil, and 73, Queen Victoria Street, E.C. (Stand No. 143), showed no fewer than four new implements, and they were as follows:—(1) Petroleum engine, standard Petter 8 b.h.p., for farm or general purposes, £100. The governing apparatus regulates in due proportion both the air and oil admitted to the vaporiser, thus modifying the force of the explosion according to the load on the engine; it also provides for the admission of water into the cylinder in a novel manner when the engine is working on a heavy load. This water being converted into steam in

the cylinder saturates the charge and retards combustion, thus preventing shock while giving increased power with a more regular turning movement. (2) Petroleum engine, self-propelled, portable, 2½ b.h.p., for light farm work, chaff cutting, pulping, driving elevator, &c. (3) Petroleum traction engine, 22 b.h.p., with two forward speeds and reverse motion. For drawing four to five tons over ordinary roads, for driving machinery, and is convertible into a road roller; and (4) Petroleum engine, with reduction shaft, portable, fitted with a worm-driven reduced speed shaft making only 25 revolutions when the engine is running at 450 revolutions per minute. It is intended to be used for driving pumps, cream separators, hay elevators, or other slow speed machines, either by means of a pulley and belt, or by a tumbling bar with universal joints such as is used with a horse gear.

Messrs. T. G. Slipper and Co., Brundall, Norwich (Stand No. 165). Here could be seen another new implement, and this was a 7 h.p. petrol engine for agricultural purposes. It has no gears, cams, or complicated mechanism, no adjustments to get out of order. Their other exhibits consisted of a number of oil, petrol, and gas engines, including the "Eli" 3 h.p. petrol engine, manufactured for the exhibitors in U.S.A.

Messrs. George Thurlow and Sons, Ltd., Stowmarket, Suffolk (Stand No. 179) exhibited a great variety of necessities for machinery, such as leather and india-rubber bands for threshing machines; leather belting and laces; boiler fittings, injectors, tube expanders, engine packings,

Messrs. EDDINGTON'S SECTION REMOVER.
Awarded a Silver Medal at the Royal Show, Derby.

juice, tobacco powder or snuff and fly powder, manufactured free of duty for agricultural and horticultural purposes; Tobacco slug destroyer; "Equisan," for mange, scab, and skin diseases in animals; whilst, touching another side of the greatest industry they showed specimens of "Niquas" for hop-washing and destruction of that pest, the aphid, on fruit trees, &c.

Molassine Meal, the chief feature of which seems to be that the potash salts contained in the molasses are neutralised in the process of its manufacture, whereby a large quantity of molasses can be given to animals without causing any injurious effect, was exhibited at Stand 370, where the proprietors had a large staff of representatives ready to give any information about the food. One very convenient characteristic of Molassine Meal is that it may be used with equally good results for all live stock, be it horses, cattle, sheep, pigs, or poultry.

B. C. Tipper and Son, Veterinary Chemical Works, 43 and 45, Homer Street, Balsall Heath, Birmingham (Stand No. 371), had on view a good assortment of their well-known goods. These include cod-liver oil condiment for horses, stock, and poultry; Tipper's Mystery, a medicated conditioning powder for horses, cattle, &c.; Circles, for guinea pigs; Lactol, for rearing calves; poultry and game crumbs, a prepared food; animal medicines, oils, &c., for the treatment of injuries and disease; lay spice, Black Leg Vaccine, with vaccinating outfit, &c.; and finally Threptene disinfectants, fluid sheep-dip, carbolic soaps, &c.

Messrs. E. Ernest Keighley and Co., Ltd., Yorkshire Cake Mills, Hull, at Stand No. 376, showed their celebrated Yorkshire oil and treacle cake, which contains oil 10 per cent., albuminoids 20 per cent., carbohydrates 42 per cent.; Empress cake, for feeding, enriching, and increasing yield of milk, oil 8 per cent., albuminoids 18 per cent., carbohydrates 42 per cent.; and also samples of their other well-known cakes and meals for horses, cattle, sheep, and pigs. These old-established cakes still retain their popularity in spite of the ever-increasing and keen competition, for the output increased over 50 per cent. last year.

Messrs. Tomlinson and Hayward, Ltd., Lincoln

Mr. T. STIRTON,
Rendlesham Estate Office, Woodbridge,
Suffolk.
One of the JUDGES of the NEW IMPLEMENTS

lubricating oils, &c.; in fact, everything required by engineers, especially in the agricultural section.

Veterinary Foods, Medicines, &c.

Messrs. Corry and Company, Ltd., Bonded Chemical Works, Shad Thames, London, S.E. (Stand No. 356), had a large collection of veterinary preparations, including Long's non-poisonous specific for scab in sheep; Long's maggot lotion or fly oil; Long's foot rot lotion; "Niquas" new non-poisonous sheep-dip; Tobacco

Messrs. SAUNDERS' UNIVERSAL MOTOR.
Awarded a Silver Medal at the Royal Show, Derby.

(Stand No. 379). This stand was of particular interest to sheep breeders, for the chief exhibits here were samples of Hayward's Yellow Paste sheep dip and fluid; non-poisonous paste and other dips; apparatus for sheep dipping; and also oils, tonics, drenches, powders, &c., all for sheep.

Mr. Stephen Willson, Peterborough (Stand No. 384). The chief exhibit was the collection of the celebrated Canadian pig powders; poultry powders were also to the front, as were also junket tablets, the prices of all articles being ranged to meet requirement, for they could be had in boxes costing 6d. to 21s. tins.

Messrs. H. E. Hope and Co., of 22, Billiter Street, E.C., and Messrs. Wharf, Millwall, London, E., made Stand No. 180 an attractive one with their collection of linseed and cotton cakes, cooked for calves, special feeding meal, winter chaff spice, summer hay spice, calf rearing meal, cattle food, game and poultry spice; condiment for horses and botanic flavour restorine; pure bones, superphosphates and compound and special manures; and numerous other of their manufactures.

Mr. C. Swaffield, St. Mary's Bridge, and Duke Street, Derby (Stand No. 193). Here feeding stuffs were again in evidence, the stand being taken up with samples of Ayre's Fatmax feeding meal and Maxilac dairy meal, E. K. square compound feeding cake, compound feeding meal, 97

The Canadian Government (Emigration Dept.), 11 and 12, Charing Cross, S.W., were as usual well represented. This time their exhibit consisted of an exhibition motor wagon containing specimens of Canadian produce, stuffed animals, &c., altogether a striking exhibit. It was situated at Stand No. 35.

Messrs. A Jack and Sons, Ltd., Maybole, Ayrshire (Stand No. 61) are manufacturers of prize reapers and mowers, ploughs, manure distributors, &c., but the chief item at the stand was their Caldonian potato digger, with which they have won prizes all over the world, including the R.A.S.E.'s first prize. It has been described as the world's best potato raiser, and the claim is by no means an exaggerated one.

Mr. William Cook, West End Works, Yaxley, Peterborough (Stand No. 62), had three interesting exhibits—namely, the National stacker, National horse gear, and the Champion slackifier.

The Wolsley Sheep Shearing Machine Co., Ltd., Sydney Works, Alma Street, Aston Manor, Birmingham, showed their well-known sheep shearing machines and horse clippers, at Stand No. 205, but the chief feature was undoubtedly the display of the Wolsley Pedersen cream separators. Twelve different sizes of these were shown and proved their claim to be easy running and easily cleaned, for all parts are accessible.

Mr. T. Newton, 48, King Street West, Manchester (Stand No. 215) makes a speciality of traps

considerable attention for the fencing exhibited and the advantage of being cheap as well as good.

Mr. G. Ball, North Kilworth, Rugby, showed to great advantage a variety of carts at Stand No. 284, some very useful general purpose carts, farm and road tractors, and floor for farm and dairy purposes being on view, whilst that useful contrivance, the farm wheelbarrow was also represented.

Strawsons, of 71, Queen Victoria Street, London, E.C., provided a most attractive stand at No. 286, for their well-known sprayers have gained for themselves a widespread reputation, and wherever shown always prove a centre of attraction.

Messrs. Cardon and Cresno, 61 and 62, Chancery Lane, W.C. (Stand No. 290). Here we came early to fencing, and that shown here consisted of the combined chestnut wood and wire fencing for general purposes, as well as for sheep fencing, and wicket gates.

Messrs. J. D. Allan and Sons, Culthiel Implement Works, Murthly, Perthshire, had four useful implements at Stand No. 297, viz., a patent farmyard manure spreader, a corn cart, a patent thistle and weed cutter, and a potato digger—all of which have proved most effective.

Messrs. J. and R. Wallace, Castle Douglas Foundry, Castle Douglas, N.B., were at Stand No. 300, and here also we saw a manure distributor, but this time there were four, one to sow broadcast only; another special for hop growers; the third with adjustable conveyors, and the fourth had an adjustable hopper for setting to any angle for sowing on uneven ground. The firm also showed a model of a sheep-dipper, in the use of which the sheep is put into a perforated cage, which is then lowered into the dipping tank.

The Westmeria Co., Leighton Buzzard (Stand No. 312). This was of particular interest to the poultry breeder, for there was a large display of incubators of British and foreign make, with egg capacities of from 30 to 360. Foster mothers and brooders, coops, craming machine, green bone cutters and poultry requisites of various sorts completed the exhibits at this stand.

Messrs. Peter Patrick and Son, Warefedale Saw Mills, Otley, Yorks (Stand No. 307), showed a number of gates, and, as a new implement, a set of improved gate hangings. Recognising that gates were liable to sag or drop at the nose, and by so doing cause endless trouble, this firm last year placed upon the market a patent hanging

"THE MARK LANE EXPRESS" STAND AT THE ROYAL SHOW.

per cent. pure linseed cake and calf meal, linseed cake (both English and American), and cotton cake (both decorticated and undecorticated), Waterloo round linseed and feeding cake, rice meal, Indian meal, decorticated cotton-seed meal, &c., and also manures.

The Stud Company, Victoria Mills, Longsight, Manchester, at Stand No. 195, showed their numerous and well-known medicines, &c., for horses, cattle, sheep, pigs, and dogs. There were Horseine, pick me up for horses; elctuary for sore throats; worm and cough powders; Newmarket blood purifying powders and Indian fluid; S&D drinks and oils, for horses, cattle, and sheep; blaster, skin, grease, and thrush lotions; hoof and mange ointments; white scour mixture for calves and lambs; Huskure foot rot cure; medicated condiment for horses, cattle, and sheep; tanning spice and blood iron tonic powders for pigs; hay seasoning spice; and dog remedies.

Mr. J. T. Mott, Littleport, Cambs., is well known for his horse and cattle medicine, as well as sheep drenches and pig powders, and all of these he displayed to advantage at Stand No. 338.

Miscellaneous.

The English Grains Company, Ltd., 30, Union Street, Burtou-on-Trent, had Stand No. 5, and here showed samples of pale ale dried grains, so largely used for cattle, sheep, and horses. These grains are claimed to be invaluable for young stock and lambs on grass in the autumn to prevent scouring, and for ewes and milking cows at all times, and very good for horses.

for sparrows, rats, &c., and his exhibits included a new implement in the form of a humane rabbit trap (Page's Patent). Mr. Newton's patent sparrow and rat trap, which has been awarded silver medals, has caught as many as sixty sparrows in one hour and twenty-seven rats in two hours.

Messrs. J. Z. Charras and Co., Oxford (Stand No. 217). Here we saw a fine display of covers for all purposes, such as wagon, engine, drum, cart, rick and horse covers, all of improved waterproof. In fact, the stand was quite an exhibition of waterproof articles.

Messrs. Follows and Bate, Ltd., Gorton, near Manchester (Stand No. 221). Grind tones for agricultural purposes were one of the features of this stand, and they were shown in various sizes and prices. A collection of paint mills were also on view, as were also lawn mowers of various sizes, whilst other exhibits included useful domestic appliances such as mincing machines, knife cleaners, and bread cutters.

Messrs. J. H. Peck and Co., Ltd., Tarpuin Works, Wigan, Lancashire (Stand No. 223). The manufacturers of this firm are too well known to need mentioning, and all that we need say is that their display of rick and wagon and engine sheets, horse cloths, sacks and bags, &c., was one worthy of the reputation of the firm.

The Economical Fencing Co., Ltd., Billiter House, Billiter Street, London, E.C., had a good display of their well-known fencing at Stand No. 236, and as fencing is a thing all farmers require at some time or other, this stand attracted

MESSRS. PATRICK AND SON'S IMPROVED GATE HANGING.

possessing those prime essentials of simplicity, effectiveness, and cheapness, with the result that it proved an instantaneous success, the demand being such that they could scarcely cope with it, whilst they won silver medals at four of the principal agricultural shows in the country. This year, however, they have improved upon last year's design and detail, with the result that they have made it even simpler, but still it retains its thorough effectiveness which characterised the older hanging. Our illustration shows the hanging when the gate is in the normal position after having been hung. The eye which fits on to the crook is attached to a loose bar, the top of which is formed into a ratchet, affixed to the shoe which is fastened to the arret of the gate is a lip hung on a brass pin—To prevent rusting. As time goes on the gate becomes afflicted with the dire common complaint and drops at the nose; in order to remedy this the gate has to be lifted up at the head, and by so doing the shoe is brought along the loose ratchet bar and the lip falls into position on to this bar, so that when the head is lifted so as to clear the ground it is maintained in that position, thus giving the gate the desired clearance. No tools, implements, nor skilled labour are required. The head has to be lifted, and the patent being self-adjusting, the "sag" becomes part of the past. The hangings—which are made in malleable iron—may be used along with the existing top hanging or with the clip or strap band that Messrs. Patrick's have also placed upon the market.

Messrs. J. T. Hobson and Co., New Wharf, Bedford, are also manufacturers of poultry appliances, and they had a good show at their stand (No. 318). Their chief feature was the display of poultry houses of various descriptions, made to suit all requirements, and these proved very attractive to the numerous visitors interested in poultry keeping.

Mr. Arthur Neaverson, Peakirk, Peterborough, (Stand No. 319), is another well-known manufac-

turer of poultry appliances, and his patent self-cleaning fowlhouse proved a centre of attraction, as did also his patent coronation chicken house, a most up-to-date chicken house on 1 run. Cattle cribs and sheep troughs, together with other items, made up an interesting stand.

Messrs. J. Fison and Co., Ltd., Ipswich (Stand 1

be remembered that a key has three principal parts, namely, the bit or serrated end 1, the pin 2, and the bow 3. This bow supplies the purchase or leverage for the shooting of the bolt. Hitherto it has been necessary to carry in the pocket all these three parts in one, but according to this new invention only the first part, consisting of the bit or

THE WALTER A. WOOD MOWER.
Awarded First Prize Royal Cornwall Show, Redruth.

327), occupied a good position on the way to the sheep section, and they made a very striking display of their well known manufactures, including their celebrated fertiliser for barley, which has brought them such distinction in the competitions with which their name has become world renowned, and special fertilisers for mangolds, turnips, potatoes, grass, and practically every other crop. Their associated company, The Coenical Union, Ltd., exhibited at this stand their canary guano and other horticultural fertilisers, used largely by gardeners and market growers throughout the country.

Messrs. J. P. White, the Pygmy Works, Bedford, attracted a large number of garden lovers to Stand No. 397, for here they had a big show of choice garden seats and chairs to suit all tastes, whilst their summer houses and arbours were the admiration of many.

The Horse, Carriage, and General Insurance Company, Ltd., 17, Queen Victoria Street, London, E.C., had Stand No. 413, and here exhibited cards and pamphlets relating to the advantages of insuring horses, cattle, and all classes of farm livestock, vehicles, etc., against accidents, and indemnity to employers against drivers' accidents, personal accidents, also workmen's compensation insurance.

Another stand of a similar nature was No. 415, for here we found the Imperial Accident, Life Stock and General Insurance Company, Ltd., of 17, Pall Mall East, London, S.W., who undertake all kinds of insurance, both personal and for livestock.

Messrs. McDougall Bros., 68, Port Street, Manchester, and 10, Mark Lane, London, E.C., occupied Stand No. 377 with a good show of sheep dips, insecticides for hop and fruit growers, disinfectants for farm use, &c., whilst there was also a portable swim sheep-dipping appliance. The machine is fitted with all the latest improvements, including McDougall's Patent Revolving Gate, and enables the sheep to be dipped thoroughly and expeditiously with the minimum of labour, and it avoids unnecessary handling and struggling.

Messrs. E. Worrall and Co., 143, Dale Street, Liverpool (Stand No. 212) were among the competitors for the society's medal given for new inventions, theirs consisting of a collapsible, self-sustained, without tracks and secured by improved patent lock. Complaints of the cumbersome of keys have caused Messrs. Worrall to give their attention to the solution of the problem of how to obtain the maximum strength of the lock with the minimum size of the key. The lock and the key attached to the improved patent collapsible gate, here shown, solves this problem by introducing an entirely new principle. The lock generally is of the ordinary type, with four levers. A is the bolt of the lock in cross section. B is the size and shape of an ordinary key such as would be required to shoot the bolt. Now it will

serrated end 1, has to be carried and the other two parts, the pin and the bow are built into and form part of the lock itself. The size and strength of the patent key has nothing whatever to do with the size of the bolt A. It is dependent entirely upon the number of levers in the lock, for it only lifts the levers, it does not shoot the bolt. The patent key may be furnished with a ring for attachment to the key ring or watch chain or bangle, and may be in gold or silver or other metal, as well as steel. It is cut like any other key to fit and lift the levers in the lock, and as the levers in each lock differ from those in every other lock, so the serrations on the patent keys of one lock differ from those in all other patent keys, and each lock therefore can only be opened by its own patent key.

The annual reports of proceedings under the Diseases of Animals Acts, &c., issued by the Board of Agriculture, will be perused with interest. The difficult task of reducing the outbreaks of swine fever has progressed steadily, in comparison with former years. Of the 817 outbreaks in Great Britain in 1905 (compared with 1,196 in the previous year), only 125 occurred in the counties of Yorkshire, Durham, and Northumberland; the latter county had practically a clean sheet, with one outbreak only; Durham had ten, and the rest were in the three divisions of Yorkshire, the West Riding having the largest total—72, and consequently the blackest spot on the map issued with the reports.

Rural Housing Suggestions.

Mr. Wilson Fox, one of the Labour Commissioners of the Board of Trade, with a knowledge of the housing question throughout the kingdom, made several interesting suggestions before the Select Committee on the Housing of the Working Classes Bill last week.

He suggested, for instance, that land values in towns might be taxed to assist in the erection of cottages in rural districts, the migration of people from which had swelled the unearned increments in towns.

Another suggestion witness made was that landowners should be enabled to borrow money from the county councils to build houses. During the past twelve years a great deal of improvement had taken place both in the construction and in the sanitary arrangements of cottages.

A week ago witness sent out over 200 circular letters to agriculturists and officials of local authorities; and had received ninety-three replies, of which twenty-six were to the effect that the cottages were insufficient, fifty-two said they were sufficient, and fifteen stated that they were more than sufficient.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending June 30, 1906:—

Disease.	Swine Fever.	Swine Slaughtered as Diseased or Exposed to Infection.		Outbreaks.		Sheep Scab.	Outbreaks Reported.	Rabies.	Cases Continued.	Other Animals.	Dogs.	Cattle (including Farcy). THE WORRALL COLLAPSIBLE GATE AND PATENT LOCK.

SHOWS.

East Kent.

This year the East Kent Agricultural Society joined forces with the Ashford Horse Show Society with highly successful results. A better show has never been held under the auspices of the East Kent Society, whose eleventh annual show this was, it being the second time during that period in which its tents have been pitched at Ashford. The attendance, like the entries, was a record one, and it has seldom been our pleasure to visit a better arranged show ground, nor have we found at any show this season greater courtesy and consideration given to the representatives of the press.

The show, like the rest of its class, can broadly be divided into four principal sections, the spectacular displays in the horse ring, the live stock, the implement, and the produce. The first section is an all-important one, one that probably draws the far larger proportion of the attendance; in fact, there are but few even of the regular showyard attendants who do not at some time or other take a quiet turn in the grand stand, and from there watch with interest the attractions provided for their entertainment. How long it will be before we have at these shows some kind of competition for motors we do not know, but one of the features around the ring side was the very large number of motor cars arranged in the places that in the immediate past used to be occupied by carriages. The occupants of these to a large extent were lovers of horse flesh, for many had entries in these classes. The displays in the ring were excellent, in many instances much above the average of those seen at county shows.

The first-class hunters that won for Mr. W. Winans, Mr. J. C. Buckland, and Lord Harris were of high merit. The Hack class under saddle were good, and some fine displays of well-mannered and well-ridden horses were given. Mrs. W. C. N. Chapman, with Messrs. O. T. Price and J. C. Buckland were foremost winners. An interesting class of polo ponies, judged with stick and ball, was an attractive feature, Mr. O. T. Price taking leading honours. It is not necessary to expatiate upon the merit of the driving displays, single, pairs, or tandems, further than to mention the winners included those excellently trained and well brought out horses owned by Messrs. E. H. Goad, W. S. Cunard, and W. Winans, who won in the open classes for single Harness Horses. Mr. E. H. Goad, whose beautifully-mannered Lord Pick-em-up and Prince Pick-em-up that won for pairs, closely followed by Mr. W. S. Cunard's excellent pair Wild Lucy and Jenny Lind, that won as best tandems after an exciting and very close contest with Mr. W. Winans' Mafeking and Pickenham Gabriel that came in for third honours in the class for pairs.

The jumping contests, ever a source of great amusement, were equally so upon this occasion. The entries were large, and the contests were watched by a very large number of visitors, more than a thousand being in the grand stand—quite a record number for this show.

The live stock section may be dealt with briefly under three main headings—horses, cattle, sheep. The horses were principally of the Shire horse breed, few but these were entered in any of the classes. Mr. Walpole Greenwell, Mr. H. G. Harris, and Lord Hothfield supported the open classes, in which were also some very capital specimens of the Shire breed sent by Messrs. F. de B. Collard, Ernest Neve, and W. F. Wood, tenant farmers of that type that have done so much to make agriculture a success in England. The above were owners of the principal winners in these classes. The local classes were of good average merit, and well supported, Mr. Ernest Neve's Amberfield Rambler, first in the brood mare class, whose capital foal was first in the foal class were real good Shires. Mr. F. de B. Collard, Mr. A. Amos, Mr. F. W. Wood, and Mr. T. D. Harris shared in the other awards given in these classes. The quality of many of the entries, particularly some of the geldings, was very good indeed.

The cattle section had classes in it for the undermentioned breeds. Jerseys came first in the schedule; these were represented by some good specimens. Amongst the best were Black Pearl and Alfriston's Pride that were first for Mrs. McIntosh and Mr. A. Miller-Hallett in the two bull classes.

The cow and heifer class was a good one, here Mr. Miller-Hallett's Vanilla II took first, her herd mate Coral, a beautiful cow, was run, having between them Mrs. McIntosh's symmetrical Ingate. There were two heifer classes, Mrs. McIntosh was first in both of them with specially good ones, North Star taking the lead for two-year-olds, and Haverling Gloriosa VI for yearlings.

The Shorthorn classes were small, but some very valuable animals were to be found in them, in fact amongst the winners were some very fine heifers, notably Messrs. Denny's Chiddingstone Cherry, a first-class yearling heifer of high merit,

and Mr. R. J. Balston's Sweet Briar, a two-year-old of choice quality. Amongst the older animals may be mentioned Mr. J. Colman's Hawesbury Flower, and the same owner's bull, Millhill's Favourite, the latter first in its class, and the former second.

A very good entry of Sussex cattle were found in the three classes allotted this breed, the Hon. R. P. Nevill won in the bull class with a very fine young bull, Lord Percy, the Earl of Derby and Mr. F. Finch shared the honours in the cow and heifer class, and the latter won first honours in the yearling heifer class with Tilsden Jessie, a very level youngster.

The sheep section was one of the best we have ever seen. The entry made by the Kent or Romney Marsh breeders was both the largest and the best we have ever seen at this show. The yearling ram class had an entry of thirty-three, and all the other classes were fully as well supported. Some said the show was not able on account of the many alterations made in the awards as compared with those made at the Royal, but this is hardly the case, because whilst the awards were not in all cases the same, to the careful critic there were in practically all cases good grounds to support the alterations.

For instance, Mr. C. Fildes, who was first and fourth at the Royal, took a similar position here, but the winning Royal sheep was not first, that position being occupied by the Royal fourth; this award really corrected an error made at the Royal. Mr. W. Millen's old ram was first and champion here, but only second at the Royal, an award occasioned by the alteration of judges, those at Ashford giving preference to this type of sheep. Mr. H. Rigden won first in the store ram class with a grand ram of fine merit. Messrs. C. Fildes won for yearling ewes, W. Millen for ram lambs, and H. Rigden for ewe lambs. A new class for ewe legs in the full fleece was well supported, an innovation for this breed, and one we should like to see continued. Mr. F. Neame owned the winners. The South-downs were a good lot, particularly that very superior entry made by Colonel Hammond, whose flock has not been out this season at previous shows; these won most of the principal awards.

The produce section consisted of one of the largest and best entries of wool we have seen for some long while. Thirty-two entries were found in the Kent wool classes; Messrs. Kelsey and Rigden won in the small South-down classes. Mr. W. Dockeray, who won first prize for this wool at the Royal, took first again in all three classes here. The butter classes were of high merit, and the competition in them was very close for the leading entries.

The implement section of the show was well supported. Several medals were offered for competition, and a prize of £5 was offered for the best set of cattle food preparing machinery, including oil or gas engine. The entries were fairly numerous, and most of the local firms had stands for machines that appertaining to the hop and fruit industries taking a leading place. The usual stands for cattle food vendors and the cattle medicine sellers were as usual, and, taking a brief survey of the catalogue, it can be said this section was equally comprehensive and well supported as any in the show.

Doncaster.

The Doncaster Agricultural Society decided to conduct this year's show on quite a different basis to former years—in fact, to turn it from a two days' show into two separate and complete one day shows, the stock shown on the first day leaving at the close and an entirely fresh lot coming in on the second day. Whatever be the ultimate effect upon the show's prestige the council hope by the new arrangement to gain one or two important advantages. Firstly, and most important, they will save the heavy cost of erecting the shedding necessary for the protection of stock that remains on the showground during the night. In the second place they hope to give more encouragement to the tenant farmers and smaller men, who as a rule cannot afford to send their stock to a show for two days. The experiment has been watched with interest in all parts of the country, and that it has proved successful—this year, at any rate—can hardly be doubted, for the entries were 1,148, as compared with the previous record of 995, and the attendance of visitors marked a great improvement on recent years.

On the first day the horses shown comprised agricultural, hunters, and two classes of Hackneys, and though losing somewhat by the smaller display, they made, nevertheless, a good show, quality being quite up to the average, the agricultural horses being particularly strong. The whole of the cattle were shown on the first day, and they made quite an imposing display, for the number (eighty-five) was higher than at any show during the past six years, and the quality, too, was quite up to the average, some of the best Shorthorn strains in the country being represented. Indeed, with the exception of three classes of Jerseys, the show was entirely made up of Shorthorns, and as usual, Mr. George Harrison,

of Darlington, was a conspicuous winner. Sheep, also shown on first day, were not a strong feature of the show, though individually the exhibitors were most commendable, whilst the horticultural display had its attractions. For the dejection of those who found the judging of horses, cattle, and sheep a trifle slow on the first day, there was a jumping competition and a "push ball" contest.

On the second day the remaining Hackney classes, saddle and harness horses, dogs and poultry, occupied the showyard and attracted over 3,000, whilst at six o'clock the admission fees were reduced to sixpence for the evening sports and gala, the public poured into the showground in large numbers. Hackneys were not very numerous, though the quality of the animals which paraded was very satisfactory, as may be imagined when it is stated that Mr. H. W. Hickling, of Adholton, Nottingham, had several excellent representatives forward. The saddle and harness classes brought out some good animals, whilst there were some creditable tradesmen's turnouts. An average number of dogs were benched, and quality was well maintained, whilst as to the poultry, these made a capital display.

Ripon.

The show of the Ripon Agricultural Society was a successful one all round, the entries being better than ever, both as regards quantity and quality, whilst the weather being fine there was a large number of visitors. Ripon has always a few first-rate turnouts to show, and certainly the contest that aroused most interest was the two in this category, one for four-year-olds by a thoroughbred, and the other for hunting gelding or mare five years and upwards. The judges found the best four-year-old in a fine chestnut belonging to Messrs. Snowden, of Starbeck, and the pick of the five-year-olds was, curiously enough, shown by the same firm. Mr. Fletcher's three-year-old, which headed its class, also carried off the Hunters' Improvement Society's silver medal. A small but good class of roadster brood mares was led by a shapely four-year-old chestnut—Pateley Princess—belonging to Messrs. Beard and Curling, and also given the Hackney Horse Society's silver medal. The harness classes included some smart turnouts, whilst the classes for heavy horses were all well filled, and included very creditable exhibits, especially when it is remembered that most of them were confined to the district. In the cattle section there were some typical Shorthorns, and the dairy cattle attracted much attention, there being forward some pretty Channel Island cows and heifers, the best of which belonged to Mr. T. R. D. Wright and Sir Reginald Graham. Ripon being so near to a famous sheep-beding district, it was only to be expected that there should be a good show of Wensleydales and Mashams.

County Cork.

The Jubilee Show of the County Cork Agricultural Society was held last week in fine weather, and attracted a large attendance of visitors. The society, which some years ago fell upon evil times, seems now to have completely recovered and is prospering, this year's exhibition being in all respects excellent. Horses were a strong department, furnishing about 400 entries, and it is not too much to say that the three-year-olds likely to make hunters have not been surpassed at Balls Bridge. The sheep display showed a small falling off compared with last year, but the quality was well maintained. There were no cattle on exhibition, as these were embraced in the spring show held some months since, but there was a large and excellent display of dogs, which was quite one of the features of the show.

At a meeting convened by the Liberty and Property Defence League held last week (Lord Wemyss presiding), a resolution condemning the Land Tenure Bill was passed, and was appointed to be voted upon at the further stages of the Bill. In the notice of meeting the league said:—"If this Bill becomes law, all security in private property in land and houses will be at an end, and all contracts and agreements relating thereto little better than waste paper."

On Monday, Messrs. Thomas, Peyer, and Miles offered several important maltings and two brewery concerns by auction at the Mart, London, but as evidencing the prevailing depression in this class of security, not one was sold, though, judging from the large attendance, the sale excited considerable interest, and it would appear from the auctioneer's remarks that biddings for the respective properties did not fall far short of the reserves, so there is a reasonable prospect of some being sold privately. For two malthouses, situate in Norman Street, Lincoln, the highest bid was £7,300, and for two other malthouses, situate on Brayford Wharf, Lincoln, £4,400. A granary and drying kiln, belonging to Messrs. Bass and Co., and used in connection with the maltings, was also bought in.

SHOW GOSSIP.

To-morrow (Tuesday) is the first day of the Peterborough Agricultural Society's great summer show, noted for its display of horses, and its bound shows. The society has drawn up the usual attractive programme for each of the three days, and with a continuance of the fine weather, this year's fixture should be the most satisfactory one of a successful series. The show will open at 8.30 on Tuesday and at 9 on the other days, and until it closes (7 o'clock) there will be a continual programme of interest for the visitors, and as a wind up on the last day there will be a firework display, which should appeal to the general public, for after two o'clock on that day the admission is only sixpence.

As the result of their show on Whit Monday the Lydney Farmers' Club are £30 better off than before the event, as the receipts total £3.0 and the expenses only £2.90. Close on £100 was taken at the gate—a most respectable sum for a local club, and the members are to be congratulated on the success of the show. In fact, the club is in a very sound position, for its members number over 200, and it has in hand a balance of nearly £400.

For their society's fourth annual show, to be held on August 23 at Ruthven, the Denbighshire and Flintshire Agricultural Society have drawn up an attractive prize schedule, containing over two hundred classes, and providing for cattle, horses, sheep, pigs, dogs, dairy produce, poultry, pigeons, etc. The class prizes are good ones, and in addition there are no fewer than fifty-seven specials, so that a good entry should be received. The majority of the classes are confined to Denbighshire and Flintshire, but there are some open to all North Wales, whilst the leaping competition is open to the United Kingdom. Prizes, schedules, and entry forms can be had of the secretary, Mr. T. Welsby, of 9, Wellington Road, Rhyl.

The eleventh annual show of the Upholland and District Horse, Dog, &c., Society will be held on the 25th inst., and gives promise of being a most successful event. Horses are the feature of the show, but classes are provided for cattle, dogs, poultry, rabbits, cats, canines, &c., so that visitors will have quite a variety of stock to inspect. The society belongs to the Federation of Lancashire Agricultural Societies, so that entries finally close at the time stated, viz., dogs, Friday the 20th inst., and other exhibits on the following day, the latest hour for receiving on both days being 10 a.m. Mr. G. H. Scrivener, Greenfield, Upholland, Wigan, is the hon. sec.

The schedule of prizes has now been issued for the East Berks Horse Show Society's tenth annual exhibition, which will be held at Hawthorn Hill Racecourse on Thursday, August 23. This show has a widespread reputation, and the society do well to foster it by offering good prizes and providing a large variety of classes. The Hackney, Hunter, and Shire Horse Societies all contribute their valuable medals, whilst there are other specials, including a thirty guinea challenge cup, presented by Miss F. Langworthy, for the best turned out private pair-horse carriage, with coachman and groom or footman on box, in livery.

Special mention may be made of the produce classes introduced last year, and which undoubtedly proved popular, for entries have been received from breeders all over the country. Prize schedules, &c., can be had of the hon. secretary, Mr. C. W. Dixon, 4, Henrietta-street, Covent Garden, W.C.

The Luttermor and District Agricultural Society will hold their annual show on Monday, August 6, at Luttermor, and for it they provide an attractive prize schedule. It includes open classes for Shire foals, heavy and light weight

classes with good prizes have been arranged, the sections including horses, cattle, produce, poultry, dogs, canines, &c., whilst as special attractions there will be leaping and driving competitions.

At Colehill Horse Show, to be held on September 19, over £100 will be offered in prizes for jumping, driving, turn-outs, &c. Entries will not close until September 5, and forms, prize schedules, &c., can be had of the secretary, Mr. W. H. M. Barton, Church Hill, Colehill, near Birmingham.

Corridor Milk Trains.

The London and North-Western Railway Company are making a new experiment in the carriage of milk, and the results will be watched with interest by dairy farmers. Recognising the importance of the rapid and careful conveyance of milk, the company have recently constructed at their carriage works, at Wolverton, ten vans of novel design to be employed exclusively in the milk traffic. Two of the new vehicles will be held in reserve, and the remainder are now engaged in making double journeys daily to the stations serving the great pasture districts of Buckinghamshire and Oxfordshire, from which a very large quantity of milk is provided for use in the metropolis.

Two objects have been aimed at by the designers of the cars. The first is to produce a train which shall save time at stopping places, and permit of the sorting of the churns during running. The second and principal desire of the builders is to secure that the milk shall be free from any possibility of contamination in transit. It is claimed that the train admirably carries out these features, and that it embodies all that science can suggest for dust-proof, well-ventilated cars.

The whole train is coupled up with gangways so that there may be communication from end to end. The cars are 50 ft. long, 8 ft. wide, and 7 ft. 10 in. high in the centre. On either side there are doors sliding open to a maximum width of 5 ft., to which the platform trolleys, laden with milk churns, may be brought, and the car loaded with a minimum disturbance of the milk.

A little trolley inside the train will enable the four railway servants who compose the "crew" to sort out the churns for Willesden, Addison Road, and other portions of the metropolis served by the North-Western system, and to place them in the proper cars, thus avoiding a long delay at an intermediate station. The vans containing milk for the supply of Kensington and north-western districts are detached at Willesden, and the stop at that junction need be no longer than the time occupied in splitting up the train.

Rapid transit of any perishable commodity is, of course, a necessity. But while the new service is considerably faster than the old, and that alone is an important matter, the improvements made in the ventilation of the cars are so great that if the new train is held as long again as the milk trains under the old system it would still be a great advance, from a hygienic point of view.

Andover Wool Fair.—At this fair on Monday prizes showed a considerable advance over those of last year, as much as 21. per lb. increase being realised. Over 50,000 fleeces of wool were pitched, and every lot was sold, the top prize obtained being 15d. per lb.

SHOW SECRETARIES.

MR. LEWES T. LOVEVENEL PRYCE.
Welsh National Agricultural Society.

hunters, jumping, driving, &c., whilst the specials include the Shire Horse and Hunter Improvement Societies' silver medals. Entries close Monday, the 23rd inst., or at double fees on Saturday, July 23. For schedules and particulars apply to the secretary, Mr. T. C. B. Dyce, Luttermor.

The Worthing and West Sussex Horse Show and jumping and driving competition—an event which is ever increasing in popularity—will take place on Wednesday, August 15, entries closing on August 1. Schedules and entry forms can be had on application to Mr. W. Paine, Summer House, Montague Street, Worthing.

The Bishop Auckland Agricultural Society's Show takes place to-morrow (Tuesday), and should prove most successful, for numerous

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

ROYAL DUBLIN SOCIETY.

HORSE AND SHEEP SHOW,
AUGUST 28, 29, 30, 31.

For Prize Lists and Entry Forms apply to the Agricultural Superintendent, Leinster House, Dublin.

By Order,
RICHARD J. MOSS, Registrar.

UPHOLLAND AND DISTRICT
SHOW (Lancashire Federation),
WEDNESDAY, JULY 25.—Judges—
Cattle and Pigs: C. Hartley, Esq.
Horses and Turn-Outs: T. F. Hutchinson, Esq.
Dog Entries close July 20, 10 a.m.; other Exhibits July 21, 10 a.m. Schedules G. H. SCRIVENER, Greenfield, Upholland, near Wigan.

THE
EAST BERKS HORSE SHOW
will be held at
HAWTHORN HILL RACECOURSE
(between Maidenhead and Bracknell,
Berks), on

THURSDAY, AUGUST 23, 1906.
Entries close July 31, or with double
fees, August 7.

Schedules, &c., may be obtained of
the Hon. Sec., C. H. W. DIXON, 4,
Henrietta Street, Covent Garden,
London, W.C.

N.B.—DON'T FORGET!

ENTRIES CLOSE NEXT
WEDNESDAY.

WELSH NATIONAL AGRICULTURAL SOCIETY.

President—
SIR POWELLT MILBANK, Bart.

Will hold its
SHOW AT ABERYSTWTH
ON
AUGUST 8 AND 9, 1906.

Over £1,000 in Prizes. Entries close
next Wednesday, July 11. Schedules
and particulars from—

THE SECRETARY,
Cambrian Chambers,
Aberystwith.

MELTON AND WARKWORTH
AGRICULTURAL SOCIETY.
AMBLE SHOW,
MONDAY, AUG. 6, 1906.

Extra Prizes for Open Competitions
in Horse Leaping. Entries close July
19. Prize Lists and Entry Forms on ap-
plication to the Secretary, J. BARNER,
High Stanners, Morpeth.

DURHAM COUNTY AGRICULTURAL SOCIETY'S ANNUAL SHOW AT WOLSINGHAM.

On WEDNESDAY, August 15, 1906.
Upwards of £1,000 given in Prizes for
Cattle, Sheep, Dogs, Pigeons,
Horses, Leaping, Milking Demon-
strations, Implements and
Hares.

Entries close Monday, July 30, 1906.
Prize Schedules for Dogs, Poultry,
Pigeons, &c., on application to the
Hon. Secretary, G. H. PROCTOR, Esq.,
Flass House, Durham.
Prize Schedules for Horses, Cattle,
Sheep, &c., on application to the
Secretary,

W. H. CHRYSTAL,
Houghton-le-Spring.

KEELE AGRICULTURAL
SHOW.—54th ANNUAL
SHOW, THURSDAY, AUG. 9, 1906.

PRIZES—£600.—PRIZES.
Horses, Cattle, Sheep, Hunters,
Shires, Pigs, Dogs, Cats, Poultry,
Turn-Outs and Leaping. Schedules,
W. A. BENSON, Silverdale, Staffs.

MALTON AGRICULTURAL SOCIETY'S SHOW.

Wednesday, July 25, 1906. President—Capt.
Clive Behre. Entries Close July 7.
Schedules and Entry Forms on
application to the Secretary.—THOS.
MITCHELL, The Mount, Malton.

EASINGWOLD AGRICULTURAL SOCIETY.

The next SHOW will take place at
EASINGWOLD on SEPTEMBER 19,
1906. For Schedules of Prizes apply
JAS. J. PENTY.

85, Stanhope Road,
Darlington.

COLESHILL HORSE SHOW, SEP-
TEMBER 19, 1906. £100 in prizes,
JUMPING, DRIVING, TURNOUTS,
&c. Entries close September 5, 1906
—W. H. M. BARTON, Sec., Church
Hill, Colehill, near Birmingham.

HARROGATE AND DISTRICT AGRICULTURAL SHOW.

President: H. V. WILLIAMS, Esq., J.P.
will be held
On WEDNESDAY, AUGUST 15, 1906.
About £300 in Prizes. Schedules
now ready. G. SAVILE,
Park View, Harrogate.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

NOTE.—Most authorities in England are agreed that the value of each per cent. of unit of albuminoids and of oil is at least 2½ times that of 1 per cent. of unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and 1 added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

		Per cent.		Feeding units.
Albuminoids ...	...	22.1	×	2½ = 55.2
Oil ...	...	5.2	×	2½ = 15.5
Carbohydrates ...	...	33.2	×	1 = 33.2
Total feeding units				104.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Scientific Feeding of Horses.

The Paris "Compagnie Generale des Voitures," or General Cab Company, owns nearly 12,000 horses, and it is, therefore, essential that the method of feeding this large number should be most carefully thought out so as to combine the greatest economy with the production of the maximum amount of power and endurance in the animals.

To obtain reliable guidance a research department was established some time ago, and it is its duty to investigate the difficult problems connected with this important matter.

The various food materials are bought in large quantities, and for the most part come from abroad; at the present time they consist chiefly of oats from the Danube, although a portion are purchased in France, peas from the East Indies, American maize, locust beans from Algiers, brewers grains, molasses fodder from the beet sugar factories, and a compound special cake (granule) prepared by the company.

Two points are most rigidly adhered to:—

1. All the materials are thoroughly cleaned by special machinery to remove any foreign substances which might interfere with the digestive process and are sometimes of an injurious nature.

2. The different materials before being given to the horses are subjected to a most thorough intermixture, as numerous experiments have proved that by this process the food is more completely assimilated.

The special cake is prepared from suitable materials selected according to the relative cheapness of the food units in the different materials offering on the market at the time of purchase; thus, among other things, bran, rice-oil, brewers' grains, are bought, and then mixed according to a calculation of the food units, the following analysis in the prepared cake being aimed at:—Albuminoids 21.7 per cent, fat 5, carbohydrates 20 to 30, ash about 6 per cent, including phosphates 1 to 2, and lime about 1 per cent. Hay and horse-bones are not employed at present, being too dear.

The daily rations differ for "resting" and "working" horses. On resting days no oats are given, and the ration consists of

Rations.
6-17 lb. chopped oat straw, 4-62 lb. maize, 2-64 lb. crushed peas, 2-64 lb. locust beans, 2-20 lb. brewers' grains, and

1-10 lb. special cake, altogether 19-37 lb. This mixture is given to the animals in four equal parts.

For "working" horses; before leaving the stall a fourth portion of the above ration is given; in the course of the day, as convenient, a ration made up of 7-7 lb. oats and 1-10 lb. crushed peas, and after return to the stall a third ration of 6-6 lb. molasses straw (60 per cent.) and 1-76 maize, making altogether in a working day 22 lb.

The atmosphere in the stables is kept quite sweet, which is due to the exclusive use of peat-moss bedding. The horses stand on a thick mattress of this material, and the parts soaked with urine are daily replaced. About 17 lb. per horse per week are thus renovated. The manure finds a ready sale in the neighbourhood.

The company takes every precaution to protect their animals from infectious diseases. Freshly bought horses are inoculated before being brought to the stables. Isolated stalls are available for horses suffering from disease or accident.

The system of feeding is the result of a long series of investigations and trials by the experimental department. The trials were conducted with thirty horses chosen for their average condition and capacities for a long period under careful supervision.

These trials led to the important and interesting conclusion that the previous nutritive ratio should be abandoned. For a resting horse it was in the proportion of 1 to 5 or 6 and for a working horse 1 to 4 or 5; but the experiments showed that the proportion of carbohydrates could be increased with advantage to the ratio of 1 to 8; 1 to 12, and indeed, 1 to 20 with the liberal use of sugar.

It was demonstrated that the value of the ration depended not so much on the percentage of albuminoids as on the total of digestible matter which the ration contained. This has led to a great economy in the use of the expensive nitrogenous foods, and having been now tested on a staff of 12,000 horses it may be assumed to be a conclusion verified by experience.

Cutting the Hay Crop.

A question of great importance to be considered is, apart from the weather, what is the proper time to begin the cutting? It is incontestable that the best results are obtained when the greater number of the dominant plants of the herbage are in flower. If cut too soon, the crop contains much water, dries slowly, and loses in the drying process part of its nourishment with considerable loss of weight.

On the other hand it is not wise to delay the operation until the plants have begun to form seed. The crop is then hard, fibrous, less aromatic, and less rich in nourishing constituents. The yield may be a little larger, but this increase is at the expense of its quality. The crop, if intended for sale, may perhaps be allowed to stand somewhat longer so as to get the advantage of more bulk, but if for consumption on the farm, it is best to secure the best quality by cutting in good time.

The grass should be cut as close as possible to the ground, so as to secure the full advantage of the undergrowth; the lower part of the stalks of the plants yield a large part of the forage. If left in the field they are wasted.

Garden Crops.

Garden crops should always be forced. If only barnyard manure is used for garden vegetables, the soil may not be sufficiently in condition to immediately supply the demands of plants. High-grade, complete fertilisers should be applied wherever crops are to be grown quickly, as they are in proper condition for feeding the young plants.

No brand of fertiliser can give satisfactory results when the conditions are not favourable. The land should receive proper cultivation, and there should be sufficient moisture in the soil to dissolve the plant foods. Droughts do not admit of deriving all that is possible from a crop, even with the aid of fertilisers. But fertilisers may save the farmer from total loss, under the most adverse conditions, compared with crop growing without the aid of plant foods.

In this country the average fall of rain is about 28 inches. It is heavier on the west than on the east side of the island. Round London it is about 22 inches, round Liverpool 33 inches.

Nitrate of Soda—Statistics and Position.

The usual half-yearly circulars of the well-known nitrate of soda broker, Mr. Thomson Aikman, jun., and of the importers, Messrs. W. Montgomery and Co., Ltd., have reached us.

The principal factor in the trade during the past six months has been the conclusion of the negotiations for the renewal for a further period of three years of the combination arrangement by which the quantities shipped are controlled.

The previous arrangements lasted for five years, and proved to be of such signal advantage to the nitrate producers, that, although there were many difficulties in the way of the renewal, they were finally overcome.

The initial quotas on which the new combination is based amount to about 3,500,000 tons, as the approximate annual produced capacity of all the works, and of this quantity the directorate of the combination have provisionally authorised the shipment during the year ending March 31 next of 70 per cent., or about 2,450,000 tons, but judging from last years' experience and the aspect of the labour and shipping markets, it is not likely that this figure will be attained.

Last year the authorised quantity was 1,765,000 tons.

The quantity shipped was 1,638,000 tons. This year the authorised quantity is 2,450,000 tons, and the exported shipments about 1,750,000 tons.

The available supplies for the world's consumption will probably, therefore, be something like 100,000 tons more than last year, but as the use of the article is yearly extending throughout the civilised world, it is thought that this extra quantity will not more than satisfy the increased demand. The world's consumption during the past three years is estimated to have been:—

United Kingdom about	
1904	1,430,000 tons
1905	1,515,000 "
1906	1,615,000 "

While the use of nitrate throughout the world is always increasing, it may be noted that its employment in England has become smaller. This is attributed to the diminishing acreage under wheat, and it seems to reflect the continued depression of British agriculture, because there is absolutely no doubt that larger quantities, especially on the grass lands, could be employed with profit.

The year opened with the price at 10s. 6d. to 10s. 7½d. per cwt., and advanced at one time during the season to 11s. 3d. to 11s. 6d. per cwt. At present there is no compulsive demand in this country, but as an indication of what the prices are expected to be next season it may be mentioned that forward contracts are being made by the big continental buyers for next season's delivery at prices equal to about 11s. per cwt. According to the present outlook, the prices for next season's consumption will be approximate to those of last season, and may be on a slightly higher level. There does not seem much chance of our farmers having the advantage of cheap nitrate. It is fortunate that an advance in the price per ton does not really represent much per acre, and that a moderate increase in the crop more than repays the outlay for nitrate.

The average price of nitrate for the past five years is given as—

9s. 6d. per cwt. for	1902.
8s. 11d. " "	1903.
9s. 10d. " "	1904.
10s. 9d. " "	1905.
10s. 9d. " "	1906.

With regard to other fertilising material, Mr. Aikman reports:—

Sulphate of Ammonia.—The price at the beginning of the year was £12 7s. 6d. to £12 10s., and is quoted to-day at £12. Farmers must bear in mind that the unit of ammonia in sulphate is considerably cheaper, that the equivalent fertilising unit is nitrate, and should use sulphate whenever they can judiciously do so.

Mineral Phosphates.—The imports have been large at ordinary prices, and we are afraid that superphosphate may be dearer next season. The consumption of this material is enormous.

Fertilisers and Feeding Stuffs Bill.

Good Progress made.

Sir David Brynmor Jones presided at renewed sittings of the Standing Committee on Law of the House of Commons, at which further consideration was given to the Fertilisers and Feeding Stuffs Bill.

On Clause 1, which provides for the giving, by sellers, of warranties as to fertilisers and feeding stuffs.

Mr. Cross (L.U.) moved an amendment providing that the analytical invoice given by the seller of food for cattle or poultry artificially prepared otherwise than by being milled, ground, or chopped, shall have effect as a warranty by the seller "that the actual percentages do not differ from those stated" beyond certain limitations of variation unavoidable in practical industrial production. He held that it would be better that the variations should be enacted by Parliament itself rather than that they should be left to the Board of Agriculture. The Bill was a serious departure from the ordinary lines of legislation. If the restrictions proposed in the clause in the Bill were allowed to stand the importation of oilcake, which was of very great importance to the agricultural interest, would largely be prevented.

Sir E. Strachey (representing the Board of Agriculture) said it was impossible to accept the amendment. He urged that the Board of Agriculture could be trusted, and would be only too anxious to consult those interested in fixing fair and reasonable limits.

Mr. Howell Davies (L.) objected to the extraordinary proposition that more onerous conditions should be placed on English manufacturers than were exacted from foreign manufacturers. Ultimately the amendment was by leave withdrawn.

Mr. Cross (L.U.) next moved to provide that the Bill should not apply to sales of less than 5 cwt.

The Lord Advocate pointed out that the amendment amounted to a proposal to make an exception from the principle of the Bill against the small humble purchaser, who was precisely the person who most needed protection.

Mr. G. D. Faber (C.) entirely agreed that the person who required protection was the small farmer.

The amendment was withdrawn.

Mr. Wiles (L.) moved to except agreements concluded between buyers and sellers from the operation of sub-section 5 of clause 1, which provides that "Any statement by the seller of the percentages of the chemical and other ingredients contained in any article sold for use as a fertiliser of the soil, or of the nutritive and other ingredients contained in any article sold for use as food for cattle or poultry made after the commencement of this Act, in an invoice of such article, or in any circular or advertisement descriptive of such article, shall have effect as a warranty by the seller." He did not want to protect the foreigner, but in assisting the farmer he did not want to damage this great trade. If the guarantees asked for had to be placed on the invoice in all cases, the trade would be so

harassed that it would be impossible for any foreign cake to enter this country.

Sir E. Strachey opposed the amendment on the ground that its effect would be to render the Bill nugatory.

After some remarks by Mr. Albert Bright, Mr. Howell Davies and Mr. Maddison,

The Lord Advocate said that the trade in fertilisers and feeding stuffs was one in which a warranty was peculiarly necessary to prevent deception or fraud. The contracting out amendment would sweep away the whole defence which the Bill proposed to set up.

On the division the amendment was rejected by twenty-one votes against ten.

The first clause was then passed. Clause 2, dealing with the appointment of a chief analyst and samplers, was postponed until the necessary money resolution should be obtained in the House. Clause 3, which provides for an analysis of any fertiliser or feeding stuff being made by the agricultural analyst, and for samples of the article being taken by an official sampler, was passed with the following new sub-section 6, proposed by Sir E. Strachey:—

"(6) Where a sample is, under this section, sent for analysis to the chief analyst or to an agricultural analyst, there should be sent with the sample the invoice (if any) relating to the article from which the sample was taken, or a copy of the invoice or of any prescribed part thereof."

This was agreed to, and the clause as amended, was added to the Bill.

On Clause 4, which gives power to the Board of Agriculture to make regulations with respect to any matter which is to be prescribed under the Bill, it was agreed, on the motion of Sir E. Strachey, that all regulations made under this section shall be laid before both Houses of Parliament as soon as might be after they were made. The clause as amended, was passed.

On Clause 5—Provisions as to county and county borough councils.

Sir E. Strachey moved to add:—"The Council of any county or county borough may contribute towards any expenses incurred by any agricultural body or association in causing samples to be taken for analysis by the agricultural analyst."

This was agreed to, and the clause, as amended, was added to the Bill.

On Clause 6, which deals with the penalties for breach of duty by the seller.

Mr. John Johnson moved to leave out sub-section (3), "A prosecution for an offence under this section shall not be instituted except with the consent of the Board of Agriculture."

Sir E. Strachey resisted the amendment, which was negatived.

Clause 7 was agreed to with a slight amendment.

On Clause 8, which provides that if the owner or the person entrusted for the time being with the custody of any fertiliser or feeding stuff refuses to allow an official sampler to take a sample of the article for the purpose of analysis, or if the purchaser of any such article refuses to give to an official sampler the invoice of the articles or a copy thereof, he shall be liable to a fine not exceeding ten pounds.

Mr. Bowles proposed to strike out the clause, which he regarded as a most objectionable one. He hoped the committee would put a check upon this bureaucratic notion, and would have some regard for the interests of the small cultivators, who might suffer a cruel injustice under this clause.

Mr. Faber and others also objected to the clause.

On a division, it was found that 12 voted for the retention of the clause and 8 against.

The chairman, in announcing the figures, said there was not a quorum present. The sitting must therefore be suspended.

The committee adjourned at 1.50.

A large Lithograph of the above "Rough on Rats" illustration (Household Troubles) which has convulsed the world with laughter, mailed free to any address. FRANCIS NEWBURY & SONS, LTD., 27, Charterhouse Square, London, England.

The Unbeatable Rat Exterminator.

WHY CONTINUE TO FEED RATS? "Rough on Rats" kills them. Rats are smart, but "Rough on Rats" beats them. Rats and Mice instinctively avoid the familiar forms of ready "prepared for use" doses. "Rough on Rats," the original and old reliable, being unmisgotten, and all poison, can be disguised in many ways, thus completely outwitting them. One Shilling box will make or spread fifty or more little cakes that will kill fifty or more Rats and Mice. Originally designed for Rats and Mice, experience has demonstrated it the most effective of all exterminators of Roaches, Ants, and Bed Bugs. The only thing at all effective against the large Black Cockroach or Beetle, which does the work and does it right. Fools the Rats, Mice, and Bugs, but never disappoints or fools the buyer. Safely used 30 years. Sold by Chemists only everywhere in 1/2d., 2s., 4s., and 8s. boxes.

CHANGE OF SEED

always increases and sometimes doubles the crop.

The Potato benefits more than any other crop by the introduction of FRESH SEED. This year has again proved the necessity for English growers changing their Potato Seed from Scotland.

The Seed I offer is grown on the high lands of Fifeshire, and from that district they always do well. Most of the new, and all the other, varieties I have grown and tested, and will please to give advice as to what kinds are likely to suit the different soils, &c., and give best results. I have also tried Findlay's latest. These have done exceptionally well.

LIVERPOOL VESTA CAKE CO.

BLACKSTOCK STREET, LIVERPOOL.

THE "BIBBY" CAKE IN THE FORM OF "CAKETTES."

'Send me two tons o' they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR.

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

Sole Manufacturers—

J. BIBBY & SONS
EXCHANGE CHAMBERS,
LIVERPOOL.

Appointed by Royal Warrant Manufacturers of Agricultural Machinery to His Majesty King Edward VII.

RANSOMES, SIMS & JEFFERIES, L^{TD.}

BEST THRASHING MACHINERY.

TRACTION ENGINES.

These Engines are well proportioned, simple, and easy to manage, and are suitable for drawing and working Thrashing Machinery, for Steam Cultivation, Sawing, Pumping, &c.

THRASHING MACHINES.

These Machines produce a perfectly uniform sample of full-size grain, free from tail corn, and make all the usual separations in the most perfect manner.

A COUNTRY COTTAGERS' GRIEVANCE.

A very genuine grievance of country cottagers is reported to us on excellent authority from Buckinghamshire, and inquiry elicits the unsatisfactory certainty that similar grievances exist in other counties. The matter is well worthy the attention of farmers, as not only does it make for the depletion of the countryside, but it is a wrong from which their poorer neighbours, who actually look to them for championship, ought not to suffer. We refer to the great distance which very young children, from five to ten years of age, have to be sent to rural schools. Some of the latter have recently been closed owing to feuds between local authorities and the Education Department, and in these cases the distance children have to be sent is almost incredible. Cases in Buckinghamshire, of which we have amply verified evidence, show that children, none too strong or fit for walking, are required to walk nearly three miles to school daily, and as far back. The mid-day interval for dinner of course involves a further difficulty. In one case where a respectable cottager declined to send his child because the little one's health would not admit of five miles' walking to and fro, repeated fines were inflicted until the labourer gave up in despair and left the district altogether, thereby depriving the farmer who employed him of one of his right-hand men.

But our readers will ask, has no representation been made in London? The answer is that full representation has been made, both to the Education Department and to the Board of Agriculture. With respect to the former there

has been little courtesy and no sympathy; the rules must be obeyed, and fines of progressive severity will be inflicted until they are obeyed. The Board of Agriculture is sympathetic, but asserts its own impotence. That is official exactitude and practical nonsense. Lord Carrington is evidently mortally afraid of his Cabinet colleague, Mr. Birrell, and perhaps not without reason, for if one of these eminent men had to go, it is fairly certain that it would not be Mr. Birrell.

But can one imagine Mr. Hanbury being treated in this way? It does one good just to think of the crumpled condition of the clever essayist from Bristol after a Cabinet discussion with the stalwart Midland squire, whose death was a national loss. It is true that the late Mr. Hanbury was not a Liberal, but there are Liberals who are also agriculturists, and who are quite capable of standing up to a pedant and a professor. We doubt if Mr. Birrell would exactly walk over Sir Walter Gilbey or over Mr. Courtenay Warner. Would that that good agriculturist, Lord Spencer, were still in harness! We can imagine "the Red Earl" being perfectly explicit even to Mr. Birrell!

Meanwhile, as the Minister of Education is bumble and the Minister of Agriculture afraid, the plain and practical course is for local squires and farmers to stand by their labourers and to pay, in cases of gross hardship, their fines. Meetings should be held, the labourers told by plain word and handbill where the mischief lies and who the enemy is. In the last resort the Lords might rightly be petitioned not to proceed with any theoretical proposals of Mr. Birrell until certain very practical difficulties were met in the proper spirit.

PREFERENTIAL RAILWAY RATES.

That the Central Chamber of Agriculture should express dissatisfaction at the report of the Departmental Committee on Railway Rates will scarcely be wondered at, when it is divested of technicalities and reduced to plain meaning. There is *prima facie* but not undue preference, the report states, the former being justified by the railway companies on the grounds "of the greater bulk, more constant and regular supply, and better packing of the foreign and Colonial consignments; of the lessened cost, therefore, in dealing with them; and also of the undeniable fact that in many cases the competition of water transit is so severe that unless they have the rates which now prevail, this traffic would equally go to its destination and would equally compete with home produce in the market."

The committee not only "recognise the strength of the justification and explanation," but praise "the generous offers and efforts made

by most of the great companies to stimulate local agricultural trading," which they say "have met with but scanty recognition." The report then goes on to state that the local trader cannot expect for small, irregular, and often ill-packed consignments the same rates as are given to the large, regular, well-packed ones, and that, in order to claim comparatively equal rates and facilities, he must "organise something like a reasonable approach to the like conditions."

The majority of the committee on the above grounds have declared that there is no undue preference, and not only so, but state that no further alteration of the present system of dealing with complaints against traffic rates or disputes is required. Agriculturists are, therefore, advised to co-operate and endeavour to improve their position that way. In fact the Majority Report is perfectly dictatorial on this point, stating "co-operation affords a practical method of enabling farmers to meet foreign competition and to put themselves in a position to obtain lower railway rates." It is to be regretted that its adoption should make so little progress.

One member of the committee only, Mr. E. G. Haygarth Brown, differed from his colleagues. In his report, after stating that preferential treatment is given to foreign over home produce, he considers that agriculturists have no means of ascertaining whether it amounts to undue or illegal preference or not. The Board of Agriculture should, in his opinion, aid them to ascertain this whenever desired to do so, and also assist them in bringing questionable cases before the Board of Trade.

Seemingly the whole matter lies in a nutshell. If home-producers were to do all that the railway companies require them, the latter would still convey foreign consignments at less rates than theirs, which, in fact, is virtually admitted by them, only they say "if we did not bring the produce it would come all the same by water, and agriculturists would gain nothing thereby."

Meantime, the Chamber of Agriculture has instructed its Railway Rates Committee to prepare a statement showing that the admitted preferential rates are not justifiable ones. The Chairman of that committee declared plainly at the last meeting of the Chamber that the fact of there being undue preferential rates can be clearly proved, and held out the promise that a manifesto will be prepared which shall throw a far different light on the entire question.

The Norfolk County Council Technical Instruction Committee has had a van equipped with farriery appliances, and it will pass from village to village accompanied by a lecturer, who will give demonstrations in horse shoeing, and will vary the practical operations by lectures on the structure of the horse's hoof, and other subjects incidental to farriery.

Notes of the Week.

It is a pleasure to record that the result of the Royal Agricultural Society's Show at Derby has been highly gratifying to all concerned.

The wisdom of reverting to the migratory system is clearly demonstrated, and also the policy of keeping the show open on the last day of the week.

The extra inducements in the shape of the jumping competitions, band competition, military tournament, &c., helped to make the show attractive to the multitude, and will, no doubt, form a feature of future shows.

We offer our congratulations to the officials, who all worked heartily and harmoniously to make it a success.

All the exhibitors, the implement makers, the seed firms, and others, seemed well pleased with the arrangements, and from what we heard, will be quite ready to support next year's show.

The opinion was expressed by a good many members of the Society from the North that if the show could be held next year at Newcastle-on-Tyne, it would be certain to meet with success.

There seems to exist a feeling that it should be the turn of the North to welcome the show, as it has been held for three times in succession in the South and now at Derby in the Midlands.

Some of the leading stockbreeders did excellent business at the show, we understand that Mr. Deane Willis sold his champion Shorthorn bull for exportation for the sum of 3,000 guineas.

"The cultivation of the land is a factor of the highest importance to the prosperity of the country."

This remark of the King at the opening of the show should be kept permanently posted up in every school of the country.

It would help to instil into the minds of the growing generation the importance of agriculture, the greatest of all industries.

This essential fact cannot be too deeply impressed upon the children; it would gradually revive the conception of the dignity and worth of agricultural pursuits.

The exhibit of the Agricultural Education Association was calculated to do good in directing more attention to the scientific side of agriculture.

Practice without science is equivalent to conducting farming operations in the dark; science without practice is simply theory.

But when the two are happily united, the offspring is prosperity.

It may be said that the dam of agriculture should be practical experience, and its sire should be science, out of investigation and research.

Harvesting operations connected with the ingathering of the hay crop are now general throughout the country.

There is no more pleasant or animated sight than the busy work in the hay fields, young and old, men and maidens, participating in it and enjoying it.

"In every field, in every lawn and mead,
The rousing voice of industry is heard;
The haycock rises and the frequent rake
Sweeps in the fragrant hay in heavy wreaths:
The old and young, the weak and strong are there,
And, as they can, help in the cheerful work."

The swish of the glittering scythe has given place to the more expeditious mower, but haying in sunny weather still remains the pleasantest of all farming occupations.

It is estimated that during the tremendous downpour of rain which fell in the closing days of June, a quantity of 400,000,000 tons of water fell over the Home Counties, sufficient to explain the floods that occurred.

The hay crop was temporarily in danger, but thanks to sunshine and breezes, the damage does not appear to have been of a serious nature.

Are earthquakes the cause of heavy rains? The idea suggests itself in consequence of the quite

unusual downpour that followed the earthquake in Wales and the tremor felt at Croydon.

In a report of an earthquake that occurred in Scotland early last century, it is recorded that a most excessive and continued rain followed, swelling the rivers and inundating much of the land.

The late Sir Wilfrid Lawson was for many years a devotee of the Shorthorn cattle, and at the time of the "Duchess" boom he was led into buying from the Holker herd a Duchess bull—Duke of Oxford—for 2,000 guineas.

Unfortunately for Sir Wilfrid, the animal died very soon after being installed in its new home, and its witty owner feelingly wrote the following epitaph over the bull:—

Here lies Duke of Oxford quiet and cool,
Bred by a Duke and bought by a fool!

It may be added that in recent years Sir Wilfrid went in for some good sires of the best Cruickshank blood, and he never had occasion to write similar epitaphs.

Scarcely a day passes without convictions for selling or exposing for sale adulterated butter.

Evidently the fines inflicted do not have the desired effect of stopping the unfair trade. Of what use is it to fine a man £5 when he is making hundreds of pounds?

The object of punishment is to prevent a recurrence of the offence, and to deter others from committing it.

Heavier fines must be imposed, and in bad cases the offender should be sent to prison.

We would suggest the publication of a black list, giving the names of the offenders. Wide publicity is the best deterrent.

Mr. Rider Haggard, besides being the possessor of a vivid imagination, is blessed with a stock of practical sense; he sees clearly the danger impending over this country from the steady depopulation of the rural districts.

He was the chief speaker at a meeting in Essex the other day, and among other remarks delivered the epigram, "The redistribution of population was really the greatest problem of the day."

His remedy consists of "land colonies," but the Government Departmental Committee appointed to consider his scheme reported unfavourably upon it.

His scheme, therefore, perished, said Mr. Rider Haggard, of that fatal disease—Departmental Committee.

No help, in his opinion, is to be expected from the Government.

My own individual opinion is that this malady, causing the exodus from the rural districts to the towns, results from the continued and growing poverty of the farmers.

That is the root of the evil to be attacked. The British farmer is a generous man, and likes to see those around him happy and contented.

If he could afford it, he would gladly employ more labour and pay fair wages.

We want, and I hope shall get, a good Land Tenure Bill and an arrangement for facilitating small holdings. That is the first step.

Then should follow Government assistance, or at least benevolent neutrality, leading to the introduction of the sugar beet industry, the manufacture of alcohol from potatoes, and some encouragement to British wheat growers.

If such changes could be brought about, combined with improved cottages, there would be no need for the continual plaintive cry, "back to the land."

One thing more. In all the schools the Board of Education should see that the elements of practical agricultural work should be taught, and as far as possible a love of country life impressed on the children.

Royal Agricultural College, Cirencester.
—Professor F. S. Boulger, F.L.S., has accepted the post of Honorary Professor of Natural History and External Examiner for the Diploma, in succession to the late Dr. Freame. Like Dr. Freame, Professor Boulger was formerly one of the resident professors of the college.

THE FARMERS' DIARY.

TUESDAY, JULY 10.—Peterborough Great Show, first day—Bishop Auckland Agricultural Show—Yeovil Great Wool Sale—Marsden Cattle Fair—Ringwood Agricultural Show—Carmarthen Horse Fair—Birmingham Annual Wool Sale (80,000 fleeces entered)—Royal Horticultural Society's Show, Holland House, first day—Leeds Horse Fair—Millers' Conference at Windsor, first day—Special Sales at Highbridge: Caerphilly Cheese, 10 a.m., Calves, 3 p.m.—Entries close for Bonaer Shows as 1 (with double fees) for the Cambridgeshire Fens Show at March—Entries to be sent in for the Welsh Principally Show at Aberystwith, Cardigan.

WEDNESDAY, JULY 11.—Royal Horticultural Show, second day—Millers' Excursion to Sonning—Maidstone Agricultural Show—Bath Cheese Fair—Macclesfield and Peterborough Agricultural Fairs—Holworthy Cattle Show—Aberystwith Cattle Fair—Uppingham Horse and Cattle Fair.

THURSDAY, JULY 12.—Mr. A. D. Hall speaks at Windsor on "The Chemistry of Wheat and Flour"—Wainfield Agricultural Show—Withernsea Horse and Foal Show—Lloyds Horse Sale, Crewe—Thornton's Ram Sale, Stallingham—Ashchurch Sale of Stock—Sile-Sherborne Calf Sale—Alton Lamb Fair—Mansfield Agricultural Fair.

FRIDAY, JULY 13.—Millers' Ball at the White Hart, Windsor—Large Sale of Agricultural Lands in Sheppey. Messrs. Cobb, at the Mart, 2 p.m.—Thornton's Shorthorn and Sheep Sale, Melton Ross—Widmore Cherry and Fruit Fair—Congleton and Leicester Agricultural Fairs—Yeovil Horse Sale.

SATURDAY, JULY 14.—Norden Agricultural Show—Agricultural Land Sale at Shaftesbury.

MONDAY, JULY 16.—Ludlow Cattle and Sheep Fair—Entries close for Lutterworth Agricultural Show—Entries close for Malby Horse and Foal Show.

TUESDAY, JULY 17.—Horse and Foal Show at March, Cambridgeshire—Lincoln Horse Sale—Sale of Romney Marsh Sheep Land at the Saracen's Head, Ashchurch—Sale of Willesborough Farm and Mill, Saracen's Head, Ashford—Lyndhurst Timber Sale—Warrington Fair—Entries close for Chestow Agricultural Show—Hilland and Ayr Society's Show at Peebles, first day.

Judges at Dublin Horse Show.

The following gentlemen have agreed to officiate as judges at the Royal Dublin Society's Horse and Sheep Show on Aug. 28, 29, 30, and 31:—

THOROUGHBRED STALLIONS.—G. H. Breen, Wigmore Grange, Leintwardine, R.S.O.; John Hill, Marsh Brook House, Church Stretton.

THOROUGHBRED BROOD MARES AND YEARLINGS.—The Right Hon. the Earl of Coventry, 1, Balfour Place, Park Lane, London, W.; C. H. Prior, Adstock Manor, Winslow, Bucks.

BROOD MARES TO PRODUCE WEIGHT-CARRYING HUNTERS.—G. H. Breen, Wigmore Grange, Leintwardine, R.S.O.

HUNTERS AND VOUCHER HORSES.—Richard L. Angus, Blenheim Palace, Woodstock; W. Henry Barber, Culham Court, Henley-on-Thames; Reginald Corbet, Ardley, Market Drayton; Frederick R. Hill, Marsh Brook House, Church Stretton; W. G. Lambarde, Bradbourne Hall, Sevenoaks; T. B. Miller, The Manor House, Cricklade, Wilts; Hon. A. E. Parker, The Cottage, Doveridge, Derby; Owen C. Wallis, West Haddon Hall, Rugby.

RIDING COBS AND PONIES.—General Rimington, Ballyfar, Carragh Camp.

HAIFESSES HORSES.—Charles E. Galbraith, Leazes, Dumfries, N.B.; Alex. Morton, Gowan Bank, Darvel, N.B.

SHEEP.—Roscommon: Matthew Flanagan, Tomona, Tusk, co. Roscommon. Lincoln: Tom Casswell, Pointon House, Folkingham. Black-faced and Cheviots: William Whyte, Hatton of Eassie, Glamis, N.B. Shropshire: Matthew Williams, Whiston Hall, Albrighton, Wolverhampton. Oxford Downs, Hampshire Downs, Southdowns, and Suffolk: W. D. Little, Middleton Stone, Bicester.

Meat Inspection in London.—Reporting upon the scheme of the Public Health Committee of the London County Council for the establishment of public slaughterhouses in London, the proper inspection of all meat could be carried out. The Finance Committee remark: "It is apparent that the establishment of food-inspection stations and public slaughterhouses will necessitate the expenditure of large sums, both upon capital and upon maintenance account, but in the absence of any details we cannot do more at the present time than express the hope that the committee, in working out their proposals for the consideration of the Council, will bear in mind the fact that the Council's present commitments on capital account are very large."

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

The fine show of Cleveland Bays which was held at the Royal at Derby, and for which we are in a great measure indebted to the liberality of Sir Gilbert Greenall, is sufficient proof of the wisdom of the policy which was adopted at the general meeting of the Cleveland Bay Horse Society in January, when a suggested amalgamation with the Yorkshire Coach Horse Society was emphatically negatived. Taking into consideration that the home of the Cleveland Bays is a long way from the site of the Royal Show, that it is also an awkward journey from the East Moor Dales to Derby, and that the bulk of the breed are in the hands of small farmers, the entry of twenty-one in three classes, with twenty of them forward, was

and an elegance which is peculiarly his own, and the long, level quarters which look so well in leather are seldom, if ever, seen in any other breed, save and except in his near relative, the Yorkshire coach horse.

The Cleveland Bay is more than a mere harness horse; he is the foundation of half-bred light horse breeding. To see the Cleveland Bay bred at its best it is necessary to look to the mares. There was no lack of quality in the half-dozen which came into the ring on Wednesday morning at Derby, and everyone of them was decorated, and rightly so, too. This is not the place to describe the mares individually or to speak of prize winners. It is my object to call attention to the value of the breed. Now, most if not all the half-dozen were mares of long pedigree—one of them, I know, dates back to a mare foaled in 1853, whose grandam was by Victory, foaled in 1826, and whose great grandam's pedigree is also given. Now here we have a pedigree dating back for at any rate close on a hundred years, whilst the type, clean hard bone of thoroughbred character, good action and great power, must be invaluable as a foundation for either riding or driving horses. The argument against the Cleveland Bay that he has scarcely enough quality for a fashionable harness horse therefore falls to the ground at once. And it must not be forgotten that it is necessary to preserve a breed pure in order to get the best results from crossing with it, the first and second crosses being always the best. There is one more word to be said about the Cleveland Bay before I leave the breed for the pre-

limited and cautious conditions, it serves well and long as food." Then the writer goes on to say that the yew probably owes this peculiarity partly to the different circumstances of soil and situation in which it grows, and partly to the different conditions and succulency and maturity, or of season and vitality, in which it is eaten. He goes on to say that in the island of Inchelnoch, in Loch Lomond, where yew trees predominate to a great extent, when a heavy snow comes, the deer eat largely of them—in fact, practically live on them—whilst the forester's cows also partake largely of them without taking any harm. This, however, is in mid-winter, when the succulency has in a great measure been dried up. A later authority says that the leaves of the yew are especially dangerous when they have been laid in a heap after the trees had been dressed and have fermented. This being the case, the trimmings of the yew should be carefully destroyed at once.

An instance of yew poisoning occurred to a horse belonging to a friend. Some yew trees had been dressed, the dressings thrown into a heap, and the horse, which had been turned out for a few weeks of well earned rest, ate greedily of them, as was evident, though he had an excellent pasture, and was in good case. But there was evidently something about the yew which appealed to his taste, and he made his last meal on yew leaves, for he was dead in a few hours.

I was talking the question over with a friend a few days ago, and he told me that he never knew that there was anything poisonous about the yew tree till it was brought home to him in a curious way. I should say that he is a very observant man, having a keen eye for everything which is passing round him. He was staying in the Lake District some few years ago, and was particularly taken with a team which ran in one of the coaches of which there are so many in the Lake District. Especially was he taken with the leaders, as good-looking horses. One day, when the horses were standing with the coachman not on the box, but somewhere in the vicinity, these leaders began to eat heartily of a yew tree which was near. They had not much time to gorge, but they had a fair quantity. Now as to the result. One horse died within twenty-four hours; the other recovered, and at the end of ten days took his place in the coach again. But he was a very different horse to what he had been before indulging in his fatal appetite. His bloom had gone, big patches denuded of hair were all over his body, and he was altogether a pitiable object.

At this distance of time there are no reliable data from which we can arrive at a reason why these two horses were so differently affected by the yew leaves they had eaten. The horse that died might have been nearer the tree and eaten more of it; or the leaves he ate might have been more succulent; or, again, the horse that survived might have had the stronger constitution. But, on the face of it here, we have two horses which took the poisonous yew at the same time and under similar circumstances; both of them were affected by it, and one succumbed whilst the other recovered. For all we know at present the conditions were precisely the same, though they might have differed in the way I have pointed out.

"What is the value of a horse over and above his apparent value—that is to say, his value in a fair if nothing was known of his merits?" was a question which was asked me the other day, and it is one which is easier asked than answered. For instance, let us take some well-known winner of jumping prizes. To look at probably he is not worth more than £30, perhaps not so much. But he is a fine performer, he is practically sound, by which I mean that there is no prospect of his breaking down for some time to come. There are plenty of prizes that seem to be well within his grasp. What, then, is his value? Now, in estimating the value of a horse like this there are three or four things which must count against him. The first of these is that the continuous jumping on the hard ground may tell sooner than anyone can anticipate from appearances—that the breakdown is nearer at hand than any expert would expect from the closest examination. Then there is the possibility—and however good the performer may be, the time will come—that he may meet something better than himself, that instead of taking first prize after first prize he may drop to seconds and thirds, or even out of the money altogether. Or, like the famous Fanny Drape, he may over-jump himself and break his back. For him it may be argued that he won £200, more or less, last year; that there is nothing "new" coming out; that he has a practical walk-over for most prizes; and that he is likely to win at any rate half, but probably more than half, of what he had done in the previous year. Now, how to arrive at his value. I think perhaps twice his value in a fair would be a fair valuation, but I should not like to generalise

SHIRE STALLION, HOLKER MENESTREL 2nd.
First Prize and Reserve Champion, Royal Show, Derby.
The property of Mr. VICTOR C. W. CAVENDISH, M.P., Holker Hall,
Cark-in-Cartmel, Lancs.

highly satisfactory. And these twenty horses represented eleven breeders, none of whom come from the north. The two south country breeders, Mr. H. C. Stephens and Mr. F. Bateman, sent five between them, and it is a sign of progress to see gentlemen in the south taking to breeding Cleveland Bays.

The show was, I take it, a very instructive one. In the first place we had a good class of stallions. Mr. Frank Bateman's winner, Beadlam Fred, is a much-improved horse since last year, and he made a very fine show, but exception was taken to him by the critical that he did not show sufficient quality about his head and neck. Now this mysterious, almost indefinable, characteristic "quality" is frequently, in the humble opinion of the writer, pulled into an argument unnecessarily. There is, for example, the quality which is necessary for carriage horses in the park. Well, we do not look for that in a Cleveland Bay stallion. If we got it we should in all probability—nay, certainly—lose some much more valuable attributes; for instance, that masculine character which is so indispensable in a sire.

It is admittedly a characteristic of the Cleveland Bay that he has a rather big head, but it is generally well carried, and it must be remembered, in criticising the Cleveland Bay, it is not fair to look at him as only a harness horse, or to compare him, as some people do, with the Hackney type of harness horse. The Cleveland Bay has a quality

sent. Our friends on the Continent have known and recognised the value of the breed, and most of those harness horses which come from abroad, and of which we hear so much, have Cleveland Bay blood in their veins. It is essential to the well-being of modern horse-breeding that there should be good Cleveland Bay mares of long descent, for from them high-class hunters and harness horses can be bred. And there is only one way of keeping this very valuable foundation, and that is by encouraging the pure breed.

It seems very curious that after something like two thousand years of writing and discussion on the subject, the question of whether the yew is poisonous or non-poisonous again crops up for discussion. There have been many discussions on the subject in the past, and all of them have been somewhat similar in character to that which is just now going on in the columns of a contemporary. There is, I think, little doubt that the safe way is the best way, so far as the yew is concerned, and I should certainly advise all stockowners to treat it as if it were poisonous at all times and in all states. Whether it is or not is quite another matter. A well-known authority, writing in 1849, says that "the foliage of the yew possesses a very perplexing reputation in reference to the domesticated animals; for in some instances it seems to be indifferent to them, little eaten and seeming neither to help nor to hurt; in others, it appears to act as a virulent poison; and in others, though under

Notes and Jottings.

Seldom does the first week of July find us with such sweet and luxuriant pastures as are found in almost all parts of the country this year. The rains of the past ten days, coupled with great heat, have brought up the white clover in the greatest profusion and freshened up the general herbage as if by magic. In spite of such favourable feed the proverbial abatement in milk has arrived, gallons short of a fortnight ago are quite general, and the butter and cheese produced is proportionately less. This year, however, the abatement is due entirely to the time of year, and the disturbance of the flies, which have been very busy recently, and as feed remains green, we may hope that the supplies of dairy produce will not sink to such a low ebb as is often the case in July.

Hay is being scoured generally in very good condition, and the crops still standing have in many cases grown very heavy. This coupled with a capital plant and good breadth of mangolds and swedes gives an all round fair promise for winter feed, which is a matter for much congratulation. When the bulk of the food that is home grown is plentiful and of good quality it not only reduces the outlay necessary for artificial food, but the cattle also give much better results. The young stores grow better, the fattening steers make greater weight, and the milkers fill the pails and churns as well as maintain their own condition much more liberally and at much less cost generally than when these bulky home-grown foods are short in quantity and of middling quality.

How satisfactory the export business in pedigree cattle continues, what gigantic proportions it has attained. The demand for the Shorthorns at the auction in the Royal showyard was quite astounding as regards the numbers required for and purchased by foreigners, and it is very gratifying to find that news recently received from Argentina from those who are pretty competent to give an opinion is that there is not likely to be any reduction in the demand for the best animals for that country for at least many years to come. There appears likely to be less inquiry for medium qualities than there has been in the past. At one time large numbers were purchased at very low prices and of ordinary pretensions. These, however, did a good work in their day by laying foundations for herds and improving the then native stock.

The herds founded there have grown in numbers and improved in quality to such an incredible extent that to-day the chief, indeed it may almost be said the entire, demand is for just the very cream of our cattle, to add as it were the last polish to these existing herds. The satisfaction, however, to our home breeders lies in the fact that when the highest possible polish has been raised in these herds it can only be retained by at least occasional importations from the original home and herds of the breed, and as the area of country over which these foreign herds exist is so vast, and the number of animals so great in comparison with our own tight little island, there seems but little likelihood of our supply of the best cattle becoming too great at any time.

It is very seldom that the demand for export is so much confined to one breed, as was the case this year. Scarcely an animal was sold at a price worth recording (under the hammer) from any other breed except the Shorthorns. This is quite wonderful altogether, and must be set down, one would think, in a great measure to the fashion that prevails so extensively, both at home and abroad, just now to become possessed of a Shorthorn herd. Whether this fashion at home is due entirely to the high prices this breed are making for export, or whether it is due to the more widely practical dual purpose character of the Shorthorn, it is hard to say. Probably the two reasons have combined to bring about this great desire to become possessed of a herd. The greater attention recently devoted to their milk-giving properties also is not without its effect.

The second price of the show appears to be that of the sale privately of Mr. Deane Willis's splendid yearling bull Bapto Viceroy at 3,000 guineas; this, too, is a record price at home for

many years past. The sale of this animal, too, emphasises very much the importance of our Royal Show. The value of the champion prize at the "Royal" being the ruling condition in the fixing his value, and when the difference of winning or not winning this championship assumes the dimensions of hundreds of pounds, it proves how highly the honours of the great English Royal are valued by our customers over the seas. Long may the Royal continue, and long may its exhibits maintain their superiority over those of other countries, and thus bring the dollars of those countries into the coffers of our breeders.

Of the many sections in the cattle department of the Royal Show, the most disappointing were those of two or three of the Northern breeds. The West Highlanders with but two entries (and those from a breeder in the South of England), the Ayrshires with but a handful (though of very good quality), and the Galloways with very scantily supported classes. Surely where the foreign buyer is so much in evidence, as was the case at Derby Royal, it would have served in the interests of breeders of these varieties of cattle to have been at the trouble and expense of giving a much more liberal and more representative display of their wares. On many of the extensive ranches across the seas there are sections where the Highlander and the Galloway would be very much at home, and would afford a good profit as well as giving pleasing variety.

The quotations given in the last issue of this paper of our London Cattle and meat markets are rather striking. In the live cattle market at Islington on Monday, July 2 this year, the total supply of cattle was 610, as compared with 1,070 the corresponding market in 1905; yet with this great difference in the supply the quotations appear to have remained as a year ago. Years ago the hot weather season was usually considered favourable to a larger demand and greater supply of live cattle, owing to the difficulty of dealing with dead meat at such a time. The increased facilities, however, afforded by improved refrigerators and cold storage appear to have so lessened this trouble that there seems quite a probability, as was mentioned in these columns a long time ago, of an end being put to the live fat cattle trade.

The quotations in the Central dead meat market are also worth glancing over. We find there that the best Scotch sides made 4s. 2d. per stone, whilst Deptford and Liverpool killed meat was quoted at 3s. 6d., a difference of 1d. per lb. only, and refrigerated hindquarters are given as making the same price. The noticeable fact in this dead meat department is that there is but 1d. per lb. difference between our best Scotch sides and the Birkenhead killed (imported) when we come to mutton the difference between the best English and the best imported is 2d. per lb. Frequently it happens that there is a still wider range in the prices of beef and those of mutton. Why is it that the foreign beef is so near in value to our own as compared with the mutton? A penny per lb. in a 90 stone steer means £3.

The dairy section of the Royal is a very important part, and should be especially so in a county so much devoted to dairying as is Derbyshire. In England, however, to-day the dairy part is an annually increasing greater part of dairying—consists merely of providing a certain supply of new milk night and morning, year in year out, cooling this and otherwise sending it off to the railway station, and thence to the large towns and cities without any further manipulation. We say "merely," but merely providing and otherwise managing such a supply is by no means an easy task, neither must it be handled carelessly if customers are to be retained and a price realised that will keep body and soul together.

The expense of raising a large dairy of new milk for the town dairyman, refrigerating it, cleansing all the necessary utensils, including the railway churns, providing float, time and man to take it to the station, and then pay the cost of carriage, runs away with an enormous share of the income, and when the sale price does not amount to more than about 6d. per imperial gallon, it is difficult to see where the profit accrues. The chief information or instruction that visitors to the Royal Show could obtain as to the nature and butter the various brands produced. Not that the writer attaches much importance to these tests and

A large amount of money was given in prizes for the test yields of milk and butter from various breeds of cattle, yet so little interest was taken in this, and so slow were matters carried out that even at the time of writing one is without the information as to the quantities and qualities of the milk and butter of the various breeds produced. Not that the writer attaches much importance to these tests and

on the subject. What a man refuses, of course, has nothing to do with it, for there are men in the happy position of wanting the horse and not wanting money. THE LOOKER-ON.

Sale of Hackneys at Llanmaes Stud Farm.

The twelfth annual sale of pedigree Hackneys and harness horses, belonging to Mr. James Howell, of Llanmaes Hackney Stud Farm, St. Ewgans, near Cardiff, took place on Tuesday, and, as usual, attracted a large company of breeders from all parts of the country, and some brisk bidding was witnessed. Messrs. Stephenson and Alexander were the auctioneers, and they had the disposal of a splendid lot of horses, as well as brood mares and foals. In fact, as the auctioneer remarked, they included some of the best hackneys in the Kingdom. The best price of the sale was 112 guineas, at which figure Hywel's The Gentleman, a bay gelding, foaled 1901, and by Golden Fireaway, changed hands. Mr. H. E. Grey, Merthyr Vale, Extra 125 guineas for two bay geldings, Taffy, foaled 1901, sire Golden Fireaway, and Tommy, foaled 1902, also by Golden Fireaway. Mr. C. Radcliffe, of Cardiff, gave 77 guineas for Lady Grant, a chestnut, foaled in 1902, and another get of Golden Fireaway, whilst yet another of this sire's progeny, Hywel's Starlight, a brown gelding, fetched 70 guineas from Mr. Morton, Darvel, N.E. Golden Fireaway who is one of the stud horses, is a handsome bay with black points, by Goldfinger V.V. and his value was proved by the good prices obtained by his stock, as in addition to the sales already mentioned, numerous others by him went at prices up to 64 guineas, 62 guineas being obtained twice. Animals by other sires also sold well up to 57 guineas.

The Memorial to Dr. Fream.

The Dr. Fream Memorial Committee, as the result of inquiries, learn that nothing could be in closer accord with the wishes of the deceased or those of his relatives than the offer of prizes or scholarships for poor lads in connection with an agricultural course of study. The exact form the memorial will take will, however, be a matter of consideration for the committee.

Until it is known what funds will be forthcoming, any definite decision on the point must be postponed. But although a few liberal subscriptions will be welcomed, a large number of moderate and small donations are specially desired from the many farmers and others connected with the land who have benefited by the late Dr. Fream's valuable services to agriculture, and who would wish this to perpetuate his memory.

The enthusiasm with which the proposal has already been taken up indicates that there will be a generous response to the appeal of the committee, over which Lord Jersey has been kind enough to promise to preside, and for which Sir George Barham has been so good as to undertake the duties of treasurer.

Mr. G. F. Strawson, 71A, Queen Victoria Street, London, E.C.4, is the hon. secretary of the committee, and he will be pleased to hear from those who would like to identify themselves with the memorial.

PRIZE WINNING RED POLLED BULLS,

Belonging to Sir RICHARD COOPER, Bart., Ashlyns, Berkhamstead.
1. Ashlyns Ben. 2. Ashlyns Major. 3. Ashlyns Duke.

trials, as the results much more frequently hinge upon the cow's temperament, her restfulness and feeding capacity, rather than her actual milking capacity. Were the animals tested in their own homes, we should seldom see the same cows at the head of the list that we find placed there in the showyard competition.

Sale of Messrs. Robertson's Dexter and Kerry Cattle.

The annual sale of Dexter and Kerry cattle, the property of Messrs. Robertson and Sons, of La Mancha, Malahide, Co. Dublin, was held this year at Bletchley, on Friday last, Mr. Jonas Webb, of the firm of Messrs. Thornton and Co., officiating. There was a good company, which included most of the well-known breeders, and for many of the animals there was spirited bidding and good prices. Messrs. Robertson's successes in the showing have been almost phenomenal, and their judgment and enterprise in connection with these breeds have been so great that most of the principal herds in England have been formed with stock purchased from them.

Mr. Martin J. Sutton, an old fancier of the Dexters, was announced as the buyer of the first lot, La Mancha Noble Lassie, a nine-year-old cow, at 14 guineas; he also got Compton Dongo'a, a young cow, at 15 guineas. Quite the best animal in the sale was Springfield Edna, a red six-year-old cow, that won third prize in the inspection class and first in the milking trials at the Royal Show at Derby. Starting at twenty guineas, there were bidders galore up to 60 guineas, but then it remained with Mr. Sutton, the Hon. Claud Portman, and Mr. Collins (representing the Countess of Sefton). Mr. Sutton was in last at 81 guineas, but the final bid of 85 soon followed, and she went to Croxeth Park at that figure. Other purchases made on behalf of the Countess of Sefton were La Mancha Peggy, 47 guineas, La Mancha Grace, 20 guineas, and the Dexter bull, La Mancha Peter Pan, 25 guineas.

Mr. B. de Bertoldo gave 51 guineas for a charming heifer in Orchid, 31 guineas for La Mancha Sunlight, and 12 guineas for another yearling. Mr. Hordern gave 26 guineas for La Mancha Chloe on behalf of Mr. Harding, of Stanton Hall, Birkenhead. This was a two-year-old Kerry heifer that won second prize at Derby. The Duchess of Devonshire's representative got La Mancha Wee Mite, one of the best yearlings, at 30 guineas. Other buyers were Mr. Tillotson, Mr. Dinwale, Mr. Jones Mortimer, and Sir Walter Gilbey. The best price for a Kerry bull was 21 guineas paid by Mr. Vicars. The average was £10 8s. 2d. for 33 head, and the total of the sale about £15.

Dorchester July Sheep Fair.

This important Western fair, which has long been celebrated for the excellent breed of sheep, both Horns and Downs, associated with the fair, was held in beautiful summer-like weather on Friday, when something like 16,000 sheep and lambs were penned at the two great sales held under the direction of Messrs. T. Ensor and Son, and of Messrs. H. Duke and Son. Buyers were largely represented, including most of the best-known dealers in the Western and South-Western shires. The sheep were a very meritorious lot, including, as they did, many registered drafts of the two different breeds. The younger ages of ewes, both Horns and Downs, were much sought after, and, as a consequence, these brought satisfactory prices, which, as a rule, compared favourably with those realised at the corresponding fair last year; but the lamb trade was scarcely characterised by the same activity, and prices suffered slightly by comparison.

As the attendance included many needy buyers, a clearance was with very little difficulty effected, ewes relatively finding a readier sale than lambs. Horn ewes commanded a quick sale at from 49s. 6d. to 57s. for the best registered drafts, more ordinary pens selling from 42s. up to 48s., one good pen of two-tooths realising 51s.; two-tooth wethers, 45s. to 49s.; ewe lambs, 35s. up to 49s. (Mr. Elworthy Monkton realising the latter figure); wether lambs, 28s. 6d. to 33s. The Down ewes sold equally well for the younger ages at from 41s. up to 53s. for a registered draft from Mr. Hooper, Winfrith, down to 37s. 6d. for ordinary ewes; two-tooth wethers, 31s. 6d. to 40s.; wether lambs, 30s. 6d. to 38s.; ewe lambs, 31s. to 33s.; mixed lots, 24s. 6d. to 30s.; crossbreds, 28s. to 35s.; Southdown ewes sold from 38s. 6d. to 43s. for a good pen of Mr. Mayo, of Puddington; lambs making 29s. to 32s. It was generally admitted that but for the recent rain prices would have been nothing like as good as they were.

The main haytime hirings at Kirby Stephen took place on Monday, when there was about an average attendance of men seeking engagements. With the early approach of harvest, in consequence hiring proceeded apace. A goodly number of men accepted service for the month at 25 to 27, this maintenance, while superior hands obtained to 47 10s., and in very rare cases 48. Young lads could command from 23 10s. to 25.

CORN & SEED CRUSHERS

SEPARATE OR COMBINED WITH

BEAN & MAIZE KIBBLERS.

Turner's Crushers were awarded **First Prize** by the R.A.S.E. in 1853, and still retain the high reputation which they then gained for durability and general efficiency.

Notes and Jottings.

The prospects for sheep keep both for the near future and for the coming winter have entirely altered, for now the aftermaths are likely to be good, and the root crop has been assured a strong start. The dry time before the rains had given good opportunities for cleaning the land, and it is quite the exception to see a really foul piece of root land. The later-sown swedes have been brought on rapidly by the period when danger from fly may be expected. There is yet a good area of turnips to be put in after summer crops are fed off, but there is ample moisture below to help start them.

The sheep show at the Royal was excellent throughout: there is no doubt there was never a time when there were so many who kept flocks of high excellence as at present. One remembers, not so very long ago, when it was not uncommon to see pens exhibited that were very ordinary in their breeding, and which made their exhibitors appear foolish for sending them; there is very little of this sort of thing nowadays. There was a good trade at the show, the Shropshire doing specially well among the Shortwools, and the Lincoln and Kentish among the Longwools. There is no doubt that any breed which is attractive to Argentine buyers is easy of sale. There is practically no limit to their buying powers, and enormous commissions are in hand. Land values in the Argentine have advanced from 30 to 40 per cent. during the last three or four years, and with the big returns from wool and mutton, as well as from other classes of stock, there is great wealth accumulating in their country. Seeing the great agricultural future of their country, and with the evidence of the last few years' success before them, there is a general endeavour to increase their holdings and to get them stocked. Promising as other things are wool is doing so well that sheep stand first in their estimation; but what they demand is the best. The English sales this year will be attended by more foreigners than has ever been known, as the vast number of Argentines over here have come with the intention of buying. The trade is by no means confined to the breeds instanced, for there is an open-mindedness about the Argentine buyers; and many other countries are well represented. The short supply of sheep in the world is being recognised on all hands. The Argentine meat trade is not likely to slacken, and a new line of steamers will shortly be fitted out to carry cold meat from Buenos Aires.

The rains have given an impetus to growth, and keep will be somewhat flush, with a tendency to cause scour; though, with the greater abundance of food there ought not to be much trouble in finding plenty which is not soured through being sheeped previously this season. The fine start that the clover and sainfoin crops have got since they were cut will altogether alter the prospect, and provide sweet keep, and after the light growth in many districts are likely to grow a very heavy aftermath.

It is not always pleasant to be told of our sins or failings, and the loyal way in which the leading sheep breeders took up the cudgels for their weaker brethren in the discussion on Mr. Hollings' paper on "The Preparation of Wool for Market" was very pretty; at the same time some of the indictments are not without ground. Undoubtedly there are a good many matters in which we are not quite so careful as we might be in respect to marketing. In the good old days when we had the markets under our thumb and the foreigner was not a terror to us, we were inclined to have our own way, and take our own methods in getting it. But the foreigner is here, and he got here a good deal by making his produce appear attractive; we have instances of this in the marketing of fruit, butter, and many other things, which are no better than our own, but which he has made the public believe are so; he can send margarine so attractively made up that he often gets more for it than some of us do for our own fresh butter. Mr. Hollings is not the first to remind us of our deficiencies in making up wool; the buyer wants wool and only wool, and if he gets a mixture he cannot set it to the stapler as clean wool; foreign fibrous material, such as hay and straw, twine, and the like are most troublesome for him to deal with, and he must be at the expense of pulling these out. In respect to dirt he must make an

allowance for that, and he naturally takes care to keep himself on the safe side by assuming that there is a considerable quantity there. There is no particular need for the farmer to perform the work of the sorter; what the farmer has to do is to keep out deleterious matter so far as he is able, and with the observance of a reasonable amount of care this can be done. The man who deliberately puts cloggy wool into the fleece is foolish, if nothing worse; unfortunately we are obliged to admit we have seen it done, and at rather widely-lying points too; and we agree with Mr. Hollings that it is not a practice that is likely to be profitable to a man for long.

The worst feature of careless or intentionally deceptive packing is that the many have to suffer for the few. The gentleman who could find no advantage from his better-quality wool and care in handling, on reflection would see that these who are dealing with large quantities cannot put themselves out of their stride for an occasional little lot that may be offered. A district or a fair very often has a certain reputation, and the buyers set their tone by it; it may be a high tone or a low one; just as hops from one district have a special value not altogether in accordance with their intrinsic worth; but it is hard on those who deal fairly and well with their wool that they should have to suffer because their neighbours are not similarly careful. The buyer says that there are those who are not so careful as they should be; and instead of burying our heads in the sand, it would be wiser to admit it, and do our best to influence others to prepare their wool as well as the best of us have done.

Matters relating to wool are much forward just now, with the stimulus of better price. In the Northern counties there is a movement to abolish the extra half pound per stone draft given when weighing up wool. Uniformity in weights and measures is very desirable, but whether there is the gain in altering weights in an instance like this that some assume is open to doubt. It is ridiculous to suppose that a man who sells a stone of wool, sells 14 lb. and gives away half a pound. He sells 14 lb., and the buyer buys it. If the buyer bought by the imperial stone, he would fix the price accordingly. When the guileless sort of buyer goes around gives the same for 14 lb. as he does for 14 lb., he will be said to have come from Wensleydale, where they breed the blue-faced sheep, locally known as Muggs. Draft is an old concession, supposed to be a compensation for the dirt on the wool; but that it gives an advantage to the buyer must be dependent upon the intelligence of the seller; if the seller will let 14 lb. go for the price of 14 lb. he certainly wants some association to take care of him.

Lamb Sales.

Disss.

Messrs. T. W. Gaze and Son had an entry of between 18,000 and 19,000 lambs and sheep for their annual sale at Diss, and there was a large attendance of buyers. Both lambs and ewes met with a very good trade, lambs being from 2s. to 3s. a head dearer than at Bury market on the previous day, and showing quite that advance as compared with a year ago. First of the very first lot there was a brisk trade, and with very few exceptions, this was maintained throughout the sale. The highest bid of the day was that of Mr. Gooding, of Witleham, near Ipswich, who gave 44s. a head for twenty selected Suffolk ewe lambs (registered and earmarked), consigned and bred by Mr. Alfred Johnson, of Burston, from rams bred by Mr. Thomas Keeble and Mr. F. C. Mariner. Thirty others from the same flock, also registered and earmarked, realised 38s. 6d.; whilst the pick of the wethers fetched 34s.

Barnham.

The thirty-sixth annual lamb sale at Barnham took place on Monday, Messrs. Biddell and Blencowe being, as from the commencement of the auctioneers. The number penned was about 7,000 lambs and sheep, including a more numerous representation of the Suffolk breed than usual, and there was a big company and trade for lambs was very good throughout, bringing 3s. more a head than last year. Two score first price lambs from Viscount Iveagh made top cross, 43s. 6d., at which they were secured by Mr. George Townsend, of Fordham; the next best 40 first cross being from a tenant farmer, Mr. H. A. A. Smith, Icklingham, 41s., and 50 from Mr. Sayer, Troston, 40s. A score pure Southdown wether lambs from Earl Cadogan made the high figure of 40s., and the best pen of Suffolk ewe lambs (42s.) was from Hon. E. G. Strutt's Timworth estate.

Hadleigh.

Hadleigh lamb and sheep sale took place on Monday, and proved most successful, over 3,000 animals changing hands at satisfactory prices. Some of the best prices for lambs were got for 280 Suffolk ewe and wether lambs, consigned by Mr. Stephen Jackson, of Kersey Priory, from his registered flock. The first lot of 40 Suffolk ewes made 39s. each, the next 40 37s., and the third 28s.

THE "QUORN" IMPROVED POULTRY HOUSE.

This substantial House is without doubt the cheapest ever offered to the public. Built in sections on strong framework of best planed, tongued, grooved and beaded Match Boards, and best selected rabbetted feather-edge Weather Boards, planed. **Perfectly Watertight and Draught Proof, Properly Ventilated** on the latest principle, very strong and superior finish. Fitted with **Movable outside Nest Boxes** for cleaning purposes. Strong floor, Glass Window, Patent Ventilator, Ornamental Barge Board, Movable Perches, Ladder, Slide, Padlock and Key. Mounted on 4 strong Iron Wheels 13 inches diameter, and **Wrought Iron Axles**, and Rings for Traces.

SPECIAL OFFER.

READERS OF ADVERTISEMENTS

in these pages will greatly oblige and assist us by mentioning

THE MARK LANE EXPRESS

when writing to our Advertisers.

The first lot of 40 wethers realised 40s. a-piece, the second lot 36s., the third 32s., and 39 others, including three ewes, fetched 27s. First-cross ewe and wether lambs (out of black-faced ewes by Lincoln tups) to the number of 250, consigned by Mr. P. V. Hills, Boxford, were another lot to realise very good prices. Fifty ewes sold for 34s. 6d. each, another 50 33s., whilst lots of 50 wethers each went at 37s. and 32s.; 30 mixed made 27s.

Ipswich.

On Tuesday Messrs. Robert Bond and Sons held their ninth annual lamb sale at Ipswich, and they had an entry of about 1,100, which included lambs of all the local breeds, and a very satisfactory trade was experienced, biddings being sharp. The sale opened with 180 Southdown lambs from the registered flock of Sir Thomas Gooch, of which 29 ear-marked realised 25s., 50 ewe 28s., 30s., 26s., 50 wether 29s. 6d., 21 mixed 26s.; and also from Benacre Park came 119 first-cross lambs, 50 28s., 30 27s. 6d., 19 18s. 6d. Three registered flocks of the Suffolk breed were represented, and 20 ear-marked lambs from Mr. J. R. Keeble, Brantham, brought the best figure of the sale, 42s., being 2s. above last year. A pen of 18 ewe, not ear-marked, fetched 34s. 6d., and 50 wether 36s. Two consignments of half-bred lambs sold as under:—Mr. F. P. Orford, Sproughton, 50 ewe 30s. 6d., 50 wether 31s. 6d.; 109 mixed 28s. 9d.; Mr. J. A.

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

"Red" Worm in Horses: Parasitic Diarrhoea.

(Continued from page 27).

Prevention is, of course, the most important consideration, although the breeder is prone to give first place to treatment. Pastures known to be infested or dangerous should be avoided for horses, and colts should be taken from them early in the season. Housing at night and feeding with corn and hay as compensation for the lost grass is attended with good results.

The results of medicinal treatment seem to be very varied, and one colt will often die under the treatment that has succeeded admirably with another. It is generally admitted that the recognised anthelmintics are not very successful in the expulsion of this worm. Some go so far as to say that anthelmintics are useless, and that if irritant

to Lady M'Fadyean, there remained a balance of over £300, which is to be spent on the purchase of a portrait in oils of Sir John for his family and on a replica to be hung in the Council Chamber of the Society.

In making the presentation, Mr. J. Abson, the president of the Royal College of Veterinary Surgeons, said his Majesty had conferred knighthood on Sir John solely in recognition of his services to science. The work he had done in scientific work would endure long after he had passed away.

Cow with Capped Knee.

Can you tell me how to make a sweating bottle for a cow with a big knee?—There are three or four ingredients: one is mercury, and I think another is turpentine. I do not know what the other is. I shall esteem it a favour if you can tell me what the others are. —L. G.

Answer: I have no knowledge of the formula to which you refer, and therefore cannot undertake to complete the recipe for your "sweating bottle." The usual course in cases of capped knee in cattle, a very common trouble when they lie on hard floors insufficiently bedded, is to first remove the cause—that is, prevent further injury, without which treatment is utterly useless, and then to apply a sweating blister. The effect of this is sometimes to cause absorption of the effused fluid, but generally by converting the soft, fluctuating swelling into a hardish indurated mass, which is eventually removed by absorption. The agent generally employed is an ointment of: Biniodide of mercury, 1 drachm; lard, 11 drachms. To be rubbed into the swelling after clipping the hair from over the part. The alternative treatment is to evacuate the fluid, and apply pressure by means of a flannel bandage, but you are not advised to undertake this for yourself.

Warts on Cow's Teats.

I have a cow in full milk which has warts on her teats. Can you help me? —S. J. S.

Answer: The variety of wart found on the teats is small and diffuse popularly "pearl" or "seed" warts—and do not lend themselves to ligature, or, indeed, to any method of removal except destruction by caustic agency. This necessarily causes a certain amount of soreness, and therefore causes pain in milking, which, in its turn, often results in imperfect removal of the milk and mammitis. Further, the caustic agents generally used, and the most efficient, are a paste of arsenic or of perchloride of mercury. Both these are deadly poisons, and the smallest quantity getting into the milk owing to the teats not being thoroughly washed would be dangerous. Moreover, caustic dressings washed off twice a day would not be very effective, and the application would be troublesome. Unless the excrescences are very much in the way and cause a great deal of soreness, they will be best left alone until the cow is dry. This is the time to deal with warts on the teats.

Thinning a Mane.

I have a nag horse that has been laying out a winter. I have now got him up to work this summer. Can you tell me, through your valuable paper, the best way to thin his mane, which has grown very thick, so thick that I cannot get it to lay over properly? Shall be pleased with any information you can give me. —NOTICE.

Answer: The only way to thin a mane so as to make it "lay over properly" is to pull out the shorter hairs, and this is done by taking up a few at a time and twisting them round the teeth of a mane comb, and pulling them out by the roots with a smart jerk. Saddlers sell an iron-toothed instrument, called a mane puller, which is better for the purpose than the ordinary mane comb, because it is not only less liable to break, but is furnished with a wooden handle which affords a better hand hold and more power. No thick mane will "lay over properly," and unless such a mane is well thinned and freely water brushed there is nothing for it but to "hog it."

Farm Colonies.—The Departmental Committee appointed to consider Mr. Rider Haggard's report on agricultural settlements in British Colonies states in its report, recently issued, that it cannot recommend that any steps should be taken by the Government at present to further any scheme of colonisation. It urges that a grant-in-aid should be given by the Imperial Government to the committees formed under the Unemployed Workmen Act for the purpose of emigration; and that it should be made a condition of such grant that the committees accept the advice of the Emigrants' Information Office as to the colonies to which the emigrants should be sent, and that the actual work of emigration should be carried out by societies or organisations approved by that office. If the colony concerned so desire, each emigrant should be approved by its representative in England.

LORD CATHORPES BERKSHIRE SOW, ELVETHAM DORA, Champion and First Prize, Oxfordshire Show, 1905.

Chalmers, Felixstowe, 50 mixed 31s., 50 25s. 6d., 17 21s.

St. John's.

This well-known Sussex lamb fair took place at Burgess Hill on Thursday, and was well supplied with lambs, about 4,000 being forward, but trade is dull, the weather was hot, and the attendances good, but finding business dull, farmers hurried back home for haymaking, which is about two weeks late, and probably accounted for the dull business. The chief trade was done in the culls at prices up to about 20s., whilst the best class lambs went up to 25s. Little or no trade was done in sheep.

Railway Rates on Perishable Food.

Earl Carrington, President of the Board of Agriculture, who was accompanied by Sir Edward Strachey, M.P., Sir T. H. Elliot (secretary of that department), and by Sir Herbert Jekyll (of the Board of Trade), received at the House of Lords on Thursday a deputation from the Joint Railway and Parliamentary Committee representing the producers and distributors of perishable foods. The various speakers complained of excessive railway rates, and unfair classification of their consignments. They asked that the Government should afford facilities for a Bill to amend the already out-of-date classification, and to set up a tribunal for dealing with increases of rates or withdrawal of railway facilities.

Lord Carrington said that he could not promise that the Government would adopt their proposed Bill, but he sympathised with many of the complaints made by aggrieved traders, and declared that his Board was willing to investigate specific grievances, and to assist in putting any hard cases before railway companies or the Board of Trade.

Northampton Wool Fair.—One has to go back to 1866 to find the record of a smaller pitch of fleeces at Northampton Wool Fair than the 16,798 fleeces sent in this year. The highest price paid in the fair was 38s. 6d. per tod, and the average, 32s. 2½d., was half-a-crown in advance of the average obtained last year, and the highest average since 1879, when, with over 40,000 fleeces pitched, the average worked out at 34s. 5½d.

are harmful, or that drugs are no good at all, and only spoil the appetite and hasten dissolution. Turpentine, sulphate, and other preparations of iron, carbolic acid, and vegetable tonics have their advocates and their detractors, and those of experience have to admit a general lack of success, although they have tried nearly every remedy. The best results appear to be obtained with thymol. This agent was employed some years ago by Professor Theobald, and later on by Mr. Peter Wilson, who obtained some success with it among Professor Ewart's hybrids produced in the famous Penuel experiments.

It was recommended by Professor Theobald to give fifteen grains of thymol early in the morning, a second dose two hours afterwards, and a strong dose of castor oil on the following day, the treatment being repeated in a week's time, if necessary. Mr. Wilson advised ten-grain doses of thymol, dissolved in equal parts of glycerine and spirit, and administered in milk or water, for three days in succession, followed by a full dose of castor oil.

At a recent meeting of the South Durham and North Yorkshire Veterinary Medical Association several members, in discussing infestation with strongyles, testified to the beneficial results obtained from the use of thymol in daily doses for three or four mornings. The great improvement in colts affected with "red" worms and "pellisade" worms following the use of molassine meal was also remarked by several veterinary surgeons, and this food stuff is well worth a trial in cases of parasitic diarrhoea. M.R.C.V.S.

Presentation to Sir John M'Fadyean.

At the annual meeting of the Royal College of Veterinary Surgeons, Sir John M'Fadyean, Principal of the Royal Veterinary College, was the recipient of a handsome service of plate subscribed for by members of the veterinary profession in recognition of the honour of knighthood recently conferred upon him. Accompanying this gift was a superb diamond pendant for Lady M'Fadyean. Colonel Duck, late Director-General of the Army Veterinary Department, stated that the testimonial had been subscribed for by over 600 members of the profession.

The total amount received was £688, and after defraying the cost of the silver plate and the gift

THE Melton Constable celebrated Herd of Pedigree Tamworth Pigs. Prize winners at Norfolk, Suffolk, and other shows. Champion Cups Smithfield. Sows all recently exported for Continental and Colonial herds.—Apply R. OWEN GODDARD, Estate Office, Melton Constable, Norfolk.

This Week's Live Stock Sales.

There are two or three important sales of live stock this week, notably Mr. Dudding's Shorthorn cattle and Lincoln sheep, and the late Mr. J. Webb's Shorthorns and Southdown sheep; but we will take the days as they come.

To-morrow (Tuesday) Messrs. Sexton, Grimwade and Beck hold a special sale of pedigree Hackneys, harness horses, and Shire mares and geldings, at Peterborough. The entries are from several breeders, among them being Sir Charles Brownlow, who sends five pedigree Hackneys, and Mr. H. Johnson, Bishops Cleeve.

Thursday is a blank day so far as sales are concerned. But on Thursday Messrs. J. Thornton and Co. bring under the hammer at Riby Grove, Stallingborough, Lincs., some of Mr. Henry Dudding's famous Shorthorn cattle and Lincoln sheep. The catalogue comprises most of the three, two, and one year old heifers and young bulls from Mr. Dudding's herd, reared in one of the highest-lying and healthiest districts of North Lincolnshire, and which has been celebrated for more than a century for the size and quality of the cattle and sheep which are reared in this part of the country. As to the high-class breeding of the animals, nothing need be said, for it is common knowledge. Many of the heifers have calves at foot, and most of the others are in a forward breeding state: the yearlings, both heifers and bulls, comprise many beautiful young animals suitable for show purposes, the latter including the prize bull Prince Alastair, and many others of great growth and fine quality, well adapted to go into first-class herds or for shipment to South America. About sixty of the best specially selected Lincoln Long Woolled yearling rams and the prize-winning yearling ewes will be sold after the Shorthorns; they are well up to the usual high standard of the flock, and include many prize-winners.

The Cheshire Repository, Crewe, will also be the scene of a sale on Thursday, the stock to be offered here including hunters, pedigree hackneys, and show cobs and ponies. The sale will be continued on Friday, when heavy horses will be the feature.

The most important sale on Friday is the dispersal of the remainder of the late Mr. Jonas Webb's well-known herd of Shorthorns and flock of Southdown sheep at Melton Ross, Barnetby Junction, Lincs. It will be remembered that last summer forty animals of the herd were sold at an average of nearly fifty guineas per head, and now the rest are to be disposed of by Messrs. Thornton and Co. The herd is of long standing, having been founded in the year 1854, and has almost entirely from animals of the favourite old Bates blood. These now comprise the Duchess, Red Rose, Oxford, Blanche, and Watford tribes; there are also some good animals of the old Lauristina family, which trace back to famous cow by Comet 155th, Mr. Charles Colling's celebrated bull that was sold at the Great Ketton sale in 1810 for 1,000 guineas. These Lauristinas were bred for many years by the Webb family in Cambridgeshire, and won numerous prizes. The dispersion of this old and highly-bred herd offers a rare opportunity to breeders of obtaining some of the fine old strains of Bates blood which now are rarely met with, are in much demand, and were so much appreciated at the recent Rudington sale, where nine animals of the Grand Duchess tribe averaged £240 15s. 8d.

On Friday we also have a sale of Suffolk sheep and lambs at Sutton, near Melton Station, this being one of the many sales of the kind held in East Anglia by Messrs. Robert Bond and Sons; whilst on Saturday Hampshire Down sheep breeders have their turn at the noted Salisbury fair.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

The fair at Thurles, Co. Tipperary, on Tuesday was a rather small one; the demand was very good, and, with the exception of some small poor cattle, all were sold. Prices: Calves, 1st class, £3 to £3 10s.; 2nd class, £2 to £2 10s. Yearlings 1st class, £17 17s. 6d. to £9.; 2nd class, £6 to £7 10s.; 3rd class, £4 to £5 10s. Two-year-olds, 1st class, £11 10s. to £13 10s.; 2nd class, £8 10s. to £10 15s.; 3rd class, £6 to £7. Three-year-olds, 1st class, £14 to £15 10s.; 2nd class, £13 10s. to £13 15s. Springers, 1st class, £13 10s. to £18 10s.; 2nd class, £12 10s. to £15. Lambs, 1st class, £1 9s. to £1 11s.; 2nd class, £1 4s. to £1 5s. Young pigs, eight to ten weeks old, were in fair demand at from 18s. to 21s. each.

The Ruckton Hall farm estate, including home-stead and 415 acres of fertile arable and pasture lands situated in East Yorkshire, was offered by Messrs. Mabbett and Edgar, in conjunction with Messrs. G. W. Clark and Sons, at Hull on Tuesday, and was withdrawn at £10,800.

Midland Notes.

JUST for the moment it is the healthiness of its meat supply the general public is most anxious about, and milk has temporarily sunk rather out of remembrance. Yet such a story as Dr. Beaton appears to have been telling the London County Council reminds us that the British dairy farmer, no less than the Chicago meat packer, may soon have to face new and exacting demands for additional inspection and supervision. According to Dr. Beaton, a Staffordshire farm, where three persons were suffering from sent fever, sent milk to Shoreditch. Surely conveyed there, the disease spread thence to Bethnal Green, Finsbury, Islington, and St. Pancras; and how much that single tainted source of supply has cost the metropolis in life and human suffering and money, is impossible to calculate.

CONFRONTED by incidents like this, what wonder is it if London boroughs now de-livered its own inspectors down into Staffordshire and other parts of the country, and give these officials power either to demand expensive and very likely impossible changes in farmers' methods, or to prohibit them from sending milk to the Metropolis at all? People of influence in other cities—in Birmingham for instance—are equally anxious to see a system of increased municipal control; and if once the city inspector, full of his urban ideas of sanitation and forgetful of the virtues of pure country air, should get a footing in our cow-sheds, there will be an ill time coming for milk producers. Such cities as that mentioned are scarce, but just for that reason the more noise is made about them when they do occur, and that they should ever happen at all is much to be regretted.

SWINE fever, as we all know, is decreasing, the Board of Agriculture's recent veterinary returns show as much, beyond any doubt. But when the figures for 1906 come to be summed up, it looks very much as though they would reveal another retrogression in this respect. Certainly there have been more swine fever outbreaks this year in the Midlands and more men slaughtered than there were last year. In the last fortnight Warwickshire has had seven outbreaks, Salop, Gloucester four, and Stafford and Northampton one a-piece, and the epidemics over a longer period in letting the disease properly under control.

WE have progressed so far, it is true, as to be able to begin grouping the infected areas together into larger districts, within which swine may be freely moved about. But the list of areas in which Regulation of Movement Orders are still enforced is even now a long one. In the Midlands Derbyshire and Nottinghamshire now form one area, Northamptonshire another. Leicestershire and Rutland are grouped together with Lincolnshire to make a third, and Bucks and Oxfordshire go along with Berks and Middlesex. We have no more stringent order in force now anywhere in Central England; but even these regulations mean that the movement of pigs from one part of the country to another is frequently attended with some little difficulty and annoyance, and naturally it is the breeders of high-class pedigree stock, who would naturally find buyers in all parts of the country, who are hardest hit.

LIKE those in other parts of the country, Midland markets have shown a little falling off just lately in the prices paid for sheep. But the decline is more apparent than real, and has not been felt where stock of ordinarily good quality has been offered, but only in the case of the inferior sheep from which the flocks are now being freed. The cheapening of wool prices is a more genuine movement, and suggests that at some recent country auctions more than has been offered than buyers are quite ready to absorb; unless, that is, they can do so upon advantageous terms. If so, there is the more necessity for consigning the clip in an attractive condition to the purchaser. A year or so ago the common excuse for sending wool to the sales contaminated with hay, straw, fragments of string and the like, was that the current prices would not repay the grower for the time and trouble of hawking and sorting. That cannot be said now; yet the same carelessness is still too common.

INTEREST in the question of canal development shows no signs of dying out, and farmers in many parts of the Midlands will be glad to see that their view of the matter is being represented to the Royal Commission by well-informed and competent witnesses. Mr. Claude U. S. Pilkington, who gave evidence on Wednesday, is well known in Nottinghamshire as agent to Lord Middleton's estates; Mr. Latham, and give some of the character of the agriculture, is an Oxfordshire farmer; and Mr. John Johnston, of St. Ives, was able to furnish evidence as to the

H. EDWARD HOPE & COMPANY, 22, BILLITER STREET, LONDON, E C.,

Works—

HOPE'S WHARF, MILLWALL, LONDON F.,

Will be pleased to see their numerous friends at the Stand, where samples of the following goods will be exhibited:—

Lard and Cylinder Oil, 2/6 a gallon.	Pynzer's Disinfectant—Powder, Fluids.
No. 2 Heavy Machinery Oil, 1/8 a gallon.	Carberzo's Disinfectant—Powder, Fluids.
Hope's Special Harness Oils, from 2/6 a gallon to 7/6, according to quality.	Carbolol's Liquid Soap and Disinfectant, 3/- a gallon.
Motor Oils, from 1/6 to 2/6 a gallon.	Weed Destroyer, from 2/- a gallon.
Motor Greases, from 4d. per lb.	Jetol: Wood and Iron Varnish from 1/2 a gallon for barrels.
Special Oils for Traction Engines, from 13 to 2/- a gallon.	Belting Composition, prevents slipping, 10/- a gallon.
Cylinder Oils, from 1/3 to 3/- a gallon.	Boiler Fluid, 2/- to 3/6 a gallon.
Burning Oils, Colza, Rape and Seal Oils.	Leather Goods, Belting Packings.
Engine Wastes and Engineers' Sundries.	

use actually made of inland waterways in that important agricultural district. At present transit by canal, even where available, is generally too slow to be of any great service to farmers, and beyond any doubt the present system will have to be very much improved indeed if they are to be made of real utility. But this time commercial men and farmers are at one, and working together with a common purpose, so that there really does seem to be ground for hope that their efforts may achieve a certain measure of success. We must all wish the movement well, for if it comes to anything no part of the country stands to gain more than the Midlands.

July 4, 1906.

OBITUARY.

Sir Wilfrid Lawson.

By the death of Sir Wilfrid Lawson, Bart., agriculture as well as temperance reform has lost one of its supporters, for Sir Wilfrid ever took an interest in matters agricultural, and was particularly a strenuous supporter of agricultural education; in fact, he was one of the founders of the Aspatia Agricultural College, which was the pioneer of agricultural education in the North of England. He was also a strong supporter of the Aspatia Agricultural Co-operative Association, and a popular member of the Cumberland Chamber of Agriculture, his sparkling wit made the meetings of the chamber much more interesting than they otherwise would have been. Sir Wilfrid, too, was a devotee of the Shorthorn, and his herd was well known other than locally, for he purchased some of the best stock, and figured as a prize winner at agricultural shows.

Mr. J. Biggar.

The death, from pneumonia, is announced of Mr. James Biggar, Chapellan, Castle Douglas, president of the Scottish Chamber of Agriculture, and a well-known Scottish agriculturist. He was senior partner in the firm of Thomas Biggar and Sons, who own large manure works at Dalbeattie. In 1879, Mr. Biggar was selected delegate to report on agriculture to the Canadian Government. He paid several subsequent visits to America, the last in 1902, when he judged the championships at Chicago Show. He was for many years a member of the Highland and Agricultural Society, and was one of the examiners at Leeds College for the national diploma. He gave evidence before several Royal Commissions, and as far back as 1887 advocated the founding of a College of Agriculture. Mr. Biggar was also well-known as a breeder and judge of Galloway cattle, and the Chapellan herd achieved many successes at the Smithfield, Royal, and other shows.

Northern Notes.

JUNE has turned out to be a dry month. At a meteorological station in Yorkshire the measured rainfall was only three points over one inch, and more than a third of this total precipitation fell on the 22nd. There were twelve "rainy" days; two days of high shade temperature, 77° 0 deg., on the 20th and 21st, the lowest reading being 32° 5 deg. on the 6th. Fruit trees, strawberries, and potatoes at the beginning of the week were badly needing moisture. This will be a poor fruit season in the North, and the growers who look to the crops to bring in their rents will be hard hit. The clover fields are emitting their sweet perfumes; and though the rural districts present a bright aspect, the shortage of clover is everywhere in the grazing districts regarded as the fly in the ointment this season. A bad "take" has followed the dry summer of 1905, and in some districts about a third were ploughed out and sown with corn. The potato crop does not give much promise; rooks were troublesome in pulling up sets, and required a good deal of scaring.

SWEDES are spoken of hopefully, and singing is affording work for the numerous labourers who have had nothing to do in the best of districts during part of May and June. At a Wold village in Yorkshire twenty men were out of work—a circumstance not recalled by the oldest cultivator—and an appeal to the poor-law authorities was made in the hope of establishing a stone yard at their nearest workhouse to give the men test labour. This can be done under the provisions of the Test Labour Order, which the Local Government Board has the power to issue. Before there was time to formulate a scheme, the unemployed were taken on at this time of year is quite unusual; but there is always a residuum of idlers, even in the smallest towns and villages. Stone breaking would be to them the most uninviting work imaginable.

HOW pleasant it is to walk past farms and to observe good order kept, to see the neatly-trimmed hedges, and the bottoms cleared of rubbish and undergrowth. A great mistake is made by leaving hedge bottoms full of tangle all through the summer and into the winter. They are the breeding-ground for all sorts of farm pests, whereas, at a trifling cost they could be cleared of all noxious weeds, and the larvae of insects would to a great extent be annihilated. Lecturers on agriculture have impressed these matters upon farmers in Yorkshire and Lancashire, and the advice has been beneficial, resulting as it has done in the more frequent incineration of rubbish heaps.

A FARMER has been airing a grievance which we cannot really say has much to commend to us or our hard-headed Northerners. When they form an opinion they stand their ground. The grievance referred to is an objection to publicity being given to crop reports. The farmer alluded to has for years refused to fill up the Government returns on June 4, on the ground that he would be a traitor to his fellow-agriculturists if he gave away all the information asked for; and he also considers it detrimental to the interests of agriculture in England to play into the hands of the foreigners by furnishing information which is of much use to them than to ourselves. We are constantly meeting men with extreme views on various subjects; but we confess this objection has a very bad cause. Human nature has a selfish side, and while one can sympathise with a farmer so highly-strung a temperament, there can be no question that the collection and publication of crop reports and returns is an important matter, and is of value to the students of statistics relating to our greatest industry. The foreigner, maybe, profits from the knowledge he thus acquires; it is questionable whether our home markets are flooded with products of which we happen to be short as a direct result of published statistics. Our rural philosophy stands on a higher platform.

CONGRATULATIONS may be freely offered to Yorkshire Hackney men over their outstanding successes at the Royal Show at Derby, the most notable feature of the department being the winnings of the Rosador strain. Lancashire also did its breeding triumphs at Derby, as witness the renewed evidences of its supremacy as a Shire Horse-breeding centre. For several years the breeders of the county, it is said, made the mistake of selling their best mares at prices which were very attractive at the moment, but which having become unpopular, Lancashire men have kept their best fillies during the past three or four years, and the result is seen in successive triumphs for Lancashire-bred cart-horses.

July 6, 1906.

FARM.

Earl Carrington and Fruit Growers.

A very representative deputation of fruit growers and market gardeners of Great Britain recently waited on Earl Carrington, President of the Board of Agriculture, at the House of Lords, and urged the necessity for giving effect to the recommendations made in the report of the Departmental Committee appointed by Lord Onslow, the predecessor of Earl Carrington at the Board of Agriculture, to inquire into the position of fruit culture in Great Britain and to consider whether any further measures might with advantage be taken for its promotion and encouragement. The report was issued last year, but at present no action has been taken in regard to it.

After several of the members had spoken, Earl Carrington, in reply, said that he was pleased at having the honour to receive that most influential deputation of fruit growers, who represented an industry which cultivated 213,000 acres of orchards, and 78,000 acres of land under small fruit. He hoped great attention would be paid to the large amount of well-paid labour that flourishing industry brought into play. He always had a warm corner in his heart for fruit growers, because he had been a grower under glass himself. Mr. Boscawen called attention to work that it was recommended should be carried on by a sub-deputation of the Board of Agriculture. He thought they all agreed that that work was an absolute necessity.

At the present moment, of course, they had no special sub-department which dealt only with fruit questions. A good deal, however, had been done by the intelligence branch, in conjunction with the scientific staff at Kew Gardens. The late Mr. John Innes had left a large sum of money, and 550 acres of very good land, his property at Merton, for a school of scientific agriculture. When they heard of this they at once set to work to see if some of this money could not be used for the public advantage. They had been very courteously and well met, and there was a proposal in hand at the present moment. At any rate, they would have some sort of experimental farm at Merton.

It was also urged that imported farm and fruit pulp should be inspected, and that it would be an advantage to fruit growers and the public generally if the Local Government Board collected statistics of fruit raised and condemned as unfit for human food. They had communicated with the Local Government Board as to this. It was an entirely new departure, in favour of which no strong evidence had been produced, and it might involve much labour on local authorities without any corresponding benefit. This point had, however, been so much insisted upon that he would see if, with the other Department, they could do this.

The question of railway facilities did not belong to his department, but to the Board of Trade. The railway companies had recently agreed to pay compensation for loss due to the culpable negligence of their servants, and he hoped that, with a little pressure, they would make better terms still. Dr. Gatherford mentioned small holdings which was a question very near his (the speaker's) heart, and cheap cottages, and the necessity for the alteration of the bye-laws, which, in some instances, were very hard. Nos. 14 and 15 had to do with the rates and taxes, and concerned the Inland Revenue Department more than himself. The department has brought No. 14 to the notice of the Inland Revenue.

He was pleased to hear from the representative for Evesham about the security of tenure they had in their district. That seemed to be the crux of the whole matter. When any persons put their money into fruit growing they all knew that for six or seven more years it did not bring any return, and it seemed perfectly monstrous that at the end of the money the landlord should be able to take all the fruit trees. That was a thing which deserved the greatest possible attention.

A delegate inquired if Earl Carrington would guarantee the formation of a sub-department to deal with fruit questions, and Earl Carrington remarked that it meant spending more money. This year, he said, would be hardly the time to go to the Chancellor of the Exchequer and ask him to give them such small doles as that when he was doing his best to lighten the taxation of the country. As soon as we can get the taxation of the country reduced, then I shall be only too pleased to get something from the Chancellor of the Exchequer for the purpose.

Horse Breeding in Japan.—The British Ambassador at Tokio reports that £75,000 was voted during the last session of the Japanese Diet for the purpose of erecting a central bureau and a number of Government stud farms throughout the country to supersede all existing arrangements for Government horse-breeding. The scheme, which was expected to be in working order by the end of May, provides for the eventual purchase of 1,500 stallions abroad.

MERRYWEATHER'S PATENT STEAM SPRAYING APPARATUS

Used by a large number of Hop Growers in Kent, &c.

63, Long Acre, London, W.C.

HOP DRYING.

Joyce's Patent Automatic Pure Hot Air System (without Fans or Costly Machinery) is PRACTICAL as well as SCIENTIFIC, and possesses many advantages over any other system both in efficiency and economy.

For full particulars apply to —
WILLIAMSON & ALLEN, Gloucester.
H. W. JOYCE, Norfolk House, Hereford.

The Curing Process.

This is commonly spoken of as "Hop drying," and if the only object in view were the getting rid of the superfluous moisture, we should experience very little difficulty in accomplishing it. The passage of dry air through any moist substance is sufficient to carry away all the contained water, if the exposure is long enough for the purpose. There is, therefore, no great skill required to remove the 75 to 80 per cent. of water contained in freshly gathered hop cones. But we must remember that the absorbing capacity of natural air is limited. At its normal temperature of 60 deg. Fahr. a cubic metre of air will not carry more than 12 grammes of moisture. It is then saturated. But its capacity is increased in rapid proportion by heat; when it is raised to 68 deg. it takes up 17 grammes, 22 grammes at 77 deg., nearly 40 grammes at 85 deg., over 50 grammes at 104 deg., and when increased to 122 deg. its point of saturation is rather over 82 grammes, being four times as much as when the temperature is at 77.

The natural condition of the atmosphere in our country reduces its powers of absorption to a certain extent, dependent upon the weather; therefore when we wish to hasten any drying process we are compelled to raise the heat by artificial means, and thus we introduce another element into our consideration. We must also provide for the continuous changing of the air, as when saturation has taken place, no more moisture can be carried, and the drying process is checked. Therefore arises the necessity of what we describe as draught, and whatever the system of drying may be, if it is deficient in this particular, our efforts will only result in failure.

If an open vessel filled with water is placed upon a fire, evaporation goes on rapidly, and we soon perceive that the vessel is empty and dry. But if the vessel be covered, though not hermetically closed, the water is lowered very slowly, as the vapour is condensed upon the cover, and returns to the water. The hop cone is a closed vessel. Not only are the petals which are folded over each other an obstacle to evaporation, but the water contained in the tissues of the petals can only escape slowly by microscopic openings.

Again, the load of hops upon the drying floor is composed of many layers, each of which forms a screen hindering the passage of air; the whole being a very imperfect conductor of heat, the resulting vapour also having the same effect. Thus, unless the pressure of the draught is sufficiently powerful to overcome this resistance, the lower layers are over dried, while the upper ones are damaged by the condensation caused by the cooler hops near the surface of the load. The lower hops become, as it were, roasted, their colour is spoiled, and the precious lupulin is practically destroyed, while at the same time the upper layers are stewed.

The volume as well as the temperature of the air must therefore be taken into account. For instance, if with the air at 170 degrees, 20 cubic metres are required to evaporate a given quantity of water, five times as much, or 100 cubic metres, will be necessary to produce the same effect if the temperature is reduced to about 100 degrees. It is clear that extreme heat is not necessary if the proportionate additional volume of air is compelled to circulate.

The German system of partially drying the cones by exposure to natural air, and subsequently finishing the process on a kiln at very low temperature, has many advantages, which are confirmed by the preference given to hops thus cured by the native brewers, and although this method is hardly practicable in England, it appears that the nearer we can approach to it, the better the results we shall attain. The Germans are well aware of the delicate nature of the material they have to deal with, and have found by long experience that in order to preserve the essential qualities of the hop they must prevent the escape of the lupulin, and must avoid any chance of the change of the soft resins into hard, which change always accompanies the application of excessive heat.

Many inventions have been introduced during recent years to accomplish the desired end. Fans have been added to kilns heated by the open fires in general use with us, and much improvement has been thereby effected, but the objections to the passage of the products of combustion through the hops, and the possibility of contamination thereby, still remain. It is admitted that having in view the recent scare concerning the deposit of arsenic from the fuel, the use of pure air for drying must be advantageous and actually safe. The old-fashioned cackle accomplished this result, but in its primitive form it was too slow in action, and therefore fell into disuse.

There are several modern methods by which good results are obtained, the most elaborate of these, viz., the combination of hot air chambers with forced draught created by powerful fans, being, perhaps, the most prominent. But however effective these may be, they present an almost insurmountable drawback to the great majority of planters, inasmuch as the outlay required for their installation is beyond the reach of so many, especially when the small returns of profit of late years are taken into consideration.

It is, however, very encouraging to know that our planters are enabled to avail themselves of the most recent inventions for the improvement of their products, thanks to the enterprise of manufacturers in this country, and it is advisable that growers should take advantage of them, inasmuch as they are exposed to keen and unsparring competition, which will continue to pursue them. Every practical proposal tending to economy and efficiency should therefore be examined, so that they may keep ahead in the race and retain the position that has been theirs for so long a series of years.

Our Crop Prospects.

I do not propose to reproduce the many reports that have reached me from the plantations during the past week, as they are very much alike, and a few general remarks will practically embrace them all. The warmer weather and the rain have doubtless advanced the bine in almost all districts, it has become stronger and more healthy, but there are many places in which it is slack and weak. There is, however, no relaxation of the attack of blight, that resists all the efforts for its destruction, in which planters are everywhere persevering. It is thus far in this respect a most disappointing and costly season. The remarks of a Worcestershire grower in a private letter that I have been allowed to quote from, paint a picture that is probably illustrative of the general state of affairs. His letter is dated July 3, and he says—

"I have repeatedly seen the same hop yards here this season, and I saw hops which were washed up to late last Saturday week, and on the Monday following at five o'clock were covered again with fly and lice. Some yards have already been given up and are being left by the planters to take their chance, as they think recovery hopeless and further washing useless. One thing I think can be taken as certain, that is, that the blight here is fully as bad as it was two years ago—all agree to that—but I think it is worse, as no yards have escaped it, all being left very hard indeed."

Under the most favourable circumstances I don't think more than half an ordinary crop can possibly be grown, and to do that everything for the future must be most favourable.

I consider it is the worst blight I have seen for forty-one years, during which time the only astonishing recovery was in 1884. That year they did, as the saying is, come out of the poles, but I have never before or since seen such a recovery as that, and you can hardly look for a repetition of it now because then the bine was everywhere strong, and very strong, too, while this year it is generally particularly weak and helpless.

The Borough.

It is somewhat surprising that under present conditions our market should continue to be so quiet, as I am sure that our traders are becoming very anxious as to the outcome of the crop, and its results on our future business. But the fact remains that there is at present little or no demand, although values remain exceedingly firm at recent rates.

NON-POISONOUS.

"SPIMO"

NON-POISONOUS.

HOP and FRUIT TREE WASH.

A SAFE, COMPLETE AND EFFECTIVE WASH.

Kills Aphis, Fly, Red Spider, Mould or Mildew, Caterpillars, American Blight, etc.

Does not clog horse washers, but acts as a lubricant.

"Spimo" Improved is a COMPLETE WASH for ALL PURPOSES.

Ready at a Moment's Notice. It is in fact THE THING that is WANTED.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

London County Council and the Milk Supply.

At Tuesday's meeting of the London County Council the Public Health Committee recommended that application be made to Parliament for authority to enable the Council, among other things, to prohibit the supply within the county, from a dairy within or without the county, of milk likely to cause infectious disease or tuberculosis. It was proposed to seek authority also to require dairymen to supply lists of their customers and the sources from which their supplies of milk are derived, to take samples of milk at railway stations and elsewhere, and to deal with such as appeared to be so impure as to be unfit for human food.

Mr. W. W. Bruce thought that steps should be taken to inform buyers of milk when chemical preservatives were used.

Sir T. Brooke-Hitching argued that the proposal of the committee amounted to an attempt to penalise and put to heavy expense all who dealt in milk. He hoped the Council would hesitate before it put the milk dealers of England under greater disadvantages than those who canned milk in Switzerland, and then sent it to England without any inspection.

Mr. Sanders urged that the true solution of the question was the establishment of dairy farms by the county council, with the borough councils as distributors.

Dr. Benton, who moved the adoption of the report, said that there were 4,000,000 milch cows in this country yielding annually 1,752,000,000 gallons, for which the public paid £115,000,000 a year. They had no desire to cripple such an important industry, but to strengthen it. A short time ago there was an outbreak of scarlet fever, which began in Bethnal Green and spread to Finsbury, Islington, and St. Pancras. Investigation showed that it arose in Staffordshire, on a farm from which the milk supply came, and where the farmer, his wife, and daughter were suffering from scarlet fever. It was a well-known fact that 2 per cent. of the milch cows in this country were suffering from tuberculous udders, and it was not an exaggeration to say that 32,000,000 gallons of tuberculous milk were consumed in this country every year.

The recommendations were agreed to.

The council then decided, without discussion, to include in the Bill power to enable the borough councils to provide and sell milk for the food of infants.

Agricultural Education Grants.

In reply to a question put in the House of Lords by Lord Barnard as to whether there was any prospect of increased grants for agricultural education, the President of the Board of Agriculture said that the Government appreciated all the efforts made to provide better facilities for agricultural education, and everybody, he thought, would agree that money could be spent in no better way than in helping farmers to meet the great competition which they had to face. The Treasury had not been ungenerous to the Agricultural Department, and this year the sum voted was £11,500. He did not deny that that was a very small sum compared with what was voted in America and on the Continent of Europe, but it was satisfactory to know that full value was received for it, owing to the cordial co-operation of the county councils.

It had to be remembered, however, that the income tax stood at a shilling, and an extra million was proposed to be given for the maintenance of Church schools. This made it almost impossible for anyone at the present moment to ask the Chancellor of the Exchequer for even small additions to the expenditure of the country.

He thought this was a question which might receive the practical consideration of the Chancellor of the Exchequer, and he ventured to propose that some inquiry should be held into the system of agricultural education. There had been no inquiry of the kind since 1888. If such an investigation showed that there was good ground for an increased grant, then their hands would be considerably strengthened. It would enable them to go to the Chancellor of the Exchequer with a stouter heart. The Government were in full sympathy with the object Lord Barnard had in view, and their earnest desire was to see that object attained at the earliest possible opportunity.

The Sugar Beet Question.—At a large attendance of farmers held at Sleaford on Monday to consider the desirability of forming a company for the purpose of erecting a factory in the neighbourhood of Sleaford for the extraction of sugar from sugar beet, a committee was appointed to further consider the matter, and if they deemed it advisable to form a company, to take the necessary steps for so doing, if the support was, in their opinion, sufficient as to the amount of beet agreed to be grown, and they could see a probability of the capital required being subscribed, the selection of a site and all other details being left to them.

Weather, Crops and Stock.

The Progress of Hay-making.

THE hay harvest is dragging itself along in a wearying sort of way, and up to the moment of writing farmers have not made the headway they would have liked. We had some nice weather about the middle of June, and those who made an early start were able to clear a few fields quickly, but the last part of the month was not favourable for haymaking, and there are prospects of the harvest dragging somewhat. In addition to having unsettled weather, with rain that would have done more good six weeks sooner, there have been a good many what farmers call "poor hay days," when skies were gloomy and there was little or no sunshine. Speaking generally, crops cannot be called heavy, indeed in many cases they are light, which makes it very desirable that we should have good weather for harvesting, and thus reduce the cost of labour. In fact, a catchy haytime is wearying to the farmer, and likewise trying to his patience and his temper, for in addition to having the work hanging about for a long time, he is painfully aware that his expenses are mounting up in the meantime, and he is not getting such good hay as he would if the weather was more favourable.

The Hay Crop in Essex.

THE hay harvest in Essex is getting on well, writes a Chigwell farmer, but there is not much more than half a crop, and a somewhat similar report comes from another Essex farmer living at Braintree. He says:—The clover hay has not been a heavy crop, both for want of rain, and the young clovers dying off in a great many places by more than half; and the hay crop generally will be about a two-thirds crop. Hay, being dearer, has cleared off a good many of the long-standing stacks. The grass hay crop will be very light.

Cornwall.

AS regards the hay crop in Cornwall, one of our correspondents writes:—Thanks to some good rain towards the end of May and in June everything has grown well since, and the hay crop is much better than it promised to be. A lot of hay is now being cut, and also a considerable quantity is being carted. A continuance of fine weather is wanted for a few days more.

Harvest Prospects.

THE prospects for the coming harvest in Mid-Essex are looking well on the cool bottom lands, but the light lands have been wanting a shower very badly; but the early frosts have, it is feared, damaged the crops all round more than can now be seen, especially the pea crop, which is showing in the green peas being now picked, and which are yielding about half what they were last year; but prices for same are better. Mangold have planted well, and sheep feed fairly well. From another part of Essex comes the report that corn is looking fairly well but short in the straw, and this is a complaint received from other counties, a good many stating that the crop cannot be a full one. It, of course, depends on the weather now to decide what sort of grain will be developed and the quantity per acre.

Good Prospects in Cornwall.

A CORNISH farmer sends us a very optimistic report on present farming prospects in Cornwall. He says:—The outlook for the farming industry is rather better than it was a year or two ago; wool is selling well, about 21. per lb more than last year; also sheep are a fairly good trade. The beef trade keeps from about 56s. to 60s. per cwt., and in cases of extra quality a little more is given. Pigs are also selling well, which is a great help to many a small farmer in Cornwall. Given good seasons and the present range of prices for our produce, we shall hear very little about bad times in Cornwall.

Live Stock.

OUR Essex correspondent summarises the live stock trade as follows, and his remarks will apply pretty generally to the whole country:—The sheep and lamb trade has been generally good; wool being dearer and a very ready sale. The fat bullock trade has been very bad, and, if possible, the store beast trade worse, and it seems difficult to understand why we cannot have a Merchandise Marks Act for English meat to stop so much foreign meat being sold for English. The pig trade has been good all through the year, stores especially selling well.

SOCIETIES.

British Dairy Farmers' Association.

A meeting of the council of the above association was held at 12, Hanover Square, London, W., on Wednesday (Mr. W. Ashcroft in the chair), when seventeen new members were elected.

The Finance and General Purposes Committee reported that the balance at bank on current account on June 30 was £291 16s. 5d., against which they recommended payments to the total of £237 8s. 1d. The committee submitted a return showing that in the nine weeks ended June 30 only 3 cwt. of fresh milk were imported into the United Kingdom, there being none in the corresponding weeks of last year. Of cream the imports in the same period amounted to 869 compared with 853 cwt., of preserved milk 357 against 173 cwt., and of condensed milk 173,870 compared with 146,286 cwt.

With deep regret the committee reported the death of Dr. Freum, who has for many years held the post of Consulting Botanist to the association. They recommended that the vacancy thus caused in the list of the society's consulting officers be filled by the appointment of Prof. John Percival, of the University College, Reading. The report was adopted.

The selection committee presented their nominations of stewards and judges at the Dairy Show to be held on October 9 and three following days, and recommendations were received from the show committee with regard to a variety of matters connected with the arrangements for the forthcoming show; whilst the poultry and pigeon committee submitted a report having reference to their department.

The conference committee stated that they once more have the satisfaction of reporting that the annual conference and excursions in Shropshire were in every respect successful. The gatherings were attended by about 100 members, who had the advantage of inspecting a number of thoroughly well managed and otherwise excellent farms, estates, and educational establishments, as well as the popular cheese fair at Watchurch. The society's visit aroused an exceptional degree of interest, and the members were everywhere received with unbounded kindness and hospitality. Many of the party expressed themselves as being greatly impressed with the advantages of these annual gatherings, a sentiment which the committee fully shared. The proceedings not only attracted new members, but helped to keep alive the interest in the association, and afforded desirable opportunities of becoming acquainted with different farming conditions and methods. Each year emphasised the value of the conferences and excursions, which, in the opinion of the committee, constituted one of the most valuable features of the society's work.

The next meeting was fixed to be held on Wednesday, August 1.

AGRICULTURAL IMPLEMENTS AND MACHINERY NOTES.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that the Norwegian Customs Department have recently issued instructions to customs officers to admit reaping-machines into Norway free of duty until further notice.

In his report on the trade of Bulgaria for 1905, the British Vice-Consul at Sofia (Mr. G. O'B. Toulmin) remarks that agricultural machinery, supplied hitherto by Austria-Hungary and Germany, forms one of the most pressing needs of the country, and affords an excellent field for British enterprise.

There is probability of diminished shipments of United States agricultural machinery this year to the Bordeaux district of France, in view of the large stocks left on hand in 1905, says Mr. R. Macdonald, H.M. Consul there, and he adds that the higher price of British farming machinery is slowly but surely reducing, each season, the British percentage of the total of farming machinery coming to France. There are exceptions, however, in the case of certain classes of machines, particularly in that of British portable steam engines, which hold their own and are even increasing in favour.

In the Department of the Landes, hundreds of these portable engines are employed in the pine-forests for sawing, and the present high price of turpentine and pine wood makes this department an exceptionally rich field. British makers should, however, note that large, semi-portable engines of from 80 to 300 horse-power, for producing electric current, are now finding their way into Bordeaux from Germany.

AUCTION SALE ANNOUNCEMENTS.

IMPORTANT SALES OF PURE-BRED STOCK.

JOHN THORNTON & CO. will SELL by AUCTION as follows:—
THURSDAY NEXT, July 12.—Mr. Henry Dudding's SHORTHORNS and LINCOLN SHEEP at Riby Grove, Stallingborough, Lincs.
FRIDAY NEXT, July 13.—The late Mr. Jonas Webb's entire herd of SHORTHORNS and flock of SOUTH-DOWN SHEEP at Melton Ross, Barney Junction, Lincoln.

FRIDAY, July 20.—Mr. H. Sessios's SHORTHORNS, RYEDALE SHEEP, and LARGE BLACK PIGS at Ifton Manor, Newport, Mon.

TUESDAY, July 24.—Mr. D. Arkell's entire herd of SHORTHORNS, at Butler's Court, Lechlade, Glos.

WEDNESDAY, July 25.—The late Mr. P. L. Mills' entire herd of LARGE WHITE PIGS at Ruddington, Nottingham.

THURSDAY, July 26.—The late Mr. P. L. Mills' entire herd of BERKSHIRE PIGS at Ruddington, Nottingham.

THURSDAY, AUGUST 2.—Col. H. W. Shakerley and Mr. E. A. Hambro's GUERNSEY CATTLE at Bargarie, Godalming, Surrey.

FRIDAY, AUGUST 17.—Mr. E. Henty's SOUTH-DOWN SHEEP at Ferring Worthing, Sussex.

FRIDAY, AUGUST 24.—Mr. F. H. Jennings' SOUTH-DOWN SHEEP and BERKSHIRE PIGS at Cockfield Hall, Bury St. Edmunds.

FRIDAY, AUGUST 31.—Mr. G. J. B. Chetwode's DEXTER CATTLE and BERKSHIRE PIGS at Wyndthorpe, Doncaster.

Catalogues may be had of JOHN THORNTON & Co., 7, Prince's Street, Hanover Square, London, W., who will execute commissions.

CROWMARSH MILLS, OXON.—On the River Thames, 2 miles from Wallingford, G.W.R.—This valuable FREEHOLD COMMERCIAL PROPERTY will be SOLD by AUCTION by

FRANKLIN & COLE, at the Town Hall, Wallingford, on **FRIDAY, JULY 13, 1906,** at 3 o'clock precisely, in 3 lots, with possession on completion.

Particulars, plans, and conditions of sale may be obtained of Messrs. Burn & Berridge, Solicitors 11, Old Broad St., London, E.C.; of Messrs. Twist & Sons, Solicitors, 16, Hertford St., Coventry; or of the Auctioneers, Wallingford, Reading, and Oxford.

PUR SALE, at most reasonable prices, to make room for young stock.

30 PURE-BRED LARGE GILTS, WHITE
8 to 10 months old; also
10 GRAND YOUNG BOARS
fit for service.

All eligible for registration in Herd Book; inspection invited.—Apply, HERBERT BROOM, Wissett Hall, Halesworth.

COCUM FARM,
Six miles from Micheldever Station, two from Sutton Scotney Station, and seven from Winchester.
ANNUAL SALE AND LETTING OF HAMPSHIRE DOWN RAM LAMBS

MESSRS. JAMES HARRIS and SON have been favoured with instructions from Mr. George Judd to LET and SELL by AUCTION, on the premises as above, on **THURSDAY, AUGUST 2, 1906.**

100 RAM LAMBS,
and 6 SHEARLING RAMS,
from his well-known Cocum Flock, entered in Vol. 1 of Flock Book.

Conveyances will meet the principal trains at Sutton Scotney Station, and a brake will leave Winchester Station at twelve o'clock and Andover at same time on day of sale.

Lunch will be provided at one o'clock and sale commence immediately after.

Mr. Judd will be pleased to show his Flock of Breeding Ewes, Ram Lambs, &c., to his friends or intending purchasers at any time previous to sale.

Catalogues may be obtained of the Auctioneers, Winchester.

At low reserves to dispose of an outlying Estate.

ISLE OF SHEPPEY, KENT.
In the Parishes of Minster, Eastchurch, and Leydsdown, close to Eastchurch Station, and intersected by the light railway from Leydsdown to Queenborough, whences London is reached in about one and a half hours.

FREEHOLD PROPERTIES, covering an area of 252½ a. 3c. 22p., comprising the very interesting and historical house known as "Shurland" (the site of the 13th Century Castle), eight farm-houses, 31 cottages, agricultural buildings, and various enclosures of productive arable and excellent grazing land; also the Eastchurch Cattle Market and building land in the village.
The arable, besides being good corn land, is well suited for the growth of turnip and mangold seed, canary, &c., and the pasture for sheep grazing or dairying purposes, for which the light railway offers considerable advantages, besides affording facilities for the sale of produce and purchase of manure and feeding stuffs.
Portions of the Estate, having charming views over the North Sea, the River Thames, Medway, and Swale might profitably be developed for building purposes, whilst other portions afford sites for the erection of commercial premises, with the advantage of rail and water carriage.

TO be SOLD by AUCTION by Messrs. COBB, at the Mart, Tokenhouse Yard, London E.C., on Friday, July 13, 1906, at 2 o'clock precisely, in nine convenient lots, viz.:

	a.	r.	p.
1. Shurland	303	2	1
2. Rides	65	0	20
3. Old Rides	443	0	12
4. New Rides	408	2	28
5. Parsonage	154	2	24
6. Building Land	3	0	0
7. Eastchurch Cattle Market	1	2	12
8. Groves and New Buildings	744	0	11
9. New Hook	308	0	34
	2,521	3	22

Possession of nearly the whole may be had on completion of the purchase.

PUBLIC NOTICE.

PROCLAMATION

BY HIS EXCELLENCY THE HONOURABLE SIR WALTER FRANCIS HELY-HUTCHINSON,

Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of His Majesty's Colony of the Cape of Good Hope, and of the Territories and Dependencies thereof, etc., etc., etc.

WHEREAS it has been shown to me to be expedient to alter and amend the Regulations, promulgated by Proclamation No. 75, bearing date the 21st day of April, 1900, providing for the examination and quarantine for the disease known as Tuberculosis of cattle introduced into the Colony from any country overseas other than the Colony of Natal:

I do hereby proclaim, declare and make known that the Regulations contained in the subjoined Schedule shall be the Regulations for the examination and quarantine of cattle which may be introduced into this Colony from any country overseas other than the Colony of Natal, and shall have force and effect from and after the 1st July, 1906, in lieu of those promulgated by the aforesaid Proclamation No. 75 of 1900, which is hereby superseded and repealed.

GOD SAVE THE KING!

Given under my Hand and the Public Seal of the Colony of the Cape of Good Hope, this 5th day of May, 1906.

WALTER HELY-HUTCHINSON, Governor.

By Command of His Excellency the Governor in Council
ARTHUR J. FULLER.

No. 156, 1906.

Schedule to the foregoing Proclamation.

1. The word "Cattle" in these Regulations shall be taken to mean and include all animals of the bovine tribe.

2. All cattle, save as hereafter excepted, shall upon arrival at any Port of this Colony from any country whatsoever overseas be liable to be subjected by a Government Veterinary Surgeon to the test, known as the tuberculin test, before being allowed to land.

It will, however, be within the discretion of the Veterinary Officer aforesaid to accept the certificate of any duly qualified Veterinary Surgeon of the country from which such animals have been brought, supported by a record of temperature reactions, to the effect that such cattle were submitted to the tuberculin test immediately before being embarked and had given no indication of the presence of tuberculosis.

3. In the absence of a satisfactory certificate as aforesaid the cattle shall be removed to place provided by the Government or by the owners subject to the approval of the Inspecting Officer for quarantine purposes, and shall be subjected by a Government Veterinary Surgeon to the necessary testing by tuberculin to ascertain whether they are or are not affected with tuberculosis.

4. In the event of the test indicating the existence of tuberculosis, the animals shall not be removed alive from the quarantine station, but shall be destroyed there, and the owner shall be allowed to deal with the carcasses as he may think fit, provided, however, that the flesh shall not be used for human consumption unless the said officer shall give a certificate that it is fit for that purpose.

5. All expenses of inspection, quarantine, testing, destruction and otherwise shall be borne by the owner of such cattle.

6. The foregoing Regulations shall not apply to cattle entering by sea from the Colony of Natal, so long as similar regulations remain in force in that Colony, nor shall they apply to cattle imported solely for purposes of slaughter, provided that, before being landed, they shall be inspected by the Government Veterinary Surgeon and declared to the best of his belief to be not unfit for human consumption, and the owners or importer shall such and deliver to each officer an undertaking to the effect that none of such animals shall be used or disposed of for any other purpose than for immediate slaughter for food.

MISCELLANEOUS.

The Grouping of Farms.

WE view with some alarm the growing tendency in the direction of grouping farms. Particularly is this noticeable in districts where agriculture is conducted on a large scale, such as the Cotswold country in Gloucestershire. Plenty of instances could be given of men who are ready to take any holding which may become vacant until perhaps they will be in occupation of four or five farms. The tenant can, of course, only occupy one of the homesteads, so he puts a labourer or bailiff in each one of the others. This in itself is bad enough, considering that if each homestead was occupied by a farmer and his family more people would be on the land. Again, we contend that the land is not so well cultivated when three or four farms are held by one tenant, neither is there as much manual or horse labour employed. By his methods of farming the tenant occupying several holdings may make a profit for himself, but generally speaking the system of grouping is neither good for the land nor the landlord, and it is certainly not a means of bringing people back to the country.

Farmers' Landlords.

WHEN agriculture felt the finger of depression at its keenest, many farmers went under, and landlords had to take holdings in hand for the simple reason that they could not get tenants for them. Some of the landlords made the farms pay, but perhaps more did not, and were glad enough to let them again at the very first opportunity. Fortunately, a better state of affairs exists just now, and agriculture has looked up somewhat. Still we find a good many landlords farming their own land, not because they are reduced to the necessity of doing so, but purely as a business transaction. Personally we have not a word to say against wealthy landlords farming a fair proportion of their own estates, because as a rule the landlord farmer is in a position to spend more money, simply because the property is his own, and he can afford to employ more labour than the tenant farmer. Altogether, farming landlords are good for a locality, and the recent boom in pedigree stock has been responsible for developments in this direction. We do not wish to oust the tenant by any means, but there is moderation in all things, and a fair percentage of gentlemen farmers is good for agriculture.

Is the Farm Labourer Thrifty?

THIS pointed question was asked in the MARK LANE EXPRESS a few weeks ago, and when we compare the farm labourer with workers in other occupations, the question can only be answered in the affirmative. Of course, there are black sheep in every flock, and some farm labourers are as

thriftless as they could well be. We must not judge communities by individuals, however, but on the other hand, strike an average. There are hundreds of men on the land to-day who are ornaments to British labour. What they earn in the shape of wages is only small, even after making allowances for perquisites, but they keep themselves respectable, bring up families, provide against sickness by paying into the local club, and never ask for anything in the shape of charity. We contend that these men are thrifty, and on account of their own thrift are better off than hundreds of their fellows who earn a great deal more. Indeed, we venture to say that if labourers in other occupations made as much of what they earn as farm labourers do, there would be less poverty in the country and fewer charitable organisations would be required.

The Royal and the Best Cultivated Farms.

AT the general meeting of the Royal Agricultural Society, which took place at Derby, a suggestion was made that the council should revive the custom of giving prizes for the best cultivated farms. The president promised that the matter should be carefully considered by the council, and we shall watch with interest to see what comes of it. The agricultural world, and, indeed, the world in general, is delighted with the success of the recent show at Derby, and it is hoped that the event is the beginning of a new era of prosperity for the society. The R.A.S.E. lives for the object of encouraging and improving agriculture, and above all things we want our farms well cultivated. It may be urged that the farmer has sufficient incentive for doing this in the success of his business. Granted; but farmers, like the rest of us, are only human; and if there is an honour or an award to be gained, he is urged by the mystic spirit of competition to strive harder than he probably would otherwise. We know several local societies who give prizes for the best managed farms, and the usefulness of these competitions is generally admitted.

Local Markets in Hay-time.

THE haymaking season has a very marked effect on local markets. The latter are sparsely attended, no great amount of business is done, and farmers seem to be in a general hurry to get their business done so that they can be off home again. In fact, during hay-time things seem to go from one ex-

treme to the other on market days, and in many cases it would not be bad if a little more of the anxiety to get home again which is noticeable when haymaking is on was displayed at other seasons. In the interests of agriculture local markets are, of course, essential for the purpose of buying and selling, but habitual attendance at these gatherings has been the downfall of more than one farmer. Perhaps things are not so bad as they used to be when going to market meant wasting a whole day, with the consequent expenses connected with the market dinner and so forth; but, nevertheless, if a man can get away from market at mid-day when his hay is about, he could do it on many other occasions in the year if he wished, and would probably find himself better in health and pocket by doing so. We make no reference to the cases where market-going is a matter of custom rather than business.

Culinary Peas as a Farm Crop.

THE average Briton at this time of the year has a characteristic weakness for a dish of green peas, and this is very marked amongst those people who live in towns, have no gardens of their own, and have to rely on the greengrocer for their vegetables. An intensely human creature is the greengrocer, and when he calls on his customers and displays his withered, battered, pea-pods to view, he feelingly calls them "marrowfats." Dear, dear, if half the people who buy peas only knew what real marrowfats are, what arguments there would be when the greengrocer called! All the same, the green pea trade (call them what you like) is an extensive one, and in districts adjoining large town centres the crop is an important one from an agricultural point of view. Unfortunately, the wrinkled, seeded, highly flavoured varieties, which are almost exclusively grown in gardens, are too tender in constitution for field culture, so the farmer sticks to a few of the older and small round seeded sorts, which the greengrocer calls marrowfats. The fact is the farmer caters for the million in the way of peas, and the *bona-fide* market gardener provides green peas for the well-to-do.

Potato Spraying.

WE have arrived at the season when we are told that it is desirable to spray potatoes as a preventive of disease, but except in cases where the crop is grown on a large scale the operation is not generally performed. The reasons for this are various. In the first place, there is always the hope that the climate will be favourable and we shall not get much disease, and the British cultivator has a strong weakness for clinging to hope if it means saving time and labour; secondly, spraying though a good one is not an infallible preventive of disease; and thirdly,

FARMS

never remain unlet when advertised in the "Mark Lane Express."

The charge is Sixpence per Line per Insertion.

CORRESPONDENCE.

hundreds of potato growers have no apparatus for doing it. The mistaken idea about spraying is that many people begin to think about doing it when those tell-tale black patches appear on the leaves. This is parallel to locking the stable door when the horse is stolen, for spraying is essentially a preventive of disease rather than a cure. Britain is not the only country where potato blight plays havoc, and we have a report before us telling of the scarcity of potatoes and the high prices they are fetching in New Zealand owing to the prevalence of disease in the crop last season.

A Point About the Egg Trade.

WE hold no brief for the British poultry-keeper, but we have heard so much about the millions of eggs that are annually imported to this country and the millions of pounds that are lost through this trade not being kept at home, that the story gets a little wearying. There is a sidelight in connection with it, however, that is generally overlooked by those who chide the British poultry-keepers for allowing the foreigner to monopolise the egg trade. If we supplied all our own eggs we should have to keep a good many more hens. Could we grow and produce the maize, corn, and other materials required for their upkeep? To say the least of it the point is doubtful, and, therefore, instead of buying eggs we should be buying stuff to keep the fowls on, so all the money now paid to the foreigner for eggs would not be kept at home, because he would get a good list of it the same as now. It may be well to remember that the people who send us so many eggs are able to obtain his feeding stuff cheaper than the British poultry keeper, and is, therefore, able to undersell him.

Weeds and Plant Food.

THE word manure is said to be derived from "manœuvre," which meant tilling by hand, and this being so, the term must have been originally used in connection with cultivation rather than any application of plant food to the soil. We point this out because there are some people who seem to think that the whole sum and substance of successful cultivation is manure. This is a great error, and it is not too much to say that there are hundreds of pounds spent on both animal and artificial manures that are simply wasted. Here is a case in point. A grower of our acquaintance informed us in the spring that he meant having a bumping crop of potatoes, and with this object in view he gave a heavy dressing of dung, and supplemented it with an equally heavy dressing of artificial. A few weeks ago we went to see the crop and found the field so infested with rank weeds that the tops of the potatoes could scarcely be seen. The question is, how much of the plant food and the money spent on it were absorbed by the obnoxious vegetation? And, again, would it not have been better to have spent half the money invested in manure on cleaning the ground before cropping? Be it far from us to say a word against manure, because we can do little without it, but contend, nevertheless, that cleanliness is one of the most important factors in arable farming.

Work Amongst the Hops.

ONE cannot help sympathising with the British hop grower in his clamourings for a pure beer bill, when one considers the uncertainty of hop culture, the capital it requires, and the many difficulties there are to be contended with. The people who rush through Kent on their way to the continent discuss hop gardens merely from a spectator's point of view, but they know nothing of the details. As a matter of fact, a man cannot be behind the times and make money out of hops. On the other hand, he must be very much up to date, for things are not as they used to be. In spite of appliances of the most approved type and insecticides galore, aphids flourish alarmingly, and washing is a serious item in the expenses of the hop-grower. Apart from the manuring and cultivation of the ground, there is the continual work through the season of tying, washing, and sulphuring, and all before the great final task of harvesting. When we think of it all, and consider the money a hop-grower has to speculate (for no other term describes the situation better) before he can hope for a return, it is only a matter of common reasoning that his interests ought to be protected.

The first prize for the best pruned and kept orchard in the county of Gloucester, or within twenty-five miles of the city, was awarded by the Gloucester Root, Fruit and Grain Society to Mr. J. R. Bennett, Chaxhill, for his plum orchard of four acres, planted by him in 1887.

Lord Amherst's old-established and entire prize herd of Red Follied cattle will be sold during the autumn in consequence of the Halland and Home Farms being let. The herd contains some very fine specimens of the breed, well known as the old Diddington blood, and has for many years been successfully exhibited at the Royal and County shows.

A Royal Show Correction.

SIR.—In your issue of 2nd inst., in the account of Guernsey cattle at the Royal, you write of "Roland of Seaview 10th," bred by the late Mr. Glynn. I am thankful to say I have been and am in perfect health, and very much alive, and was invited to judge Guernseys at the Royal. Some of those who have known me as a very successful exhibitor and breeder of Guernseys may take it that I am dead. I gave up exhibiting last year, but still have my herd of Guernseys, some sixty head of the old blood so much to the front in the showyard.—Faithfully yours,
Seaview, W. A. GLYNN.

Ile of Wight,
July 10, 1906.

[We tender Mr. Glynn our apologies for the error he mentions, and in doing so echo the wish of Guernsey breeders that it may be many a long year before he has to be described as "late," so that he may give us more of those splendid specimens of Guernseys for which he has gained so wide a reputation.—Ed.]

Half-Holidays for Farm Labourers.

SIR.—If your correspondent, "Red Rose," will explain who will feed and attend to the live stock on a farm on the weekly half-holiday he wishes to be extended to farm labourers he will do much to facilitate its adoption; and this problem must be solved before such a proposal can be made practicable.

Agriculture is not in a position to bear the additional expense of employing casual labour to do this work on half-holidays, even if it could be obtained, and surely "Red Rose" does not expect the farmer and his family to do it whilst his men are holidaying. "Red Rose" asserts that the unpleasantness and inconvenience of continually being on duty is driving labourers from the land; he should remember that such men do not work from choice but necessity, and would not work at all if they could live comfortably without doing so.
July 10, 1906. ANOTHER ROSE.

SIR.—"White Rose's" opinion that a more absurd proposition than the above was never conceived, would have carried more weight if he had backed up this sweeping assertion with a few sound arguments. "Red Rose" asserts that have come about in recent years have been voted as absurd at the outset, but they have come nevertheless, as probably this may in due course. I wish I could think with "White Rose" "that no class of labourers are more happy or more content than the genuine farm labourer, and he would be loth to change places with the artisan and mechanic (all things considered)."

If this happy state of affairs really exists, perhaps "White Rose" will kindly explain how it is that good—I may quote your correspondent and say genuine—farm labourers are getting more scarce every year, and also say why it is that the sons of farm labourers do not follow in the occupation of their fathers. Facts do not corroborate "White Rose's" statement, and if the farm labourer is such a free, happy, contented, and well-treated individual, what is the cause of the lamentable rural depopulation, and whence comes the necessity of the cry of back to the land?

I claim to know something of the life of a farm labourer, and I still contend that it is a grind in too many cases, with not very much in the way of prospect, and I further contend that all work and no play is conducive to making Jack a dull boy.
July 12, 1906. RED ROSE.

SIR.—In this matter my sympathies are with the views expressed by "Red Rose." If the boys in the villages are to be induced to remain there, instead of being attracted as they grow up to centres of population, some counter attractions must be offered them.

My idea is that in every village a "sports club" should be organised, that the squire, parson, farmers and shoppeople should subscribe to the necessary expenses, and that the boys should pay a weekly small contribution. There should be a local cricket club, in which the "quality" should take an interest, and that

matches should be played on Saturday afternoons. Many a boy would willingly work half an hour longer on other days in the week in order to get off on Saturday afternoon. The local parson should try to keep control over the boys, not in a goody-goody sort of way, but by participating in their games and gaining their confidence. The boys would then get to look upon the village as the centre of interest, and would be loth to leave a place associated with many a pleasant hour.

But if he is kept always at work, he naturally yearns for a more varied life. "All work and no play makes Jack a dull boy," and not only dull but discontented. In such cases it is not to be wondered at if he quits the village at the first opportunity, and remembers it only as a place of dull, monotonous grind.—Yours truly,
YORK.

June 13, 1906.

Money Instead of Beer.

SIR.—I am very much interested in the note from "J. D. W. F." on the above subject, because it bears out what I have long contended, that beer is not so essential in the hayfield as some people would have us think. The fact of the matter is that it is a time-honoured custom for beer to be given to men during hay and harvest, and everyone knows that it is not easy to upset customs, particularly in agriculture.

"J. D. W. F." says that he can get his hay-making done with less grumbling now that he gives money instead of beer. I can quite believe this, and my experience teaches me that it is a common thing for hay-harvesters where beer is provided to be everlastingly complaining that they do not get enough. To contend that a man cannot do a fair day's haymaking without beer is absurd, because he can get other palatable drinks if he is thirsty, and to supply men with liquor with the idea of getting more work out of them is following a wrong principle.

It is no part of my gospel to wish to try and deprive any working man of his pint of beer, but if he is healthy and strong he wants no stimulant to help him do his work, and by far the most business-like principle is to pay extra money for extra work and let the men drink what they like. There are scores of labourers who will drink beer all day if provided *ad lib.*, but their common sense does not allow them to spend all their extra money in liquor, and they are all the better for it.
RED ROSE.

July 7, 1906.

Agricultural Imports.

An account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended July 7, 1906, together with the quantities imported in the corresponding week of the previous year:

	1905.	1906.
Oxen, cows, &c...	8,723	13,011

SITUATIONS WANTED and VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

PETERBOROUGH SHOW.

The annual summer show under the auspices of the Peterborough Agricultural Society was held on Tuesday, Wednesday, and Thursday last, and was in every way a very successful meeting. The weather was fine, and with a gentle breeze was not too hot, while the greater part of the judging was got through upon the first day. Towards four o'clock slight rain came over, but by this time the thick of the day's work was over. The Peterborough Society has few, if any, equals in the way of agricultural societies that are managed on such thoroughly practical lines and by all round practical men, who take a direct interest in the management of the show, from the framing of the prize schedule to the stewarding and looking after small matters on the days of the exhibition; and it is doubtless this practical sympathy with the movement that has caused the society to progress so successfully from year to year until it has acquired a place second to none in showyard history. The spring and autumn horse shows under the society's management work admirably in connection with the summer meeting, and the show of horses on this account forms the great feature of the exhibition. The prizes offered in the open classes are sufficiently liberal to induce owners of the best animals in the country to compete for them, and the honour of winning at Peterborough

Golden Leaf, both high class brood mares. In the foals out of these so-called lighter weight mares Merry Matchmaker had the honour of siring both first and second prize winners, the third being sired by Boatswain.

The gold medal of the Hunters' Improvement Society was awarded to Mr. Wilkinson's Glasspore, and the reserve to Mr. J. A. Brown's Rosalinda.

The young Hunter classes were exceptionally well supported both as regards numbers and quality. There were no less than sixteen entries of yearlings and seventeen of two-year-olds. This circumstance should be more than gratifying to our country; it is the only bright spot in the appearance of our future horse supply for military purposes, and it is well that the sport of fox hunting is the one thing above all others tending to maintain the breeding of the best possible class of horses for army remounts.

Our town and general public companies are day after day doing their utmost to drive the horse from our midst, and so prevent interest being taken in its breeding, that it behoves those who have any thought for our army in time of war ought to feel doubly grateful that at least fox-hunters and farmers are determined that good mounts shall not die out, and these fine classes of

Connaught blood also came in again in the third prize colt, Sir Walter Gilbey's Bouncing Connaught. The Hackney brood mare class was a very strong one, and included several well-known competitors, hard nuts to crack. Mr. W. Barnell Tubb's Rosadora, Sir Walter Gilbey's Mitre, and Mr. Evan's Ticonderoga were the best of them, the foal out of the latter mare by Royal Danegolt heading its class for Sir Walter Gilbey. Very smart and precocious are many of these Hackney foals, their action and manners will bear looking into. Other good foals were Mr. Rowell's by Rosadore, and Mr. Evans's by Evanthus. The local class of brood mares was also very good, Messrs. Bellam James, and Baxter winning the prizes with well bred stock. Two-year-old fillies were eight in number, Mr. C. E. Cook's Lillendora and Mr. Tabb's Two Dozen, the former by Rosadora and the latter by Garton Duke of Connaught, were the best of them. Yearlings were rather on the weak side, Sir Walter Gilbey's Lively Beeswing and Mrs. F. E. Colman's filly by Ganymede were the best.

Hackneys in saddle found a place, and eight were entered; these, however, were quite of the high-stepping harness class of Hackneys, not exactly suited to the saddle. Mrs. Hartley Batt's Prince Edward, Mr. Tubb's Hopwood Clematis, and Prince Edward's companion, Hopwood Horace were awarded the prizes. The harness classes were a very important section of the show, so far as sight-seers were concerned, and proved a great attraction.

PETERBOROUGH AGRICULTURAL SOCIETY'S SHOW: A PARADE OF THE SHIRE HORSES.

is second only to those of London, whether in respect to the Shire, for which the immediate neighbourhood is so renowned, or for the Hunter or Hackney, each of these breeds being well represented. As regards other classes of live stock, Peterborough is more the centre of a good feeding district than of a breeder's home, there being but few pedigree herds of cattle or flocks of sheep in the immediate neighbourhood, so that these sections are not patronised to the same extent as those of the horses.

Hunters.

The catalogue commenced with the Hunter section, of which there was a very good entry, animals being contributed by most of the leading show people, who had not forgotten to send of their best to meet the keen competition. The heavyweight class of brood mares drew entries from all over the hunting districts, the awards going to Mr. L. B. Wilkinson's Laurista, Mr. H. R. Roe's Harmony, and Mr. J. A. Mullin's Gaiety Girl, leaving nothing but the reserve place for so good a brood mare as Mr. Colman's Homely Lass by the premium stallion Homely. All these mares are well known for their brood character and for their breeding alike. Coming to the foals out of these mares, Mr. Robinson's colt out of the young Pantomime mare Good Ann secured first honour, Mr. Colman coming second with the filly out of Homely Lass, sired by Royal Mask, and it is cause for some satisfaction that the hunter-bred sire, Sir Walter Gilbey's Merry Matchmaker, was the sire of the third prize foal, which, however, was one of the blood mare Florence by Bluegrass. In the lighter weight class of brood mares Mr. Wilkinson's well known Glasspore was once more in her accustomed place, backing Mr. A. J. Brown's Rosalinda and Mr. Ernest Robinson's

highly-bred young stock at Peterborough are worth thinking about. Amongst the best of the yearlings were Mr. J. L. Nickisson's Esnig, a colt with power and style by Yard Arm, Mr. Fenwick's Gaxboy, fit to cross country or anything, got by Whisperer, and Mr. Wilkinson's His Grace by Erskine. The best of the two-year-olds were Mr. Rickaby's by Lifeboat, Major Renton's by Enterprise, and Mr. Long's by Merman. Three-year-olds, also in two classes (fillies and geldings), made up a total of eighteen entries.

The Hunters' Improvement Society's silver medal for best filly was awarded to Major Renton's Success, and the reserve to Mr. J. H. Stokes' Black Pearl.

The made Hunter classes were very strong, and included many of the crack Hunters from all parts of the country that have been winning at the leading shows in the spring and early summer. The championship of these made classes lay between Mr. Drage's Nuggett by Chieftain and Mr. Colman's The Monk by Dirk Hatterick, who has sired a remarkably good lot of Hunters in the Shropshire district. After a long and close competition the honours were placed in the order named above.

Polo ponies were a small entry of three, and call for little comment.

Hackneys.

Hackneys were in pretty good force, especially if we take into account the horses of this breed shown in the harness classes. The breeding classes, however, at an agricultural show claim first attention, and the two-year-old stallions came first in these. Mr. A. J. Hall's Copmanthorpe Performer and Mr. R. P. Evan's Gartious were first and second in these, their sires being Duke of Connaught and Garton Duke of Connaught. The

Mrs. Hartley Batt's horses above mentioned as winning in saddle were included in the harness classes also, and so was Hopwood Clematis. There were entered also Mr. Sykes' Fyde Sabinetta, Mr. Makeague's Summator and Pink Blossom, well known in double harness, as well as Mr. Kerr's Advertiment and Paddock Wildfire. In the pony section there were also many of the leading animals of the season competing.

Shires.

Shires were, as usual, quite the strength of the equine section, and were exceptionally well represented both in the open and local section, and with several American as well as home buyers present these classes made a business occasion of it as well as an exhibition.

Two-year-old stallions came first in this department, and were one of the weakest classes to deal with. It was rather unfortunate that several of the entries had taken cold at the recent Royal and were unable to take their places, so that only five animals came before the judges. Mr. R. W. Hudson, as is his wont this year, came to the front with Shustoke Monarch, a wide, big, good-quality colt with substance, got by Colchill Paxton. Mr. W. Hammond also sent a very weighty and fine mover in Catterall Black Prince by Westminster III., that stood second, and Sir P. A. Muntz and Mr. C. Morbey also exhibited very promising colts.

Some thirteen entries of geldings were competing in the two classes open to them. In the junior class Mr. A. H. Clarke had a fine colt in Captain by Castle Bromwich Keith, which came well to the front, and very good furnished geldings were shown in the older class by Mr. Wyun, Mr. R. P. Greger, and others. These classes illustrated very plainly that there is money in

breeding Shire horses now as in the past, when £100 and over was readily offered for the best of these, and several of them had been working on the fallows to within a few days of the show. When Shire geldings will grow money at the rate of £25 a year, and do the work of the farm at the same time, wherein lies the sense or necessity for employing motor power, which runs up an expensive bill for petrol every month, and another heavy bill for wear and tear?

Yearling entire colts were a very good class, both open and local. Mr. F. E. Muntz's Royal winner was again invincible, coming out in fine condition, and with his capital back and limbs, as well as quality, looks like retaining his hold of the public for a long time to come. Other winners were shown by Mr. Max Michaelis, Sir P. A. Muntz, Mr. J. Rowell, Messrs. Fletcher and Andrews, and Mr. J. Measures. Lockinge Forest King blood was very prominent in these colts, and, indeed, had a thorough good innings the day through.

Yearling Shire fillies were also a very formidable lot, Mr. G. Atterbury, Mr. E. Orme, and H.M. the King in the open, and Mr. Favhock, Mr. Richardson, and Mr. Rowell in the restricted class were the chief winners; the leading filly this time being sired by Dunsmore Jameson, the second was by Tatten Friar.

The two-year-old class Lockinge Forest King blood again asserted itself, Messrs. W. and J. Thompson winning first with Desford Future Queen, a well built, carty, good filly all round, come to stay, Sir P. A. Muntz and Lady Wantage had also famous fillies here in the money.

The Lockinge Forest King blood also made what we may call an indelible impression in the three-year-old class, as Mr. Max Michaelis' Pailton Sorais by that sire carried off the first prize, which was followed by the first prize in a class open to all ages, and also by the championship of the entire sex later on. The contest in the three-year-old class, however, was only accomplished by the umpire's choice, as the two judges were divided as to Pailton Sorais and Sir P. A. Muntz's Quality, the latter a very nice quality filly and a fine mover. Pailton Sorais, we may add, was first in London when a yearling, and has since then grown into a wide and weighty mare with excellent build, and she moves well. Quality is the get of Dunsmore Jameson. H.M. the King's very shapely and good quality Facsuma by Colwich Blend was given third.

The classes for the best single mare or filly, and also for the best pairs of mares, fillies, or geldings, were capitally filled, and included in addition to the mare mentioned as champion, such notable animals as Lord Rothschild's Blythwood Guelder Rose (second), Mr. Towgood's Rolleston Fuchsia, Lord Beauchamp's Sussex Bluegown and Monks Polly, the former London champion, and the two now first as best pair; then there were Mr. C. Morbey's fine mares Handley Bounce and Thorney Pride, second as a pair, and from the local flock such splendid Shires as Mr. F. W. Griffin's Borough Parlourmaid, winner of the £25 subscription challenge cup, which is now won outright by Mr. Griffin, Mr. T. Gee's Wydelands Sunshine and Wydelands Starlight, as nice mares as could be wished; also those good Duchesses of Mr. John Bradley's, and in the bigger company again mares and foals from Lord Egerton, whither the third prize for foals was given, Sir P. A. Muntz taking first with a foal by Jameson, and Lord Rothschild second with the get of Birdsall Menestrel.

The championship, as previously mentioned, was accorded to Pailton Sorais, and the reserve to Blythwood Guelder Rose, the latter mare also carrying off the Shire Horse Society's gold medal for which Rolleston Fuchsia was reserved.

Cattle.

This section was somewhat insignificant when compared with the extraordinary show of horses, and consisted of three breeds only, Shorthorns, Lincoln Reds, and Red Polled, the Polled Angus and Jersey classes having been struck out of the schedule.

In the Shorthorn classes Mr. F. Miller's Linkfield Champion, the bull that was first in his class and reserve champion at the "Royal," was well first for bulls over two years, where he beat H.M. the King's very level-headed Royal Carlisle. Messrs. Haslam and Son had also a good bull in Kinross 3rd. In the younger and local class of bulls Mr. R. M. Knowles, Lord Armstrong, and Mr. J. A. Preece contributed very good animals, Mr. Steward and Mr. Stokes also coming in for a share of the prizes. In bull calves under a year Lord Armstrong, the Hon. L. de Rothschild, and Mr. Preece were again in the running, the class a good one of thirteen entries. In the cow and heifer classes Sir Arnold Mowley's heifers, Proud Duchess and Rolleston Spice, were first in their respective classes, and also carried off the champion prize in their section. Mr. W. Bell's Ratcleugh Witch, another well-known cow, and her herd companion, Ratcleugh Beauty, were in the money, as was also Mr. Leon's beautiful white heifer Silver Flora and Mr. W. A. H. Bass's White-wall Anna.

In the mixed class of registered or not cows for dairy purposes, there was a good show of milk. Mr. John Even's Lincoln Red Burton Quality 3rd being first. Very good cows followed shown by Mr. Thos. Stokes, Mr. F. J. Stanhope and others.

Lincoln Reds were certainly a very useful lot, to say the least of them, Mr. W. J. Atkinson's Weston Monarch 4th was best bull over a year and a half, a good-shaped and well-grown one; Mr. R. Chatterton and Mr. J. Laugham in the younger bull class were successful with very straight yearlings; and in the cow class Mr. John Even's Burton Quality, Messrs. Fletcher and Andrews' Clara, and Mr. Patchett's Cherry Perfection were the winners, Mr. Laugham, Mr. Chatterton, and Mr. J. Topham sharing the heifer prizes.

There was a very good show of Red Polls, its supporters coming well to the help of their favourites. The breed, however, as represented at Peterborough appeared more inclined to beef points than to milk. There were two capital aged bulls, Mr. H. Daplyn's Dairyson 24th and Sir R. Cooper's Ashlyn's Major, placed as named. In younger bulls Sir Walter Corbet's Acton Rufus and Lord Amherst's Darius, two very level, well-bred ones, carried off the prizes. Cows were only two in number, Lord Amherst's Waxlight 2nd and Sir Walter Corbet's Tiff 4th; these were given first and second prizes as named; and out of half-a-dozen entries of very level heifers Sir Walter Corbet's Acton Beryl, Lord Amherst's Diddington Daisy 17th, and Sir R. P. Cooper's Ashlyn's First were the best. The champion prize of this breed fell to Mr. H. Daplyn's first prize aged bull Dairyson 24th.

Sheep.

These consisted chiefly of Lincolns and Hampshire Downs, the display being about an average, and a good number of the entries were shown in untrimmed, natural condition. For Long-wooled Shearling Rams there were four entries, Messrs. Dean and Sons taking all the money. Hampshire Ram lambs made a good show of seven entries, Mr. F. E. Baxton having four entries of very forward good lambs, and carrying off first, second, and reserve honours. Mr. F. Ward and Mr. J. A. Preece stood at the head of the local ewe class, and Messrs. Dean and Sons scored in a small class of lambs. In cross-bred stock Mr. J. A. Preece and Mr. T. Stokes were the only exhibitors.

Pigs.

The pig section of the show was a very important one, quite a long range of sheds and pens being filled by the grunters, and included in them were a number of the best pigs of the season.

There were eight entries of Large White boars, in which Mr. T. Henson came off victorious with Peterbor' Bar Noug, a very lengthy and deep pig; Messrs. Sanders Spencer and Son's Hollywell Hoppy, another pig, younger and of good quality, came second; and Sir G. Greenall's Walton King 4th followed. Large White sows were a very fine class of eleven entries, Sir Gilbert Greenall's Walton Lady Jane being first; Mr. Knowles and Mr. Henson were also in the money. These same exhibitors, with Mr. Dewhurst, Mr. J. Neaverson, Mr. Daybell, and Messrs. Wherry were also successful in the younger classes, which were well filled, that for pairs of gilts having fourteen entries.

Berkshires were also capitally represented. Mr. Inman, Mr. R. W. Hudson, the Duchess of Devonshire, and Lord Calthorpe were the chief exhibitors, the quality was the best, and the honours were pretty well divided.

Mid-Kent.

The Mid-Kent Agricultural Society's eleventh Annual Show was held on Wednesday in beautiful weather, and was an all round success. Sir Marcus Samuel once more placed the beautiful Mote Park at the services of the society, and this was no small attraction, whilst the show of stock, &c., was a good one as regards quality and a record one in respect of numbers, so that the success was well deserved. The Shire Horse classes, always popular in Kent, were well filled, and most of the well-known breeders were represented by excellent animals. Mr. Cornwallis won a notable victory with Linton Uniform, who was placed above Mr. Walpole Greenwell's well known Marden Conqueror. Mr. Max Michaelis, the Hon. R. P. Nevill, Mr. E. Neve, and Lord Hotfield divided most of the prizes between them. Mr. Walpole Greenwell's special prize for the best Shire or filly went to Mr. Ernest Neve for Amberfield Rambler, while the Shire Horse Society's silver cup was given to Lord Hotfield for Empress of India, Mr. Max Michaelis being awarded the reserve for Wimbledon Fuchsia. In the any breed section there was rather a surprise, for Mr. Neve's Amber-

field Rambler, who was beaten at Ashford by Horne's Surprise, turned the tables this time and gained first prize. The Hunter classes were stronger than last year, and there were some good harness classes.

There were some splendid specimens of Sussex cattle on show, and in these classes the Hon. R. P. Nevill was a conspicuous winner. The Shorthorns were also strong, and for cows and bulls the first prizes went to Mr. Jeremiah Coleman. Channel Islands cattle were by no means numerous, but were of good quality, and the same may be said of the class for any breed or cross breed. The entries for sheep, which are usually small, this year showed a slight increase. Mr. Charles File, of Elham, led the van of the prize winners, but Mr. Quessted, Mr. Gazale, and Mr. Coleman also figured prominently in the prize list.

United East Lothian.

The United East Lothian Agricultural Society is fortunate enough to have Lord Wemyss' beautiful Amisfield Park, near Haddington, as the site of their show, and this alone is enough to attract visitors. Beautiful weather favoured their show on the 7th inst., and the show being an all-round good one, the attendance was on a large scale. Clydesdale horses, which are always a prominent feature in the yard, were on the whole better than last year, notwithstanding the blanks caused by the death of the late Mr. St. Clair Cunningham, who was always a large exhibitor. There was also a large and meritorious collection of horses for road and field, whilst in the cattle section there was a good display of Shorthorns—one of the best seen here. Sheep also made a creditable display, Leicesters and Cheviots being the feature, but half-breeds were good, though not numerous. Apart from its agricultural features, there was much in the yard to engage the attention of the spectators. The popular element was abundantly provided, and included a military tournament and musical ride by a detachment of the Royal Scots Greys, horse leaping competitions, driving competitions, and athletic sports. An extremely interesting display was the working trials of colliers, in which there was an unusually large entry and very keen competition.

Great Chesterford.

On account of the death of their popular president, Sir Robert Herbert, G.C.B., so near the date of their show, the Great Chesterford Colt and Foal Society last year decided to forgo the event and with a new president to resume the show in 1906. They have been fortunate enough to secure Lord Howard de Walden as a successor to Sir Robert, and this year's show took place under his presidency. The contest was not quite up to the level of 1904 as regards number, but the quality, on the other hand, showed some improvement, many first-class animals being forward, and the judges had no easy task in making their awards. The class for Shire fillies foaled in 1904 was a strong entry, the pick of thirteen animals being Mr. Towgood's Shelford Link, which was also the winner of the Shire Horse Society's silver medal, but was closely run by Mr. E. Pig's Brothertoft First Lady, which was the winner of the challenge cup given by Messrs. Hudson and Co. The agricultural gelding or mare class had five entries, all of good quality, the best being Mr. J. E. Tellow's Red Rose, a very fine five-year-old mare. In the Hunter classes the premier honour went to Mr. H. Duke's bay gelding, which was first in his class, and also the winner of Mr. F. A. Taylor's silver cup. Among the brood mares The Witch, shown by Sir Walter Gilbey, was an easy first, and the same exhibitor had another easy win in the hackney colt or filly foal class, in which there were three entries, with his five weeks' old filly, whose dam, Bold Primrose, was awarded the Hackney Horse Society's silver medal.

Sutton Sheep Fair.

About 6,300 lambs were brought to the hammer by Messrs. Bond and Sons at the ninety-eight Sutton lamb sale on Friday, and met with a very good trade, there being a considerable number of Norfolk as well as of Essex and Suffolk buyers. The leading price for registered Suffolk ewe lambs this year fell to Mr. Fred Smith, Woodbridge—53s. for twenty—which were bought by Mr. W. F. Paul for his Kirtton flock. Mr. J. Cracknell, Wickham Market, and Mr. Alfred J. Smith, Readeham, came next, tying at 52s. for pens of twenty; and Mr. C. E. Murriner, Hasketon, was fourth for a score at 50s. 6d. A pen of fifty half-bred lambs from Mr. George Walker, Hacheston, realised 40s. The wetter lambs sold quite as dear as at Great Bentley on the preceding day, but ewe were perhaps a trifle easier, although as regards several flocks there was an appreciable advance on the year.

VETERINARY PREPARATIONS,

and Small Articles of a Portable Character, sell readily when brought regularly before the readers of the "Mark Lane Express."

THE SWEDISH NATIONAL AGRICULTURAL SHOW.

HIS SHOW, WHICH IS ONLY HELD ONCE EVERY FIVE YEARS, TOOK PLACE AT NORRKÖPPING FROM JULY 2 TO 9.

Reading from left to right our illustrations show:—1. A general View of the Showyard, from which it will be seen that it is very much on the same familiar lines of English Shows. 2. A View of the big Ring, in which the animals were Judged and numerous Parades took place. 3. A Bull of the Polled Swedish Breed, the only pure breed. 4. A Dutch Bull and his herdsman, who is riding him, as is the custom of the country. 5. An Ardenne Stallion, a Belgian Breed of horses that is very popular in Sweden. 6. A Dutch Cow, bred in Sweden.

THE Swedish National Agricultural Show, as mentioned above, took place at Norrköpping from July 2 to 9, and it has proved to be a great success. It was opened by King Oscar in person, who displays as much interest in agriculture as does our own most gracious monarch. The prize money and show expenses are guaranteed jointly by the National Government and by the Provinces, but this year there was no need to make any call upon such sources, as the attendances have left a handsome profit on the exhibition. On the opening day 2,262 persons paid the sum of 5 kroner for admission (a kroner is worth roughly 1s. 1½d.), while on one other day the figures reached over 50,000 at a kroner each. The last day of the show, it may be mentioned, admission was only 50 ore, or under 7d. each.

The catalogue itself is more or less a puzzle to an Englishman, but what most particularly strikes the visitor is the fact that Sweden is almost entirely dependent upon other nations for her breeds of stock as well as for agricultural implements.

Horses are given the first place, and the object

aimed at is the provision of army remounts, for which thoroughbred stallions are in most demand, many of which are imported from England.

Cattle are almost entirely confined to Ayrshires and Dutch, with an occasional representative of another breed. The Ayrshires are of good quality, although not quite satisfying the requirements of the Scotsman, as they are apt to get a bit leggy and lose that fine drawn milking character so much sought after. The Dutch cattle are descended from some of the best strains imported from Holland, and, if anything, they seem best fitted to the needs of the country. There is but one Swedish breed yet remaining pure, and these are known as Hill Cattle, being small and white in colour, with occasionally a few black spots upon them.

There was only a small number of sheep exhibited, and these, with a few exceptions, were rams imported from England. Sheep are not much kept, as the rigours of the climate render it necessary to house them for seven months out of the twelve.

The most popular breed of pigs were the Large

White, and much English blood is in general use; while in the poultry section many of our popular breeds could be seen, about the most numerous being the White Leghorn and the Plymouth Rock.

The implement section was almost entirely occupied by American machinery, and the extent to which this section is monopolised is remarkable.

Findon Sheep Fair.

This well-known Southern fair was held on Thursday, and was far from successful from a seller's point of view, prices being low and demand being by no means brisk. (Close on 4,000 lambs, &c., were forward, and most of the business was given to the auctioneer (Mr. Harry Jas. Burt, of Steyning), very few private sales being reported. Top price was realised by Mr. Thomas Watson, who sold 100 mixed lambs at 3s. 6d., whilst Mr. J. T. Strong was next with 35s. for 100 wether lambs. One of the best private sales was that by Mr. Phillips, of Sompington, who disposed of 90 lambs to Mr. Candy at 34s.

SOCIETIES.

The Lancashire Federation.

The chief subject discussed at the annual meeting of the Federation of the Lancashire Agricultural Society was the question of railway facilities for exhibitors and officials attending shows. The chairman (Mr. J. W. Parkinson) said the question had been before the committee on several occasions, but they were somewhat handicapped in Lancashire owing to the fact that a number of railway companies had no termini in Lancashire as they had in London. The Kennel Club was taking up the question, and the secretary had written the secretary of that body to say that any help the federation could give them on the matter would be gladly extended.

Mr. Rawcliffe (ex-chairman of the Federation) proposed (a) "that the sub-committee appointed at our last meeting draw up a petition asking the various railway companies that the facilities now given to delegates and representatives at conferences and other meetings, anglers, golfers, &c., of travelling at cheap rates be extended to exhibitors and officials attending shows, and that a copy of such petition be sent to each federated society for consideration by its committee, and if approved, to be signed by the officials and committee of such society, and returned to the secretary of the Federation on or before September 1." (b) That copies of the petition be forwarded to all other district societies, inviting similar action. (c) That the Royal and County Society be asked to use their influence to further the objects of the petition.

He observed that the committee had been delegated to approach the railway companies to ask them to grant certain facilities for *bond fide* exhibitors—that they should be permitted to travel to and from any show at which they exhibited, at a fare and a quarter for the return journey. When they went into the matter they remembered that there were exhibitors from all over the country coming to their attractive Lancashire shows, and they realised that isolated action to effect the remedy they desired would be ineffective. It was therefore decided to associate themselves with one great body or organised influence, to approach not only a portion, but the whole of the railway companies of England on the matter. All the agricultural organisations of the kingdom were similarly interested in this matter, and would, he felt sure, be glad to ally themselves with this movement. An exhibitor naturally considered the cost of attending shows, and they felt that if the fares were reduced the exhibitors would come to see their stock judged, and the influence and prestige of exhibitions would be enlarged. The Royal and the County Agricultural Societies managed to secure that which the district societies failed to get, and they, therefore, could not ask them to take similar action to themselves; but they could reasonably ask them to lend their vast strength of influence for the welfare of the local societies of England, remembering that the district shows were the auxiliaries of the larger, and that all were bound together in one common object—the welfare of the agriculture of England.

The resolution was carried, and we may add that the Federation trusts that all secretaries to whom the petition will be sent, who consider the interests of exhibitors, will recognise the importance of the movement, and give immediate attention to the obtaining of the necessary signatures, as it is believed that only by a combined united action, that the importance of the objects of the petition can be sufficiently impressed upon the Railway Clearing House Committee.

As some difficulty may be experienced in obtaining a complete list of the secretaries of the various societies it is requested that any secretary who has not received a copy of the petition by August 13 notify the secretary, Mr. M. Birtwistle, of the fact, by postcard to S. Garden Street, Ramsbottom.

That the Federation is increasing in strength and usefulness each year was shown by the annual report, for this stated that six new societies had joined during the year, the number of new members of the Federation being twenty-nine.

Scottish Chamber.

The Land Tenure Bill came under discussion at the last meeting of the directors of the Scottish Chamber of Agriculture. Viscount Dalrymple wrote that he thought the Bill was so extremely badly drafted that he did not think its good points were sufficiently good to warrant its passing with all its bad points. It was framed by people who were totally ignorant of Scottish requirements under present conditions, and the uncompromising attitude with which they met various amendments, even on the preamble of the Bill, exposed their inability to see both sides of the question. Personally, he trusted that, if they were to have a Bill for Scotland, it would be another one framed by people with some knowledge of Scotland and applicable only to Scotland.

The secretary read a letter from Mr. Munro Ferguson, M.P., in which he suggested that the

Chamber should frame a bill on Scottish lines on reasonable terms. He would be willing to take charge of it next session, and no doubt it would be backed by members of both parties. After discussion it was decided not to take action in the matter.

The secretary reported that Lord Carrington had intimated that October 10 would be a convenient date for the conference. It was resolved to invite the Secretary for Scotland also to attend the conference, which will be held in Edinburgh.

With regard to the subjects for discussion, Mr. Rutherford suggested that the question of the inspection and marking of foreign meat should be widened to embrace the whole question of the meat supply of the country. In view of the American meat scandals, were they agreed that it would be the best thing that all the meat should be killed on the other side and then brought here?

It was agreed to instruct the secretary to send out a circular to the affiliated societies, with a list of the subjects suggested for discussion, and inviting additions and an indication of the lines on which they wished resolutions to be submitted. The subjects would include the milk standard and the expenses of milk prosecutions, the inspection and marking of foreign meat and War Office contracts, butter manipulation, dairy regulations, and the amendment of the Holdings Act and the Ground Game Act.

Mr. Prentice suggested that the Chamber should consider as to taking steps for the appointment of an advisory board in Edinburgh for the Board of Agriculture, or to secure that there should be more Scottish influence and representation in the Board. It was agreed that a representation should be made that a Scotsman should be appointed to the vacancy in the Board caused by the withdrawal of Dr. Semerville.

Felton and Warkworth.

A meeting of the executive committee of the Felton and Warkworth Agricultural Society was held at Ambleside under the presidency of J. T. Dand, Esq., Vice-President. The names of several well-known agriculturists were announced as having accepted the office of judge in the several classes at the ensuing annual show.

On a motion by Mr. Jas. Davison, of Guzyance, the following resolution was carried unanimously: "That in the opinion of this meeting the new dipping order issued by the Board of Agriculture is unnecessarily harsh in its requirements, very difficult to carry out, and likely to interfere seriously with the business of the farmers in the district." It was agreed that the chairman and the secretary (Mr. J. Barker) be empowered to act on behalf of the society in uniting with other similar associations in obtaining the repeal or modification of the order.

Tunbridge Wells Farmers' Club.

The accounts presented at the annual meeting of the Tunbridge Wells Farmers' Club showed that receipts of £112 1s. 5d., and expenditure £88 1s. 5d., thus leaving a credit balance of £24. The year, it was pointed out, had been a successful one altogether, for some interesting papers had been read, and useful discussion taken place; whilst the membership had increased.

Mr. W. Troy was elected president for the ensuing year, and a vote of thanks returned to the retiring president, Mr. Walter; whilst other officers were chosen, Dr. H. H. Lester, the hon. secretary since the death of Mr. Durrant, being unanimously re-elected as hon. secretary.

An Edition de Luxe of the Great Eastern Railway Company's Handbook, "Summer Holidays," has been issued, and is altogether a well-put production likely to increase the popularity of East Anglia. Prominence has been given to some less known districts in East Anglia, and the facsimile water-colour, pen and ink illustrations have been made a special feature.

Professor Collinge, of the University of Birmingham, whose entomological work has more than once been noted in these columns, has, we learn, another scheme in hand that is of a more immediate interest to farmers. In the view of men of science the ordinary mode of destroying insect pests by means of sprays, washes, fumigations, and the like, are one and all wasteful and inefficient; and what Mr. Collinge contemplates is the establishment of an "insectory" where certain parasites which prey on fruit-destroying insects may be systematically cultivated and disseminated through the gardens and orchards of the Midlands when the need arises. So in due time it should be possible for any farmer or fruit grower on notifying any serious insect infestation, to receive the supply of the particular parasite which naturally checks its course. For a beginning a campaign has been opened against the larvae of the codling moth, the plum and hop aphid, and the rose aphid, to oppose which the ichneumon fly is being encouraged; and if a sufficient number of the last can be bred, Midland fruit growers may hope to see the pests reduced to largely and permanently reduced in numbers.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

There was an average supply of cattle at the fair at Middleton (co. Cork) on Monday, and a fair demand was experienced. Prices: Yearlings, 1st class, £7 15s. to £9; 2nd class, £6 5s. to £7 7s. 6d.; 3rd class, £5 to £6; two-year-olds, 1st class, £10 to £13; 2nd class, £8 to £9 15s.; 3rd class, £7 to £7 12s. 6d.; three-year-olds, 1st class, £15 5s. to £16 10s.; 2nd class, £13 10s. to £14 10s.; 1st class, £14 7s. 6d. to £16; 2nd class, £11 10s. to £13; 3rd class, £9 to £10. Lambs, 1st class, £1 to £1 12s.; 2nd class, £1 3s. to £1 5s.; over twelve and under twenty-four months' old, 1st class, £2 1s. to £2 6s.; 2nd class, £1 14s. 6d. to £1 18s. Young pigs, eight to ten weeks' old, averaged about 24s. each.

SHOW GOSSIP.

The Sussex County Agricultural Society have drawn up an attractive programme for their show at Brighton on Wednesday and Thursday next, and given fine weather the show should be a great success, for "London by the Sea" is now crowded with visitors from all parts of the country, and a large proportion will no doubt put in an appearance at the show. The attractions, other than the display of live stock, include riding, driving, and jumping competitions, bending race, and the band of the 20th Hussars. The showyard will be opened each day at 10 a.m. and close at 7.45 on the first day, and 6 p.m. on the second day.

The fifty-fourth annual show of the Keele Agricultural and Horticultural Society is to be held in Keele Park on Thursday, August 9, and should certainly prove a success, for no less a sum than £500 is offered in prizes—an unusually large amount for a local society—and the sum is well spread over all sections, which include horses, cattle, sheep, pigs, butter and cheese, poultry, pigeons, &c., and, of course, the horticultural classes. Numerous attractions are provided for the visitors, who would soon tire of a purely agricultural show, so that the society have no reason to be disappointed to make the event a success; and it is to be hoped they will be rewarded as they deserve. Prize schedules, &c., can be had of the Secretary, Mr. W. A. Benson, Silverdale.

£400 is the sum offered in prizes by the Cleveland Agricultural Society for their show at Redcar on August 24, prize schedules for which have now been issued. The cattle, sheep, and pigs classes are confined to the district, but a large number of horse classes have been provided, and these are open to the United Kingdom. Agricultural horses, hunters, Cleveland Bays, coach horses, Hackneys, and ponies all figure in the list, whilst in addition there will be driving, jumping, and turn-out competitions, also a donkey race. Minor sections include dairy and farm produce, rabbits, poultry, pigeons, and ferrets. Entries close on August 15 with the secretary, Mr. T. Turner, Lazenby, Easton, R.S.O., Yorks.

For a local society the Cookstown Agricultural and Horticultural Society issued quite an ambitious prize schedule, and that it meets with success is proved by the fact that the entries at the last two shows have been considerably over a thousand. The sections comprise cattle and poultry (some of the classes for which were open ones), flowers, fruit, vegetables, butter, eggs,

honey, and home industries. This year's show, to be held on August 22, will be on similar lines to that of last year, and a good amount is offered in prizes. Entries close August 4, with the assistant secretary, Mr. G. Ramsay, Mountain View, Cookstown.

The entries received for the Tunbridge Wells

SHOW SECRETARIES.

Mr. E. J. POWELL,
Smithfield Club.

and South-Eastern Counties Agricultural Society's annual show at Tunbridge Wells on the 26th and 27th inst., indicate that the show may be expected to be of the usual extent and high character, the number of animals entered being generally satisfactory. Heavy horses (Shires) account for nearly

100 entries, and there are about twice that number in the classes for Hunters, Hackneys, and other of the lighter breeds. Among cattle, Jerseys will, as is customary at this show, take the lead numerically, and some strong classes will be found; but other breeds will be there in satisfactory numbers, and admirers of Shorthorn, Sussex, Guernsey, Angus, and Dexter stock will find plenty to interest them; while, from the practical business point of view, the competitions in the milking trial classes promise to be of unusual interest, judging by the number of cows entered.

Sheep bid fair to be one of the chief attractions of the above show. The entries are numerous, especially of the Romney Marsh breed, which will include contributions from most of the best known breeders and exhibitors, and the rapid improvement in this class of sheep during the past few years will prepare visitors for seeing some very superior specimens, while Southdowns will not be lacking either in number or quality. There will also be a large collection of goats, and as they will be sent by the most famous breeders they are certain to be of the best. The show of carriages, implements, &c., will be of about the usual extent and the customary competitions in the horse ring will doubtless prove as attractive as ever. Under favourable weather conditions there would appear every ground for anticipating another successful show.

The Whalley Agricultural Society have issued a good prize schedule for their show on the 28th inst., it including open classes and handsome premiums for Shires, Hackneys, hunters, turnouts, leapers, cattle, sheep, poultry, &c. The society, which was instituted as far back as 1810, is as vigorous as ever, and the above show will doubtless be as successful as any of its predecessors. Entries close at 10 a.m. on the 24th inst. with the secretary, Mr. J. M. Rawcliffe, Whalley, Blackburn.

We would remind intending exhibitors at the South Durham and North Yorks Horse, Cattle, and Dog Show, to be held at Darlington on August 1, that entries close on Monday next, the 23rd inst. Forty-four classes have been provided for horses and cattle, including eleven classes for hunters, and good prizes are offered in each. In addition there is a good classification for harness and agricultural horses, dairy and farm produce, poultry, &c. Mr. J. J. Harris, 6, Arden Street, Darlington, is the secretary, and from him can be had entry forms, prize schedules, &c.

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

DURHAM COUNTY AGRICULTURAL SOCIETY. ANNUAL SHOW AT WOLSHINGHAM.

On WEDNESDAY, August 15, 1906. Upwards of £1,000 given in Prizes for Cattle, Sheep Dog Trials, Dogs, Pigeons, Poultry, Leaping, Milking Demonstrations, Rabbits, Butter, Eggs, &c. Implements and Horses.

Entries close Monday, July 30, 1906. Prize Schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flass House, Durham.

Prize Schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,

WM. CHRYSTAL,
Houghton-le-Spring.

EIGHTON BUZZARD AND LINSLADE POAL SHOW SOCIETY are holding their

POAL SHOW ON TUESDAY, SEPTEMBER 18, 1906,

at Leighton Buzzard. Schedules now ready, and can be had on application to either of the Secretaries.

Entries close September 4.

WALTER C. PRUDAMES,
W. GRAVELLY W. WILLIS,
Hon. Secs.

THE EAST BERKS HORSE SHOW will be held at HAWTHORN HILL RACECOURSE (between Maidenhead and Bracknell, Berks), on

THURSDAY, AUGUST 23, 1906.

Entries close July 31, or with double fees, August 7.

Schedules, &c., may be obtained of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C.

WARWICKSHIRE AGRICULTURAL SOCIETY.

SHOW at NUNEATON, AUGUST 29 and 30, 1906.

Prizes over £1,140. For Horses, Cattle, Sheep, Pigs, Implements, Dairy Produce, Eggs, Dressed Poultry, Stock Judging Competition, &c., &c. Prizes in Horse Department over £595. Special Driving and Jumping Classes. Last day of Entry July 28, after which at double fees up to 8 p.m., July 31.

Prize Books and Entry Forms sent on application to—

FREDERICK H. MOORE,
Secretary,
Warwick.

KEELE AGRICULTURAL SHOW.

THURSDAY, AUGUST 9, 1906.

£600 PRIZES.

Horses, Cattle, Sheep, Pigs, Dogs, Cats, Poultry, Rabbits, Flowers, Vegetables, Turn-Outs and Leaping.

Entries close July 30; double fees later, except dogs. Schedules ready.

W. A. BENSON, Silverdale, Staffs.

MELTHAM AND DISTRICT

Fifteenth Annual Agricultural Show, JULY 28, 1906.—A Grand

Show of Horses, Cattle, Sheep and Pigs, Farming and Gardening Produce, &c., Leaping, and Sheep Dog trials, in conjunction with Dogs, Poultry, Pigeons and Rabbits. Entries close

July 21.—For Schedules, now ready, apply to J. BRAMLEY, Carlisle Terrace, Meltham, Huddersfield.

MALTON AGRICULTURAL SOCIETY'S SHOW, Wednesday,

July 25, 1906. President—Capt.

Clive Belmore. Entries close July 7.

Schedules and Entry Forms on application to the Secretary.—THOS.

MITCHELL, The Mount, Malton.

THE SOUTH DURHAM AND NORTH YORKSHIRE HORSE, CATTLE AND DOG SHOW, AT DARLINGTON, ON WEDNESDAY, AUGUST 1, 1906.

44 classes for Horses and Cattle, including 11 classes for Hunters. £15 First Prize for Four-year-olds and upwards.

There is also a splendid classification for Harness and Agricultural Horses, Classes for Butter, Cheese, Eggs, Honey, and Dressed Poultry.

Entries close Monday, July 23, 1906. Schedules and entry forms on application to—J. J. HARRIS, 6, Arden Street, Darlington.

WHALLEY AGRICULTURAL SOCIETY. (Instituted 1810.)

ANNUAL SHOW, SATURDAY,

JULY 28. Prize of £5 offered for best Shire Mare, and of £5 each for best Shire Colt or Filly Foal. Open

Classes and Handsome Premiums for Hackneys, Hunters, Turnouts, Leapers, Cattle, Sheep, Poultry, &c. Entries

close 10 a.m., July 24. Dogs one day earlier. Particulars and entry forms

from JAS. M. RAWCLIFFE, Whalley, Blackburn.

COLESHILL HORSE SHOW, SEPTEMBER 19, 1906.

£100 in prizes, JUMPING, DRIVING, TURNOUTS, &c. Entries close September 5, 1906

—W. H. M. BARTON, Sec., Church Hill, Colleshill, near Birmingham.

FELTON AND WARKWORTH AGRICULTURAL SOCIETY.

AMBLE SHOW,

MONDAY, AUG. 6, 1906.

Extra Prizes for Open Competitions in Horse Leaping. Entries close July

10. Prize Lists and Entry Forms on application to the Secretary, J. BARKER,

a.m. Schedules G. H. SKEWEN,

Greenfield, Upholland, near Wigan.

DAIRY.

The Butter Committee's Report.

The report of the Select Committee of the House of Commons on Butter was laid upon the table of the House of Commons last week. It will be remembered that the inquiry was instituted at the commencement of the session "to consider whether any, and if so what, further legislation is required in order to secure the better conduct and control of the trade in butter and butter substitutes," and, under the chairmanship of Sir Edward Streechey, who represents the Board of Agriculture in the House of Commons, has held a considerable number of meetings.

The principal recommendation of the report is that butter factories should be placed under the same law as margarine factories so far as inspection is concerned. At present there is no power of inspecting premises where butter is made or dealt with the public markets, and the committee found that there has been a good deal of "faking" and adulteration, which it is necessary to check. It is hoped by means of inspection to put an end to such practices and to trace where foreign fats are used for the manufacture of butter.

The report suggests that powers should be given to inspectors of the Board of Agriculture to enter any premises where there are reasonable grounds to suspect that butter is blended, reworked, or adulterated, or where it is believed adulterated butter is stored, and that all such premises should be registered, the licence granted at the time of registration being subject to annual renewal.

In the same connection, it is proposed that no fat other than butter-fat, and no vegetables or other oils, nor any substance capable of being used as an adulterant of butter, should be allowed to be stored in any registered butter factory, that no butter made or reworked in such factory should contain more than 16 per cent. of water, and that the addition to butter at any stage of manufacture of any fat not derived from milk should be forbidden.

Other recommendations of the committee are:—Penalties for the importation of adulterated butter should be proportionate to the magnitude of the consignment, and that all practicable steps should be taken to bring about international agreements as to the prevention of adulteration.

Milk-Blended Butter.

As regards the blending of milk with butter, the committee say:—

"Your committee think it would not be desirable to prohibit the manufacture or sale of the substance known as milk-blended butter, as it appears that this substance meets the wants or suits the tastes of a certain section of the community; but they consider that it is not butter; that it and other substances (not being margarine) containing butter fat, should only be allowed to be manufactured for sale under a special name, and regulations approved by the Board of Agriculture and Fisheries; and that when sold by retail, it should be delivered to the purchaser in a wrapper, also approved by the Board of Agriculture and Fisheries. It would be necessary that factories where the mixture is made, and the premises of wholesale dealers who deal in it, should be registered, and that books should be kept on these factories and premises by which consignments of this mixture could be traced to the retailer."

Numerous witnesses expressed the opinion that no special exemption as to salt firkin butter manufactured by Irish farmers is desirable. The Committee concur in this view. They think that the existing law should be sufficient to prevent the manufacture by farmers in Ireland of salt firkin butter containing an unreasonable or fraudulent amount of moisture, and, so far as this kind of butter is concerned, they do not recommend any further legislation.

The Local Government Board and Preservatives in Milk.

The Local Government Board has issued a circular to authorities under the Food and Drugs Act, with reference to preservatives in milk. It is pointed out that the report of the Departmental Committee on Food Preservatives (the last meeting of which body was held in May, 1900) concluded that the addition of preservatives to milk was not necessary, and recommended that no preservatives should be so added.

The circular goes on to say that the Board has obtained further evidence on the subject, which shows that many milk vendors now conduct their business without preservatives, and that in some districts prosecutions have been frequently and successfully carried out against vendors, in order to bring about the disuse of the practice.

The circular advises the local authorities to obtain reports from their public analysts as to the extent of the use of preservatives, to notify milk traders that action will be taken under the Food and Drugs Act, and finally, where necessary, to take such action.

It is pointed out that a question of some difficulty arises where milk is sold subject to a declaration that it contains preservatives, but the board is advised that where the usual fomal or boron preservatives are used in a certain strength, the presumption that the article has been rendered injurious to health is strong.

Adulterated Dutch Butter.

The interesting case which has occupied a considerable time of the Grimsby stipendiary magistrate, was finally concluded on Wednesday. It will be remembered that the Customs authorities charged Messrs. John C. Hopkinson, provision merchants, Liverpool, E. K. and W. E. Peters, produce importers, Grimsby, and the Continental Egg Company, Grimsby, with importing adulterated butter, and there were two summonses against the first-named, three against the second, and two against the last-named, who pleaded guilty of a technical offence.

His Worship said that after very carefully considering the evidence he felt bound to decide that the Government analysts had not made mistakes, and that the figures submitted by them must decide the cases. The prominent analysts who had been called for the defence had all admitted that the butter was suspicious, but that they would not in their capacities as public analysts condemn it. He had come to the conclusion that the butter was not genuine. There was nothing to prove the guilty knowledge of the importers, but under the Act the importer was liable.

There was another innocent party to consider. It was not fair to the consumer who thought he, when he purchased a shilling's worth of butter, should get 10½d. worth of good butter and the rest refined beef suet. In the interest of the consumer the importation should be stopped. He would impose a fine of £10 and £20 costs on Messrs. Hopkinson's first summons, had £1 and the court costs on the second. Messrs. Peters would be fined £5 and £10 costs for the first offence, and £1 each and the court costs upon the other two, while the Continental Egg Company, who had pleaded guilty, would be fined £5 and the court costs.

The Butter Warranty Case.

In accordance with the recently-delivered judgment of the King's Bench Divisional Court, Alderman Sir James Ritchie sat, at the Mansion House, on Wednesday, to re-hear the summons issued at the instance of the Customs against Messrs. J. and L. Lonsdale and Co., Ltd., Stanley Street, Liverpool, for having, on August 28, 1905, imported into the United Kingdom from Rotterdam 127 packages of butter which, on examination of a sample thereof, was found to be adulterated, the packages not being conspicuously marked as required by the Sale of Foods and Drugs Act.

The summons was heard before Sir James Ritchie in January, and it was dismissed by him, the defendants having proved that they had received a warranty with the butter, which warranty stated that it was pure butter manufactured under the control of the Dutch Government, and known as "control butter." From the alderman's decision the Customs appealed to the King's Bench Division. The appeal came on for hearing recently before a Divisional Court, who set aside Sir James Ritchie's decision and sent the case back to be reheard by him, with the expression of the court's opinion that the defence of warranty was not available on a summons for importing butter.

Sir James Ritchie said the Customs had expressed themselves very favourably towards the defendants, and he imposed the nominal fine of 10s. and £3 3s. costs.

Western Counties Cheddar Cheese School.

The first draft of twenty-eight cheeses, weighing over 20 cwt., made during the month of April last at the above-named school, carried on at Glendale Farm, near Wedmore, has just been sold to Messrs. Hill Brothers, of Evercecih, at 6½s. per cwt. of 112 lb. 3,577 gallons of milk made 3,503 lb. of green cheese, which, when sold at eleven weeks old, weighed 3,300 lb., being a shrinkage of 6 per cent.

The following particulars relating to the manufacture of the cheese will be of interest to cheese-makers:—Temperature of milk when rendered, 84° deg.; average acidity of milk when rendered, 19°; average temperature of first and second scalds, 88 deg. and 93 deg.; average acidity of whey at close of second scald, 15°; average acidity of whey when cheese was vatted, 77°; average time when cheese was put in press, 3.25 p.m.

All Advertisements ordered for the "Mark Lane Express" appear simultaneously in the *THIN* paper "COLONIAL AND FOREIGN EDITION" for circulation abroad, WITHOUT EXTRA COST to the Advertiser.

Midland Notes.

THE harvest of one entire field of wheat, now growing in Warwickshire, being sold this week to a well-known Midland firm of corn merchants, who are expecting to do well out of the bargain, that how will the grower fare? Not very brilliantly, one fears. It is not a case of money being wanted immediately for some pressing purpose. The crop, which will not be ripe for three weeks or so, must be harvested, threshed out, and delivered before the cheque will be received, and though the purchasers take the chance of damage by prolonged rain, it is not to be supposed that they do not make allowance for that and similar risks in calculating the price. But apart from any question of expediency, the deal is worth noting as being about the first of the kind effected this season in this district.

THE *Times* reports upon crop prospects at the beginning of July, issued to-day, give but a poor account of the outlook in that big section of the country which takes in the counties of Leicestershire, Northants, Notts, Oxford, Rutland, and Warwick. Judged by these figures, barley and oats appear just a little more promising than they did twelve months ago, but wheat indifferent and of poorer promise than in any other section of the country, roots distinctly worse than in any other district, and grass decidedly inferior to that of the north and west. Potatoes, judged by the same statistics, seem to be better in these Midland counties than they are further east, but by no means so good as in the other divisions of the kingdom; and beans are spoken of favourably from every county but Warwick. Surely, however, there is some mistake in a report which places the condition of field beans in Warwickshire at 10 per cent. less than of any other county mentioned, and 20 per cent. less than most.

THERE are various reasons, however, for suggesting that some of these figures are more or less misleading. It is misleading, in the first place, to assign a low value to a crop merely because it is a little backward, and although it may be healthy and promising with every prospect of an ultimate abundant yield. In the second place, what stood in the way of the progress of vegetation during June was lack of moisture, and since the end of the month crops of all kinds have come on rapidly. Farmers in Staffordshire, who are more systematic in manuring their grass land than some others, are reaping their reward to-day in a hay crop of more than average bulk and an abundant supply of herbage on the pastures, although in the latter case so much of the grass has now risen to seed that the milk flow is not considerably helped. One is sorry to see and hear of a good deal of blight among the potatoes, earlier especially, in some districts of Worcestershire and Warwickshire, along the borders.

THE customary announcement of the preserved egg prizes at the coming Christmas Cattle Show at the Crystal Palace is reminding both of the time of the year, and of a certain commercial grievance of which I have been hearing. It is so seldom any complaint is made as to farmers' honesty—or lack of it—that when any arises it is worth inquiry. In this case it is the manager of a large Midland company doing an extensive trade in dairy produce who is aggrieved, and the trouble arises over eggs. Eggs are collected by the company's agents from very many farms within a 100 miles of Birmingham, and in the numerous cases in which the farmer is not the supplier. But the farmer, I am assured, has learned too well the possibilities of egg preservation, with the result that when autumn comes a considerable and growing proportion of the eggs offered are found on examination to be preserved. If they were openly sold as such no great harm would be done, but they are sold as "new laid" and at "new laid" prices. In this case (it being the practice to examine every egg) they are returned, I am told, to the consignee, who is notified that for the future he may take his custom elsewhere. But apparently the number of preserved eggs that masquerade as fresh during autumn and winter is increasing.

July 12, 1906.

At Thursday's meeting of the Court of Common Council Mr. Hepburn, chairman of the Sanitary Committee, said that so far from a recent statement at the London County Council as to the excessive adulteration of milk sold in the City being true, the percentage of adulteration had decreased from 21 per cent. of the samples examined in 1901 to 7.5 in the last two years, which favourably compared with 12.5 in the rest of the metropolis.

Agricultural Politics.

BY A LOBBYIST.

Lord Carrington and the Fertilisers Bill.

What a tense anxiety for the immaculate character of the Minister for Agriculture possesses those politicians who protested against Lord Carrington seeking, as they put it, to influence the Committee dealing with the Fertilisers and Feeding Stuffs Bill! What an heretical criminality was this of his lordship's! Interested in the progress of a Bill promoted by his own department, and having the sympathy of Conservatives and Liberals alike and actually bearing the *imprimatur* of his predecessor in his office, Lord Carrington, finding himself ostracised from the Committee dowered with the duty of examining it, sought to commend its purpose to the legislators having that duty. Had he been in the Commons he would have inevitably been a member of this body, and in that capacity had the duty not merely of presenting arguments, but of commending them by every personal influence and solicitation! To seek to recompense himself for the disability he thus suffered as a result of titular distinction and the accident of his birth was thus not merely heresy but flagrant burglary.

The Four More Significant Points.

I am bound to say that I regard the report of the Committee on what is brusquely described in the House of Commons as "butter adulteration" as being on the whole satisfactory. Members of the House—even those who demanded the imposition of the most rigorous and punitive measures—are possessed by that view. Sympathetic appreciation especially centres upon four suggestions: The first is that providing that an inspector of the Board of Agriculture should have power to enter any premises where butter is blended, re-worked or adulterated, or where the adulterated article is suspected to be stored, and insisting on the licensing of such premises. The second is that proposing that no fat other than butter fat, and no vegetable or other oils, or any substitute capable of being used as an adulterant for oils, should be allowed in a registered butter factory. The third is that providing that neither butter nor margarine shall contain more than 16 per cent. of water or moisture, and that in the case of the former no fat other than that derived from milk shall be added. The fourth is that providing that margarine shall masquerade under no other name, and that other substances shall have a name applied to them which shall be sufficiently descriptive to differentiate them from butter.

The House Against Adulteration.

There will be no serious difficulty, except from the rancorous spirit which indulges in wanton obstruction or loves to revel in antagonism from buffoon impishness, in retaining in the measure this saliently rigorous character. It is an admirable sign of the times—it is especially the case with the more democratic and demagogic section—that the prevalent sentiment of the House is strongly in favour of the insistence upon the purity of all foods. This sentiment regards the words "blending," "reworking," and "substitutes" as often something very like synonyms for adulteration, and, to put it bluntly, nastiness.

Sir E. Strachey as Minister.

It is only right that a tribute should be paid to the intelligent assiduity and wise insistence of Sir E. Strachey in connection with this and other matters. Sir E. Strachey, as the Minister representing agriculture in the House of Commons, has been sensible enough never to seek to coruscate. He has been content to be a minor being in the firmament of officialdom and not been moved by the desire to scintillate. Agriculture may be described as the science of Boetia, of decorous solidity; and, recognising the fact, Sir E. Strachey has played the part of one of its apostles with amiable discretion and harmonious common-sense. On such a question as this of fertilisers and feeding stuffs, Sir E. Strachey has a knowledge which, allied to undeniable

capacity and sympathy, has been of the greatest value to the interest. The fact that the Minister for Agriculture, as the chief of a national spending department (national parsimony does not allow him to be reckless with his "denimism ha'pence"), has no place in the House of Commons, where he could be subjected to an unceasingly interrogative vigilance, is still to be deplored. Still, failing the realisation of this wisdom, the present system is an excellent one; that is, the having in either Chamber a Minister who is alert, sympathetic, and generously reformative in character; without being touched by that featherheadedness which is too often associated with progressive politics.

Mr. Burns and Our Interest.

Methinks Mr. John Burns is justifying the character which I have given him—he, the erstwhile intransigent who once regarded the red hat as the sacred oriflamme of liberty as a friend of agriculture. He may not intend it, but he is, or rather has been, our friend. His opposition to the incensate drafting of the street-corner loafers of the towns into the villages, there to become (in the eyes of their ebullient but ever-emotional apologists) heaven-sent agriculturists, had, as a sequel, a resolve to do nothing to facilitate the entrance of Yankee putrescence impudently pretending to be meat into this country. It is a wise sequel that he should be the author of a measure (the Public Health Regulations as to Food Bill) whose purpose is to impose regulations restricting and governing the importation, preparation, storage, and distribution of articles of food. I am glad that with his sane enthusiasm he has not been deflected from his purpose of dealing with this foreign offal trade by the fantastic depreciation of our own methods by men over-given to heroics. "If," said a speaker at the Sanitary Inspectors' Conference at Bristol, "the public knew a quarter of what is going on in the slaughter-houses of this country, the Chicago scare would not be in it." This means, if it mean anything at all, that our own filth is infinitely worse than the most revolting revelations of "The Jungle," or of the American investigators. This is not merely ridiculous exaggeration—it is, I should say, turgid rhodomontade, intended to tickle the ears of the groundlings—Mr. Burns is intent on completing the system of food-supply inspection, of robbing it of its gaps. But, again I ask, what is being done by the disciplined agrarian bodies to persuade the food-growers of this country to take advantage of the opportunities thus created for them? Those bodies exhibit a spirit of dull acquiescence in anything the State may ordain. They have become too habituated to their own inertia to now relinquish it.

Gilbertan Position in Cornwall.

"Was I sober when I swore?" asks Omar Khayyam. Well, perhaps, this is an unwise preface to the question as to what is thought by those politicians who have been anathematising the Land Tenure Bill as though it were a sacrilege against landlord-rights, and very nigh unto economic blasphemy of the fact that the Conservative candidate for the seat from which Mr. Agar-Robartes has been ejected is in favour of the measure. Of course, the same vitriolic heat has not been generated over this measure as has been generated over the Education Bill; but at least it may be said to be the second measure of the Session, over which men's imaginations have been inflamed and their tempers irritated. Well, here is the fact that from this point of view what may now be described as the second Ministerial measure of the Session (as a fact, economically it has nothing like the significance of the Workmen's Compensation Bill or the Taff Vale Bill) is supported by the anti-Ministerial candidate in an attempt to wrest a seat from the Ministerialists. 'Tis almost a Gilbertan situation, but to those of us who are aware of the electoral situation it is comprehensible. I am not accusing this Conservative candidate of insincerity—far from it, and he is certainly fighting the seat with conspicuous ability and gallantry; but he is in the

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

area in which the Callington rural programme is fashioned, and to set himself athwart its tenure-reform suggestions—most of which are included in the Land Tenure Bill—would be to court overwhelming and assured defeat.

Even Antagonism Better than Apathy.

Well, at all events, despite the unintended humour of this situation—humour which must have, however, a pungent distaste for certain members of the House of Commons—it is at least gratifying to find that there is one rural constituency in England in which a rural issue of moment to farmers commands an absorbing interest. No matter what may be the character of that interest so long as it have an intelligent basis—its exhibition is a happy portent. Better have tenure proposals which have received the approval of the Central Chambers derided by antagonism than have them regarded in the place where the rural interest is the dominating quantity with indifference and apathy!

An Heroic Deed—Neglected!

By the way, the possibility of a greatly heroic deed presented itself to my gaze. The vision was of the capable and vigorous Parliamentarians who have so strenuously opposed the Land Tenure Bill descending armed *cap-i-pie* upon the Bodmin constituency willing to couch a lance *a l'entrance* against any knight who dared champion the measure. Mind you, this constituency is, in a sense, its birth-place. True, the Central Chambers have accepted the main principles of the Bill; but this should not have prevented this act of daring, knightly derring-do. I am assured that not one has leapt into the arena, because not one has been invited to do so. They would be an electoral inconvenience. Is the meaning of this perceived?—the meaning that a moderate reform is comprehended to be the best enemy of wild turgid suggestions.

The Staffordshire Agricultural Society is amongst those holding their shows this week, and the site is at Stone, where, on Wednesday and Thursday, thousands of visitors are expected, for a good show has been arranged, and the programme, a copy of which we have seen, shows that there will be plenty to interest visitors. All that seems wanted is fine weather, and it is to be hoped the society will be favoured in this respect.

Last autumn, during the winter, and in the early spring we heard a good deal about the ravages of wood-pigeons, and the complaints have not ceased, for in some parts these voracious marauders have been the authors of considerable mischief during the early summer, and there are few signs of them holding their hand. The mild weather early in the year was favourable to breeding, and pigeons began nesting early, with the result that two broods have been brought on in many cases, and the young birds have turned to the turnip fields for food. While the young pigeons are feeding earlier turnips are later own to dry weather and the ravages of the turnip fly, and the result is that the birds destroy the plants, which would have been much more advanced in growth had the general conditions been normal. We are inclined to agree with a farmer who observed the other day that if he had not one pest to worry him to death he was sure to have another.

National Potato Society.—Mr. W. P. Wright, having been appointed Horticultural Superintendent at the South-Eastern Agricultural College, Wye, has been reluctantly compelled to resign the secretaryship and treasurer'ship of the National Potato Society, and the new officers are:—Hon. Secretary, Mr. W. H. Adsett, Hatton House, Great Queen Street, London, W.C.; Hon. Treasurer, Mr. Charles Foster, University College, Reading, Berks.

Weather, Crops and Stock.

A Wiltshire Survey.

ONE of our Wiltshire readers, who writes under the signature of "An Old Hand"—he is turned eighty-one years of age, so the *nom de plume* is an appropriate one— informs us that he returned on Tuesday from his regular and yearly inspection of some of the largest corn farms in the county of Wiltshire. Two brothers he visited farm between them nearly 4,000 acres on separate holdings, and he has been good enough to send us his verdict on his inspection. It is as follows:—I only saw 2,008 pieces of wheat up to a full average, which I call eight sacks, and the greater portion much under this; it is so thin on the land, and consequently a very small crop of straw, and as every straw must have an ear at the end of it, I fail to see how the crop can be any other than a light one. I may add that all the land I saw is well farmed, and has been so for fifty years to my knowledge, and the same stock of sheep on it as has always been. The barley and oats, I take it, will be about an average, having wonderfully improved of late, and I say this because about a month since I was over the same farms, so could note the change. Hay will be about three-quarters of an average. In conclusion our correspondent says:—I have always been much interested in the corn crops, especially barley, which you can understand when I tell you that for many years I bought 500 qr. of this grain weekly, and was a grower also.

The Crops in Huntingdonshire.

A WELL-KNOWN Huntingdonshire farmer and breeder sends us the following interesting account of the position in that county:—The rain on the 29th ult., has done an immense amount of good in the high lands on which all crops much needed moisture. On the Fens the oat, barley, and some of the wheat crops have been laid by the heavy storms, and great fears are entertained for the yield and quality of the grain. Some of the more thoughtful or observant farmers have secured their hay grown on the uplands in good condition, whilst others who fully imagined that the rains would increase the growth of the undergrasses have been disappointed, and now find that the quality of the bents is gone and the residue very much like highly coloured straw and of about equal feeding value. It appears that each crop will be ready in about the usual season, even though the weather may have been unpropitious. Sometimes the period of ripening is delayed, and then the crop usually suffers in loss of quantity or quality. Roots and weeds are growing splendidly. There will be some very fine fields of barley, whilst many other fields will show signs of drought and ripening, thus rendering the barley of less use for malting, not as great a loss as formerly.

The Outlook in Brecon.

A BRECON farmer sends us the following rosette view of the present farming outlook in his county, and it will be noticed that his is one of the few districts where the hay crop is abundant. The present summer is one of the best that has been experienced for many years, the occasional showers of rain, combined with the nice genial weather, have worked such a good effect on the ground, so that the crops generally are very promising, and the hay crop abundant. Grass is also very plentiful, and provided we get a good harvest, evidently it will be one of the best seasons on record.

The Scottish Harvest: Good Prospects.

REPORTS as to harvest prospects in the various districts of Scotland, published by the *Scottishman*, are, with few exceptions, of an exceptionally hopeful character. All round, with favourable weather, the crops are expected to be heavier and more profitable than for many years. The harvest will probably begin about the end of August, or in backward districts about the first week of September. It will thus be from a fortnight to three weeks later than last year's harvest. The main, and practically the only, exception to the favourable outlook is furnished in the case of turnips. Where farmers have sown early the plants have grown well; but those sown later found an unfavourable seed-time. Resowing has had to be resorted to in many cases, and the prospects vary considerably.

Mr. Ernest Parke, the results of whose artificial manure experiments at Kington have appeared in our columns during the past five years, has been made a magistrate for Warwickshire.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Whitechapel Hay Market Customs in Dispute.

On Tuesday, sitting as an additional Judge of the King's Bench Division, Mr. Justice Swinfen Eady delivered reserved judgment in the case of "Gingell, Son, and Foskett (Limited) v. the Stepney Borough Council." This was a test action brought by the salesmen of the ancient hay and straw market in High Street, Whitechapel, to determine the validity of certain market regulations issued by the Stepney Borough Council, and their right to extend the limits of the market into Leman Street, Commercial Street, and Commercial Road, which adjoin the High Street. The Council denied that the salesmen had any such right, and claimed that the market was restricted to the High Street.

His Lordship held that the proper inference to be drawn from the evidence and the documents was that the Whitechapel Hay Market was a market without meets and bounds, and might extend from time to time as the exigencies of the market might require, and that the streets in question must be presumed to have been dedicated to the public, subject to the exercise of the market franchise. That position was recognised by Section 46 of the Whitechapel Improvement Act, 1853.

His Lordship also found that the market regulations issued by the council were invalid. The declaration asked for by the salesmen was granted, and the council was ordered to pay the costs.

Damage by Trespassing Cattle.

SIR,—I should be glad if your Barrister-at-Law will give me advice on the following:—A. and B. have lands adjoining, divided by fences, belonging in some places to A. and in others to B. Last week B.'s bull broke through B.'s fence into A.'s land and gored one of A.'s cows so badly that she had to be killed. Is B. liable for the loss, and if so, how should A. proceed in order to obtain damages? It may be said that B. has been in possession of the land in a friendly manner on the subject, but denies any liability.

July 13, 1906. MANY YEARS SUBSCRIBER.

[It is the duty of every occupier of fields who keeps cattle in them to prevent them from doing damage by straying or injuring the property of others. This entails the liability of fencing properly. A's cow was injured by B.'s bull breaking through B.'s fence, therefore it rests with B. to show that he took the proper precautions to prevent this. *Prima facie* he did not, otherwise B.'s bull would not have broken through the fence. A. can bring an action. He should prove that the cow was killed and the loss occasioned him by the death of the cow. Evidence should be called to show that B.'s fence was broken through, and that it was not secure. On these facts being proved A. should succeed in his claim.—BARRISTER-AT-LAW.]

Income Tax.

SIR,—I am a tenant farmer, and my rent is admitted by the Surveyor of Taxes as being below taxable values for income tax. But my wife in her profession earns a considerable yearly income which she pays income tax on. From this I do not benefit one single farthing, as, naturally, my wife takes her earnings and does what she pleases with them. But the Surveyor of Taxes—wrongly, I am certain—says I have to pay income tax in addition, because my wife earns money on which she now pays the full tax of 1s. in the pound. I know this claim on the part of the Surveyor of Taxes must be unfair; but I don't know what steps to take to prevent this claim for taxes on me. Cannot I do something? Should not married women's incomes be assessed absolutely separately? I trust your barrister can easily answer these questions. I have a strong conviction that I should not be made to pay income tax in addition to what my wife pays, as if she did not pay I should not be charged at all.

July 10, 1906.

A TENANT FARMER.

[The law on the point is as follows:—The income of a married woman residing with her husband is deemed to be his income for income tax purposes, notwithstanding any settlement or provisions of the Married Women's Property Act, 1882, and the joint income of husband and wife must be included in the claim which should be preferred by the husband; but by the Finance Act, 1897, where the total joint income of a husband and wife does not exceed £500, a wife may separate her claim for exemption or abatement from that of her husband on profits earned by means of her own personal labour in any profession, employment, or vocation under Schedule D, or from any office or employment under Schedule E.—BARRISTER-AT-LAW.]

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Lime Com-pounds.	Special Man-ures.	Kainit.	Sul-phate of Potash.	Muriat of Potash.
	Raw or Equa-lised.	Phos-phatic.	Dis-solved (sol-uble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. 10 6	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
" in Sulphate of Ammonia	—	—	—	—	—	—	—	—	—	12 6	—	—	—
" calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	—	1/10-2	—	2 0	2 0	—	—	—
" assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
" insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids	2 8	3 0
Oil or fat	2 8	3 0
Carbohydrates	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least $2\frac{1}{2}$ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by $2\frac{1}{2}$ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1	× $2\frac{1}{2}$ = 55.2
Oil	5.2	× $2\frac{1}{2}$ = 13.0
Carbohydrates	33.2	× 1 = 33.2

Total feeding units 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Nitrogenous Fertilisers: Their Comparative Efficacy.

A series of trials has been carried on for several years at the Experimental Station of the "Park des Princes" with the object of testing the relative fertilising value of the principal forms of nitrogenous plant food, and Professor Grandeau has recently published in the *Journal d'Agriculture Pratique*, a résumé of the conclusions. The trials were made with nitrate of soda, sulphate of ammonia, and organic ammonia in the form of dried blood, the crops being potatoes and maize.

It should be stated at the outset that the soil is described as stony, dry, and deficient in lime, and therefore not favourable to the natural process of nitrification, so that the results must not be accepted as applying to other kinds of soil. We must not generalise from the particular to the common.

In 1892, 1893, and 1896 potatoes were grown, and in 1897 maize. During these four years nitrogen was given in the three different forms at the rate of 40 lb. nitrogen per acre, the soil being well supplied with phosphate and potash.

The average yield of potatoes during the seasons 1892, 1893, and 1896 was, calculated per acre:—

(a) with nitrate of soda	10 tons.
(b) with sulphate of ammonia	8½ "
(c) with dried blood	6½ "

All the other conditions of cultivation being the same, the excess of the (a) plot cannot be attributed to anything else than the superiority on such soils of nitrate of soda over sulphate of ammonia or organic ammonia.

With the maize crop in 1897 the result, calculated per acre, was

With nitrate of soda	21½ tons.
With sulphate of ammonia	18½ tons.
With dried blood	16 tons.

Here, again, the increase of crop can only be put down to the greater efficacy of nitrate of soda—and it must be explained by the fact that whereas nitrate of soda supplies to the plant nitrogen in a form directly assimilable, the nitrogen of the other two fertilisers has to undergo a transformation in the soil, this process being more rapid in the sulphate of ammonia than in the organic material.

These experiments, according to the opinion of

Professor Grandeau, have demonstrated so clearly the superiority of nitrate of soda on the soils of the experimental station, that the trials with the three forms of nitrogenous manure have been discontinued.

This year nitrate of soda is being tested against the new nitrogenous fertiliser manufactured by the Birkland Eyde process, in Norway, from atmospheric nitrogen, and known under the names of nitrate of lime, basic nitrate of lime, and nitrite. The results should be of a very interesting character and will be published in due course.

Fertilisers and Feeding Stuffs.

Mr. Eugene Wason presided at the final sittings of the Standing Committee on Law, at which further consideration was given to the Fertilisers and Feeding Stuffs Bill.

Discussion was resumed on the motion to omit Clause 8, which provides for the imposition of a penalty in the case of any one who, having the custody of a fertiliser or feeding stuff, obstructs the official sampler in taking a sample for the purpose of analysis.

Mr. Bowles (C.) strongly opposed the clause, holding that it was a monstrous suggestion that persons, whether vendors or purchasers of these goods, should be bound to allow any officious official to enter their premises to take samples, and to require the productions of the invoices relating to them.

Mr. Cave (C.) characterised the clause as absurd. Sir E. Strachey, representing the Board of Agriculture, declared that the clause was absolutely necessary if earlier clauses were to be operative, and he pointed out that similar power existed under the Food and Drugs Act of 1879, and other Acts.

The amendment was negatived, and the clause added to the Bill.

Mr. Barnes (Lab.) moved as a new clause:—"The provisions of this Act shall not apply to fertilisers of the soil consisting of residual products from sewage purification or the manufacture of gas, or refuse from the cleansing of areas under the control of any county council or county borough which have been subjected to an artificial process for the purpose of rendering them suitable for transport or application to the

soil." He said there was no desire to put local authorities above the law, but simply to safeguard them in the law and practice hitherto observed.

Sir E. Strachey said that his object throughout the proceedings on this Bill had been to see that no injustice was done to the farmer on the one hand, or the trader on the other. This, however, was a proposal to give exceptional treatment to municipalities who traded in fertilisers.

The clause was negatived without a division, and the Bill as amended was ordered to be reported to the House.

Production of Sulphuric Acid.

The production of sulphuric acid may be regarded as in some measure indicative of the progress of agriculture and manufactures in a country. It is a product largely used in many industrial processes and especially in the manufacture of superphosphate; this material contains about half its weight of acid. As might be supposed, the consumption of such an important article is constantly increasing. In England its production amounts to about 1,000,000 tons, in Germany 900,000 tons, in the United States nearly as much, France is estimated to make 500,000 tons, Italy 200,000 tons, Austria nearly as much, Belgium 165,000 tons, Russia 125,000, and, finally, Japan 50,000 tons.

Using Liquid Manure.

Liquid manure should never be used when the soil is dry, as it is best appropriated by plants when there is plenty of moisture in the soil. Weakly plants are often killed with liquid manure unless it is very much diluted, as the stronger and more vigorous a plant the more food it can assimilate.

To use liquid manure properly not only should small quantities be applied, but it should be spread over a wide surface, hoing the ground when it becomes dry. It is used mostly for flowers, and especially rose bushes. It gives excellent results if applied a little at a time and often, but many who use it do not dilute it sufficiently, hence they claim that it is an injurious substance to use.

Preserving Potatoes in Germany.

The increasing difficulty of disposing at profitable prices of the enormous quantities of potatoes grown in Germany is causing anxiety among the growers, as it is feared that the position will fall into the same unsatisfactory state as that of the beetroot cultivation.

During the last twelve to fifteen years the acreage under potatoes has extended from 7,000,000 acres to over 8,000,000, and the average yield per acre, owing to the greater use of artificial manures, has also increased, in consequence of which the selling price has seriously declined.

The total crop is now estimated to be about 44,000,000 tons, which is disposed of somewhat as follows:—For seed, 6,000,000 tons; loss through disease, 5,000,000; human consumption, 1,500,000; fodder, 21,000,000; starch manufacture, 2,000,000; alcohol manufacture, 3,000,000; leaving a surplus of 5,000,000. It is just this surplus which gives the buyers the whip-hand of the market, as the growers, fearing to have such perishable stock left on their hands, are forced to sell cheap.

In order to find a way out of such an unsatisfactory condition, the farmers are taking counsel together. The idea is that they should establish works to desiccate the surplus potatoes, so that they can be stored for any length of time. Then the position would be changed to the advantage of the growers, who would no longer be at the mercy of the big buyers.

The large quantities, about 21,000,000 tons, used as food for pigs and cattle are got rid of during the months from October to June, while the potatoes are good and sound; and if the tubers could be preserved, the farmers could employ them as fodder with great advantage during the four other months. At least 9,000,000 tons of dried potatoes could be so used, which would quite relieve the market of the present surplus supplies, and even permit of a further extended cultivation.

* * *

The process of desiccating potatoes has already made considerable progress in Germany, and as 75 per cent. of moisture is dried out of them the product can be sent long distances at little cost.

According to statistics, foreign feeding stuffs are imported into Germany to the value of about £22,000,000. It should be possible to save a third of this enormous expenditure from going out of the country.

But besides the prospect of the advantageous use of dried potatoes, it is thought that there is another way in which potatoes might be put to good purpose. At present the potato haulms are burnt or put into the compost heap for manure. With proper drying apparatus, the green stuff could be dried without much cost, and potato hay made out of it. Four and a half cwt. of haulm will make 1 cwt. of hay, which is said to equal good meadow hay, and to be not only much liked by cattle, but to influence favourably the yield of rich milk.

Dried potatoes are also found to be quite suitable for alcohol manufacture, and the refuse to form a good cattle food, which will keep a long time.

The above ideas were a subject of discussion at a meeting of the German Agricultural Society, and are worth consideration.

Oilseed Crops of Eastern Bengal.

The Department of Land Records and Agriculture for Eastern Bengal and Assam have issued their final rough estimate of the area under oilseed crops in the important districts under their supervision.

On the whole the growing season has not been good; short rainfall at the time of sowing and insect pests have operated adversely.

Area sown—The area under rape and mustard is estimated to be 8 per cent. below that of last year, the shortage occurring principally in Mymensingh. In the Rajshahi district the area under rape and mustard is estimated to be a little more than one-third of that sown last year; it is stated that the cultivators have substituted sesamum for mustard on an area approximating to 25,000 acres; and altogether the area sown has decreased by 48,000 acres, owing to losses incurred on the crop of the previous year. The area under sesamum is larger owing to this change of cropping, though in other districts it is generally much the same as in previous years.

The area under linseed has increased in Rajshahi and Noakhali and elsewhere is much the same as in last year.

Rape and Mustard—The crop was generally poor, except in Pabna, where the final forecast indicates a normal crop. The final forecast indicates a 70 per cent. crop as compared with the original estimate of 75 per cent.

Linseed—The outturn is expected to be 76 per cent., rather less than the original estimate.

Sesamum—An outturn of 78 per cent. is expected for *rai*, and 80 per cent. for *badol* til.

Other oilseeds—The estimate is 73 per cent. as in the preliminary forecast.

Gross outturn—The outturn of rape and mustard is 168,900 tons, nearly 28 per cent. less than in 1904-1905, the decrease being due partly to a diminished area under cultivation and partly to unfavourable weather. The outturn of linseed (17,300 tons) is expected to be practically the same as in the previous year. The yield of sesamum and other oilseeds is estimated at 34,100—a very slight variation from the figures of 1904-1905.

Atmospheric Nitrogen.

Notes from a paper read by Dr. Birkeland, of Christiania, before the Faraday Society on July 2:

The nitrate problem has gained within a short space of time an important place among technical problems. During the last twenty years more than four times as much nitrate was exported from Chili than during the preceding twenty years, and the requirements of the world are still increasing. At the present time about a million and a half tons are yearly shipped, and experts calculate that the stock will be exhausted by 1910 at the latest.

* * *

In 1898 Sir William Crookes, in his address as president of the British Association, drew the attention of the entire civilised world to the question of food supply. The present acreage devoted to the world's growth of wheat is about 163,000,000 acres. At the average of 12·7 bushels per acre, this gives 2,070,000,000 bushels. But thirty years hence the demand will be 3,200,000,000 bushels, and there will be difficulty in finding the necessary acreage on which to grow the additional amount required. By increasing the present yield per acre from 12·7 to 20 bushels, we should, with our present acreage, secure a crop of the requisite amount. Now from 12·7 to 20 bushels per acre is a moderate increase of productiveness, and there is no doubt that a dressing with nitrate of soda will give this increase and more.

The action of nitrate of soda in improving the yield of wheat has been studied practically by Sir John Laves and Sir Henry Gilbert on their experimental field at Rothamsted. This field was sown with wheat for thirteen consecutive years without manure, and yielded an average of 11·9 bushels per acre. For the next thirteen years it was sown with wheat, and dressed with 5 cwt. of nitrate of soda per acre, other mineral constituents also being present. The average yield for these years was 35·4 bushels per acre—an increase of 2·5 bushels.

At this rate, to increase the world's crop of wheat by 7·8 bushels, about 14 cwt. of nitrate of soda must annually be applied to each acre. The amount required to raise the world's crop on 163,000,000 acres from the present supply of 2,070,000,000 bushels to the required 3,200,000,000 bushels, will be 12,000,000 tons distributed in varying amounts over the wheat-growing countries of the world.

If we assume a liberal estimate for nitrate obtained from the lower-grade deposit, and say that it will equal in quantity that from the richer quality, the supply may last, possibly, fifty years, at the rate of a million tons a year; but at the rate required to augment the world's supply of wheat to the point demanded thirty years hence, it will not last more than forty years.

According to Professor Grandeaue the crops harvested upon the cultivated area of France abstract annually 600,000 tons of nitrogen—in round numbers—from the soil. It is proved that the nitrogen returned in stable manure—even supposing it were all taken to the fields, which is not the case—would not represent more than 327,000 tons.

Now France consumes only 230,000 tons of Chili saltpetre per annum, which represents 31,200 tons of nitrogen, while the deficiency is 273,000 tons. The amount imported is thus only 11 per cent. of the deficiency produced by the removal of the crops.

Chili nitrate is a first-rate fertiliser. One hundred kilogrammes = 220 lb. of nitrate give, on an average, the following mean excess of products;—

Cereals	660 to 880 lbs. of grain,
	and straw to correspond.
Potatoes	3½ tons.
Beetroot	5½ "
Roots, Indian corn	4½ to 5½ tons.

The great importance of the nitrogen problem is there evident. And now that this problem has been solved, as I shall presently show, and the atmosphere itself freely offers us the raw material, so that out of the air over each square mile of the earth's surface we can make more saltpetre than is to be found in all Chili, we have no longer any reason to fear "the near exhaustion of the world's stock of fixed nitrogen."

The "Mark Lane Express" has the finest conception amongst

MAKERS OF FERTILISERS AND FEEDING STUFFS

of any journal in the United Kingdom.

The best medium for this class of announcements.

The nitrogen problem has been solved in two ways. By taking as his starting-point the power possessed by several metals of directly-fixing nitrogen, Professor Frank, of Berlin, in collaboration with Mr. Caro, has been led to the discovery of his beautiful method—namely, the introduction of calcium carbide as an absorbent of pure nitrogen.

At a red heat, the carbides of the metals of alkaline earths absorb the nitrogen supplied to them, and are thereby transformed into metallic salts of cyanamide. These salts are capable of many kinds of chemical changes. After being for short time in the soil, for instance, they decompose and form ammonia. Calcium cyanamide can, therefore, be employed directly as a fertiliser, and is manufactured for this purpose by the Cyanidgesellschaft in Berlin, whence it appears upon the market under the name of lime-nitrogen.

The other way in which the nitrogen of the atmosphere can be fixed very simply and to great advantage is by the oxidation of nitrogen in electric arcs. This method has been followed by a great number of scientists and inventors, whose endeavours have been chiefly directed towards the discovery of a stable and practical form of electric arc that could serve as a flame for the oxidising of nitrogen. A flame such as this, burning with a power up to 1,000 kilowatts, and fulfilling every requirement as regards reliability for manufacture on a large scale, has been used for the first time in the "Birkeland-Eyde Process," the method now employed in the Notodden Saltpetre Manufactory, and also to be employed at the new Svalgfors-Notodden Works of about 30,000 h.p., which will be completed next year.

(To be continued.)

Nitrate of Soda.

According to news from Chili the price of nitrate of soda on the West Coast is gaining in firmness, as it is becoming recognised that the conditions are not favourable for any increased production on a large scale, while, on the other hand, the consumption throughout the world is continually extending. It is reported that merchants on the one hand, in view of the above situation, are already contracting for cargoes in 1907 and 1908 at advanced prices.

Renewing Pastures.

An experimental station is undertaking to renew a worn-out hill pasture on its test farm without breaking the ground, an experiment which has direct interest for many farmers. It was begun one year ago. The greater part of it was disked sufficiently to give some fresh soil, but not enough to destroy the little grass that remained from a sod once fairly good. It then was reseeded with clover and grasses, and was fertilised. The new growth is excellent.

But the actual test of the need of the land was made on a series of plots in the field where manure, various commercial fertilisers, reseeded and no treatment were tried. The soil is clay, and is typical of much hill land. A study of all the plots is convincing that such worn pasture land needs only two things—viz., phosphorus and reseeded.

When plants are nourished by acidified or dissolved phosphates they do not take them up in the form in which they are applied. Dr. Dyer writes that the moisture in the soil first dissolves the acid phosphates, and these combine with the basis of the soil. If there is a fair supply of lime in the soil, the acidity is counteracted, and we get precipitated phosphate of lime. If there is absence or deficiency of lime the phosphate forms acid phosphates of lime and alumina, the sourness of which will only gradually disappear, and these are less healthy for plant food than thoroughly and rapidly neutralised phosphates, such as would be formed in a soil well supplied with carbonate of lime.

Sugar beet contains more nourishment than any other crop except the potato.

Fertilisers in Spain.

The British Vice-Consul at Valencia (Mr. A. F. Ivens) reports that fertilisers, consisting chiefly of sulphate of ammonia and sulphate of lime for the manufacture in Spain of artificial manures, continue to be imported into Valencia from the United Kingdom, Belgium, and other foreign countries on an increasing scale.—(Foreign Office, Annual Series, 3,631.)

There is no one way on the farm in which money can slip away so easily as through the improper handling of manure. Probably because of the cash value being hidden under an unattractive surface, if the farmer does not see the actual value, but if the manure was dried and handled in bags, with the value marked on the official tag, it might make a difference, and the farmer would take care of it.

THE SETTLERS' IDEAL HOME NEW ZEALAND

Arrangements have been made with the Shaw, Savill & Albion Co., the New Zealand Shipping Co., and the Federal Steam Navigation Co., for REDUCED FARES for 2nd and 3rd Class Passages to persons possessing small capital and approved by the High Commissioner for the Colony. Eligible Single Women, Domestic Servants, are granted reduced rate passages without the "capital" qualification. For application forms and further information apply to the High Commissioner for New Zealand, 13, Victoria Street, London, or the Agents in the United Kingdom of the above Shipping Companies.

NEW ZEALAND.

Pick and Shovel Men.

Grants of reduced rate passages to Navvies and Pick and Shovel Men have been discontinued.

NEW ZEALAND GOVERNMENT OFFICE, 234, FINE, 1068.

THE

"BIBBY" CAKE

IN THE FORM OF

"CAKETTES."

'Send me two tons of they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untried paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best result obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuses to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION

IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

Sole Manufacturers—

J. BIBBY & SONS

EXCHANGE CHAMBERS,

LIVERPOOL.

Appointed by Royal Warrant Manufacturers of Agricultural Machinery to His Majesty King Edward VII.

RANSOMES, SIMS & JEFFERIES, L^{TD.}

MANUFACTURE THE BEST THRASHING MACHINERY.

TRACTION ENGINES.

These Engines are well proportioned, simple, and easy to manage, and are suitable for drawing and working Thrashing Machinery, for team Cultivation, Sawing, Pumping, &c.

THRASHING MACHINES.

These Machines produce a perfectly uniform sample of full-size grain, free from tail corn, and make all the usual separations in the most perfect manner.

THE BUTTER COMMITTEE'S REPORT.

We give elsewhere those details of the Butter Committee's Report which our readers will naturally wish to study; it need only be remarked here that the report is distinguished by very great moderation, and that it is unanimous. The Session would in ordinary years be too far advanced for legislation to be possible on the basis of the Committee's recommendations, but this does not apply in the present exceptional year, when the controversy between Lords and Commons on the Education Bill is certain to keep the Legislature at work all through the autumn. Now the inevitable negotiations between the two Houses, whatever their ultimate issue may be, will necessarily be attended by awkward pauses and short adjournments. Is not the opportunity unique, and should not Sir Edward Strachey, who has acted as chairman of the Butter Committee, seize the occasion to embody that committee's recommendations in a Bill? It might fairly claim to be treated as a non-contentious measure, and its becoming law on January 1, 1907, instead of January 1, 1908, would be a real boon to our dairy interests.

The report can, at its best, be regarded as a step of an experimental character. Wrappers and registration, inspectors and inspection—these are all so many essays in meeting the iniquity of the adulterator. We do not build much on the proposal that no fat other than butter fat shall be stored or allowed in any butter factory, nor, indeed, do we attach any cardinal importance to any provisions which do not touch the retail trade and distribution.

However, we shall see, and it is for the Government to insure our seeing as soon as possible.

If the Bill, which sooner or later—and the sooner the better—issues from the committee's report, serves the avowed purpose of the report, well and good. If it fails to do so and evasion once more brings widespread adulteration in its train, then there will still remain the one clear remedy which the Legislature has hitherto hesitated to apply. By requiring all imitation butters to be coloured differently from butter so that the purchaser can see at a glance what he is buying, this particular adulteration evil can always as a last resort be suppressed.

SHOWYARD INFLUENCES ON DAIRY HERDS.

What with our milk and butter tests so thoroughly carried out at the leading agricultural shows and the additional classes for Shorthorn cows, the prizes for which are offered by the two societies of that breed, dairying is much more promoted by the show system than it used to be. But these provisions, highly important as they are, must be deemed very much circumscribed in their influences to the pedigree herds; and the bulk of our middle-class and smaller farmers throughout the country keep cross-bred cows. The prizes offered by nearly all the agricultural societies for dairy cows, irrespective of breed, are too few and small to tempt any large numbers of these classes to send their best milkers to the shows, and unless they do so, they are unable to compete in the milk and butter tests. The popular belief as to how these non-pedigree herds ought to be improved is that of the selection and use of pedigree bulls of deep-milking families; but there is, unfortunately, a wide-spread prejudice against doing this on the part of many ordinary farmers, not merely because of the extra outlay involved, but, to quote a phrase once happily used by the late Clare Sewell Read, "lest the milk be pedigreed away."

The same idea, probably, weighs with judges occasionally in awarding prizes for bulls belonging to breeds of a general purpose character. This would scarcely be so for Shorthorns or North Devons, the bulls of which to win at shows must have grand conformation, richness of flesh, with indications of early maturity—properties which do not come into the reckoning with dairy farmers. But it appears that breeders of South Devon cattle at their local shows have for many years been accustomed to seek for indications of dairy property in bulls no less than in cows and heifers. The true reason why certain awards made at the Devon County, Bath and West, and Royal

Counties' Shows this year could not be understood by those accustomed to appraise bulls according to what is termed showyard character, may be attributed to this. The Red polled breed is a general purpose one, no less than the others above mentioned, but bulls of that breed like Shorthorns and North Devons, have gained success in show-yards for possessing grazing rather than dairy property. Whether anything of utility could be gained by having special classes for bulls best adapted for dairy service is very much to be doubted. Whenever such are wanted they can always, of course, be had by seeking for them in herds of undoubted deep-milking property.

According to the paper read by Mr. Primrose McConnell at the Shrewsbury Dairy Conference, there is abundant room for improving the milk-yields of dairy herds throughout the country, and, of course, the means recommended by him for its promotion, that of more general private testing and keeping of milk-registers, have been those placed in the foreground continually for twenty years or more. The homily that every dairy farmer ought to make himself acquainted with the milk yields of his cows has been preached perpetually, whether ears have been open to receive it or not. The maxim has also been insisted on that when a cow is found to be an indifferent milker she cannot be too soon got rid of for the substitution of a better one. But unfortunately this is not always so easy in accomplishment practically as theory would suggest. The owner in most cases would have to sacrifice a large amount to do so, and the ordinary farmers who have the worst milkers are, as a rule, too impecunious to make such changes as they would like to carry out. In former times farmers on discovering that they had unprofitable milkers, were accustomed to feed them highly that they might lay on flesh, so that after a brief period they sold them for about the same price they could get fresh calves to put in their places. But cow-beef has lately been quite a drug in the market, and likely to continue to be so, owing to the enormous quantities of imported foreign to compete with it.

The Earl of Ancaster made a return of 10 per cent. to his agricultural tenantry at the Lady Day rent audit of his Lincolnshire estates held at Rip-pingale on Wednesday.

ALL MISCELLANEOUS ARTICLES of FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." The charge is very moderate, and consistent with the profit such small goods yield.

Notes of the Week.

The show of the Highland and Agricultural Society, which opens to-morrow, is an event to which the great body of agriculturists in Scotland and the north of England look forward with great interest.

It always follows about a fortnight after the show of the Royal Agricultural Society of England, and is succeeded by the great Irish show of the Royal Ulster Agricultural Society.

The Highland Society can lay claim to a long descent, having been founded in 1784.

This year the small town of Peebles, lying about twenty miles south of Edinburgh, has the honour of receiving the show.

It is the first time the society has visited this town, and, considering the small population, it is doubtful whether it will be a financial success, although in other respects it will do much good.

Fortunately, the Highland Society has a big reserve, and is not obliged to study the question of E. s. d. so closely as some other societies.

The Scotch agriculturists, perhaps wisely, concentrate their energies chiefly in one important show. Whereas in England during this year there are about 350 agricultural shows, including horse shows, in Scotland there are only about 30.

Mr. Henry Dudding is to be congratulated on the success of his sale on Thursday, and also on securing a fresh record price for a ram.

It will be remembered that previous to last week he held the record of 1,000 guineas, but this he has now beaten by no less than 450 guineas, Mr. Miller giving 1,450 gs. for the shearing man Riby which won a first prize and the championship at the Royal Agricultural Society's show at Derby. This is the highest figure ever obtained in England for a ram, and will certainly be difficult to beat.

Among the cattle sold at Riby Grove on Thursday, £1,000 was obtained for the two-year old roan bull, Prince Alastair. The bull was purchased by Mr. Pearson, and like so many other plums of the sale, will be sent to South America.

Two Bills of great interest to farmers have just passed the Committee stage, the Fertiliser and Feeding Stuffs Bill and the Land Tenure Bill.

Many farmers will be disappointed if facilities are not afforded by the Government in order that these Bills may be placed on the Statute Book during the present session.

As regards the Land Tenure Bill, the Prime Minister promised to a deputation last week that the Government would provide the necessary facilities.

And as to the Fertiliser Bill, the different clauses have been fully discussed in Committee, so there can be no need for further controversy in the House.

The important interests of the traders were represented by Mr. Alexander Cross with the tactical skill and argumentative tenacity for which his countrymen are renowned.

The still greater interests of the farmers were looked after with equal ability by Sir E. Strachey.

So that the Bill, as now reported to the House, is an equitable adjustment of conflicting interests, and should meet with general approval.

No less than 3,000,000 tons of potatoes are used in Germany for the manufacture of spirit, the residue from the distilling operation being employed as cattle food.

Nearly another 2,000,000 tons are used in the production of starch.

Is it not a pity that similar important industries cannot be operated in this country?

The climate of Ireland is particularly adapted for the growth of potatoes, and the production could be increased with great advantage if there were a market for them.

Tabers not fit for consumption by man or beast can be quite well used for manufacturing purposes.

When Sir Joshua Reynolds was asked by a young artist how he mixed his colours with such brilliant results, he answered "with brains."

The farmer also who would be successful must cultivate his land and conduct his operations "with brains."

So writes Mr. James Loug in an interesting article in the *Manchester Courier*.

This must not be understood to insinuate that farmers in the past have neglected to do so, but that under modern conditions, the Intelligence Department, centred in the "brain," has become more important.

Scientific farming must co-operate with Nature's handiwork, and make the best use of labour-saving machinery, seed selection, and scientific feeding of animals and crops.

The farmer's brain must be actively at work, finding out what his soil requires for the different crops, and what his stock requires for the production of milk, butter, cheese, beef, and mutton.

There are right and wrong, economical and wasteful methods, which lead to success or the reverse.

The present Government would be all the better for a little judicious pressure. Earl Carrington acknowledges that several measures are necessary to assist agriculture.

But he puts off taking the necessary steps, which would involve a small outlay, because, forsooth, the Chancellor of the Exchequer bars the way.

Thus to the deputation of fruit growers, the other day, the Minister of Agriculture, whilst very sympathetic, pleaded that want of means prevented him from acting on their reasonable suggestions.

Lord Carrington can be trusted to do what he can, but the Ministry as a body should be constantly reminded that moderate expenditure to assist agriculture is the true economy for the country.

So Akmerley has decided at a public meeting to support a scheme for the importation of live cattle and sheep from Argentina to be slaughtered in the island for shipment to England and the Continent.

If this scheme is carried out it will have to be carefully watched. It involves the possibility of breeding disease very near our shores, and the necessary measures will have to be adopted to keep it out of this country.

A friend of mine, when arranging the other day for the refreshments of a large school-treat, insisted that the sandwiches, meat-pies, &c., should be guaranteed "made of English meat."

This is a condition which should generally be adopted.

It should be a stipulation of Army and Navy meat contracts. Now that our eyes are open, there is no excuse for supplying our men with meat which, if half what we hear is true, is fit only for the manure heap.

Oh, for the roast beef of old England! succulent, strengthening, and wholesome.

The advantages of good cultivation are very apparent this season.

The average hay crops are decidedly light, but on some farms where the fields were liberally treated with farmyard or chemical manure the yield is quite satisfactory.

Similarly with oats. In many places in the south the prospects of the crop are poor, but where a small dressing of nitrate of soda was given the plant gives promise of a good crop.

Good cultivation by strengthening the plant enables it to send its roots deeper down, thus finding food with the essential moisture.

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

THE FARMERS' DIARY.

TUESDAY, JULY 17.—Highland and Scottish Agricultural Show at Peebles, first day—Horse and Foal Show at March, Cambridge—Lincoln Horse Sale—Sale of Romney Marsh Sheep Land at the Saracens Head, Ashford—Sale of Willesborough Farm and Mill, Saracens Head, Ashford—Lyndhurst Timber Sale—Warrington Fair—Entries close for the Salisbury Agricultural Show—Horticultural Society's Swanley Prize Giving—Flower Show, Vincent Square: Lecture on Growing Sweet Peas, 8 p.m.

WEDNESDAY, JULY 18.—Scottish Agricultural Show at Peebles, second day—Wye Agricultural College: Address by Lord Carrington, Minister of Agriculture—Bedfordshire Agricultural Show at Luton—Agricultural Show at Eborick—S.E. Surrey Agricultural Show at Oxley—Cambridgeshire Agricultural Show at Ely—Staffordshire Agricultural Show at Stone—Sussex Agricultural Show at Brighton—Lincolnshire Agricultural Show at Gainsborough—Entries close for the Chesterfield Show, for the Tadcaster Show, and for the Adlington Show—Sale of Hares and Cattle—Fair—Sheep Pairs at Kirtton—St. Boswells Horsham, Kenninghall and Overton—Cattle and Sheep Fair at Malmesbury—Cattle Fairs at Leeds, Camelord, and Kirtton.

THURSDAY, JULY 19.—Second days of the Gainsborough, Ely, Staffordshire, and Brighton Shows—Third day of the Scottish Show at Peebles—East Cornwall Agricultural Show at Launceston—Foal Shows at Burch and at Sutton-on-Hill—Horse Shows at Sutton-on-Hill and Taunton—Entries close for the Wem Show—Entries close for the Whitcreek Show—Bristol Colt Pair—Entries close for the Dublin Great Sheep Show—Leeds Horse Fair.

FRIDAY, JULY 20.—Scottish Show at Peebles: last day—Aspatira Agricultural College: Prize giving and Speeches, 2.30 p.m.—Combined Foa and Horticultural Show at Hutton—Cranswick—Entries close for the Up-Holland Show—Ifton Manor Sale of pure bred Stock—Lord Rothschild's Lamb and Ewe Sale—Tring—Maidstone Horse and Cattle Fair.

SATURDAY, JULY 21.—Cumberland Agricultural Society's Show at Carlisle—Entries for Northampton Park Show close—Entries close for the Meltham Show—Entries close for the Burlington Jersey, and Pembroke-shire Shows—Hucknall Torkard Agricultural Show.

MONDAY, JULY 23.—Hamshire Down Sheep Ram, and Ewe Sale at Ware—Helston Fair—Stamford Fair—Ware Sheep Fair—Ickleton Horse Fair—Entries for Wrexham Horse Show and Sale close, also for Tutbury Horse Show.

TUESDAY, JULY 24.—Sir Gilbert Greenalls Pedigree Horses: Sale at Warrington—Sale of Knowle Hall Pedigree Devons at Bridge—Oster Sale of Short-horn Cattle at Lechlade—Entries close for the Shows at Whalley, Shirley and Cliffe—Sale of Rams at Kettering—Reading Great Fair—Entries close for Pickering Foal Show—Barnard Castle and Howden Fairs.

Southdown Sheep Fairs.

The two great fairs of Southdown sheep will be held this year on August 8 and September 21. These fairs are held at Lindfield, not far from Haywards Heath and at the county town of Lewes respectively. Both fairs are easy of access, being only a little over an hour's run from London, and with excellent railway service from other parts of the country.

Lindfield Fair in the Weald of Sussex, consists principally of lambs, with a certain number of draft ewes and tegs. Lewes Fair, held in the heart of the Southdowns, consists of the greater number of draft ewes from the Down flocks, and a very large number of lambs, while most of the Sussex breeders send consignments of rams and ram lambs.

Sheep at these fairs come in most cases direct from the hill flocks, and are shown straight from the flock without artificial feeding, and therefore pay well when put on better land, with or without extra help in the way of cake. These fairs are well worth a visit from those interested in sheep. Here can be seen the Southdown sheep in its purest type, straight from the farms in their natural state and in breeding and store condition.

Mr. Patino, one of the largest cattle-breeders and produce brokers in the Argentine Republic, who arrived in London from Paris a little more than a week ago, was taken ill whilst riding in a cab a day or two afterwards and died before medical aid could be summoned. At the inquest a verdict of death due to suffocation from internal hæmorrhage, the result of chronic consumption, was recorded. The body is to be embalmed and sent to Buenos Ayres.

Notes and Jottings.

The present season will surely end with the heaviest sales of pedigree stock that have ever been recorded in this country. The demand all round for Shorthorns appears quite insatiable, and prices remain as firm at the higher level that has been attained as they did when lower figures prevailed. The splendid sale at the Royal Show has been followed up by high prices at the Riby sale, as well as by very high prices paid privately for animals for export. Altogether, it really seems as though the remarks of a well-known feeder the other day are likely to prove true—namely, that the days for making beef at a profit in this country are ended. It would be greater satisfaction, so far as pedigree stock are concerned, if more of our breeds shared to a larger extent than at present in the foreign demand.

As matters stand at present, the Shorthorn enjoys quite enough of a monopoly. The Hereford, it is true, has experienced perhaps its share in the demand, but none of the other breeds have been patronised to the extent that might fairly be

shown that the Sussex steer has given the largest return in gain of weight per day. Some enterprising speculators might do worse than purchase and export some of the best specimens at the sales indicated.

We notice also that a sale of the old Longhorn cattle is announced to take place in Kent the end of the present month. It will be seen by the tabulated statement of the milking trials at the recent trial that the only specimen cow of this breed entered in those trials came out with an exceedingly satisfactory percentage of butter fat, being beaten only by the Channel Island breeds, and the quantity of milk yielded was satisfactory also. Whether for beef making or dairying in a pure state, or for crossing purposes, the Longhorn is a most valuable breed.

Breeding for colour in several of our different breeds of cattle that have been taken in hand within the last twenty years or so has been a great hindrance to the progress of such breeds in their general improvement. About the time mentioned there was a great craze in colour amongst breeders of Jersey cattle, and animals showing even a very, very small amount of white intermixed with their silver grey coats were discarded altogether, doubtless very much to the hindrance of the development of milking properties, for at that time of day most of the cows of that Channel Island breed showing white were invariably amongst the best milkers that could be found, and the more white there was visible the more milk usually followed.

American buyers were then quite as much prejudiced against white markings as were the owners of the leading herds in England, and for some countries, Australia is an instance, the same antipathy to white spots or markings still exists.

breed that have once gained a footing in a herd. The offending colour, type of head, and other points will occasionally crop up after many long years of the greatest care.

There are few points in cattle so susceptible to alteration by the infusion of other blood as the coat, and this is often, completely changed both in colour and character without what may literally be termed any infusion of alien blood. Black is a colour that frequently crops up where it ought not to do. Many a Shorthorn breeder in the past has found his young stock throwing up dark muzzles, though perfectly purely bred and from parents for generations with the orthodox flesh-coloured nose, the objectionable dark colour having come, perhaps, from the sire having been allowed to serve a black cow for crossing purposes, or from the fact of one or two black animals having come in contact with the dam whilst in season. No breeder can be too careful about such matters.

Whilst upon the subject of colour, what splendid coloured calves some of our white Shorthorn bulls are siring. When mated with a dark red the result is almost invariably a roan of the richest possible hue, and the coat is generally of that silky, mossy texture that delights the eye as much as its mellow touch pleases the hand. The dark red colour is very pleasing and attractive when a whole herd is in view without the presence of any other colours, as may be seen where a well-bred herd of Red Polls, Sussex, or North Devon are concerned, or even the Lincoln Red Shorthorns, but with the Coates Shorthorns, or, as we like better to call it, the Durham Shorthorn, a good rich roan is very hard to beat for general attractiveness; and when pastured with reds or red and white the mixture adds quite a charm by its variety.

PRIZE WINNING KERRY CATTLE, THE PROPERTY OF MR. D. M. RATTRAY, GORTNASKEHY, BALLYBUNION, CO. KERRY.
The group on the left have won several prizes at leading Shows, whilst the cow on the right has won a First Prize at the Belfast Show, and 2nd at Dublin.

anticipated. Reading in a business pamphlet from the Argentine recently, it is stated in effect that other breeds are slowly making their way, and will in time become quite as much sought after as the one or two favoured herds mentioned. As much has been intimated in these notes for some time past, but the lane is a long time before we reach the turn where these are concerned. Prejudice takes a great deal of breaking up, and it would appear that beyond the general purpose character of the Shorthorn, which has been so great an inducement to foreign buyers, there has also been a strong prejudice in their favour for fashions sake.

In the course of the next few weeks several fine herds of Sussex cattle are announced to come under the auctioneer's hammer, and the show these cattle have made recently—notably at the "Royal"—should go a long way in inducing our Argentine friends to give them a liberal trial. The breed was quite amongst the most uniformly good in the Royal showyard, and the young stock were big for age. So far as beef producing is concerned, there was certainly a sufficient development in the way of weight for age to make the breeding and feeding of them a profitable enterprise in such countries as the Argentine, and the development mentioned in the classes at the Royal Show has been many times equalled in the splendid classes of the breed seen at Smithfield each year, where it has been

In England the fancy has in a great measure died out, though there are still many breeders who prefer what is called a whole coloured herd, and as regards the uniform appearance, no one can doubt but the herd consisting entirely of unbroken fawns in colour is much the most attractive and appeals to one's admiration much more strongly than the herd that is variegated by having a good proportion of its members showing a considerable amount of white markings.

The Kerry and Dexter breed, too, suffered very considerably in their march on the way to improvement when the colour lines were first laid down in the rules of their herd-book. Prior to that date many magnificent Dexters and some Kerries were seen with quite an amount of white about them, and with these, as with the Jersey breed, these specimens in many instances gave by far the greatest show of milk, so that the discarding these barred for a time the dual purpose progress of these breeds. With time, however, a sufficiency of heavy milkers has been found of the orthodox red or black colours to maintain and increase the dairy properties of the herd as well as their symmetry and general appearance of breeding.

In both the breeds mentioned, there hinges a certain evidence of purity of breeding in the animals that are without white. Many years ago, in the Island of Jersey, alien breeds were not as stringently forbidden to breeders as is the case in the present day, and it is quite likely, indeed, more than this, that a good deal of the white that was visible was due to other blood being infused. Cattle from Guernsey were at one time admitted, also other breeds, and the markings introduced by these cattle remain almost indelible. It takes many generations to efface the points of another

Travelling recently over a large area of the best grazing land of the country, cattle generally appear to have done remarkably well. From their backward condition at April such improvement as is now visible could scarcely have been anticipated, and with very good pastures, succulent and clovery at the middle of July, and showers falling frequently, there appears every prospect of a much shorter supply of half-meated cattle in the autumn than at one time appeared imminent. This should improve prices, or, in other words, should tend to prevent their sinking to so low a ebb as is frequently the case when the markets are crowded with unripe animals. Nothing has, such, a lowering effect upon prices as a market filled with unfinished beasts.

The beef trade in American markets appears to have somewhat brightened of late; supplies have not been in excess of the demand, and a clearance has generally been made; whilst advances as to future supplies are such as not to alarm feeders on this side of the water. At home, though prices have not been sufficiently high to leave a fair profit to the feeder, they have nevertheless maintained a fair level, best Herefords being quoted in the provincial markets at 6½d. to 7d. per lb., sinking the offals. Dublin's best quotations are also over 6½d. per lb., and London, with very short supplies last week, remains at about its normal pitch. In addition to good pastures, swedes and other roots for autumn and winter use are growing rapidly and of charming colour in the foliage.

The "Mark Lane Express" is a

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of this late
MARKET SUPPLEMENT,

Riby Shorthorn and Lincoln Sale.

Record Price for a Ram.

This noted sale was held on Thursday last, and the attendance was one of the largest and most representative we have seen for a very long while. Mr. Dudding, who was confined to bed by his broken ankle, was not able to witness the great triumph in person, but he had the pleasure of seeing most of his friends seated upon his bed at the open window. The congratulations given him were well deserved, because probably no breeder has ever before been able to have so notable a sale of his own stock and to sell in one and the same day a bull for 1,000 gs. and a ram for 1,450 gs., or eight rams, all yearlings, his exhibit at the late Royal Show, for an average of £560 8s. 9d. per head. The space at command being limited, the better way to convey to the reader full details of the sale is to give the price list, and although it would be of interest to record the names of those who were present and those for which they were competed, not only by the English breeder but also by those from abroad.

The cows and calves sold numbered fifteen, the top price was 100 guineas paid by Lord Winterstoke for a very choice cow indeed; four others made the century or over, going to Mr. E. N. Casares, who took two at 105 and 100 guineas, Mr. A. W. Hickling, who gave 100 guineas, and Mr. C. Villate, who gave the same price. The average for this age was £85 9s. 4d.

The two-year-old heifers numbered five, and it was amongst them that the top price of the female section of the sale was found, namely, Bright Morn 2nd, c Jan 21, 1904, a Scotch Squire, Mr. E. N. Casares gave 110 guineas for another, and Mr. D. MacLennan for another of the same age, the average working out at £113 12s. 2d.

The yearling heifers numbered sixteen, a very level and good lot of youngsters. These were in good demand, although the top price of the age was 180 guineas, two making this one, Merry Bride, to Mr. R. J. Pearson, and the other, Riby Jessie, to Mr. C. Villate. Mr. T. Mathews gave 95 guineas for another one, another average of this age was 274 5s. 1d., making the average of the thirty-six females sold to work out at £84 8s. 2d.

The demand for the bulls was not so level, but the most notable lot of the sale—namely, Prince Alastair, that grand young bull that has been so well to the fore at the leading shows this year was in keen demand, and ultimately went to Mr. R. F. Pearson at the notable price of 1,000 guineas, Mr. MacLennan being the runner up.

The average for the fifteen bulls sold, worked out at £134 16s. 4d., making the average for the whole sale of fifty-one head £99 4s. 8d. The following were the sales at 50 guineas and over:—

Lincoln Sheep.

There is no need to say much in connection with this sale further than to note we have been unable to find any previous record where an average of £151 1s. 9d. has ever been made of sixty yearling rams. The competition was notably keen all through, and that for the champion ram that Mr. E. Miller secured at 1,450 guineas was continued right up to the last by the English breeders, Messrs. S. E. Dean and Sons, who bid 1,350 guineas for him, then came a fifty from Mr. C. Villate, followed by Mr. F. Miller's final bid of fifty more, which made him the purchaser at the price given above. This same buyer also took the five rams that were in the first prize pen at the Royal Show this year; these cost 580 guineas, 500 guineas, 430 guineas, 330 guineas, and 300 guineas, or an average of £449 8s. per head for a pen of five, a record, we think, that will not often occur. Mr. E. N. Casares, as will be seen from the detailed list, was a large buyer, as also were several of the other large exporters and agents, and it is a satisfactory feature to find that so large a number of the home breeders were able to secure some few of these choice specimens of this well-known flock that had probably never before been represented by a better lot of rams at any of its sales.

The following is a list of the sheep sold, prices realised, &c.:—

LIST OF PRICES (SHEARLING RAMS). Gs.

Riby Prizeman, 1st, pen of five, Royal, 1906	80
Riby Panty, hc, Royal, 1906	120
Riby Derby Champion, 1st, single shearing ram and long-wooled champion at Royal, 1906	1450

Riby Briton	Mr Atkinson	40
Riby Lieutenant	Mr W. Savage	72
Riby Kitchener	Mr Herbert Webb	33
Riby Charlie	Mr Johnson	28

The average for the rams was £151 1s. 9d., and that for the ewes £16 17s. 4d., making the aggregate amount realised for the combined sale £13,909 17s. 6d.

Dispersal of the Melton Ross Herd of Shorthorns.

This herd, owned by the late Mr. Jonas Webb, came up for dispersal on Friday last, Messrs. J. Thornton and Co. being the auctioneers. The sale, which was an absolute clear out, was a notable one by reason of the very high prices realised for the older cows and the yearling heifers, particularly that noted old Duchess tribe, of which there were quite a number of specially good specimens. The attendance was a representative one, and many of the choice young animals, it is satisfactory to note, remain in this country, at Sir R. P. Cooper's herd. Mr. Dudding got one of rare good merit, as did also Lord Middleton, his lordship being present in person. We have given a full price list, and will give the several averages, which were as follows:—Cows and calves, eighteen, at £104 4s. 2d.; two-year-old heifers, five, at £113 8s.; one-year-old heifers, ten, at £108 7s.; making the average for the thirty-three females £105 7s. 7d.; and the seven bulls, which met with a satisfactory demand, averaged £64 7s., making the general average for the whole sale of forty animals to work out at £98 4s.

The Southdown sheep, which have been kept there for many years, were also sold, but the prices realised were not high. The following were the chief sales of Shorthorns:—

COWS AND HEIFERS. Gs.

Notes and Jottings.

Lamb sales have gone briskly, and portend a good sale for the pedigree rams which are coming to the hammer from now to the autumn. The prospect for keep is good enough to make breeders firm in a strong position, for sheep are likely to be dear, and as a rule there is sufficient food not to have to hurry them off the farm. Still, as the season comes round, lamb keep is not so available on breeding farms as it is in early summer, and in the general economy of the farm they are best moved on; and they thrive better on going into districts where fewer sheep have been carried during spring and summer. In the strictly breeding districts such a high sheep stock is kept per acre that it requires skill in cropping not to get the land sheep sick, that it is not as a rule wise to keep the heavy stock running on the land for an exceptionally long period. Lambs are subject to the affliction of many kinds of worm, from which the ewes are not altogether free, and present profit by holding on longer than usual is not unlikely to cause trouble in the future in those districts where sheep keeping is done at high pressure in respect to the head of stock per acre.

The modern farmer fortunately does not have to inspect a lame sheep to see if it has foot-and-mouth disease, as was the case some years ago; but no man likes to take footrot on to his farm. There are many farms which can trace persistent

able importance. If the foot has been contorted through neglect in the first instance, and made unduly hard by the use of too strong acid dressings subsequently, there is every probability that trouble will come again; and whether a buyer regards this point or not, there is no doubt that a lot of sheep with naturally formed hoofs, and no traces of previous rot, are worth a substantial sum more than those which through bad treatment are likely to cause the loss which footrot always occasions.

The season has come round again when the early breeders are beginning to look round for a suitable run, and ram sales will be frequent in the south in a very short time. Those who are going in for pedigree breeding know pretty well what blood will mate best with their flocks, as experience has shown this. It is always a risk to bring in strange blood, for there is no certainty as to how it will tick in. There are many breeders who have had the experience of a change which did a considerable amount of harm to their flock; and violent changes must always be dangerous where a certain type has been obtained by following one course of management. The best animal of the year does not necessarily mate best with every flock of high degree; the blood may be too distant, and though it may give vigour to a flock wanting tone, yet it may give rise to some of the faults of cross-breeding because of distant relationship. A tendency to horns, a too dark skin, too much hair on the breech, and other blemishes which the flock was previously free from, have not infrequently arisen, even from a ram which appeared practically perfect.

A ram for a general flock where the type is not well marked should be one with a considerable amount of character about it, so that it may stamp its own features on the offspring. It is for this reason that a strong masculine character is so often looked for. A ram with effeminate features is not, as a rule, an impressive sire; although it may get lambs which will mature quickly. For a general flock, where there is no intention of raising

573 sent from Mr. Eagle's Walton Hall and St. Oysth flocks was 42s. 10d., about 2s. 6d. a head more than in 1905. Other good averages fell to Mr. John Salmon, of Kirby le-Soken, 40s. 10d. for 300, and to Mr. Edwin Giles, of Great Clacton, nearly 39s. for 516, their top pens of ewes being respectively 50s. for 25, and 46s. 6d. for 50. Mr. Arthur Stanford, of Beaumont, realised 48s. 6d. for 50 ewe, and the top wether from those four flocks were—Mr. Eagle's 47s. 6d., Mr. Salmon's 47s., Mr. Stanford's 45s. 6d., Mr. Giles 44s.

Haverhill.

A record ontry of sheep and lambs—the total being about 7,000—was received by Mr. G. Boardman for his annual sale at Haverhill on Monday. The entries were principally from registered Suffolk flocks, and the importance of the sale attracted a large number of buyers from a wide district. Wethers and ewes of the Suffolk breed made from 47s. to 68s., the latter figure being secured by Mr. A. W. Ruggles-Brice, J.P., of Chingfield, for a grand collection of Suffolk shearing ewes, others from the flock made 67s. (twice), 61s., and 63s. Suffolk lambs sold from 34s. to 48s., half breeds 30s. 6d. to 38s. 6d., Hampshires 27s. 6d. to 32s., and first-cross 31s. 6d. to 34s. 6d. Mr. W. R. Hedges, Worcester, sold Hampshire ewes, thirty half-bred lambs out of Hampshire ewes by Oxford Down rams. They were very heavy, and made the top price of the lambs—viz., 50s. 6d.

Stowmarket.

At the eighth annual lamb sale held at Stowmarket on the 6th inst. by Messrs. Spurlings and Hampson 3,000 lambs and ewes were penned, and in two instances the highest figures for Suffolk ewe lambs at the sales in this district this season have to be recorded, namely, 52s. for 50 from the flock of Mr. Percy A. Noble, Stowham, and 49s. for 20 from Exors. T. Woodward, Old Newton. In these and two other cases exceptionally good averages were made, namely, Mr. Noble's 171 lambs 38s. 8d., Exors. T. Woodward 204 38s., Mr. S. Scott, Felsham, 121 37s. 3d., and Messrs. Webb and Son, Cambs, 292 36s. 8d. First-cross lambs were also in sharp demand, two pens of ewe making 37s. 6d., and of a few lots of black-faced ewes 35 two-shear from Mr. G. A. Woodward, Stowham, realised 62s., and 10 maiden shearlings from Exors. W. Juby, Mendlesham, 58s. 6d.

Wool Fairs and Sales.

Birmingham.

The annual sale of wool at Birmingham took place on Tuesday at the Wool Warehouses, New Canal Street, and was conducted by Messrs. Lythall and Walters, in conjunction with the Butchers' Hide, Skin, and Wool Company. Buyers attended from Bradford, Halifax, Leicester, Newtown, Welshpool, Kendal, Swindon, Stratford, Stone, Kidderminster, &c., and a good clearance was effected at well-maintained prices. Washed wool sold up to 15s. per lb., and unwashed up to 12½d.

Blandford.

This well-known Dorset Wool Fair was held on the 7th ult., in brilliantly fine weather. Buyers were represented from Scotland, Cork, Athlone, Bradford, Kidderminster, Halifax, Oxford, Winchester, and many other places, Blandford wool being held in high repute by staplers owing to its general high-class character. Close on 100,000 fleeces were pitched in the usual new-wool house the sales took place by Messrs. Ensor and Son (Dorchester), Messrs. Senior, Gidwin, and Young (Sturminster), and Messrs. Duke and Son (Dorchester). Business was generally very animated, and the whole of the wool was quickly appropriated at prices showing a general advance of a 1d. to 1½d. on last year's rates. Viscount Portman pitched a grand lot of Downs, which realised 15½d., the top price for the fair, which was given by Mr. Elling of Warminster; and Lord Alington sold his Southdown clip at 15½d. A general range for the best Down fleeces was from 14½d. to 15½d., and ordinary lots 13½d. to 14½d. Washed lamb wool ranged from 13s. to 14½d., and unwashed lots 10½d. to 14½d. All the picked wools met an exceptionally keen competition.

Devizes.

Devizes Wool Fair was held on Tuesday, when about 70,000 fleeces were sold. Trade was not over brisk, but prices were good. The highest price for washed was 15½d., and unwashed 11d.

Dorchester.

This fair on Monday was in every respect the most successful that can be remembered for very many years past, the pitch being considerably in excess of previous years, the attendance of buyers of a larger and more representative character, and the prices considerably in advance of last year's—from 14d. to 2½d. per lb. The pitch was about equally divided between Horns and Downs, and, although both classes of wool excited keener competition than can be recollected for a long decade, the Horns undoubtedly found the greatest favour, though there was no very marked difference in the relative prices realised by the two different classes of wool. In proof of the extensive character of

THE RAM WHICH WAS SOLD FOR THE RECORD PRICE OF 1,450 GUINEAS at Mr. H. DUDDING'S Sale, last week. The buyer was Mr. MILLER, the well-known Argentine Exporter.

footrot over a great many years to a particular lot of sheep, or even to an individual ram, which has been bought with footrot in its feet, though it was apparently sound. The loss which comes to a farm previously free from the disease is very serious, for when once the contagion is there, a constant fight has to be made to keep it in check, or better still to stamp it out. There are few things more troublesome on the farm, though it is doubtless more prevalent than it would be if more active steps were taken to check it when once it appears; a single outbreak should be attended to at once, and the sheep be isolated; but to prevent further cases, the whole flock should at once be walked through an arsenic or carbolic acid bath. The neglect to pare the feet, causing abrasions which admit the germs, is frequently the initial cause of an outbreak. The knife should always be at work, so that the feet are kept in proper shape.

One very important point often misses recognition, and that is that when dressing and paring the feet of infected sheep the parings are allowed to fall on the ground and leave the infection there. There can scarcely be a surer way of keeping the disease in the land. Although it is sometimes rather inconvenient, the paring ought to be done on a cloth, so that the diseased parts may be collected and burned. In buying in sheep it is not merely a matter that the sheep are sound at the moment—the condition of the hoof is of consider-

able importance. If the foot has been contorted through neglect in the first instance, and made unduly hard by the use of too strong acid dressings subsequently, there is every probability that trouble will come again; and whether a buyer regards this point or not, there is no doubt that a lot of sheep with naturally formed hoofs, and no traces of previous rot, are worth a substantial sum more than those which through bad treatment are likely to cause the loss which footrot always occasions.

Great Bently annual lamb sale was held on Thursday by Messrs. Sexton and Grimwade, and a very good demand was experienced for the 5,000 lambs offered. Mr. John Eagle headed the prices with a pen of a score ewe, which, after keen competition, went to Messrs. E. and H. Gilling at 70s., a rise of 15s. on the year, whilst the average of the

THE SHEEP SALES NUMBER of the "Mark Lane Express" will be published on the 30th inst.

the fair we may state that close on 200,000 fleeces were included in the two auction sales conducted by Messrs. Ensor and Son and by Messrs. Duke and Son, a complete clearance of which was readily effected.

The best price at the fair was made by Mr. W. R. Flower, of West Stafford, Dorchester, with a rare sample, his fleeces going up to 15½d.—a price that was touched by no other lot, though a number of other lots made 15½d., and his lamb brought 15½d. Mr. F. Hooper, of Southover, another well-known Horn flockmaster, made 15½d. all round for his fleeces and also for his lamb, which was a good achievement. The general range for the best Horn fleeces was from 14½d. to 15½d., and for unwashed lots 10½d. to 12½d.; best Horn lamb, 15d. to 15½d.; unwashed Horn, 11d. to 13½d.; Down fleeces ranged from 14½d. to 15½d., and unwashed lots, 10½d. to 11½d.; best Down lamb, 13½d. to 14½d.; and unwashed lamb, 10½d. to 11½d.

Perth.

Messrs. Macdonald, Fraser, and Co. held a wool sale at Perth on Thursday, and brought under the hammer 2,645 bales of cross, half-bred, Cheviot, and black-faced. The attendance was larger than at any previous sale, and for all classes of wool an animated demand was experienced, a decided rise over last year's prices being obtained. The advance in cross and half-bred wool was 1½d. per lb., while black-faced wool made an advance of 1d. per lb. Black-faced ewe and wether was making up to 8½d. per lb., black-faced hoggs to 9d., cross ewe to 11d., cross hoggs to 1s., half-bred hoggs to 13½d., half-bred ewe to 12½d., Cheviot hoggs to 13½d., Cheviot ewe to 13d., Shropshire and Oxford 1s 9½d.

Salisbury.

Messrs. Waters and Rawlence's thirtieth annual sale of English Down wool at Salisbury took place on the 16th inst., when the catalogue comprised about 85,000 fleeces, divided into 180 lots, besides 60 lots of tailings and trimmings, and the whole was disposed of. There was a good attendance of buyers, and a steady selling trade at a rise of about 1½d. per lb. for washed and unwashed wools above last year's figures, prices ranging as follows:—Washed, from 13½d. to 15½d., one lot making the top figure of 15½d., three lots 15½d., 19 lots 15d., 30 lots 14½d., 14 lots 14½d., 12 lots 14½d., and the remainder 13½d. to 14d. Unwashed made from 10d. to 11½d., one lot making the highest figure of 11½d., two lots 11½d., six lots 11d., five lots 10½d., 18 lots 10½d., 24 lots 10½d., 12 lots 10d., and the remainder 9½d. and 9½d., whilst lamb wool made from 11½d. to 13½d.

Winchester.

At Winchester wool fair on Wednesday about 75,000 fleeces, mostly Hampshire Downs, were offered. There was a good attendance of buyers, and bidding was brisk, prices showing an improvement over last year's figures of about 1d. per lb. The average for washed wool was between 14½d. per lb. and 14½d., while the highest price touched for this grade of wool was 15½d. per lb. Greasy wool made up to 11d.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

The Canadian National Exhibition of Toronto will be held from August 27 to September 10, and it is said to be the best horse market in America. On this account Dr. Orr urges English breeders of Shire horses to exhibit their horses there, so that American and Canadian farmers may be able to compare them with other heavy breeds. It is scarcely likely that English breeders, unless they have a connection at the other side, will go to the expense and trouble of sending their horses over the Atlantic merely on the off-chance of selling, let the Toronto market be ever so good. They will argue, and wisely, that if Toronto is such a good market, let the dealers who come over here make up their lots for the Toronto market; they know the customers on yon side and we don't. It would take away a lot of the profit if a man were to be left with a horse or two a few thousand miles from home and had either to bring them home or sell them at a sacrifice.

It is interesting to look for a moment at the prizes offered at this National Exhibition and compare them with some of the prizes offered on this side of the water. For stallions four years old and upwards prizes of £20, £12, £8, and £4 are offered. For three-year-old stallions prizes of £8, £5, £2, and £1 are offered; for two-year-old stallions the prizes are £4, £2, and £1; and for yearlings they are £3, £2, and £1. To three-year-old fillies £5, £3, £2, and £1 are allocated; two-year-old fillies have £4, £2, and £1 allotted to them; and yearling fillies have £3, £2, and £1. Brood mares are put on the same lines as three-year-old fillies, with the exception that an additional sovereign is added to the second prize, and there is a class for mares with any two of their progeny for which prizes of £4, £2, and £1 are offered. For foals the prizes are 50s., 25s., and 12s. 6d.

I have gone into the details of this prize schedule, first to compare it with those at which our English exhibitors grumble so heavily and so often without cause. With one exception the

prizes offered are insignificant—the exception being in the class for stallions four years old and upwards, and this compares but poorly with the four year old class at the Shire Horse Show, where the prizes summed up to £83, nearly double the amount offered at Toronto. But the prizes offered evidently bring together an excellent show, or we should not have a prominent man like Dr. Orr accentuating the importance of it in the way he has done. And, therefore, though the prizes offered are not such as are likely to attract English breeders, it is evident that they serve their purpose. But the show in Canada and the United States is something very different to what it is in England, where there are so many important centres within easy reach of each other, and where the very circumstances which surround showing has raised up a class of professional exhibitors. The bulk of the horses shown at Toronto will be for sale, and so winning of prizes is looked upon in a different light to what it is here, and the mere amount of them seems a secondary consideration.

But for all that, English breeders will be well represented at Toronto, for His Majesty the King is going to send some from the famous Sandringham stud to the Canadian National Exhibition, and so is Lord Rothschild, report having it that His Majesty has asked Lord Rothschild to send some of the Tring Stud. So that English Shire breeders will have direct representation at the Toronto show, where our Canadian and American friends will have the chance of seeing some of the best. Such a public-spirited policy cannot fail to give trade a fillip, and Shire breeders may well expect to see it even better in the immediate future than it has been in the past. Nor is Toronto the only place at which the Royal and Tring stud representatives will be seen. The shows at Ottawa, London, and Kansas, U.S.A., will also be visited.

I often wonder why, at our large shows, we have not more produce classes. There are many very good-looking mares which are not very good breeders. They are either irregular breeders or they breed moderate foals, and it would not be difficult to find mares of any breed that can win in the brood-mare classes of their breed and that in the best of company, and that never breed anything of the very highest class. If prizes were given for two or three of the produce of one mare we should then find which were the best breeders, and, after all, that is what we want to find out. Classes of this sort would provide a very useful lesson in horsebreeding provided the pedigrees of the mares were carefully noted. But somehow we go on in the same old groove, and when there is a produce group class at a show, which is not often, the prizes are generally for the produce of a stallion. I only know of one exception to this rule, and that was at the Polo pony show this year, where there was a mare produce class, which was perhaps the most interesting one at the show.

THE "MARK LANE EXPRESS" REGISTER OF FORTHCOMING LIVE STOCK AUCTION SALES.

DATE.	NAME AND ADDRESS OF AUCTIONEER.	CLASS OF STOCK FOR SALE.	PLACE OF SALE.	NAME OF OWNER.
July *20	Messrs. John Thornton and Co., 7, Princes Street, Hanover Square, W.	Shorthorn Cattle	Ifton Manor, Newport, Mon.	Mr. H. Session.

* Further details appear in our advertisement columns.

Of course there would be a little difficulty in getting entries in a mare produce class. The owner of the mare might, and indeed, he probably would have sold her produce, or the best of them, and there might be some difficulty in getting them together. For instance, some men who had bought the produce might object to showing it, and some of the produce might have changed hands two or three times, and might be difficult to trace. With Stallion produce groups there is, of course, no difficulty, as the owner of the stallion looks after getting his horse represented by the best of his stock that is at the show. Still difficulties can be met, and I cannot but think that a produce class for mares, in which, say, not more than two of the produce of any mare should be shown, the said produce to be three years old, or under, would prove very attractive. It would also be likely to bring buyers to look after any of the fillies that were shown. At any rate, I think mare produce classes are worth a trial, and I should not be discouraged if for a time or two they proved a failure.

This brings me to the Brood Mare Society, the second annual report of which has just been sent to me. The report is a very satisfactory one, and perhaps there is no society in England at the present moment which is doing so much good at such a small outlay. During the last year the society has spent £85 15s. on the purchase of mares, and has sold one mare for £25 5s., the total income from all sources, including the balance in hand at the commencement of the financial year which was £214s. 11d., amounts to £490 16s. 6d., and the total expenditure was £294 13s. 2d., leaving a balance of £196 3s. 7d. There are fifty mares in the hands of breeders, which I take it is a very satisfactory result for such a small expenditure. The men to whom the mares are lent pay a rent of £2 per annum for them, which is an admirable plan. And as it is the endeavour of the society to supply a mare which is capable of working on a farm, her heir is very cheap at £2 per annum even if she should miss breeding a foal. The society is doing a good work and its receipts from annual subscriptions, which are now £291, should run into four figures. Indeed, it should have done so by this time. If with the present subscription there are fifty mares allocated, it is easy to see what would be done if the society met with the support it deserves. A few hundred good sound brood mares in the country that could not be sent out of it would soon alter the position of light horse breeding.

I have always thought that the Brood Mare Society and Cleveland Bay and Yorkshire Coach Horse Breeders should come into touch. In the Cleveland Bay mare and the larger stamp of Yorkshire coaching mare there is the foundation for either a good hunter or a good harness horse, and they are eminently fitted to work on the land, being both active and powerful. Unfortunately there are not too many of them, but there are plenty for a foundation, and the numbers would soon increase if there was, as was once the case, a good steady home demand. Under present circumstances the foreigners get the best mares, for even now, when the trade is not so brisk as it was, the foreigner gets the pick of the market. This is nothing less than a national calamity, and it will be found so some day. An active, powerful, hardy breed like the Cleveland Bay is, even in these days, a valuable national possession.

THE LOOKER ON.

The Bentley Stud.

Situated in the extreme east of England, exposed to the north-east winds from the German Ocean, lies the parish of Bentley, where the late Mr. Edward Quilter founded one of the most successful studs of Suffolk horses which have of recent years competed in the showyard. The fact of the exposed position of this locality is a proof that this stud is endowed with that hardness of constitution which cannot fail to stand any inclemency of the weather that might prove fatal to stock less robust and hardy. It is with regret the present owner, Major J. A. C. Quilter, has decided to submit his horses to public auction. The farm, however, being let, it has been thought advisable to offer the entire stud at the annual Suffolk horse sale to be held at Ipswich on Monday next, the 30th inst.

In addition to Bentley Duchess (4129) (of whom we give an illustration), a great prizewinner, being three first and champion at the Suffolk Show, there are many other noted animals, including in the mares Bentley Christine (4716), Bentley Princess (5217), and Bentley Gladness (5150) having all been conspicuous in the show ring, and may be relied upon as breeders, being offered for sale

with foals at foot. Other mares such as Bentley Belle (4320) and Bentley Perfect (5317) have, and will no doubt continue to give a good account of themselves.

The stallions, although not large in number, are one of the choicest lots that have come before the public for a considerable time. The three-year-old stallion Bentley Cornet (3122) by Mars, winner of first prize and reserve for the champion at the recent Suffolk Show, cannot fail to attract notice; whilst Bentley Grist (3238), unbeaten as a yearling last year at the principal shows, will undoubtedly be in request. It is to be hoped that these stallions will be retained in the country, as it is predicted by some of the best judges of the breed that there is every prospect of their proving valuable sires in the future.

The West Ayton Hunters.

The late Mr. J. S. Darrell's well-known stud of hunters and young hunter stock was dispersed by auction at West Ayton, near Scarborough, on the 6th inst. by Messrs. Walker and Sons and Messrs. Boulton and Cooper. Breeders from all parts were present, and a satisfactory sale resulted, the total amount realised for sixty-two animals being £2,055 16s. 6d. Two three-figure prices were recorded, a four-year-old brown mare by Red Eagle being knocked down to Mr. Willaers, of Antwerp, for 117 guineas, and a four-year-old chestnut gelding by Castlereagh fetching 103 guineas from Mr. Murry. The five-year-olds and upwards sold at prices up to 68 guineas, three-year-olds up to 62 guineas, and two-year-olds to 50 guineas.

1905, while the expenditure was £206 9s. 6d., as against £275 2s. in 1905. Annual subscriptions show an increase of £5 15s. The revenue from entry-fees showed an increase of £12 5s. 6d., and from certificates an increase of £3 5s. 6d. As regards expenditure, the decrease is accounted for by reduction in the amount given as special prizes. The expenditure on the show and sale was £52 15s. 2d., of which £35 15s. was given in prize money. The receipts amounted to £10 19s. 3d., compared with £15 5s. 10d. last year. There was thus a net loss on the show and sale of £41 17s. 11d., the receipts even failing to meet the cost of printing, advertising, &c., to the extent of £40s. 11d. The society's capital assets, valued on the same basis as last year, stand at £680 16s. 11d.

Some discussion took place as to the continuance of the Society's annual show, on which there had last year been a net loss of over £41. The chairman, the Hon. G. R. Vernon, said it was known to the members that the show was encouraging the breeding of Ayrshire cattle, and he thought they were justified in continuing the show, even though the receipts did not meet the expenditure. It was unanimously agreed to continue the show.

The Marquis of Ailsa was appointed patron for the ensuing year, the Hon. G. R. Vernon president, and Mr. A. Cross, of Knockdon, vice-president.

It was agreed to give £20 to Ayrshire Agricultural Association, to vote £40 for the Society's own show, and £30 to be allocated among such shows as applied for grants. It was agreed to send representatives to the conference at Peebles in regard to proposed points in judging cattle. It was also agreed to add to points for judging Ayrshire cattle the colours black and white.

SUFFOLK MARE, BENTLEY DUCHESS.
Winner of numerous Prizes, including three Championships.
One of the late Mr. EDWARD QUILTER'S Bentley Stud.

Ayrshire Cattle Society.

The report presented at the annual meeting of the Ayrshire Cattle Herd Book Society, stated that during the year 281 certificates of pedigree had been granted, from which it may be inferred that 281 Ayrshires of both sexes have been exported during the course of the year. As compared with last year, this shows an increase of forty-seven. The destinations of the animals were as follows:—Canada, 107; Finland, seventy-six; Sweden, thirty; United States of America, twenty-nine; South Africa, twenty-six; Australia, twelve; Ireland, one. During the year twenty-four annual members had joined the society.

The committee were, the report continued, disappointed with this year's sales of pedigreed Ayrshires. They did not think, however, that the show and sale should be abandoned. A sale of pedigreed stock could not be established in one or two years. Breeders seemed to think that buyers were not forward in sufficient numbers to afford competition for their stock. On the other hand, the committee reminded breeders that buyers could not be induced to come from a distance unless a good selection was afforded in the way of numbers. They strongly urged that members should send consignments, and that purchasers would inevitably follow.

The total revenue from all sources during the year was £207 0s. 5d., as against £200 1s. 6d. in

Alderney and the British Meat Trade.

A public meeting, attended by over 200 of the principal inhabitants of Alderney, was held on that island on Thursday in connection with a scheme to import Argentine cattle and sheep to be slaughtered there and the carcasses shipped direct to English and Continental ports.

The meeting was called by Mr. Spurling, chairman of the syndicate, because the Lieutenant-Governor of Guernsey desired the disadvantages, as well as the advantages, to be fully explained to the Alderney people. Mr. Spurling said small would be caused, but the buildings would be far from the habitations. In slaughtering and dealing with by-products British and local labour would be exclusively used. There would be no sweating or wage-cutting. One of the objects would be the introduction of the famous Channel Islands' breeds of cattle to South America.

The meeting unanimously passed resolutions in favour of the scheme, to be conveyed to the Lieutenant-Governor and President of the Board of Agriculture. It is proposed to import 500 cattle and 4,000 sheep weekly if the scheme is practicable.

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the larger farmers and estate owners.

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

"Fly" or "Maggot" in Sheep.

Recently a querist ("F. M.," page 620) sought information as to "how to prevent flies tormenting cattle and sheep." Some information was given with reference to a dressing for the former, and it was promised that, the subject being a reasonable one, fly prevention and maggoting in sheep should be dealt with in greater detail at an early date. May and June are reputed the great "fly" months, but the attacks are continued throughout the summer, and in mild seasons prolonged far into the autumn. In thundery weather, after showers, and at the latter end of their short existence, the flies appear particularly vicious, and the shepherd dares not relax his vigilance for a moment.

The particular "fly" responsible for "maggotting" sheep has long been in dispute, and probably several of the Muscidae, an important family of the two-winged flies, are concerned in causing this trouble, but one of the green-bottle flies—*Lucilia sericata*—appears the most prevalent cause. The following description of *Lucilia* in its different stages, as supplied by the Board of Agriculture leaflet on the subject, can hardly fail to be of interest:—

L. sericata is a bright shining green or blue-green fly, about one-third of an inch long, and about seven-eighths of an inch in spread of wing. The fly, examined with a lens, is seen to be covered with dark bristles; the arrangement of these bristles being used as an aid in distinguishing this and allied species.

The eggs are yellowish white, and measure about one-sixteenth of an inch in length.

The larva is a legless maggot, capable, however, of an active crawling movement. It measures, when full grown, up to half an inch or more in length; the head end is pointed, and provided with two mouth hooks; the hind end is blunt, with tubercles round its margin and two plates carrying the spiracles on its flat surface. The female fly is capable of laying as many as 500 eggs, and fixes these to the wool in clusters of twenty or more. These eggs may hatch in twenty-four hours, the resulting maggots feeding at first externally, and later boring into the skin and flesh. In a fortnight they may be full grown, when they drop away from the sheep and become pupae, under cover of brown and rounded or barrel-shaped cases, from which the fly, when ready, issues from a hole at one end.

In certain experiments that have been made the flies inserted in from less than a fortnight to a fortnight according to temperature and other conditions. Direct loss of sheep or lambs from death is not common unless under conditions such as on hill pastures, where careful oversight is impossible, but unless the maggots are destroyed and the wounds kept clean, the torture ends in death.

Either from neglect or lack of knowledge, or both, sheep sometimes get practically eaten alive. Indirect loss is heavy owing to the disturbance caused by the frequent hunting and collecting, and "struck" sheep always thrive badly, and are depreciated in value, owing to rapid loss of condition and injury to the wool.

Two things that favour the attack of the "fly" are cuts and similar injuries, the former often received in shearing, and allowing the sheep to get dirty behind. Filth seems to form a congenial habitat for the maggots, and a damp fetid patch of wool will generally be found where they are actually at work. Thus the rump and tail are parts liable to attack.

It is said that a good dog recognises a "struck" sheep, but there are some bipeds that are either less observant or less intelligent than the canine guardian of the flock, for maggoting is sometimes overlooked. The sheep is at first restless and excitable, shakes its tail in a peculiar manner, stamps its feet, runs about, and tries to rub or bite in order to allay the irritation caused by the maggots. Later, the animal becomes dull and dejected, loses appetite, and stands listlessly, with hanging head, apart from its companions.

The wool at the seat of attack is raised, rough, and discoloured, there is an oozing from the sores of an evil-smelling discharge, and the maggots in working into the tissues cause deep fissures or galleries.

The wool, which falls out, does not, in bad cases, grow again.

An attack on lambs is worse than on old sheep. Prevention is, of course, of the greatest importance. This includes the destruction of the carcasses of all dead animals, including birds, which should be burned or buried deeply in order that they may not serve as breeding places for the fly. This is a precaution very commonly overlooked or

neglected. The prompt treatment of cuts, wounds, or abrasions of the skin at the time of their infliction is essential. For the protection of wounds zinc ointment to which ten drops of pure carbolic acid has been added to each ounce, or a mixture of sulphur in carbolic oil, are very useful.

The latter is especially convenient, as it can be supplied to the shearer or carried in a can by the shepherd, and applied with a brush to the part. The removal of dirty locks of wool, and the trimming up of parts contaminated, when, owing to the nature of the food, the bowels are relaxed, or the animal suffers from diarrhoea, should be attended to. Sheep suffering from "scour" fall away very to the fly, and the object of keeping them thoroughly clean about their hindquarters, and clearing away any filth, is to afford as little opportunity as possible for lodgment. Flies have a keen sense of smell, and are quickly attracted to dirty places for their egg-laying.

These precautions as to dressing wounds and careful trimming do not, however, entirely suffice, for the yolk of the wool proves a sufficient attraction, and, no matter what care is taken, the fly will often strike, particularly in moist, warm, muggy weather, or warm sunshine, after showers, unless there is an application to the wool of some agent that is either obnoxious to the fly and deters egg-laying, or preventive of the development of the maggots.

"Powdering" used to be a favourite method of prevention and cure, and most country chemists sell "fly powder" for dredging into the fleeces, both for preventing the "fly" and the destruction of the maggots. They consist for the most part of mixtures of sulphur, arsenic, hellebore, white lead, cinabar of antimony, alum, prepared chalk, Armenian bole, amber, ochre, and whale oil in various combinations and proportions; but dipping, and to a lesser degree, sprinkling have almost entirely superseded powdering, as being more economical and efficient. (To be concluded.)

Swelling on Cow's Knee.

SIR,—Will you kindly tell me through your paper what to do with a windgal on cow's knee as large as a quart measure and soft; has been there four or five months?—**A. CONSTANT READER.**

Answer: "What to do" in such a case will be to call in the local veterinary surgeon and consult him as to the advisability of putting a seton through the swelling, and we tender you this advice because we fear there is nothing you can do in such a case for yourself. You are of course aware how such bursal enlargements are caused, but the size of the enlargement and the persistence for such a long period is suggestive of the cause remaining in operation. The most common cause of the enormously enlarged knees in cattle is bruising due to their lying on hard and insufficiently bedded floors, and unless this is remedied the swelling not only persists, even in spite of treatment, but becomes considerably large.

In recent cases, where the enlargement is small, cold water bandaging and protection against further injury is occasionally effective, but a more common practice is to blister the front of the knee. This converts the soft fluctuating swelling into a hardish, indurated mass that is sometimes gradually removed by absorption. Anything so large as "a quart measure" cannot, however, be dealt with in this way, and the only thing is a seton through the body of the swelling and protection from further injury. The question as to whether the game is worth the candle is for you to decide. It is true that these bursal enlargements are not windgalls, but contain fluid, not air—are terrible eyesores, but they rarely cause lameness, and there is, therefore, no cruelty; the milk yield is not affected, and the knee is not a particularly valuable part of a carcass of beef. M.R.C.V.S.

Butter Gone Wrong.

SIR,—I should feel obliged if you could tell me what is the cause of the very disagreeable taste in the enclosed sample of butter. There is only the one cow, and the cow-man can see no weakness in the pasture that would cause it. The dairy is kept very clean, and the cow seems in good health. The taste has been in the butter for the last month or six weeks; during the last three weeks butter has been made twice a week. The taste is not so strong on the first day.—**B. Q. V.**

Answer: The trouble I am inclined to think is caused either by some unwholesome food or water the cow takes, although there are a dozen other things I could name that might cause it. Bad drinking water is often an unthought-of cause of such a trouble. And water used in dairy work should be quite pure. I advise you to keep the cow in the shed for a week or ten days, and there feed and water carefully. Then, if the butter is sweet, you will know there has been something taken afail to cause the taint; while, if the disagreeable taste still prevails, you may look elsewhere for the mischief. The butter tastes to me as if food or water gave the taint as aforesaid, and the fact of it going off with bad flavour after a day or two points all the more strongly to my theory. M.R.C.V.S.

MERRYWEATHER'S PATENT STEAM SPRAYING APPARATUS

Used by a large number of Hop Growers in Kent, &c.
Ask Particulars and Expert Advice.
63, Long Acre, London, W.C.

NON-POISONOUS. "SPIMO" NON-POISONOUS.

HOP and FRUIT TREE WASH.

A SAFE, COMPLETE AND EFFECTIVE WASH.

Kills Aphis, Fly, Red Spider, Mould or Mildew, Caterpillars, American Blight, etc.

Does not clog horse washers, but acts as a lubricant.

"Spimo" Improved is a COMPLETE WASH for ALL PURPOSES.

Ready at a Moment's Notice. It is in fact THE THING that is WANTED.

Full Particulars from—

E. A. WHITE, LTD.
MANUFACTURERS,
PADDOCK WOOD, KENT.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

A Country Trip.

I have had the opportunity of spending a couple of very enjoyable days in Kent this week, and have now the pleasure of recording the results of my observations. Looking at the plantations that were within the range of my vision from the railway train, I was struck with the general aspect of slackness and apparent weakness of the bine, and was therefore not surprised to find confirmation of my impressions when I came into closer contact with them.

Arriving at Paddock Wood, I was met by a friend, who kindly offered me a seat in his motor car, and we were rapidly conveyed by this most agreeable modern method of locomotion through many miles of roads, bordered on each side by some of the best hop grounds in England, which may be accepted as representing the most skilful cultivators in the world. I was soon aware that the reports I had received of the general condition were not exaggerated, for the first gardens we passed showed very evidently the trials they had been through, and the critical condition in which they still remain. The next that should have come under observation were the famous Beltring gardens, but we passed on to Watlingbury, where it was painful to notice in many grounds the lightness of the bine and the sickly appearance of the foliage, giving evidence of the severity of the attack of blight, and of the labour that must have been bestowed in fighting with it.

Here and there a more promising piece was to be seen, but, on the whole, my impressions were very unfavourable. Similar pictures were presented as we passed through East Barming, until we arrived at the outskirts of Maidstone, when houses took the place of hops. Leaving the town by another route, we ran through Tovil and entered upon the Farleighs, looking with interest at the extensive grounds of Messrs. Ballard. Here it is well known that capital and labour are not spared to ensure good crops. The most persistent attack of aphis blight is met by an elaborate system of spraying pipes distributed throughout the gardens, the wash being applied by the power provided by steam pumps.

This process had been in operation from the moment of the first appearance of the pest, and was being continued at the time of my visit. The plants are fairly clean, but as a fresh supply of lice constantly takes the place of their destroyed predecessors, it seems that perseverance in washing will be necessary up to the last possible moment. With the advantages of such an arrangement as I have mentioned, it was to be expected that good results should be found, and to some extent this is the case, but, nevertheless, the general condition appeared to be much in arrears of what I have seen in these gardens, and the bine must still make great progress if the crop is to come up to an average.

Further on there were very many poor looking pieces, and certainly the Bow Hill grounds seemed to be disappointing, so far as I was able to observe them. Too much daylight was a marked feature in glancing across the gardens. They did not look like cropping to the extent desired, and had clearly suffered, and were still suffering from the ravages of the blight. Some gardens at Kenward were apparently in a rather more satisfactory condition. The bine was stronger and more plentiful and the foliage of sounder colour, but as we approached Yalding we found some gardens that were in a most lamentable condition. Whether they had

been neglected, I do not know, but much of the foliage was smothered with vermin, many of the leaves were turning black, and the feeble aspect of the bine could not be overlooked. Such pieces cannot produce any amount of crop even under the most favourable conditions during the remainder of the season. Round the village of Yalding there are some grounds with fair promise, and others for which the outlook must be somewhat dark.

The general effect upon my mind of this brief survey may perhaps be illustrated by the feeling aroused when one meets a friend who stands with his head lowered, his back bent, his eyes half closed, and his whole attitude expressive of anxiety and depression. One wonders what is wrong with him, and one's sympathies are stirred, as one realises that one cannot assist him.

As with the man, so with the hops this year; they are despondent, they are oppressed with trouble, and unless Nature comes to their help they will continue on the downward path. Illustrations are not often entirely applicable, and I feel that my attempt cannot quite convey my meaning, but it is pretty certain that the general condition of our plantations is not promising, and we may safely go farther, and predict that present appearances warrant us in anticipating a harvest that must come far short of that of last year, and will probably not much exceed the yield of 1904.

From Foreign Plantations.

I have received the following from the German Hop Growers' Association:—

Bavaria.

SPALT.—Although the late and early hops are going on well, it is still too early to come to any decision as to the amount of the crop, as it depends on the weather which we shall have.

HABSBURG.—In our neighbourhood the hops are medium and satisfactory. In nearly all the plantations the plant is injured with lice, and mildew and rust have set in.

SCHNITTACH.—On account of the great quantities of lice the plant has not made much progress during the last fourteen days. It is to be feared that by unfavourable weather rust will set in. The different attempts to clean the black rusty hops have met with some success.

NEUSTADT A/ALBACH.—During the last fourteen days the condition of the plant has improved, but in many gardens—particularly new plantations—the plant has not grown well—there are lice, and the hops are likely to get black.

MAINBURG.—The condition of our hop plant in general is very good; it has grown well, and is free from vermin and disease. The storm last week has freshened up the plants considerably.

SIEGENBURG.—The condition of the plant is good, but the lice have increased and have attacked some of the plantations. In this neighbourhood there has been a heavy hail shower, which has completely destroyed some of the hops, and others are badly injured.

MERTINGEN.—The weather is at present favourable, and the plant is two-thirds up the pole. On the whole it looks healthy, and is free from vermin.

Wurtemberg.

KENNINGEN.—The condition of our plant is good. With regard to the amount of the crop, it will not be far behind that of others, comparatively. At present leaf-lice are showing themselves, but not so much so as to cause anxiety.

HEERENBURG.—The wet and cold weather has injured the plant, and those gardens which have suffered from the earth flea are behind, the condition of the gardens is therefore unequal. During the last eight days leaf-lice have increased, and in some of the best gardens it looks as if the plant would get black if we do not have good weather, especially warm nights.

ADLBINGEN.—The condition of our gardens is at present varied. Some places have suffered so much with the earth flea that it has been impossible to train them on the pole; others, on the contrary, have developed beautifully.

WEILHESSTADT.—Condition in general good. On account of the high temperature in low-lying places lice are to be found, but there is no sign of the hop turning black.

ROTTENBURG.—Development has been slow on account of unfavourable weather, and the condition of the plantations is unequal. Since middle of June weather has been better and the condition has improved; there have been some cold nights, and if they repeat themselves much harm will be done.

Baden.

HUGENAT.—The warmer weather has done much good; early hops begin to blossom, the bine is good, but the amount produced will be smaller than that of the late hops.

Prussia.

NEUMISCHSEL.—Plants backward on account of bad weather; they have hardly reached the half of the pole, and to prevent mildew from setting in heavy rains are much required.

GARBELEGEN.—Condition unequal here, and some of the plants are suffering from vermin. On

the whole things are fourteen days behind against last year. A warm, wetting rain would do much good. It is safe to say we shall not have a very good or early crop.

Austria-Hungary.

SACHSENFEELD.—The weather has changed here at last, and we have warm nights and days. In strong "golding" gardens buds are noticeable. Vermin is not increasing.

SCHASSBURG.—From middle May till middle June the weather in this district was bad, and the prospects look far from promising. At last, however, the weather has changed for the better. The hops in general are sound, good green, and unimpaired up till now.

SAAZ.—Since last report, weather good with some rain, and the plant has developed nicely. As is the case every year—this year part of our plantations, those which have been cut late—are rather weak, but the greater part are luxuriant and have well developed side shoots. Vermin has not increased where there have been heavy showers, and if the weather does not change again for the worse, our prospects are as before good.

Belgium.

Some Belgian planters, with whom I have had some conversation this week, inform me that the blight is universal and most persistent throughout the Alost plantations. Their system of washing is very primitive and ineffective, being limited to hand syringing with soft soap, extract of tobacco—in which they appear to place much confidence—and in some plantations quassia is also used. The general condition is stated to be unfavourable, and only a very moderate crop is anticipated.

America.

From Washington I have received to-day (Friday) the following extract from the *Morning Oregonian*, dated June 29:—

SALEM, Or.—Almost incredible though it may seem, well-posted Oregon hopgrowers expect a crop of 130,000 bales in this State this season. This is an expectation based upon the present condition of the yards. Some men who are both dealers and growers say they will not be surprised at a crop of 140,000 bales, and will be disappointed if it comes under 130,000, with continued favourable weather conditions. The largest crop heretofore gathered was that of last year, aggregating 108,000 bales.

All the yards are now in first-class condition. Many old yards are promising a yield of 25 to 50 per cent. greater than last year. In addition to this, there are many young yards which produced eight crops of baby hops last year that will yield full crops for the first time this year. The great question in the minds of growers is whether all the hops can be gathered. Labour is scarce, and a much larger number of people than usual will be required to pick the crop.

Our Foreign Trade.

Contrary to my expectation, the official returns for June show an increase in our exports of hops. The Continent has fallen off, but America has again come to the front with 3,396 cwt., raising our total receipts for the month to 10,271 cwt. These arrivals are mainly from the Pacific Coast, and are principally traceable to the desire of a large Californian grower to unload himself of his holdings for special reasons. Our aggregate of imports during the past six months now shows the important figure of 98,796 cwt., and we have received from all foreign sources since the beginning of our season on September 1, 1905, no less than 173,412 cwt. After deducting the exports for the same period it will be seen that the balance against our market is 153,870 cwt., which, taken in connection with our immense native crop, is much too heavy for the satisfaction of English growers. Referring to the exports of the past season, it is pleasing to know that colonial brewers give such marked preference to English growths, as out of our shipments of 19,542 cwt. 13,612 cwt. were of our production.

The Swindon Tram Accident.—After extending over six days, the coroner's inquiry touching the death of four persons who succumbed to injuries sustained in the tramcar accident at Swindon on the occasion of the Bath and West Show, was concluded on Thursday. The jury, after a lengthy absence, returned a verdict of "Accidental death." They exonerated the driver from all blame, and found that the brakes were not in perfect working order, and considered that the electrical engineer and the tramway manager, Mr. G. J. Griffin, were lacking in judgment in not sending the car in. They also found the tramway committee of the corporation guilty of general slackness in not enforcing the by-laws. Mr. Thomas Neate, of Bath, died at Swindon Hospital on Thursday from injuries received in the accident, making the total deaths five.

Northern Notes.

THE lackwaddiness of farmers in grasping new ideas is one of the things which militates against their prosperity. Every farmer who will spend fivepence on the official copy of the Report of the Departmental Committee on Railway Rates would be rewarded manifoldly. Much grumbling is directed against the railway companies. The complaints are many of them ill-founded. When agriculturists have thoroughly learnt the lesson of co-operation, we may hope for a more satisfactory state of affairs in the carrying world. The companies will carry cheaply if they are allowed to handle big lots; but the comparatively small and petty lots sent over a system of railway cost much more in proportion than a truck or several truck loads forwarded to a given centre. Manufacturers of farmers' requirements in Yorkshire are adopting the plan of delivering their orders by means of a motor service of their own, sending the goods along free within a given radius. This is enterprise; and the offer of free delivery is a tempting bait. While combination and co-operation have on the Continent enabled the agriculturists to export freely and thus to compete in our markets, here it appears to be difficult to induce farmers to abandon their antiquated methods.

COPIOUS, penetrating rains have fallen this week in some parts of the North, where the rainfall for the second quarter of the year is deficient. Notwithstanding, the outlook all round is far better than last summer, and, in fact, for several years past. The difference in the appearance of most turnip plots is strikingly in favour of the roots now in the ground, and the prospect of a sufficiency of winter feed has put heart into the farmers who feed for the markets. The hay crops are receiving attention, but not universally. Wealthy crops of clover hay are being mown, and corn and ordinary meadow-land crops have been greatly stimulated by the torrential showers and subsequent heat. The idea is being fast exploded that it is possible to produce something out of nothing; and it is interesting to observe that fertilisers are being used after the first "sweep of the seythe," in order to ensure a more rapid growth of the aftermath. The judicious use of a fertiliser amply rewards an enterprising man.

ON suitable wheat lands the crop is conspicuously good. Slight attacks of wireworm have been spoken of, but these are by no means prevalent. Wheat is now well into ear, and is so heavy a plant that many fields have bowed beneath the weight of rainstorms. There is much more straw this summer; this remark is applicable to all the three cereals—wheat, oats, and barley. Oats were a shockingly light crop last harvest; they suffered from the drought, and we saw field after field on the Yorkshire wolds which would not repay the cost of cutting. With a spell of heat after the rains, it is quite possible the harvest may be much earlier than is at the present moment anticipated. In Northumbria an excellent mat of clover is reported, and it is so thick in some cases that yellowing of bottom due to lack of air is to be seen. Haymaking has become a much more rapid process than it once was; appliances for tedding, raking, sweeping, and carting are becoming very general. The pastures are affording an excellent bite in these northern regions, and milk producers are finding trade pretty remunerative; otherwise so many new aspirants to "fortune" would not be so venturesome as to plunk down their savings in the dairying business. Milk selling is to be preferred to butter-making in June and July, when the manufactured article recedes in value to 8d. and even less per lb.

SEVERAL well-known breeders in Yorkshire and Durham have made remunerative prices for animals exhibited at the Derby Royal, amongst them being Mr. Harrison, of Gainsford, who has sold his yearling bull—the winner of second prize—for a long figure. Mr. Harrison appears to have good luck, following sound judgment, in regard to both Shorthorns and Leicester sheep. He is a prominent breeder of both, having divided honours pretty evenly with Mr. Jordan, of Driffield, for Leicesters, besides winning both the prizes offered for wool of that breed. Mr. Geo. Schoy, of Helmsley, has heared, sold his Yorkshire coach horse, Easingwold, to go abroad. This very fine specimen of a coacher has realised a big price. Some people appear to seriously question whether we can really afford to let some of our best stock be shipped abroad. The reason we can afford to do so is that our stock-raisers are such adepts at the art. What has been done in breeding can be repeated; at any rate, we will hope so. If we declined to allow the foreigner his choice, we should pretty quickly lose his

If SHEEP DIPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

custom altogether; his addresses would be paid to some other nation, but because he finds the best in England, to England he comes, and he enriches our lucky and intelligent farmers. The latter can hardly afford, after their merits have been determined in the prize ring, to throw away prospects of high values for their cattle, horses and sheep because of some prejudice. The pedigreed live-stock man has hardly arrived at that stage of absolute independence that he can afford to become a national philanthropist.

I HEAR, from what I have occasion to believe is a trustworthy source, that a number of large holdings on two extensive estates in Yorkshire are shortly coming into the market. The farms in question have for the most part been in the same occupation many years. All the farms are well let, and the only apparent object of putting them on the market is to reduce the area of the estates. Farmers of late years have not saved much money, except the fortunate few, who have done a heavy stroke of business in Hackney breeding. It occasionally comes to pass that a tenant purchases his holding. Land is always there when bought; it does not pass in a night, as investments of the will-o'-the-wisp order are apt to do. Many considerations enter into the purchase of land; its contiguity or otherwise to a railway is an important factor in determining its commercial value. An offer was made of about £20 an acre for a 100-acre holding in East Yorkshire recently; but the vendors declined to part with it.

POULTRY.

Late-Hatched Chickens.

The many phases of chicken life make poultry-keeping full of a variety that is charming, and an interest that attracts. Some people object to late-hatched chickens, feeling that those hatched during the months when the wild birds bring up their young are really natural birds, and fit for good work in the poultry-yard. But these people forget that domestic poultry are very largely out of their element in many respects, and as they remember this they will cease to clamour for any other thing than the most natural, and anything beyond that will assist Nature to ensure success.

We must also remember in this connection that it is profitable poultry-keeping, and not natural poultry-keeping that we have to study, and that utility in a modern sense is not always allied to copying Nature in her times and seasons, if we find it advantageous to copy her methods, and that when a system is found to produce beneficial results it is always most legitimate to employ it, because this principle, evolved very largely out of the higher intelligence of men to govern the beasts of the field and living things generally, has been at the source of all improvements, and very much of the excellence that now exists in many departments of life. So it is with the raising of men and women of the old school, "July and August chickens do not do well."

We believe that the blundering management was largely responsible for the condition of things of which this remark was only too sadly true, and as we have looked round the question we have not been surprised that it was so under the old management, so sadly defective, and which claimed a margin for so much of inattention and deficiency in many ways.

Let us now look at what really was the

THE CAUSE OF FAILURE.

One very frequent cause of chickens that were hatched late not being reared was found in the tendency poultry-keepers had to bring up old and young chickens together. This modern poultry-keepers know to be a most fatal mistake, and often the poor little late-hatched chicks were allowed to huddle up in the chicken houses with the older birds, until they were almost stifled, and their growth and vigour seriously impaired. And even now, strange to say, many people are very careless over this matter, and these grumble and blame the chickens, poultry-keeping, and, indeed, everything else, except the one cause—even their own bungling through ignorance; and then finding their young late-hatched chickens dying off one by one, wonder how this is, when they might be quite sure that this would be the result of such bad management as their poor little chickens are oftentimes subjected to.

Then, again, in breeding, bad feeding, wrong mating, and other evils of ignorance cause weakness of constitution, and the consequence is a sad story of failures that are most disastrous. Further, with the old negligence, hens are set in the old nests, which are infested with vermin, and consequently the hen is soon attacked, and loss of blood causes her to lose heat, and weak chickens are the result. Of course these do not do as well as if they had the advantage of quick, vigorous incubation, and so if a little cold weather should come, then they are weak and scarcely able to stand against it. Another

CAUSE OF DEATH

among young chickens is found in blows in the

back of the head which little chickens frequently get when they are allowed to feed with the earlier-hatched, larger chickens and the older birds. Of course, they live on perhaps for weeks after, but they gradually lose ground and droop, and are soon found dead, as this seems to cause some most fatal affection of the brain, from which they never recover.

Then, the ground on which the late-hatched chickens run is often quite stale before they are put there, consequently this causes death in many instances, and people wonder why it is their chickens are dying off. As a rule, if properly managed, late-hatched do as well, and in some cases, even better than earlier-hatched ones, but as with the spring-hatched chickens, so with these later-hatched birds, some are bad, while the vast majority, if properly cared for, turn out well.

One rather remarkable fact is noticeable in some of the July-hatched chickens, and that is that some of these hatched about the end of July have begun to lay before birds hatched in March and April. So, strange as this may appear, it seems abundantly certain that in these cases the birds lose nothing in the way of vigour, etc., by being late-hatched. If poultry keepers are short of birds at this time, we should advise them to get some eggs now they are cheap, and

SET TO WORK HATCHING AT ONCE, as they may both hatch and rear birds well at the end of the summer or early in the autumn. We would urge poultry-keepers to study well the bearing of these economical methods of keeping up the supply of birds when they are short of stock through disaster earlier in the season, as they might very well in part make up now for any shortcomings in this respect. For anyone who has only limited space at their disposal, and pens filled with good chickens, we should not advise any attempt at such proceedings, but where birds are required these may be got, and that with little difficulty and trouble.

Where one is able to rear birds quickly from a good laying strain, birds of the right kind may often be produced, so that birds hatched at the end of August are found laying in January. In some cases we have known birds hatched the last week in August were laying at Christmas, while some hatched in February do not lay even then. These

LITTLE POINTS OF MANAGEMENT

are often the many points in which many fail, and while they are thinking of what they can do, and mourning their disappointments, the time flies away, and the opportunities are lost for ever. Where poultry keepers are unable to afford the higher prices paid for good eggs early in the season, they may get good stock by buying eggs and hatching late when they are cheap, and getting some good birds the first year; they would, if they followed this up by mating a large, early-hatching cockerel with the hens, the next year get some fine stock, equal almost to birds bred early in the season.

A good deal depends upon how people go to work in these matters, because practical poultry-keeping is largely a question of economy, which is taking up with constantly remembering that "Time and tide wait for no man." Of course, stock bred in the way we have mentioned is not the size the birds bred directly would be, but one gets the blood, and that is a great consideration, as this often means vigour and characteristic strength of constitution, and, in many instances, we have known them to grow out quite large birds the second season.

TABLE BIRDS

may be reared in large numbers late in the season. The Surrey and Sussex table breeders hatch immense numbers of birds at the end of August, September, and October. Birds hatched at that time make 1s. or 1s. 6d. more in the London markets than those hatched in May and June; that is to say, birds that are sold at the end of January or during February and March. These people are well up to their business, and so select the most advantageous moments for hatching the birds with which they supply the markets so continuously and so well, and we are most anxious to see the splendid enterprise, which has made these fatteners justly famous, extending to all parts of the country, until each county shall have cause to rejoice over mighty results in profitable poultry-keeping.

There are two reasons why these birds make more. Pullets that have already laid, at the end of the summer, are not worth much for table, and the cockerels though spurs and although a little bigger, their flesh is tough and not worth as much as that of younger birds. In cases where people only hatch and rear birds for their own consumption, a few good autumn-hatched chickens are very useful. The cheap time for selling poultry is during the months of July, August, September, October, and November, and during this time chickens make most prices.

One thing is always to be aimed at, and that is to get the birds of a good weight and of good quality, so that the birds may command good prices in the markets.

AGRICULTURAL IMPLEMENTS AND MACHINERY NOTES.

The Walter A. Wood Mowing and Reaping Machine Co., Ltd., of 30, Worship Street, London, E.C., are ever to the front in introducing features of the greatest service to users of farm machinery, and their latest is in connection with their "Admiral" mower, which was awarded a first prize at the Royal Cornwall Show at Redruth in June. They have now a reaping attachment for this machine which is most simple, but at the same time of the greatest value, for the mower can in the space of a very few minutes be turned into a most efficient reaper, whilst if the machine has to be transported anywhere no parts need to be removed, the attachment simply being folded up to the side of the mower. An illustration of the mower with the reaping attachment is given on this page. Another feature of the machine is the increased space allowed between the lead-wheel and the pole for inside horse—an advantage apparent to all users of machinery. In fact the "Admiral" mower deserves the addition of two more letters in its name, and thus make it the "Admirable."

In his report on the trade of Italy for 1905, recently issued, Mr. J. H. Towsey (H.M. Consul at Milan) states that in the supply of steam-engines and steam threshing-machines British makers still held their own, but that the hay-making and harvesting machinery trade has for a long time been entirely lost to the United Kingdom, and is in the hands of the United States. They supply a very much lighter and cheaper article, and the sale of this class of machines is

eighty days' credit from receipt of the goods. The cash with the order or against bill of lading means four or five weeks' anticipation of the money. Finally they send their goods by rail without packing, and buyers know beforehand the cost of their purchases, whereas with British goods this is impossible. Mr. Towsey adds that if British makers would quote prices delivered at dealers' station, in francs, and on more liberal terms, the trade might even now return.

H.M. Consul-General at Odessa (Mr. C. S. Smith), states in his report for 1905 that of harvesting machinery, self-binders, reapers, mowers, horse-rakes, about three and a half shiploads, of some 30,000 tons (40 cubic feet), arrived at this port during the year 1905. For these articles the United States, with some competition from Canada, holds the market. The manufacturers of these countries have specially studied the adaptation of their products to South Russian requirements and the chief merits of the machines, by which they have gained the monopoly, are lightness of construction, an essential in a country where the draught animals are either oxen or undersized horses; cheapness; and the low prices of the reserve parts, of which immense stocks are held. This latter point is a speciality, for the machines are not strongly built and soon shake to pieces. By the provision of reserve parts at low prices and by the small original cost of the machine, the American producer has successfully tempted the Russian buyer, who is for the most part a man of limited means, and largely dependent on the results of each harvest.

H.M. Consular Agent at Corumbá (Mr. C. C. Cooper) reports that although the agricultural

THE WALTER A. WOOD "ADMIRAL" MOWER, WITH REAPING ATTACHMENT.

increasing, but Canada is now getting a small share of this trade. Italy imports quite 1,200 tons of ploughs and seed-drills per year, and this trade is entirely in the hands of the Germans, who have studied, and are continually studying the local requirements. The German type of plough is preferred, and no British cattle-drawn ploughs come to the country.

The reasons for the above failure of British makers in Italy are thus clearly set out by Mr. Towsey:—Because makers of other countries study the requirements of the country; as a consequence they visit the local shows and compete for prizes. They push principally such implements as are sold in large numbers and sold in truckloads. They frequently publish catalogues and price lists, often in Italian and French currency and metrical measures; they further often visit the dealers. They do not require cash with the order or before delivery, but to good firms they allow, as a matter of course, three months' credit, and only as an alternative they quote their discount for cash.

When one considers that goods from the United Kingdom arrive at their destination in Italy in three or four weeks, and from any station in Germany to the centre of Italy in ten days, this difference in the payment conditions of the two countries becomes even more marked. The three months' credit from the German maker means

FARM MACHINERY and IMPLEMENTS

have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

industry of the States of Matto Grosso is destined to become one of the principal sources of revenue on account of the fertility of the soil, varied climate and favourable position, agriculture is as yet in its most elementary state, owing chiefly to lack of labour and a general want of enterprise on the part of landowners. Manufacturers of agricultural implements and machinery should, however, keep this market before them as an important consumer of their products in the near future.

Stowmarket Show.

The thirty-second annual show of the Stowmarket and Central Suffolk Farmers' Club took place on Friday on the King's Meadows at Stowmarket. Seeing that this local agricultural organisation includes within its operations an annual display of live stock, as well as of machinery in motion, the example of a kindred and older Suffolk institution might surely be properly followed by making an addition to the already long title of "Agricultural Association." With such a display of the extent and character as that of Friday on the King's Meadows, the Stowmarket Farmers' Club might well be regarded as doing work on behalf of the great agricultural cause other than holding discussion meetings and the reading of papers on farming topics. This year's show was one of the largest and the best held for some years, the entries on the present occasion numbering something like 100 more than in 1905, this gratifying increase being spread over all the classes. There were more Suffolks and Shires, while in respect to hunters and Hackneys, whose performances in the ring claim so much of the interested attention of the general body of visitors, there was a decided improvement.

AUCTION SALE ANNOUNCEMENTS.

PUBLIC NOTICE.

IMPORTANT SALES OF PURE BRED STOCK.

JOHN THORNTON & CO. will **SELL BY AUCTION** as follows:—
FRIDAY, JULY 20.—Mr. H. Sessions' **SHORTHORNS, RYELAND SHEEP, and LARGE BLACK PIGS**, at Ifton Manor, Newport, Mon.

Sheep penned, including Ewes, Lambs, and Rams, at **LINDFIELD, 13,000.**

At **LEWES, 18,000.**

MONDAY, JULY 23, 1906.
THE WATERS PLACE HAMPSHIRE DOWN FLOCK.
 The property of Mr. T. FOWELL BXTON. Registered in the *Hampshire Down Flock Book*.

Notice of the Annual Sale and Letting of **96 RAM LAMBS and RAMS**, together with **135 DRAFT EWES in AGES**, and which

(In conjunction with Messrs. Jackson and Son) Messrs.

WATERS and RAWLENCE are instructed to **LET and SELL BY AUCTION**, at Waters' Place Farm, two miles from Ware (Hertford Branch), and three miles from Roydon (Cambridge Line) Stations, G.E.R., on **MONDAY, July 23, 1906.**

From a personal visit to the Estate the Auctioneers can testify to the general excellence of the Waters' Place Flock. Mr. Hurford, the manager, is satisfied he will bring out for the sale a very choice lot of Sires. It is admitted that no Flock possesses a greater depth of flesh or those essential qualities of early maturity. That noted sheep "The Swell" (4668) or his direct descendants are the Sires of many of the Ram Lambs, a fact alone sufficient to attract the attention of all Hampshire Down Breeders.

Conveyances will meet the trains at the above Stations.

Luncheon at 12.30 and Sale after. Catalogues of Mr. J. H. Hurford, Waters' Place Farm, Ware; of Messrs. G. Jackson and Son, Auctioneers, Hitchin; or of Waters and Rawlence, Canal, Salisbury.

BROUGHTON LODGE, KETTERING (one mile from Kettering Station, Midland Main Line.)

ANNUAL SALE OF HAMPSHIRE DOWN RAM LAMBS and ABERDEEN-ANGUS CATTLE.

BERRY BROS. and BAISHAW have received instructions from Mr. W. SHATFORD JAMES to **SELL BY AUCTION**, on the premises, as above, on **TUESDAY, JULY 24, 1906,**

45 PURE-BRED HAMPSHIRE DOWN RAM LAMBS and 20 EWE LAMBS, also **17 CHOICE PEDIGREE ABERDEEN-ANGUS CATTLE**, including Lord Fearless 18086, winner of Five Champion (2 gold medals) and Eight First Prizes; and others of noted tribes, viz.:—Three Erca, Two Miss Burgess, Two Jilt and Four Pride of Aberdeen.

Luncheon at 1 o'clock. Sale immediately after.

Catalogues may be obtained of Mr. W. SHATFORD JAMES, Broughton Lodge, Kettering, who will send to meet anyone by appointment previous to or on the morning of the Sale; or of the Auctioneers, Market Place, Kettering.

OXFORD RAM FAIR.

DISPERSAL SALE OF THE RENOWNED SHIFFORD FLOCK OF HAMPSHIRE DOWN SHEEP.

FRANKLIN & GALE are favoured with instructions from Mr. A. L. Cripps, Esq., who is relinquishing farming, to sell by auction in Messrs. Morell's Close at the above Fair, on **WEDNESDAY, AUGUST 8, 1906** the Highly-celebrated and Registered Hampshire Down Flock, consisting of 100 Stock Ewes, 80 Choice Two-Tooth Ewes, 60 Matching Ewe Lambs, and 42 Rams and Ram Lambs. Catalogues may be had of Mr. Cripps, Shifford Manor, Bampton, Oxon; or of the Auctioneers, Wallingford, Reading, and Oxford.

PRELIMINARY.

THE 21st ANNUAL SALE and LETTING of Mr. LAMBERT'S pure-bred HAMPSHIRE DOWN RAMS and RAM LAMBS will take place at **CAMBRIDGE, on THURSDAY, AUGUST 2, 1906.**

Messrs. C. G. G. Auctioneers, 11, Alexandra Street, Cambridge and Linton.

The Leconfield Lincoln Long-Wool Rams, No. 38 in Flock Book.—Messrs.

SUGDON and PEARCE-BROWN have received instructions from Mr. Robert Fisher to **SELL BY AUCTION**, on **WEDNESDAY, AUGUST 15, 1906, 80 SHEARLING RAMS** from the above Registered Flock; when Mr. Fisher will be glad to see his friends.

Deposits. 2½% Interest allowed on Deposits.

Advances made. Stocks and Shares bought and sold.—Apply **SECRETARY, South Hampton Buildings, 115, Holborn, W.C.**

PROCLAMATION

BY HIS EXCELLENCY THE HONOURABLE SIR WALTER FRANCH HELY-HUTCHINSON,

Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of His Majesty's Colony of the Cape of Good Hope, and of the Territories and Dependencies thereof, etc., etc., etc.

WHEREAS it has been shown to His Excellency that it is expedient to alter and amend the Regulations, promulgated by Proclamation No. 73, bearing date the 21st day of April, 1906, providing for the examination and quarantine for the disease known as Tuberculosis of cattle introduced into this Colony from any country overseas other than the Colony of Natal:

Now, therefore, under and by virtue of the powers and authorities in me vested by the seventh section of the Act, No. 27 of 1895, intituled the "Animal Diseases Act 1895," I do hereby proclaim, declare and make known that the Regulations contained in the subjoined Schedule shall be the Regulations for the examination and quarantine of cattle which may be introduced into this Colony from any country overseas other than the Colony of Natal, and shall have force and effect from and after the 1st July, 1906, in lieu of those promulgated by the aforesaid Proclamation No. 73 of 1906, which is hereby superseded and repealed.

GOD SAVE THE KING!

Given under my Hand and the Public Seal of the Colony of the Cape of Good Hope, this 5th day of May, 1906.

WALTER HELY-HUTCHINSON,
 Governor.

By Command of His Excellency the Governor in Council,
ARTHUR J. FULLER.

No. 136, 1906.

Enacted by the foregoing Proclamation.

1. The word "Cattle" in these Regulations shall be taken to mean and include all animals of the bovine tribe.

2. All cattle, save as hereafter excepted, shall upon arrival at any Port of this Colony from any country whatsoever overseas be liable to be subjected by a Government Veterinary Surgeon to the test, known as the tuberculin test, before being allowed to land.

It will, however, be within the discretion of the Veterinary Officer aforesaid to accept the certificate of any duly qualified Veterinary Surgeon of the country from which such animals have been brought, supported by a record of temperature re-entries, to the effect that such cattle were submitted to the tuberculin test immediately before being embarked and had given no indication of the presence of tuberculosis.

3. In the absence of a satisfactory certificate as aforesaid the cattle shall be removed to a place provided by the Government or by the owners subject to the approval of the Inspecting Officer for quarantine purposes, and shall be subjected by a Government Veterinary Surgeon to the necessary testing by tuberculin to ascertain whether they are or are not affected with tuberculosis.

4. In the event of the test indicating the existence of tuberculosis, the animals shall not be removed alive from the quarantine station, but shall be destroyed there and the owner shall be allowed to deal with the carcasses as he may think fit, provided, however, that the flesh shall not be used for human consumption unless the said owner shall give a certificate that it is fit for that purpose.

5. All carcasses of inspection, and any testing, destruction and otherwise shall be borne by the owner of such cattle.

6. The foregoing Regulations shall not apply to cattle entering by sea from the Colony of Natal, save as similar regulations remain in force in that Colony, nor shall they apply to cattle imported solely for purposes of slaughter provided that, before being landed, they shall be inspected by the Government Veterinary Surgeon and declared to be the best of his kind to be sent to the slaughter, and the owners or importers shall sign and forward to the Government Veterinary Surgeon a declaration to the effect that none of such animals shall be used for human consumption for any other purpose than for slaughter and food.

MISCELLANEOUS.

WATERPROOF COVERS. Same material and pliable as railway material: 12ft. by 9ft., 12; 15ft. by 9ft., 15; and so on to any size at 1s. per square yard, with lashes. Trains marked thus * arrive at and depart from Peebles (Engine Shed Platform).

NOTICE.

The Company hereby give Special Notice that in consequence of there being only a single line to Peebles, and limited Station accommodation and facilities there, they do not undertake to guarantee that Passengers will reach Peebles, and will not be responsible for delays which may occur, or in connection with, either the outward or the return journey, however excessive from whatever cause arising. All Tickets to Peebles, available for 17th, 18th, 19th, and 20th July, are issued subject to this Notice. The Company do not undertake responsibility for the Luggage of Passengers booked at the above Fares.

W. F. JACKSON, General Manager.

Edinburgh, July, 1906.

FARMS, BUSINESSES, &c

MESSES. CRONK'S LIST of FARMS containing particulars of numerous Farms in Kent, Surrey, Sussex, and elsewhere, to be obtained gratis at their office, or will be sent by post on receipt of a stamp. Properties inserted free. 15, Pall Mall, London, S.W., and Sevenoaks, Kent.

FARMS TO LET of various sizes in Kent, Sussex, Surrey, &c. - LANGRIDGE & FREEMAN, Agricultural Valuer and Auctioneers, Tunbridge Wells, Kent, and 28, Queen Street, London, E.C.

FARM - BERKSHIRE. - EAST HANNEY FARM, near Wantage, comprising 200 Acres ARABLE and 56 Acres excellent OLD PASTURE with plenty of Water. DWELLING HOUSE and spacious Out-buildings, 1 mile from railway station, 3 miles from Wantage, and 7 miles from Abingdon. Rent £230 tithe free. To be let from Michaelmas next. - Apply, Messrs. E. and E. B. Ormond, Solicitors, Wantage; Messrs. Meecy and Son, Solicitors, Thatcham, Berkshire; or Messrs. Becher, Adkin, and Co., Estate Agents, Wantage.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

AUCTIONEERS, AGENTS.

INVERNESS, WEST HIGHLANDS. - To Noblemen, Gentlemen, Land Agents, Farmers, and Graziers. - JAMES ARNOTT, Scotch Liro Stock Commission Agent (Est. 1870), Ellandowan, Inverness, selects and supplies on commission all classes of SCOTCH STOCK at lowest rates. Attends leading markets; orders receive personal attention. Classes with approximate prices on application; references given and required; terms cash. Telegrams: "Arnott, Inverness." **CATTLE.** - Short-horn, Polled Angus, West Highlanders from the best Herds in Scotland, and direct from their folds, Polled and Horned Crosses, Ayrshire Cows, and Pedigree and Show Cattle of all classes. **SHEEP.** - Border Leicester, Cheviot, Black-faced and Crosses, and Pedigree and Show Sheep of all classes. Cattle and Sheep bought throughout the Winter Season.

PUBLICATION.

THE NEW ZEALAND FARMER. - Bee and Poultry Journal. An illustrated monthly publication, containing practical and scientific information on Farming, Stock Rearing, Cattle, Horses, Sheep, Dairying, Fruit Growing, &c. The only paper entirely devoted to Farming matters and circulating throughout the Colony. Price 1s. 1d. by post 1s. 4d. Proprietors, The New Zealand Publishing Co., Ltd., Auckland. London Managers, R. B. BRETHERTON & Co., 10, Imperial Buildings, Ludgate Circus, London, E.C.

Agriculture and Small Village Schools.

A CASE was recently brought before our notice in which a certain county education authority proposed, on the grounds of economy, to close a small village school containing about thirty scholars, and make arrangements for these children to be accommodated at another village school two or three miles away. The gentlemen who sit in committee at the county town doubtless thought they were doing a good stroke of business for the ratepayers, but the villagers thought otherwise, and very properly sent a deputation to the county committee to state their case. The end of it all was that the village won, and the school is still open, though it is questionable whether this would have been the case had not a farm labourer with six children been one of the deputation, and the strong point of his argument was that he objected to sending his youngsters two or three miles to school, and if the county authorities persisted in carrying out their proposals he should leave the village. This is just the point. We want economy by all means in educational matters, but not at the expense of closing small village schools, which are as useful in their way as large ones, and driving working men away to places where their children can get education without having to tramp two or three miles a day for it.

St. Swithin's Day.

ST. SWITHIN'S Day is past and gone, and though rain was not general on that memorable occasion, showers fell in places, in consequence of which, according to the old story, we should predominate during the forty days following. But there, St. Swithin has lost his reputation, and people of the present generation place no faith in him. This is not to be wondered at, considering how many times the weather has proved to be of an entirely different character afterwards to that on the day of the saint referred to, and it would be interesting to know the origin of this time-honoured weather story of St. Swithin. We may venture to leave the saint out of the question, but the fact remains that the first half of the summer has been unsettled. In fact, the Yankee's description of an English summer being two fine days and a thunderstorm has been applicable, for as yet we have had no stretch of unbroken sunshine, which is so welcome to farmers at haymaking time. And after all it is sunshine that makes a summer, whereas day after day of gloomy skies are depressing alike to all.

Small Shows.

BIG agricultural shows like the Royal and the Bath and West serve a useful purpose of their own, but they live more for the big breeder

than the ordinary tenant farmer. With here and there an exception, the latter cannot hope to compete with success at the big events, and there is no need for us to explain the reason why. Still, in a good many districts the tenant farmer has a show of his own at which he can compete with his neighbours on common grounds. It has been urged that there is a possibility of local shows taking the place of bigger meetings, but we do not think so (though we agree that the latter may suffer), because, after all, the big open show caters for a different class of breeder to the small local event. We are quite in favour of local agricultural societies having their own shows, because it is good to encourage the ordinary tenant farmer to take an interest in and improve the standard of his stock. Apart from this, local agricultural shows are a means of keeping the people interested in farming in touch with one other, and they are also qualified to do more than a little to maintain a feeling of mutual good fellowship between landlords and tenants.

The Art of Shoeing.

IT was Tennyson who immortalised the village blacksmith, and as an individual he is as indispensable to the farmer as in days of yore. The smithy, too, remains unchanged, and you find it, as a rule, a somewhat ramshackle looking affair by the roadside. The only difference is that the village blacksmith of to-day adds letters after his name on his sign board, because blacksmiths can pass examinations now and take certain degrees in their profession. Perhaps county councils think that shoeing smiths are not quite so expert at their business as they ought to be, because most of these bodies employ an expert who travels about and gives instruction in this work. We think this is as it should be, because there is a scientific or theoretical, as well as a practical side to farriery, and the man who gets no tuition besides that which he receives in the village smithy cannot be expected to acquire much knowledge of the former. It is not every man who calls himself a smith that can shoe a horse as it should be done, and of smiths as a body it must be said that they are not averse to receiving instruction providing they realise that the man who sets out to teach knows more about the work than they themselves. In common fairness to the village blacksmith it must be said that he is a man of parts and does not live by shoeing alone. Every farmer in these

days must have implements, some of which are more or less intricate, but as soon as anything goes wrong, the blacksmith is sent for, in full expectation that he will know all about it and be able to put matters right. Nor is it often that he fails, and though there is a wide difference between shoeing a hunter and temporarily gearing up a motor car, the man at the smithy is generally equal to the occasion.

Cleanliness in Cowsheds.

THE habitations of cows are not unlike those of human beings, which means to say that just as men live in palaces and hovels, so also the lot of some cows is to be housed in aristocratic sheds while others have to make the most of very ill-arranged and dilapidated structures. Certainly the cows do not seem to mind, and are apparently as healthy in the lowly shed as is the country labourer who in his country cottage does not get anything like the amount of air space which, according to the health authorities, he ought to have. Of course it is very nice for those who can afford it to have smart, up-to-date cowsheds of model character, but there have to be cottages as well as palaces in the cowshed world. What we would urge in respect of cowsheds is sweetness and cleanliness. No reasonable excuse can be urged for filth and dirt, and just as the lowliest cottage can be kept in a state of cleanliness, so also can the ordinary cowshed. Lime is cheap enough, goodness knows, and there are many days in the year when it is impossible to pursue outdoor occupations, and these occasions should be taken advantage of for limewashing and cleaning sheds. In short, there is no excuse for dirt.

Derbyshire Cheese at the Royal.

IN our report of the Royal Show at Derby we were obliged to express disappointment at the poor competition in the class for Derbyshire or Staffordshire cheese. At a Royal show, held in the very heart of a famous dairying country, one might have reasonably expected to find a keen competition for local produce, and such would have been the case at one time, but things have changed now. The fact of the matter is cheese-making is now only a minor industry in Staffordshire and Derbyshire, and those long, heavily-laden milk-trains which daily rattle their way from the Midlands to London explain the secret of the poor competition in the local cheese classes at the Royal. We have known the above counties for a lifetime, and remember buxom farmers' wives of the Mrs. Poyser type, so faithfully depicted by George Elford in "Adam Bede," who took a pride in making cheese as well as winning prizes with it, and they initiated their daughters in the art. More milk is

FARM MACHINERY AND IMPLEMENTS
have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

now produced in the district than ever was the case, but it is wanted in London, Manchester, and elsewhere; consequently, it is allowed to go, and the farmer is contented to buy a bit of cheese from America for his own use. This explains the poor competition at the Royal.

Rent Audits. HALF yearly rent audits have been the order of late, and we observe that several eminent landlords have made returns of 5 and in some cases 10 per cent. to their tenants. This is very gratifying to the latter, and also shows that the landlords in question display more than a superficial interest in the affairs of their tenants. We question, however, whether the principle is altogether the best, because everything depends on the generosity of the landlord, and we have known

cases in which the tenants on one estate have received a return of 10 per cent., and on an adjoining estate the full amount due was exacted. In view of this kind of thing, would it not be infinitely better if some rule or sliding scale could be adopted by which both landlord and tenant could share alike the benefits of a prosperous time and also be co-partners in adversity? As things are now, both the landlord and tenant has a case under different circumstances, because after the price per acre has been mutually arranged the landlord is often called upon to make a return when rent day comes round. This, of course, is when the farmer has not done so well as he anticipated; but if things were ever so prosperous the landlord would not have the privilege of asking another shilling per acre. This, as Kipling would say, is another story.

Agricultural Politics.

BY A LOBBYIST.

Four Proposals of Grave Moment.

Four facts affecting rural areas stand out luminous and distinct in Mr. Burns' remarkable, and, I would add, romantic speech—I use the word "romantic" as illustrative of the deep sincerity and enlightened sentiment which possessed the President of the Local Government Board—in connection with the Unemployed Act. The first is that Mr. Burns has not for a moment relinquished that sane antagonism to the over-fantastic Quixotry of the impractical visionaries who believe that the unfortunates of the towns—the unemployed and the unemployable, the ne'er-do-wells, and the mere shiftless, unstable, or weakling—have only to be drafted to the villages to become, in the guise of farm colonists, reformed characters, skilled workers, and the smiling harbingers of peace and prosperity. As a wise man, Mr. Burns refuses to be drawn into the vortex of impracticable featherheadness in which so many Labour leaders have been immersed. The second fact is that he is determined to, if possible, arrest that process of migration to the towns, the sequel to which is a tragic decline in the will, social habit, character, and sturdiness of the countryman transplanted to the slumdom of the great congeries of our life. The third, and most momentous of all, is that the Local Government Board, under Mr. Burns's aegis, meditates a far-reaching reform of rural housing, and for this purpose will not hesitate to—among other schemes affecting rural areas, one of which will concern allotments—invoke an English analogue of the Irish Labourers Bill. The fourth is—and the MARK LANE EXPRESS has every reason to be gratified at this resolve, for it is in harmony with the persistent advocacy of the suggestion in this column—the speedy utilisation of some thousands of acres of land in afforestation. The absence of a disciplined system of afforestation is a flagrant crime, and its redemption will be a heroism.

Re-building the Villages.

Mr. Burns has not lost faith in the possibilities of this land of ours for the native-born Britisher. He believes that emigration can be little more than an anodyne. This is his view as I interpret it. And what is needed in the re-utilisation of the economic possibilities of England is not the irrelevant irresponsibility of men without knowledge, not the thumping-down of ne'er-do-wells where science is required, but the recognition that in this matter lies a national responsibility. In this work the application of the Irish Labourers Bill to England will have a great economic significance. 'Tis not merely that we have to save the villages. The application of the principle of the Bill to England may be also a factor in the relief of the undesirable congestion of the great towns. The migrating rural labourer—without an urban trade, without any comprehension of the stress of life in these great hives of competitive jealousy—does not long escape the influence of the fetid and miasmatic economic and social conditions of the towns. The village migration, instead of being a source of strength to the towns, is often but a stream which adds to the unhealthiness of its misery-pools. "It makes the mouth of us Englishmen water," said Mr. Harwood, M.P., to the Parliamentary Committee examining the Irish Labourers Bill. Well it might! Of course, it cannot be

entirely applied in its present guise to England; the necessity of the difference of character in the two people will be appreciated. The outstanding, salient fact, however, is that the Government recognises that this rural housing problem—the impossibility of building houses which will secure a remunerative rent is only one of the difficulties—provides a national duty. In Ireland it will mean the advance of between three or four million pounds. What will the English edition of this Bill mean to the English rural areas?

Be Not Suspicious.

I beg that this proposal be regarded apart from partisan jealousies and partisan sentiment—that it should have a non-partisan consideration. The rural housing question has to be dealt with by the State. Neither capitalism nor landlordism ought to be expected to build cottages which will not pay a remunerative rent; and, what is more, they will not. Philanthropy can do nothing, because of necessity it must be ill-regulated and undisciplined. Legislation of the type of Sir Thomas Wrightson's Bill is worse than elusive and illusory, worse than useless. Here is a definite proposal that the State should formally step in. Quibble not that it is applying the principles of State Socialism to England—this would be but one of a number of such applications. 'Tis but the price of a Somaliand expedition; and, methinks, 'tis a better use of the money. Gore only occasionally produces fruit.

Mr. Rider Haggard and Waste Lands.

Is Mr. Rider Haggard revealing his characteristic prescience in the advice he has given a recent silly Gilbertan land-grabbing incidents? Mr. Haggard suggests that local urban authorities should make grants of the waste land in their immediate vicinity to such of the unemployed or others who are anxious to cultivate them. Well, let us concede for a moment even the rather extravagant contention of the extremists, that the permitting of waste land is, in a land like ours dependent to so large an extent for its supplies of food upon outside sources, an offence against the community. Does not, however, Mr. Haggard perceive that it would be difficult to discriminate in a matter like this? Supposing, for instance, that a local authority was called into existence which was in favour of this rather fantastic principle of cultivating waste land by the unfortunates of the community. Why should it be forbidden realising its chimerical ambition because its area happened to be described as "rural" rather than "urban"? Again, why should a rural unfortunate, who, after all, might be assumed to have some knowledge of cultivation, be forbidden the privilege of a waste-land plot which had just been conceded an "urban" unfortunate or ne'er-do-well, whose first knowledge of a cabbage-plant was probably obtained by the presentation of a bundle to him by emotional philanthropy? Mr. Rider Haggard justifies his suggestion by an American illustration. Transatlantic illustrations are not applicable to a narrow,

confined, restricted country like our own. Nothing could so piquantly illustrate the folly of this farm colonising, anybody-will-do-for-a-farm-labourer-or-small-farmer-craze than its modern day developments. These have almost brought the idea down to the bathos of operabouffe.

Rural Areas and the Motor Commission.

Surely the rural authorities will not permit the presentation of the report of the Motor Commission—which we may expect at any moment—to pass by with unheeded eye. There is not a county, scarcely a rural area, which is not vitally concerned in the increase and development of this expensive and devastating nuisance. There is not a county which has not a tale to tell of higher expenditure on roads, of a lessened comfort of life along the main highways, of cottages which have been relinquished for former habitants and of a dust-laden atmosphere, which is an antagonism to cultivation; and all this endured without any compensation or sufficient penalty being exacted from the scurrying, flying motorist, who, with soul dead to the enjoyment of the picturesque in the landscape, loves naught but the distribution of nauseating fumes and the inducement of unnecessary fear. What, however, are those rural authorities doing by way of promoting concerted action? The urban authorities are already alert and vigilant, and in London in particular, are taking steps by which the executive administration of the country shall become definitely aware of the urban sentiment. A conference of municipal bodies is being arranged; and, proceeding with discreet expedition, will seek to impress its own views and necessities upon any legislation that may emanate from Parliament. Why should not there be a similar conference of urban authorities? Of course, isolated action is better than no action at all; but it could not have the same significance as action representing a concerted and probably a unanimous suggestion as to the best way of relieving the counties of growing, undesirable expenditure, and of a dust menace which is an enemy, in not a few instances, of successful roadside culture. The Locomotives on Highways Act of 1896 is not sufficient to protect the country-side against the motor nuisance. Upon that there must be a common agreement. How should it be amended? This is the question.

The State and Horse Breeding.

Well, Earl Carrington—whose natural temperament disposes him, I fear, to the optimistic view—is not without hope of, at least in one instance, inducing the too suspicious Treasury to loose its purse-strings. I hope his lordship's anticipations may be realised. Again and again attention has been called in this column to the wisdom of persuading the Government to do something practical with a view to the encouragement of the horse-breeding industry. In the MARK LANE EXPRESS the suggestion has been more than once made that what I may describe as the equine necessities of the army should be made the basis of this encouragement policy. Well, this view so impressed both the present Board of Agriculture and the present War Office that a conference was held with a view to the adoption of some scheme. Of course, these two departments were aware of the recommendations of the Royal Commission on Horse-Breeding; but they were without any practical scheme—alas! the word "inertia" is but a synonym for "agrarian interest"—as to how to carry out those recommendations was the very debate vitally concerned in them. "Why," say noble legislators like the Duke of Portland and the Earl of Donoughmore, "should not the Government give financial assistance to organisations like the Brood Mares Society?" "The Brood Mares' Society," says Earl Carrington, "is doing excellent work. Give us, however, a practical scheme for dealing with what I confess is a dangerous situation—more particularly this foreign collaring of our best mares—and I will promise to seek to persuade the Treasury (not without hope) to provide the necessary funds." Will this invitation be accepted? Or has it already fallen on fallow-ground?

Mr. Spokes of King's Sutton, near Bicester, is reported to have lost a cow under rather peculiar circumstances. It had been ailing for a considerable time, and died a few days ago. The carcass being examined, it was found to contain a cricket ball, which, it was thought, caused the animal's death.

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of the late MARKET SUPPLEMENT.

THE HIGHLAND SHOW AT PEEBLES.

The showyard of the Highland and Agricultural Society at Peebles was without doubt one of the best ever occupied by the society, not only for its adaptability to the purposes of the show, but also for its picturesqueness, for it was by the side of the Tweed at a part where the broad historic river is seen at its best as it flows through this ancient borough. It is right in the heart of the land of grouse and salmon, and although the crack of the gun was not heard, the angler up to the waist in the Tweed was a familiar sight. This was the first time the society had visited Peebles (it is not likely to be the last), the previous shows in the Border districts being that of Kelso eight years ago, and the Kelso exhibition as far back as the year 1889. In comparing the Peebles Show with the others promoted by the Highland Society a better estimate is arrived at by comparing this year's figures with those of Kelso, leaving Glasgow and other places visited in the meantime out of the question. At Peebles then cattle numbered 233, at Kelso there were 238; horses made a total of 253, as against 254; of sheep there were 291, whilst at Kelso they were 366; and the entries in the other sections were about the same, one department being balanced by another. Naturally the entries in a South-Eastern district are not so strong as is the case when the show is, as it were, on its native heath at centres like Stirling and Perth. Bearing this difference in mind, this year's show was well up to the society's standard. The people of Peebles gave the society a most hearty welcome and practical assistance, for the county council realised by voluntary assessment the sum of £130 for the show; the West Linton Agricultural Society contributed £105, the merchants of Peebles subscribed £105, and the town council also gave a handsome donation in addition to granting the use of the Victoria Park and the water supply.

Cattle.

The Shorthorn cattle came first in the catalogue, and they made a capital show, the entries including several champions and other prize winners at the Royal at Derby. In the class for Shorthorn bulls calved before 1904, Sir Richard Cooper's famous white two-year-old, Meteor, was easily at the head of the list. At the Royal he was beaten by Linksfield Champion, belonging to Mr. Miller, of Birkenhead, who, however, did not journey thus far north. In the two-year-old bull competition Mr. Gordon's Fascinator repeated his victory at the Royal, again heading a strong class in which Mr. George Harrison, of Gairford Hall, Darlington, was among the winners, taking fourth award for Royal Ensign, a companion of Charming Victor 2nd, who was second in a similar class at Derby. Yearlings looked well, and were led by Mr. Robertson's Avondale, which was closely followed by Messrs. Lew's Pride of Holl, a promising son of the well-known sire Pride of Aron. Mr. George Harrison's big roan cow, Ursula Raglan, bred in Cumberland, and fourth at Derby, was adjudged the best of the cows. She has great scale, but is just a trifle common looking in her quarters. Mr. Robert Taylor's three-year-old roan, Silver May, also bred in the North-west of England, came second. With Dalmery Beauty II, a well-ribbed, even roan, by Villager, Sir Richard Cooper took the lead in two-year-old heifers, whilst Mr. Robertson's female champion at Stirling, the

red Royal Lily by Victor Chief out of a Newton Stone cow, made a close second. From a big and generally meritorious lot of yearling heifers the judges selected without much trouble Mr. Taylor's dark roan, Pitlivia Rosebud 2nd, by Golden Dawn, and winner of a third at the Royal. She had a fine specimen against her, however, in the frequently successful Montrave Wondrous, owned by Mr. George Harrison, and bought at Perth in Spring. Sir R. P. Cooper's Meteor took the £25 special as best bull, Mr. Gordon's two-year-old being reserve; whilst Mr. Harrison's cow won the corresponding prize for best female of the breed in the yard. Sir R. P. Cooper's bull took the President's medal as best of the breed, and Mr. Gordon's bull was reserve for that honour.

The display of Aberdeen-Angus, while not so large as usual, was of a good representative character, and showed no falling off in general quality. In the class for aged bulls, Sir George Macpherson Grant, Ballindalloch, was placed first with his five-year-old Jeshurun, which was bred by himself; whilst the class for bulls calved after December 1, 1903, was headed by Mr. G. A. Duff, Hatton Castle, with a fair type of the breed, showing considerable quality, his Majesty the King being fourth with a bull from Balmoral, sired by Elandslaught. In a small class of yearlings, Mr. D. M. Macrae, Stenhouse, Thornhill, led the way with Everlasting of Ballindalloch, one of the most perfect Aberdeen-Angus yearlings seen for many a day, and he was reserved for the male championship. There was a good class of cows, in which the noted Juana Erica, the property of Mr. J. E. Kerr, Harviestoun Castle, came to the front. She had already won championships at the Highland and Royal Shows, and further added to the list on this occasion by being awarded the championship prize for the best animal of the breed. There was a strong class of two-year-olds topped by the King's Gwitch, which was first at the Highland Show last year, but many preferred Mr. G. S. Grant's heifer, first at the Royal Show. The yearling class was notable for its good general quality, and here there was a close contest for first place. After a lengthy scrutiny by the judges, a heifer shown by Mr. James Whyte, Hayston, and bred by himself, was given the position, the second prize-winner being the exhibit of Sir George Macpherson Grant. The male championship, after a close contest, went to Sir George Macpherson Grant's winning aged bull, Mr. D. M. Macrae's first prize yearling being reserve. As the aged bull was bred by himself, Sir George also received the breeder's silver medal. As has been already noted, the female championship of the breed went to Mr. Kerr's aged cow, the reserve being the aged bull. Mr. Kerr's cow was also awarded the gold medal for the best breeding animal in the section.

There were forty-four entries of Galloways, being six more than last year, and about a dozen more than at the last Border show at Kelso. Even

with such notable absentees as the Chapleton and Stepford herds, the animals forward were well representative of the breed. A high standard of excellence was maintained, especially among the females. The aged bull class was remarkable for the fact that Mr. Cunningham's Chancellor, which was first and male champion at the Royal, Derby, this year, was only placed third; while the fifth prize-taker at the Highland last year, Campfollower 3rd, of Stepford, belonging to Mr. Walter Montgomerie Neilson, of Queenshill, Ringford, received the premier position, and later was awarded the medal for the best bull, and also the president's champion medal for the best Galloway in the yard. Campfollower, it may be added, is a bull of extraordinary substance, and turns the scale at 23 cwt. In a class of four bulls calved in 1903 the Countess of Carlisle had leading honours with Bruce of Naworth, which was second at Derby, whilst another Royal winner headed the class for bulls calved in 1904—namely, the exhibit of Mr. J. Wilson, Tundergarth Mains. Cows were a nice lot, so were two-year-old heifers, whilst there was an attractive bevy of yearling heifers, the last-named class having the honour of supplying the reserve champion in Mr. Fox-Brockbank's Jacmine, a Newton-Stewart-bred daughter of Cairnhouse.

As was to be expected, the Highland breed was strongly represented, and made a capital show, there being not a single weak class. The Earl of Southesk and the Duke of Atholl were amongst the prominent winners, although the President's Medal for the best animal of the breed was secured by Bullough's Trustees, Meggernie Castle, with the noted brindle Lord Clyde, bred by the late Earl of Southesk, and silver medallist last season at Glasgow.

The show of Ayrshires, though small, was select, and competition was very keen, especially in the yield stock section, the quality of the entries being very high and uniform. The cows in milk, calved after January, 1903, had the honour of supplying the day's champion in Mr. Alexander Cross's Lady Diann. Considerable comment was passed on the poor muster in the class for cows in calf or for heifers calved in 1903, in calf, and due to calve within nine months after the show. The rule applying to the class is that the animals must be in milk on show day, must have had a calf within nine months previous to the show, and must be due to calve within nine months after it. These rigid restrictions were alleged to be responsible for the great depletion of the class, and it is probable that a change will be effected.

Horses.

Being away from the home of the breed, it was not to be expected that the show of agricultural horses would be so large as at Glasgow last year, but the display was a very creditable one for the Border district, and if the numbers were a little less than usual, the quality all over was quite up to the average of former years. All the classes were well filled, and in some of them there was a large entry for a country show. The remarkable feature of the judging in this section was the extraordinary success achieved by the produce of Messrs. A. and W. Montgomerie—note stallion, Baron's Pride. This celebrated sire—one of the most typical and one of the best stock getting Clydesdales of his day—had to his credit no fewer

All Advertisements ordered for the "Mark Lane Express" appear simultaneously in the THIN paper COLONIAL AND FOREIGN EDITION for circulation abroad, WITHOUT EXTRA COST to the Advertiser.

than six first prizes, three seconds, five thirds, and three fourths, while his progeny also carried off the two championships, a feat which has not before been equalled in any showyard. The male champion was found in a big class of two-year-old colts, this being Messrs. Montgomery's Scottish Crest, who made his first appearance in the showyard. He is by Baron's Pride, and had no difficulty in getting first prize in his class, whilst the awarding of the championship to him met with general approval. The competition for the Cawdor Cup for the best female filly between Mr. Kerr's first prize yearling filly, Marlin, and the same owner's six-year-old mare, Pyrene, both sired by Baron's Pride. The mare, which was shown as extra stock, has been a noted winner since she was placed first at Edinburgh as a yearling in 1901. In addition to her many other honours, she was the champion female at Edinburgh and reserve for the championship at Glasgow last year, and she has this year been first at Kilmarnock and Ayr, and champion female at Edinburgh and Glasgow. The coveted trophy was awarded to the mare, the yearling filly being reserved to the Robert Murdoch prize for the breeder of the best brood mare was awarded to the representatives of the late Mr. Thomas Smith, Blaen Point, for Chester Princess.

Hackneys were not so numerous as on many previous occasions, but those forward were capital specimens, and made a good show. Mr. Arthur Hall, of Copmanthorpe Grange, York, scored a remarkable victory with his two-year-old chesnut, Copmanthorpe Performer. This colt was not only first in its class, but when parading in the ring for the championship was almost immediately picked out for that distinction. Copmanthorpe Performer, who has won at Peterborough, the Royal, and London shows, is of quite exceptional quality, and has a beautiful neck and shoulders. The reserve was Mr. A. W. Hickling's winning brood mare, Adbolton Rosina, a chesnut five-year-old daughter of the celebrated Rosador, shown with fail, by Polonius. She is a strong goer and a prize-taker throughout England. She was also awarded the champion prize of £10, or gold medal, granted by the Hackney Horse Society for the best mare or filly. In the smaller class for brood mares Mr. J. Ernest Kerr, Harviestoun, was first with Lonsdaleborough Nancy, a brown five-year-old of beautiful quality, and nursing a nice foal by Mathias; Mr. J. Ernest Kerr won in the class for yield mares or three-year-old fillies with Broxtown Getlette, first at the Highland show last year; whilst in the two-year-old filly class Mr. A. W. Hickling's Adbolton Rosamond, a fine quality mare, which won at Doncaster, was first. Mr. Wm. McAllister won for yearlings with the well-known Acclamation of Inverness, which won both at Edinburgh and Glasgow, and in the class for big bred stallions, Mr. Thomas H. Duke was easily first with St. Thomas, a son of Garton Duke, the Seaham Harbour Stud, Limited, being second with Freemason, an animal which would make a very good harness horse. In the class for smaller-sized stallions, Mr. Wm. McAllister won with Inverness Royalist, which also won at Aberdeen. Mr. Wm. McAllister won for yearling colts with a son of the winning stallion St. Thomas out of a Lord Derby II dam, and this colt, it is reported, has been sold to Messrs. Graham Brothers, Ontario.

Hunters made a rather small show, but the quality was excellent, among the young stock being several promising animals. Yearlings were led by Peg the Rake, a nice filly, belonging to Mr. William Lee Carlyle, Ecclefechan. Another promising animal, a colt, which was bred and exhibited by the Earl of Rothes, and named Wotan after Balio, was second. Among the two-year-olds another Dumfriesshire exhibitor, Mr. Beattie, Canobie, showed the way with a brown gelding, Gilmockie, which was sired by Hale, and was bred at Tarraby, Carlisle. In the three-year-old class Mr. J. A. Robson, Scot. Jedburgh, took precedence with a promising filly bred by himself and got by Battledie, second place falling to Larry, a gelding bred in Cumberland, and after Menchhaus, the owner being Mr. Charles Jackson, Dalston, Carlisle. In the two classes of made hunters, Messrs. T. and H. Ward, Great Ayton, led. The winner among the heavy weights was the bay five-year-old, Sportsman; and in the class for light weights, Ireland, an animal of the same age, which was bred in Ireland, took precedence. The latter was also awarded the President's medal for the best hunter, while the Hunter Improvement Society's gold medal for the best filly fell to Peg the Rake. About half-a-dozen brood mares were out, and the winner was found in Beatrice, a very handsome specimen, belonging to the Messrs. Ward, whilst Mr. Robert Wallace, Townhead of Drumley, Ayr, had the second prize-taker in Fire Escape, a seventeen-year-old, which occupied a similar position at this show last year at Glasgow.

The usual classes were provided for the various breeds of ponies, and there was an interesting display in this section, particularly of the little Shetlanders. The President's medal for the best Hackney pony went to Mr. J. Ernest Kerr,

Harviestoun, Dollar, for Sir Archie, a nice bay three-year-old stallion bred by Sir Gilbert Greenall, the reserve being Mr. John Cairns' dark brown three-year-old mare, John Duden. The President's medal for the best colt went to the Earl of Minto, Hawick, for his brown four-year-old mare Coronation, a stylish home-bred of good shape and quality. Highland ponies made a most creditable show, and the President's medal in this section went to Lord Arthur Cecil's MacNeil, from The Mount, Lymington, Hants. This is a dun five-year-old stallion of an exceptionally useful as well as attractive type. The President's medal for Shetland ponies fell to Mr. R. W. K. Mackenzie, Earlsall, Leith, for the well-known six-year-old stallion Bellman, a home-bred animal of a good type, whilst the reserve was Mr. William Mungall's four-year-old mare Thorahind, bred by the Marchioness of Lintlithgow.

Sheep.

The display of sheep, though not so large as in some previous years, was a very strong one, and quite a feature of the show. There was an excellent display of Blackface sheep, the yearling tups being as good a class as has ever been seen at a Highland Society Show. First honours in the aged tup class went to Mr. James Clark with Heather Bell, which secured the leading awards at Glasgow last year as a shearer. He is an outstanding animal of great substance, with a very finely shaped head and horn, and a good class of wool, and later was given the silver ticket for the championship. Messrs. Catlow Brothers, who had to be content with a third prize in this class, came to the front in the shearing class—the pick of the section—with a tup of great substance with beautiful head and fine carriage. He was sired by the £123 Sandilands sheep, purchased at Lanark, and was looked upon as the best shearer seen at the Highland Show for many years. It was therefore only natural that he should be awarded the President's medal and the champion prize, and Messrs. Catlow also secured the Sinclair Scott Challenge Trophy for a group of sheep.

Cheviots have been more numerous, but it is doubtful whether the quality has ever been surpassed, some splendid animals being forward. There was a capital display of aged tups, fifteen of them giving the judges considerable trouble. The premier position fell to Mr. Jacob Robson, Otterburn, with Lanercost, a sheep which won in his class at Edinburgh, and is a grand specimen of the breed. In a class of sixteen shearing tups Mr. John Elliot took first position with the champion at Edinburgh, a fine type of a Cheviot, with beautiful style and action, second place being given to Mr. Jacob Robson, Otterburn, for an animal which had not the firmness and Cheviot characteristics of the winner. Later in the day Mr. Elliot was given the President's champion medal and the challenge cup for his shearing tups. In the female classes the competition also lay between Mr. Robson and Mr. Elliot. The former was placed first with the ewe that won at Glasgow last year, but in a strong class of shearing ewes Mr. Elliot came to the front.

The Border Leicesters were well represented both as regards numbers and quality. In the class for aged tups, Mr. R. Taylor, Pitlivi, had an outstanding winner in Pitlivi Brilliant, bred by the Duke of Buccleuch, which as a shearer brought £80 at Kelso last year. He was first and champion at Edinburgh, and also champion at the Royal Northern Show at Aberdeen, and on the present occasion carried off the championship, the Tweeddale gold medal, and the Sheep-Breeders' prize of £10. In the shearing tup class, Mr. David Hume, Brechin, received the principal award with a sheep of very equal quality. A very stiff contest ensued in the aged ewe class. Messrs. Smith gained the premier award with a very stylish sweet ewe which was third at Glasgow as a gimmer. At the same time several good judges would have preferred the Rt. Hon. A. J. Balfour's exhibit, which was put into second position. Mr. Hume took the leading award in the shearing ewe class with an animal which thoroughly deserved her place, the second award going to Mr. Kerr's first at the Edinburgh Show.

Shropshire sheep were represented by only two exhibitors—Sir Richard Cooper, Shropshire, and Mr. Buttar, Croydon. Sir Richard took the first prize for aged tups with the ram with which he was first at the Royal Show, and was now given the President's medal, whilst Mr. Buttar was second in the class with his fourth prize winner at the Royal Show. Mr. Buttar found some compensation in the shearing class, which he headed with a big, strong sheep of beautiful

quality, shown for the first time. Sir Richard's second prizewinner was second at the Royal Show. For aged ewes Sir Richard was first, and Mr. Buttar second and third, and for gimmers Sir Richard was also first with one of the first prize Royal Show pen. In the Oxford Down class Mr. James T. Hobbs, Gloucester, secured all the prizes, while Mr. Wm. Ford, Fentonhams, Mr. Alex. Anderson, Berryhill, and Mr. Wm. Kennedy, Luce Mains, were the winners amongst the Suffolks.

Half-bred sheep made an uncommonly good display in point of quality, although in numbers there were only about half the entries recorded at the Kelso Show eight years ago.

Pigs.

Pigs made a capital display, many breeders having forwarded fine specimens. The President's champion medal for the best pen of swine fell to Mr. David W. Gunn, Craigcrook Farm, Edinburgh. Poultry also made a good show, whilst there were several classes for dairy produce, and in each the display was excellent.

Royal Northern.

The Royal Northern Agricultural Society's Show at the Central Park, Killybrewster, Aberdeen, last week, was quite up to the high average, although the entries which numbered 1,042, were not quite so numerous as last year when the total was 1,130, but in 1904 it was 918, and in 1903, 976. Cattle last week numbered 190, horses 313, sheep 118, pigs 350, poultry 357, and dairy produce 54.

The display of Shorthorns was one of the best seen here for many years, except, perhaps, in aged bull class. Here Mr. Chalmers, Auchrinyne, won with a seven-year-old, Invernessmouth-bred red bull by Waterville, which was champion at one of the local shows last year. In a class of two-year-olds Mr. A. T. Gordon, Combuscauseway, had an easy win with Fascinator, his Jackstown-bred Royal English winner. In the yearling bull class Mr. Anderson, Saphock, had a grand leader in Diamond Star by Royal Edward, an exceedingly pretty white bull, bred by Mr. Duthie, Collynie. The Pitlivi bull Lindis Fame, which was first at Edinburgh, only came in fourth, the Messrs. Law, Sanquhar, being second, and Lady Cathcart, Collynie, third. In a great class of cows Colonel Grant, Minmore, was the first prize winner with Augusta 2nd of Minmore, an exceedingly handsome four-year-old roan by Scottish Wanderer. Mr. Taylor, Pitlivi, was second with his second prize Edinburgh winner, Silver May. Mr. Taylor, Pitlivi, showed as one of first prize pair of cows his beautiful Edinburgh champion, Donside Princess.

There was a keen struggle for the championship of the Shorthorn breed between Mr. Taylor's cow Donside Princess and Mr. A. T. Gordon's two-year-old bull Fascinator. The animal who had to be called in gave the championship to the cow, which was undoubtedly one of the best ever seen at the Royal Northern. She was bred by Mr. Campbell, Deystone, and it is interesting to know that the only other occasion when a female won the championship here the breeder of the exhibit was Mr. Campbell's father, the late Mr. Sylvester Campbell, Kinellar. Mr. Gordon's bull won the male championship.

The Aberdeen-Angus were a good average show. Colonel Grant's Royal English champion Prince Forest had a likelier rival in the aged bull class. The handsome Erica bull Elbis, shown by Mr. Duff, of Hatton, and bred by Mr. Kennedy, of Donholm, won in the two-year-old class, Colonel Grant, Auchrinyne, being second with his Derby exhibit Ephorus. In the yearling class Mr. Findlay, of Aberlour, won with his Derby winner, Blizzard. In a good class of cows Mr. Cran, Morlieh, won with one of his famous Jimma family by Rover of Craibstone. In the two-year-old heifer class Colonel Grant, Auchrinyne, won with his Royal English reserve champion, the champion Pride of Spey IV., beating Gwyeth, the pretty heifer belonging to the King, which was first last year at the Highland at Glasgow. Mr. Findlay, with his first prize yearling at Derby named Prize, won, one of Mr. Cran's Jimmas being second. Colonel Grant, Auchrinyne, won the championship of the breed quite easily with Prince Forest. Mr. Findlay was reserve with his nice show cow of last year, Pride of Honour, which also won the female championship.

In a good show of Clydesdale horses, Mr. Barr, Tullochgordon, won the special for the best draught stallion in the older classes with his Marcellus three-year-old horse Lord Guthrie. In the younger class, Messrs. Cocker, Hill of Petty, took the special prize with his Everlasting colt Girvan Chief, which also won the Highland Society's prize for the best draught stallion. The championship prize for the best mare or filly was won by Mr. Argo, Petty Fyvie, with a two-year-old filly by Royal Edward, and the special for the best draught mare or horse was won by the Messrs. Cocker, with a three-year-old filly by Hawatha. Other sections of the show were well filled, and the quality in most cases was up to a good standard.

SUSSEX SHOW AT BRIGHTON.

Those of us who remember the inception of this show twenty years ago can but be surprised how it has grown and increased since the days when it was started quite as a small local affair. That there was room for the show within the confines of Sussex has also been proved, for few county shows can boast of a better average entry or of a more attractive programme than this show.

This year's meeting was held in that most typical show ground, Preston Park, Brighton, and the attendance of visitors was a good one. The larger proportion it is true were attracted by the large and varied programme of competitions arranged to take place in the large ring, for a feature of this display has always been made by the society, particularly when its visits are made to one or other of the popular seaside resorts within the confines of the county.

Sheep.

There is one point in connection with this society that few others have—namely, the special conditions under which several of the more important ewe and lamb classes are held. The purport of these conditions is that the exhibits shall be exhibited under as near as possible the ordinary conditions, and that there shall be as little as possible of that showyard preparation both in respect to feeding and dressing. The result of these conditions is that one is able to see at Brighton a competition amongst Southdown flocks in the usual conditions found on the farms. Such a competition is full of interest; and the fact that such classes are given affords the visitor full opportunity to see the native breed as near as possible in a natural instead of an artificial condition. It would be well if there were more classes of this description at other shows for other breeds, because nothing can be a better means of proving the merit or value of any kind of stock to the prospective breeder than its being shown him in a natural condition.

The class for flock ewes is one that is well deserving of being copied by other societies, because here we have a class of nine, three of each of the usual flock ages, a very much more severe and thorough test of any flock than three of any particular age. To get an even pen of these is a very difficult matter, but to get one of nine is, of course, infinitely more difficult, and hence when a pen can be made of uniform type and character, it is evident that the flock from whence they come must be one of considerable value. The Hill flock class this year was a good one, but in mak-

ing the awards there are good grounds to believe that the judges, as is unfortunately so often the case, fail to give sufficient prominence to the necessity of the winner of the fleece, for in one, if not more, instances it appeared that preference had been given to pens somewhat deficient in this important particular. Mr. F. J. Maitland, who won first in this class and special for the best pen of ewes or ewe lambs from Hill flocks, won with a typical pen of its breed, Mr. A. M. Singer was second and ran, and the Duke of Richmond third; but for the typical Southdown ewe, as generally found on the Southdown Hills, the unnoticed pen of Mr. A. Cooper was probably the better example in the whole class. The ewe lambs from the Hill flocks were a very good lot indeed. Here the Goodwood flock claimed first honours with a particularly even and well matched pen of very choice quality; Mr. Cooper's pen ought to have followed these, but the judges held different ideas and put in that pen of well-grown lambs from Mr. J. T. Strong's flock, which were followed by Mr. F. J. Maitland's pen, whose next attendant in the award list was Mr. A. M. Singer's pen, a pen of strong and well-grown lambs, but hardly of the quality one likes to see in a pen of breeding Southdown sheep.

The Underhill classes were smaller in number than usual, only three competitors were found in each, and the awards in both classes went to the same breeder, Mr. J. Tompkins taking the two first, Mr. E. Henty the two seconds, and the Duke of Devonshire the run. The winning pen here was of striking merit in both classes, and that flock of Mr. Tompkins, which is very widely known, has seldom been represented by a better and more even pen, they were true to type and of first-class colour and good fleeces.

There was one class for yearling ewes, and here the usual showyard or over-fed breeding ewes are exhibited; this year there were only two pens, that from the Duke of Devonshire taking first honours and the special as best pen of ewes in the yard, leaving Mr. J. Coleman's pen that have been seen at most of the shows this year with another second award to their credit.

The Goodwood flock came out well in the class for two-shear rams, and the Duke of Richmond for the second year in succession had the pleasure to win at the county show in classes open to all first prize for two-shear rams, and the Southdown Society's gold medal. His Grace was third with

his second entry, and the Pagham Harbour Co. came in for second honours as well as r.n. for the champion prize. The last-mentioned exhibitors were first for yearling rams, with a real good ram, and first and second for ram lambs with a pair of the most typical and best woolled ram lambs seen for some considerable time at this or any other show. Second honours for rams went to Mr. A. Hensman, and third and run went to Mr. E. Henty. All of these sheep were of good merit, and the same remark is applicable to the ram lambs that won third for Mr. Coleman, fourth and he for the Duke of Devonshire, and run for Mr. Henty.

Horses.

The noticeable feature in connection with the agricultural horse classes was that in nearly all cases the exhibits that won were sent forward by the tenant farmer. This is a very pleasing fact, and shows that those who were competing have not been slow to take the advantage offered them by the landlords who have been the means during the past ten or fifteen years of taking into this district quite a number of very high-class and well-bred Shires. Mr. John Rearman, with Astoria, first in the four-year-old class, won the Shire Horse Society's medal for best mare or filly, Mr. T. Luckin taking the run for this honour with Sussex Surprise, a well grown, evenly-balanced three-year-old filly. The stallion class had for its winner Sussex Menestrel, also owned by Mr. T. Luckin, whose nearest attendant in the award list was Sir M. R. Birrell's Alvechurch Monaco.

The Hunter classes were very attractive, and included in them were quite a number of very capital horses. The display these gave in the ring was witnessed by a good number of the principal sporting men of the district. Sir Merrik Burrell gained the Hunters' Improvement Society's silver medal with his chesnut mare Victory, as good a mare as could be desired. The Hackney classes, once so popular at these shows, failed to secure any entry at all. The driving classes and those for jumping, which has always been made a special feature at this show, secured their full share of entries, and the displays given in the ring in many of these driving classes were of a high order.

Cattle.

The Shorthorn and mixed-bred cattle classes do not call for much comment. The cow class had quite a good lot of milch cows, whilst the winning two-year-old heifer from the Duke of Richmond, and those yearling heifers that were first, second, and run, from Mr. G. Duck, Sir A. H. Brown, and the Marquis of Camden had good merit.

The entry of the Sussex cattle was one of high merit, and although it was not quite so large as was the case at the 1905 show, it is a matter of gratification to find that there are more competi-

SUSSEX BULL, MAYOR.

WINNER OF FIRST PRIZE AT THE ROYAL SHOW AT DERBY.
Bred by and the property of the EARL OF DERBY, K.G., Orchardmains, Tonbridge.

toys coming out in these classes, and from other sources of information it looks as though there is going to be a revival of interest in this grand breed of beef cattle, quite one of the best we have in the country. The Earl Winterton was very successful, and the all-round good merit of his females fully deserved their success. These included first for cows, first for heifers under three years old (this one was made champion female), first for heifers under a year old, and second for the heifers under two years old—a notable array of successes; in addition to this, his lordship won first prize for the under twelve months old bull-calf with Shillington Gold, one of the best of its age we have seen for some time. Mr. P. Saillard was also well to the fore for heifers. The Earl of Derby was second for cows. In the bull classes Mr. E. E. Braby's Lord of Dungewick 5th won first honours as a two-year-old, and was also made champion, beating in this contest that well-known bull Lord Eric, owned by Mr. C. J. Lucas, and that handsome calf from Shillington, mentioned above.

The entry of Jerseys was not by any means a record one, but the high average of merit and type all through were first class. Lord Rothschild, who won the champion honours for the best cow and also the Blythwood Bowl; Mr. McIntosh, who won first in the old bull class and champion honours for the best male with Black Pearl; Lady De Rothschild, Messrs. Millin Hallett, J. Corbet, D. Mutton, Freeman Thomas, and Bishop Fisher were amongst the leading winners.

There were no entries of Guernsey cattle, an event that we do not remember ever noticing before since those classes were given.

The Dexter and Kerry classes had very choice but small entry. The Duchess of Devonshire won for females, and Mr. B. de Bertodano went to the fore for bulls.

The entries for poultry, butter, &c., were good, and the collection of implements were amongst the best we have seen at this show for some little time.

Cambridgeshire.

When Ely invited the Cambridgeshire and Isle of Ely Agricultural Society to hold their show in that town this year, it was stipulated that the exhibition should be a two-day one, and not for one day only, as has been the case of late years. The stipulation was agreed to, and the show was held on Wednesday and Thursday. Unfortunately it clashed with the Bedfordshire and Lincolnshire shows, so that an accurate idea of the result of the return to a two day fixture cannot be arrived at, but, nevertheless, the entries showed a falling off of something over 110 when compared with the previous lowest during the past eight years, and the total was but 289 as against 406 last year at Cambridge, and 345 when the show was last held at Ely in 1900, when the affair was confined to one day.

The falling off in the entries was most marked in the Shire classes, several of which did not secure a single entry, a result which was probably to some extent due to the Bedfordshire and Lincolnshire shows being held on the same day. Nevertheless, visitors had the opportunity of seeing some of the best Shires in the country. Mr. C. Morbey, of Solham, supplied the winner in the class for stallions foaled before 1902 with his Raydon Duke, and having twice won in London, it was only in the order of things that the championship should have fallen to him. Mr. W. Richardson, of Doddington, who came first with the three-year-olds, exhibited an animal bred by himself, in Northern Star II., which since its appearance at the March Show as a colt, has not been exhibited since. Mr. W. Hammond, of Ware, with his Peterborough winner, Catterall Black Prince, came first in the next class for entire colts foaled in 1904, but was run very close by Mr. W. Richardson, who had a big weighty animal, which many considered was the best of the breed. It won easily in the tenant farmers' class. Yearlings formed a nice lot, and here Mr. J. Rowell, of Bury, Huntingdon, came first with one which has every appearance of growing into an excellent horse, whilst Mr. C. Morbey's brood mare, Brigstock Countess, with which he won second at Peterborough, came first in the brood mare class, Capt. Duncombe having to be content with second for Festive, Shelford Link, Mr. Hamar Towgood's two-year-old filly, was first in her class, and for yearling fillies, Mr. W. Richardson's bay was given the premier honour. Mr. Hamar Towgood's prize for the best three mares or fillies, the property of a tenant farmer occupying land in Cambs or the Isle of Ely, was won by Mr. Geo. who won with a grand trio in Wyndlands Starlight, Sunshine, and Pink, the first of which secured its owner a champion prize offered for the best Shire mare or filly, as well as the Shire Horse Society's gold medal. Shire geldings of any age had only one representative, Mr. Johnson, of Solham, being the exhibitor, but there were eight colt foals, the two best of which were the property of Capt. Duncombe.

Hackneys were fairly numerous, and included some very nice specimens. Mr. R. G. Heaton, of

Chatteris, with Warwick Marshall, shown in the class for stallions foaled in or before 1902, won with an excellent horse of the real hackney type. Winning Sir Walter Gilbey's Challenge Cup for the best hackney stallion, it curiously enough lost the Hackney Society's champion prize through not being brought into the ring—a blunder which cannot be laid upon the judges, who understood it was not going to compete. Mr. R. A. de Mancha, of St. Albans, took the leading place in the three-year-old stallion class with Ver Precocious, which while being reserved for Sir Walter Gilbey's Cup, won the championship, for the reasons stated. The entire colts, foaled in 1904, had some good representatives. Mr. W. Flanders, of Witelham, taking the leading place with Lord Nelson, whilst the second winner was shown by Mr. A. Collen, of Saffron Walden. Brood mares formed a particularly strong class, and it was very creditable to Mr. R. A. de Mancha to be able to win with Bashful Kate in such company. Sir Walter Gilbey's Gallant Girl ran the other exceedingly close, but lacked the bone of the winner below the knee. The first of the three-year-old mares was a credit to the Elysham stud. Two-year-old fillies only formed a small class; nevertheless, everything was of the best, and from among the four animals shown the judges selected the champion mare, this being Lillalora, a beautiful dark chestnut, belonging to Mr. C. E. E. Cooke, of Bygrave Baldoek, who also obtained first at the Royal Show. She had plenty of size and weight, and looked like growing into a very valuable animal. There were as many as eleven colt foals, and the judges at first put Sir Walter Gilbey's chesnut aside for the premier award, but when moved over for the final trial the first of Mr. R. A. de Mancha's animal rested in the end, the colt going to his foal. In the filly foal class Mr. W. Flanders was an easy winner; Mr. R. G. Heaton had an easy winner in the saddle class for mares over 15 hands; and Mr. A. J. Rowell, of Bury, Huntingdon, scored a double success with a chesnut, taking firsts in the saddle and harness classes for mares under 15 hands.

There were not many hunters, but a couple of good brood mares came under notice, shown by Mr. Parsley, of Waresley, who won the champion medal with a very fine type of hunter.

The cattle exhibited were not numerous, but there was some compensation for the deficiency in numbers in that several good animals were shown. Mr. W. J. Atkinson, of Weston St. Mary, Spalding, won in the Shorthorn bull class with his first Peterboro' winner, which was also third at the Royal Show at Derby. Mr. H. S. Leon, of Blethley, was ahead of Captain Duncombe, of Waresley Park, in the class for cow of any age, Mr. H. Towgood, of Little Shelford, taking the reserve number.

Merton Dairyman, shown by Mr. F. Hargreaves, of Camling, took the leading place among the Channel Islands bulls, which were shown by the same exhibitor. He was likewise the only exhibitor of Channel Islands cows, of which there were three. The best of the dairy cows came from Mr. E. R. Gill, of Highflyer, who like Mr. J. Neaverson, of Eye, near Peterboro', entered an animal that had never been shown before. Captain Duncombe was the only exhibitor of a Shorthorn cow, eligible for registration in the Herd Book.

As there was a lack of entries in the sheep classes, the competition was practically nil, in fact there were only two entries, which were shown by the late Colonel Macdonald, also supported the Southdown breed, Mr. W. J. Green, of Childerley Gate, being the sole exhibitor of Wensleydales. Black-faced Suffolks were shown from the flock of Mr. R. Barclay, of Higham, near Bury St. Edmund's, and being the sole exhibitor, had no difficulty in taking the Suffolk Society's medal for the leading pen of Suffolks. Mr. H. J. Briggs, of Babraham, and Mr. A. E. Hall, of Six Mile Water, were competitors in two of the three Hackney classes, the latter taking the premier award for both ram and ewe lambs, whilst Mr. E. R. Gill, of Highflyer, Ely, was the only exhibitor of cross-bred lambs.

Staffordshire.

After an absence of twelve years the Staffordshire Agricultural Society held their show at Stone again last week, and although the town, in which, by the way, the society's first show was held in 1844, is less favourably situated with regard to population than many towns in the county, it is the centre of a large agricultural district, whose residents look upon an agricultural show with sympathetic interest, and on previous occasions, and the society were given a warm and hearty welcome. The exhibition itself was fully up to the high standard of previous years, although the entries were not quite so numerous as last year. The total number of entries of live stock was 631, as compared with 671 last year at Walsall, and 325 two years ago, when the society met at Hanley. There were 300 entries of horses, as compared with 318 and 247 in the two preceding years: 218 of cattle, against 246 and 181; 87 pens of sheep, against 73 and 60; and 26 pens of pigs, against 28 and 31. There were also 108 entries of cheese,

45 of butter, and 120 of honey, all increases on last year's figures, whilst there were something like 400 poultry forward, and a good display of implements, &c. The attendance, however, was very disappointing, for the official return shows that the total number of persons paying for admission to the show on both days was only 8,652 as compared with 23,804 at Walsall last year, 16,229 at Hanley in 1904, and 14,437 in 1894 at the jubilee exhibition at Stone. The total receipts for the two days amounted to £482 18s. (including grand stand receipts), as against £1,029 15s. 6d. at Walsall. The falling off is generally attributed to the Royal having been so recent at Derby, which absorbed in a great measure the agricultural interest of the whole of the Midlands. It is too early yet to speak of the financial result, but there will probably be a loss to the society, which is much to be regretted.

Horses.

The feature of the horse section was undoubtedly the display of Shires, for they were the best lot ever seen in a Staffordshire showyard. There was a large entry, and the horses were of such evenly quality that the judges had a most difficult task. The competition in the open classes was never so keen, and among the animals paraded were several which have earned distinction at our big shows. There was a splendid class of brood mares, all big, weighty animals of true Shire character. Earl Beauchamp's great grey, Sussex Bluegown, one of the best of Nailstone Cœur de Lion's progeny, was placed first. She was adjudged best at Nottingham, and in company with Lord Beauchamp's other grey, Monk's Polly, won first at Peterborough. The Duke of Sutherland's Lillashall Moss Rose by Marketon Royal Harold is a mare of fine quality, and she was run close for the second card by Mr. Cunningham's Starborough Catherine, a thick, weighty animal. The younger mares are also animals of correct type, and two by Dunsmore Jameson carried off the chief prizes in the two and three year old classes. In the former class, Mr. R. Whitehead's Peak Dolly, a beautiful bay, beat another daughter of Dunsmore Jameson, and in the other class the winner was a grey belonging to Sir P. A. Muntz, M.P., aptly named Dolly. Particularly difficult was the class of the judges in the class for the best brood mare with foal at foot. The president's Argent, a Buscot Harold brown, which has been frequently seen in the showyard, was eventually given first prize, and the second to a grey belonging to Mr. W. F. S. Humphreys, a well-known Montgomeryshire breeder. The tenant farmers' mares and geldings were a useful lot, and made a nice display.

Several promising young stallions were paraded, and the outstanding horse among the two-year-olds was Ratcliff Forest King, a worthy son of Lookinge Forest King. He possesses all the good points of this famous strain, and has won seconds at the Royal, the London, and the Nottingham shows. Mr. Walter Cunningham's Childwall Chanter, which was adjudged second, was slightly lacking in character. It is interesting to note that Sir P. A. Muntz's Dunsmore Royalty, which was not placed, has previously beaten the second and third horses. The best of the yearlings was King Forest, also son of Lookinge Forest King, and a winner at other shows this season. The foal classes were somewhat weak and disappointing.

There were several remarkably good Hunters in the show, the class of brood mares in particular being very creditable; the winner was Mr. Bowen's Molly, a bay showing a lot of quality. There were some good-looking foals, which should develop into capable performers, notably the first prize winner, Captain Heywood Lonsdale's filly. The yearlings were a poor class, and there was no difficulty in choosing the best. The two-year-olds gave more trouble, but the strongest class in the show was that for three-year-olds, and here a beautiful brown gelding, shown by Mr. J. Yeung, of Jun., of Newbold, came to the fore. There was nothing of exceptional merit among the four-year-olds, but there were some excellent weight-carrying geldings, in which Mr. Young again figured as a first prize winner, other prize takers being the Wigginton Stud and Lord Huntingdon.

Cattle.

The cattle were quite up to the high standard seen at this show, and the collection on the whole was a very fine one. Shorthorns predominated, and the first class for bulls of this breed calved in or previous to 1904, and not exceeding five years old. A number of particularly interesting animals faced the judges, the best being King Edward, a three-year-old Scotch bred roan, the property of Sir Oswald Mosley. King Edward is of great scale, level, and of the best quality. He was bought by Sir Oswald at the Ruddington sale some weeks ago for 200 guineas, and his capital form now made him an easy winner. A stylish roan, nearly four years old, Royal Guard, shown by Mr. J. Lucas, was second. Yearling bulls, which looked well, were headed by Sir R. Cooper's Chiddingstone Malcolm, a choice specimen, smart, level, and of first quality. The best of the Dexters was a bull coming Rolleston Bellaport, a white bull bred by

Sir Oswald Mosley. The latter was adjudged the best bull bred in Staffordshire, and as such received the special prize of the Shorthorn Society. Mr. C. W. Kellock headed the bull calf class with Viscount Clarence, a massive red youngster just under the age limit, bred in Cheshire, but was closely run by Sir R. Cooper's Shenstone Albino, a home-bred white son of Speculator. Captain Harrison showed the best milking cow in Elderberry 4th, a roan, eight years old, bred at Wigton, and the winner of numerous prizes, which is of nice quality and great scale, and attracted attention at the Shropshire and West Midland show, where she led in her class. At the Royal Show she was commended in an exceptionally strong class. In the two-year-old heifer class Captain Harrison was second with Bearstone Sunshine, which made a good fight with Sir Oswald Mosley's Rolleston Faithful, a useful roan, which, however, beat him. Captain Harrison was more successful in the yearling heifer class, for he took the first two prizes with Bearstone Sybil and Aldershaw Primrose II., Sir R. Cooper having to be content with third place for Shenstone Empress.

The tenant-farmers' classes were filled with dairy cattle, and it was easy to see that a great improvement had been made in the local herds of late years. The butchers' beasts, too, were shown in prime condition, and of marketable quality. All of the exhibits were of the polled type, and the chief prize was taken by Mr. J. Bostock, with a ripe polled Angus bullock, which also secured a couple of special awards.

pens were on view, an increase of twelve on last year, so that the display was by no means a small one. The aged ram class contained several capital sheep, notably the animal with which Sir Richard Cooper took the first prize. Shearing rams also made a good show, and the best of these was a fine specimen the property of Mr. M. Williams, who also won the second prize with an almost equally meritorious example. Mr. E. Nock beat the Duke of Sutherland in the pens of five shearing rams with well-matched and well-grown sheep; and Sir Richard Cooper had a sequence of successes, being placed at the head of five classes of ram lambs and ewes. There was a considerable improvement noticeable in the tenant farmers'

classes when compared with previous years, and some of the animals would doubtless merit pretentious flukes.

Twenty-seven entries of pigs had been received, but not all were forward, and thus this section was a small one; quality, however, was at the best. Mr. A. C. Twentynian showed the best boar of the Large, Middle, or Small White breed, with a grand specimen of the Middle type, which also won the medal offered for the best boar in the show. The same exhibitor was also successful with his breeding sows, for which he received two prizes. Sir Peter Walker and Mr. F. W. Gilber, secured all the honours for Tamworths, while Mr. Barker and Mr. C. T. Avins was the most successful exhibitor.

LINCOLNSHIRE SHOW AT GAINSBOROUGH.

The Lincolnshire Agricultural Society received a good entry for their show at Gainsborough on Wednesday, Thursday, and Friday last, but there was one disappointing feature, and that was the falling off in the number of Hunters and Hackneys from some cause or other, and no doubt the clashing with other big shows was the chief. Anyhow, Hackneys were the smallest number since 1889, there being only 42 entries, whilst hunters numbered but 99 as against 139 at Grantham last year, and 149 at Grimsby in 1904. On the other hand, cattle showed a marked in-

crease. Rothschild's Ascot Victor and Ascot Wanderer, which were second and third respectively. Now the Northumberland calf had to be content with an empty honour, the leading position being filled by Ascot Wanderer, and Ascot Victor was relegated to third place. Lord Middleton received the second prize for Birdsall Brewer, a home-bred son of Bardford 6th. The Shorthorn Society's prize of £10 for bull in the county of Lincoln calved in 1905, was taken by Mr. Robert Chatterton for Forester, a yearling which was reserve in the yearling open class. A quartette of cows was not a big entry.

LINCOLNSHIRE RED SHORTHORN BULL, BRANDON GRENADIER.

FIRST PRIZE WINNER AT THE ROYAL SHOW, DERBY, AND SECOND AT THE LINCOLNSHIRE SHOW GAINSBOROUGH. Bred by and the property of Mr. J. LANGHAM, The Park, Nottingham.

The collection of Aberdeen-Angus cattle was small but good. There were fourteen entries in three classes, and they included several choice specimens of the famous beef-producing breed. The best cow was Corskie 4th of Wryley, ten years old, which has been profitable to Mrs. Macpherson in her Palsall herd. The cow is in capital show condition, and defeated the richly bred Mabel 8th of Knapperna, belonging to Mr. J. J. Cridlan. Mr. Cridlan, however, was a very successful exhibitor, for he won the two prizes for heifers and the two for bulls with grand representatives of the Maisemore herd. His straight, level, promising yearling bull Bengal of Ballindallock also secured the silver medal of the English Aberdeen Angus Cattle Association. Mr. Cridlan further secured the challenge cup offered to the exhibitor gaining the greatest number of points in the section.

Sheep and Pigs.

The show of sheep was a good one, though not particularly numerous, due to some extent to the fact that the regulations do not permit of winners at the Royal Show being entered. Eighty-seven

improvement, being 164 as against 143 last year, whilst Shire horses, sheep, and pigs were well up to the average. Altogether the show was an interesting one, the exhibits being of good quality, and it attracted a large number of visitors.

The cattle section was made up of Shorthorns and Lincolnshire Red Shorthorns and dairy cattle, and all did credit to the society and exhibitors. Pride of Sunshine, exhibited by Mr. T. Atkinson, of Bury, and bred by the King at Sandringham, worthily occupied the premier position in the class for the old Shorthorn bulls, second to him being Kinross, a Yorkshire-bred animal, and owned by Essex gentlemen. The yearling bulls and bull calf classes witnessed a reversion of the Peterborough awards. At Peterborough Mr. R. Knowles, of Colston Bassett Hall, North, was first with Handicraft, a roan of the Earl of Powis's breeding, and Lord Armstrong was second, with Baron Merry Beau, a son of Baron Hopeful; but now Baron Merry Beau was put first and the second ticket given to Handicraft. Then as to the bull calf class. At Peterborough Lord Armstrong's Wild Duke of Geneva 239th led from the Hon. L.

but the two animals decorated—Mr. J. P. Rayner's (York) Honey 92nd and Messrs. Dean's Brigstock Princess—are good specimens. The two or three-year-old heifers also made only a moderate display. Heifers between one and two years were headed by Mr. Louis's well-known Silver Flora, from Blatchley, Bucks, the same owner's Augustine winning in the class for heifer calves under one year.

As was only to be expected, the Lincolnshire Red Shorthorns made a very strong show, and one worthy of the county. In the old bull class there was a partial upsetting of the Royal verdict. Mr. Chatterton's Steriot Royal Chief was second, and Mr. A. Parker's Sidel-bonus was third, but out for most honours, in preference to Mr. S. Crawley's Western Monitor 2nd. At Derby the latter was second, and the present leader held the

OIL and GAS ENGINES

are growing more than ever in demand, and would be still further "boosted" if regularly advertised in the "Mark Lane Express."

position of reserve. Saltfleet Bonus also gained the male championship for the section, the runner-up being Western Monarch 2nd. The yearling bulls were headed by Mr. Chatterton's Gosherton Beau, and the successful bull calves were exhibited by Captain E. M. Grantham, Mr. Joseph Drewery, and Mr. S. B. Carnley. The pick of the cows and the female champion was Mr. E. H. Cartwright's Miss Calceby 3rd, the other prize winners including animals from the herds of Mr. John Longham, Mr. Chatterton, Mr. John Evens, and Mr. George Loughton. The male challenge cup of 20 guineas was taken by the Shorthorn Pride of Sunshine, with the Lincolnshire Red Shorthorn Saltfleet Bonus reserve.

Although the sheep have been more numerous, they have certainly never been better in quality, and the display was a really excellent one, but Lincolnshire Longwools were the only breed shown. The centre of attraction was the shearing ram class, for here Mr. Dudding exhibited the animal which was sold for 1,450 guineas at his recent sale. Naturally, he secured the first prize, and was also awarded the challenge plate. Mr. Dudding also supplied the first and second prize-takers in the animals which sold for 580 guineas and 350 guineas at his sale. They are of similar type to the other, but not so big. Messrs. R. and W. Wright, of Nooton Heath, Lincoln, were fourth and fifth, and Mr. T. Casswell, of Pointon, Folkingham, was the reserve, whilst six animals were in the he and e division. Mr. Howard, of Nooton Rise, Lincoln, won in the class for two-shear rams. The pens of three ram lambs form an extraordinarily good class and here Messrs. R. and W. Wright were first and Mr. Dudding second with animals which were even in skin and capable of great development. In the class for shearing gimmers Mr. Dudding's winning animals were far in advance in the matter of growth of any of the others; whilst in the class for she lambs, an exceptionally good one of Messrs. R. and W. Wright once more came out at the top.

The show of pigs was the best seen here for some time, quality being very much in evidence. Classes of the old Lincolnshire curly hair breed were, as usual, in the greatest state of interest that it is intended that the breed shall remain distinct, and that a stud book is to be started. Messrs. S. E. Dean and Sons were successful exhibitors in these classes, whilst for Large Whites Messrs. Duckering and Son and Sir Gilbert Greenall were among the winners. Mr. J. Jefferson and Lord Calthorpe being prominent in the Berkshire classes.

Had it not been for the presence of a number of well-known show horses, the section for Hunters would have been weak in calibre as well as in numbers. In regard to bled mares, there is not much to linger over after the three winners. The first of these was Mr. F. B. Wilkinson's beautiful Glasspore by Glasshampton—Extremepore, Mr. A. J. Brown's well-known Rosalinda coming next, and the last named took the Hunters' Improvement Society's gold medal. Foals were not particularly strong, while "fair" adequately described the yearlings. Mr. Swallow, of Wotton Lawn, Uxley, winning with one of nice quality by Wales. All the three prizes for two-year-olds remain in Lincolnshire, Mr. Swallow taking the first and second with Red Horn and Vigo, which were first and second respectively at the Royal. Mr. Wilkinson's Destruction improved upon his seconds at Derby and Peterborough in the three-year-old class, Mr. Stokes, of Great Bowden, Market Harborough, being second with Black Pearl. There were four riding classes, but they were not particularly well filled. Mr. Stokes was first in each class, being represented by Sybarite, Dervische, Madrid, and Border Boy, whilst in three of the classes Mr. Brown, of Doncaster, was second.

As previously stated, Hackneys were poorly represented, and the quality was by no means great, taken as a whole, though, of course, there were some conspicuous winners. Only one stallion three-year-old and upwards came forward, this being Mr. Surfleet's Beekingham Squire, from Beekingham, Gainsborough. The younger class was headed by Mr. Haley's Blanch Illuminator, from Malton, which is quite of the stallion type. Messrs. Cockayne Bros., of Sheffield, won in the class for mares with their well-known Paddock Queen, which has been shown for years, and was used as a medal for the first time in her career, whilst Mr. Surfleet secured the premier award in the foal class, with a nice filly by Beekingham Squire. There was one pony class, and it was a very good one, Mr. Franklin, of Derby, being successful with his Grand Duchess Go Bang.

The Shire horses made up for the weakness of the other horse sections, for they were a grand lot, including as they did representatives from the leading studs. The old stallion classes brought out five of the eight entered, and the first prize fell to Mr. Clark's Ethelwulf, from Moulton Easington, Spalding, a nice animal, very attractive in build and movement. Second was Mr. Sutton Netherport's Souldern Seyfax, from Seawby, Brigg, which won at the Royal as a two-year-old, and has done well in Lancashire and Yorkshire. In the class for two-year-old stallions five came before the

judges, but there was no disputing the leader in Messrs. Forshaw's Catterall Drayman, by Drayman XXIII. This colt has come on immensely since he won the gold medal at Nottingham. Sir Berkeley Sheffield, of Doncaster, was second with the heavy-boned bay Kingsway by Birdsall Menestrel. Lord Egerton, of Tatton Park, Knutsford, won in the class for yearling colts with the big heavy-boned Tatton Champion, being followed by Mr. Jackson's Knottingley Marquis, from Knottingley, Yorkshire.

The brood mare class brought out a big entry of good animals, and the judges were some time in deciding as to the first three. Lord Egerton's Tatton Amora by Buscot Harold, was eventually placed first, and Mr. Dook's great favourite, Reamer 2nd, from Scotton, Lincoln, was second, and Mr. Jackson's celebrated Enfield Poppy, third. In the foal class, Lord Egerton again won with a colt by Tatton Friar, Mr. Jackson's second being closely pressed by Sir Berkeley Sheffield's filly by Birdsall Menestrel, which won at Doncaster, where she beat the other. Another victory was gained by Lord Egerton in the yearling filly class with the dark brown, Tatton Abbeys, which has been a conspicuous winner, whilst Mr. Jackson gained a very easy success in the class for three-year-olds with Knottingley May Queen. The three-year-old filly class saw Mr. Glasier, of Winterton, come out at the top with Roxby Starlight, an upstanding, heavily-limbed animal, closely followed by a very good filly belonging to the Duchess of Newcastle, which won the gold medal and champion cup at the Notts Show.

Wirral and Birkenhead.

The Wirral and Birkenhead Agricultural Society are so used to having deplorable weather for their shows that the fine weather experienced last week came as a welcome surprise, and as the entries were on a most satisfactory scale—4,524, as compared with 3,168 last year—and the attendance of visitors good, the show may be described as an all-round success. The society deserved it, for they had done everything possible in their power to command this success, and their financial failures of previous years, owing solely to disastrous weather, need some making up.

Among the cattle, the dairy classes were especially good. The well-known exhibitor, Mr. Rainey, of Ringway, was among the successful competitors, and two first prizes were won by him. Turton, Woodchurch. In the class for cows in calf, Mrs. Turton, with her roan cow, Landican beauty, which had never previously been shown, succeeded in defeating some well-known winners.

Shorthorns made a capital display, some well-known animals being forward, but Mr. F. Miller had matters nearly all his own way, for he took no fewer than half a dozen first prizes. For yearling bulls he won with Bapton Viceroy, an animal for which he recently paid 2,500 guineas, and which has won every time exhibited. Mr. Miller's Broadboks Champion was first in the class for bulls calved in 1904, and the same exhibitor took premier honours for aged bulls with his Linkfield, which was champion at Dublin and Belfast and first at the Royal Show. All the animals placed in the yearling heifer class were capital types of Shorthorns.

The Shire horses were undoubtedly the feature of the show, being both numerous and of first-rate quality. A particularly gratifying feature to local exhibitors was the success of Mr. J. Gould, a tenant farmer of Lymn, near Warrington. His three Shire mares were pronounced by the judges as the finest specimens of their kind, and they questioned if any stud in the kingdom could show a better type of animal. With his mare Lymn Blossom Mr. Gould won the Shire Horse Society's gold medal, the J. W. Kenworthy 50-guinea challenge cup, and the Toogood silver medal. The same exhibitor carried off first honours in the class for Shire stallions foaled in 1904 with Lockinge Truffle, which also won the George Harding 50-guinea challenge cup for the best Shire stallion in the show, beating the Right Hon. Victor Cavendish's bay Holker Menestrel II., which was reserved champion at the Royal Show. The W. H. Lever 50-guinea challenge bowl for the best Shire gelding was taken by Mr. A. Sparkes, of Altrincham; and the special prize presented by the Royal Rock Beagles for the best Shire mare or gelding bred by the exhibitor went to Mr. Joseph Reececroft, of Eastham, for his Bankfields Perfection.

SITUATIONS WANTED AND VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

Among the Hunters were some of the best brood mares in the kingdom, and among those in saddle some of the best known animals in the ring. Hackneys were an exceptionally good section, and described by experts as the best seen since Islington. The big class, exceeding 15 hands, contained several magnificent specimens. The brown gelding Radiant, owned by Mr. J. Jurgens (Holland), was placed first; his pace was not so good as the second horse, but the judges preferred his action. Dr. Tobbs again won the record Reign 50-guinea challenge vase for the best Hackney mare with foal at foot with Rosadore; and his chesnut stallion Administrator carried off for the second year the subscription challenge bowl. Mr. Howard Frank's brown mare Kissington Kit Cat was an easy winner in the class for Hackney mares or geldings. This animal was first at Islington, and more recently at the Hague.

Though the entry in the leaper class was numerous, the jumping outside that of the prize-winners was not superior to that previously seen at this society's shows. Two accidents occurred, neither of which, happily, was as serious as at first seemed. Walter Wilson, of Bebington, riding Mr. Brevin's mare Lightning, came to grief at the first hurdle. He was thrown off, turned a somersault, and had an ugly fall, his mount treading on him in passing over him. He was stunned, but was able to get up, and was assisted out of the ring. The second mishap occurred to the rider of Mr. T. G. Jolley's gelding Blazer. The horse refused the water-jump, swerved, fouled a hurdle in close proximity, and pitched off his rider, rolling over him. It was at first thought that he was seriously hurt, but, happily, this was not so, for he was able to walk away.

By far the strongest and best sheep class were the Shropshires, of which there were quite a number of the first grade. Pigs, though not numerous, were distinguished for excellence of breed, as may be imagined, when it is stated that Sir Gilbert Greenall was the chief prize winner, he taking in all ten honours.

Bedfordshire.

The annual show in connection with the Bedfordshire Agricultural Society was held in Luton Hoo Park, the beautiful grounds of the president, Sir Julius Wernher, Bart., on Wednesday, in warm, sunny weather. Though the show appearances covered a straggling area, the undulating character of the park was excellently adapted for a good view of the ring competitions, and during the afternoon a natural bank at the end of the ring in which the jumping took place was occupied by a big crowd, in fact the attendance was one of the best on record. There was unfortunately a marked falling off in the number of entries as compared with last year's show at Amptill, but there were about forty more than on the occasion of the last show at Luton in 1901. The figures this year were:—Horses, 200; cattle, 57; sheep, 40; pigs, 11; butter and poultry, 41; honey and eggs, 22; sheep dogs, 6; working dairy competitions, 30; horse shoeing, 22.

Shire horses made a good display, some well-known animals being forward. The prize offered by the President for the best Shire filly bred in the county of Bedford was awarded to Mr. Robert Long's Standon May Flower, owned by Mr. J. L. Stokes's unnamed exhibits were the pick of both the light and heavy weight classes. The winning exhibitors of cattle included Mr. W. Simmons, Mr. C. F. Raphael (whose Bright Silver was awarded the special prize of the Shorthorn Society), Mr. W. A. Bass, and Mr. A. Brittain. Sir Julius Wernher, Mr. T. F. Buxton, and Mr. Joseph Newman were the most successful exhibitors of sheep. The classes for produce were exceedingly well supported. Mr. E. Tewson and Mr. G. Dickson being among the winning butter makers. Mr. J. N. Godfrey won both the prizes offered for comb and run honey.

Lord Alwyne Compton's prize for the labourer in husbandry who had worked the longest time in the same employment was awarded to John Constant, who had served Mr. W. H. Joyce, of Renhold, Bedford, for sixty years. The shepherds' prizes went to George Rickett, who had reared 271 lambs, and W. Teasdale, whose record was 108 lambs.

Mr. C. J. Tong, of Great Towbrick Farm, Hasleholme, Potters, Fyde, last week shipped to Santander, Spain, a young Large White boar and gilt, sired by Shard Roger 2nd, winner of the third prize at the Royal Agricultural Society's Show at Derby, and out of Shard Floss 12th.

SHOW GOSSIP.

"Never do to-day what you can do to-morrow," which is said to be a favourite motto with journalists, evidently finds no favour with the Peterborough Agricultural Society, for only four days after their recent successful show they sent out notices to the effect that their 1907 show would be held on July 9, 10, and 11. Prize schedules are, however, not yet ready!

The twenty-sixth annual Horse Show at Kingston, Herefordshire, will take place on Wednesday, September 19, and a good prize schedule has been arranged for it. Competition is open to the United Kingdom, and classes are provided for Agricultural horses, Hunters, Hackneys, Polo ponies, whilst there will be jumping and driving trials. The Shire, Hunters' Improvement, and Hackney Horse Societies offer their medals, and the class prizes are on a liberal scale, so that a good entry should be received. Prize schedules, entry forms, &c., can be obtained from the secretary, Mr. T. H. Vaughan Morris, Byford House, Staunton-on-Wye, Hereford.

The annual autumn show and sale of Shorthorn cattle at Bingley Hall, Birmingham, will take place on Wednesday and Thursday, September 5 and 6. There will be seven classes—four for females and three for bulls, viz.:—(1) Cows or heifers exceeding three years old (calved prior to September 1, 1903); (2) Heifers exceeding two and not exceeding three years old (calved between September 1, 1903, and August 31, 1904, both days inclusive); (3) Heifers exceeding one and not exceeding two years old (calved between September 1, 1904, and August 31, 1905, both days inclusive); (4) Heifer calves not exceeding one year old (calved on or after September 1, 1905); (5) Bulls exceeding eighteen months old (calved before March 1, 1905); (6) Bulls exceeding twelve and not exceeding eighteen months old (calved between March 1, 1905, and August 31, 1905, both days inclusive); (7) Bulls not exceeding twelve months old (calved on or after September 1, 1905).

The prizes in classes 1, 2, 3, 5, and 7 consist of £10 first prize and £5 second prize; in class 4 the prizes are £7 and £3 respectively; whilst in class 6 the first prize will be £15, the second £10, third £7, fourth £5, and fifth £3. Although not such a big event as the spring sale, this autumn Shorthorn sale has increased in popularity considerably in recent years, and, seeing the present boom in Shorthorns, there is likely to be a larger entry than ever this year. Entries close on Thursday, August 9, with the secretary, Mr. W. H. Lythall, Bingley Hall, Birmingham.

The Dunster Summer Show of horses, cattle, and sheep, of which Sir W. J. Trevelyan, Bart., M.H., Nettlecombe Court, is president, will be held in the Dunster Castle Lawns on Friday, September 7. This will be the seventy-first annual show, and there seems no reason why it should not be as successful as in other years, for a liberal prize schedule has been arranged, and that the show is as popular as ever is quite evident. Mr. W. Risdon, Dunster, is the secretary, and from

him prize schedules and entry forms (the latter have to be returned by August 23) can be obtained.

The desirability of breeders or exhibitors being allowed to show their stock themselves before the judges—a subject that has often occupied the attention of the Highland Agricultural Society—was once more discussed at a meeting held in the Peebles showyard on Wednesday. As the regulations stood up to the time of the meeting no owner or exhibitor was allowed to parade his stock in the ring. This had to be done by somebody else—the exhibitor's son, attendant, or herdsman—the object

the way from Galloway and Ayrshire should be under the penalty of having to bring a man with them, because they could not show their stock themselves, and eventually a resolution directing the abolition of the regulation that owners be not allowed to parade their own stock was carried by an overwhelming majority. In future, therefore, breeders or exhibitors will be allowed to parade their own stock before the judges.

The Staffordshire Agricultural Society has accepted the invitation to hold their 1907 show at Burton-on-Trent.

We would remind intending exhibitors at the Royal Dublin Society Horse Show that the entries close at single fees on Friday, the 27th inst., and at double fees on Thursday, August 2. Applications for prize list and entry forms, &c., should be addressed to the Agricultural Superintendent, Leinster House, Dublin.

Whilst sweltering in the shade of the hottest day of the year, we were quite refreshed with thoughts of winter which were brought to mind by the receipt of a copy of the prize schedule for the Smithfield Club's show at Islington. Christmas is coming, but is yet a good way off, so that a detailed review of the schedule will hold over to another issue, when summer shows are not quite so pressing as they are this week.

By the way, what a pity it is that the clashing of shows—at least, county fixtures—is not, we were going to say cannot, be avoided. Last week the Lincolnshire, Cambridgeshire, Sussex and Staffordshire shows all opened on Wednesday, and, in addition, there was the Wirral and Birkenhead Show, to say nothing of the Highland at Peebles. The result was that all suffered to some extent as regards entries, as reports of the shows will demonstrate, whereas with a little more co-operation a great deal of the clashing could be avoided.

At a meeting of the council of the Yorkshire Agricultural Society, held at York on Thursday, the secretary stated that the entries of stock for the forthcoming show at Middlesbrough on August 8, 9, and 10, are very good, but there is a considerable falling off in the entries of implements, which is attributed to the fact that Middlesbrough is in a remote corner of the county, and also to the enormous entry of implements at the Royal Show at Derby. The total of live stock is 930 as against 867 at Hull last year, cattle number 223—an increase of 20—sheep 127, or 5 more than last year, pigs total 97 against 99, and horses 485, or an increase of exactly 40. In addition, there are 296 entries of cheese, honey, and horse-shoeing and butter-making competitions. The number of feet frontage of implement shedding, &c., at Middlesbrough is 5,114, compared with 6,836 at Hull last year. The open space for rustic houses, greenhouses, &c., amounts to 790 odd square yards, considerably less than the record of 1,730 square yards at Hull. Excellent arrangements have been made for the military tournament on the third day by the 18th Hussars, and the council hope the experiment will prove a great success.

Mr. A. H. EDWARDSON,
Wirral and Birkenhead Agricultural
Society.

evidently being to keep the judges' mind entirely free from being prejudiced in favour of any particular owner whom the judges might happen to know. At Wednesday's meeting a strong protest was raised against this regulation by a member, who said the rule worked particularly hard on tenant farmers, who were put to the expense of having a man to show the stock, when he himself could do it more easily and to much better advantage, seeing that he was better acquainted with the exhibit than any one else. The Rev. Dr. Gillespie said he thought it hard that exhibitors coming all

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

WARWICKSHIRE AGRICULTURAL SOCIETY.

SHOW at NUNEATON, AUGUST 20 and 30, 1906. Prizes over £1,140. For Horses, Cattle, Sheep, Pigs, Implements, Dairy Produce, Eggs, Dressed Poultry, Stock Judging Competition, &c., &c. Prizes in Horse Department over £595. Special Driving and Jumping Classes. Last day of Entry July 28, after which at double fees up to 5 p.m., July 31.

Prize Books and Entry Forms sent on application to—

FREDERICK H. MOORE,
Secretary,
Warwick.

KEELE AGRICULTURAL SHOW.

THURSDAY, AUGUST 9, 1906.
£600 PRIZES.

Horses, Cattle, Sheep, Pigs, Dogs, Cats, Poultry, Rabbits, Flowers, Vegetables, Turn-Outs and Leaping.

Entries close July 30; double fees later, except dogs. Schedules ready.

W. A. BENSON, Silverdale, Staffs.

COLESHILL HORSE SHOW, SEPTEMBER 19, 1906. £160 in prizes, JUMPING, DRIVING, TURNOUTS &c. Entries close September 5, 1906.

W. H. M. BARTON, Sec., Church Hill, Coleshill, near Birmingham.

DURHAM COUNTY AGRICULTURAL SOCIETY ANNUAL SHOW at WOLSHINGHAM.

On WEDNESDAY, August 15, 1906. Upwards of £1,000 given in Prizes for Cattle, Sheep Dog Trials, Sheep, Dogs, Pigeons, Horses, Poultry, Leaping, Rabbits, Milking Demonstrations, Butter, Implements and Eggs, &c.

Harness.

Entries close Monday, July 30, 1906.

Prize Schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flax House, Durham.

Prize Schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,

WM. CHRYSTAL,
Houghton-le-Spring.

THE EAST BERKS HORSE SHOW will be held at

HAWTHORN HILL RACECOURSE (between Mailehead and Bracknell, Berks), on

THURSDAY, AUGUST 23, 1906.

Entries close July 31, or with double fees, August 7.

Schedules, &c., may be obtained of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C.

THE SOUTH DURHAM AND NORTH YORKSHIRE HORSE, CATTLE AND DOG SHOW AT DARLINGTON, ON WEDNESDAY, AUGUST 1, 1906.

44 classes for Horses and Cattle, including 11 classes for Hunters. £15 First Prize for Four-year-olds and upwards.

There is also a splendid classification for Harness and Agricultural Horses. Classes for Butter, Cheese, Eggs, Honey, and Dressed Poultry.

Entries close Monday, July 23, 1906. Schedules and entry forms on application to—J. J. HARRIS, 6, Arden Street, Darlington.

EASINGWOLD AGRICULTURAL SOCIETY.

The next SHOW will take place at EASINGWOLD on SEPTEMBER 19, 1906. For Schedules of Prizes apply Jno. J. PRETY.

HARROGATE AND DISTRICT AGRICULTURAL SHOW.

President: HY. WILLIAMS, Esq., J.P. will be held

On WEDNESDAY, AUGUST 15, 1906.

About £300 in Prizes. Schedules now ready. G. SAVILLE, Park View, Harrogate.

WARRINGTON AND DISTRICT AGRICULTURAL SOCIETY.

President:

SIR GILBERT GREENALL, Bart.

Vice-President:

Rt. Hon. LORD LILFORD.

17th ANNUAL SHOW

To be held in

WALTON PARK, near Warrington, on THURSDAY, AUGUST 16, 1906.

Prizes, Cups and Medals value £700. Open Classes for Jumpers, Harness, Hunters, Shires.

Entries close August 1.

H. BERSFORD MELVILLE, Secretary, Estates Office, Warrington.

WELBECK TENANTS' AGRICULTURAL SOCIETY.

SEVENTEENTH ANNUAL SHOW.

TUESDAY, AUGUST 7, 1906.

1062 ENTRIES.

HAY HORSE SHOW, September 20, 1906.

Entries close on September 6; double fees September 12.—REECE MORRIS, Secretary, Broad Street, Hay, Hereford.

CORRESPONDENCE.

The Filgrove School.

SIR,—The editorial article in your issue of the 9th inst. with regard to the closing of Filgrove School in Bucks, and to the distance which the children had consequently to walk in order to attend school, is calculated to convey such an inaccurate impression that I must ask you to allow me to state the actual facts. So far from the Board of Agriculture having been apathetic, the fact is that they took up the matter as soon as it was brought to their notice, and represented to the Board of Education the effect which the closing of small local schools might have in driving country people into the towns. The Board of Education readily agreed to reconsider the matter, and on the 3rd inst. they ordered the school to be reopened.

As evidence of the appreciation felt for Lord Carrington's action, I may quote the following extract from a letter addressed to his lordship by Mr. J. C. H. Robinson, of Filgrove, who brought the matter to the notice of the Board:—

"I consider that the village and the whole of the smaller villages in the country are indebted to the Board of Agriculture for their action in the matter; and I know the farmers of the country will appreciate the efforts of the Board."—Yours faithfully,
R. WINFREY.

House of Commons, July 19, 1906.

[We print the above with the greatest pleasure, and also draw attention to the editorial article recording the reopening of the school on another page, which for our own justification we may say was in type before the above letter was received. We had the pleasure of meeting Mr. Robinson at Derby, when the full facts of the case were explained to us and our aid was invoked to bring about a change, which we are pleased to see has been effective.—Ed.]

Teaching Agriculture.

SIR,—Your remarks on the necessity of teaching agriculture to children are the sensible I have seen. There is no doubt, the Education Act has done much towards the depopulation of rural districts by preventing the children of agricultural labourers from becoming familiarised with the treatment and handling of animals (which must begin young), and from any opportunity of seeing how work is done, and taking an intelligent interest in it.

Instead, they hang about the villages (often around the public house) during the long evenings and holidays, and, with nothing to occupy them usefully, become accomplished loafers of no use to the farmer, when a paternal (or shall I say grandmotherly) Government allows them to attempt to earn a livelihood.

Another serious matter is the extinction of the small landowner or squire, who was generally a practical farmer living amongst his tenantry, spending the rents they paid him in the neighbourhood, and maintaining a standard of respectability by precept and example.

In his place we have now the large landowner buying up parish after parish—throwing farms together for cheaper management, and drawing all the rents he can from them to spend anywhere but in the district, which he considers ought to be grateful if he comes for a couple of months in the year to reside at some castle he may own nine or ten miles away, to which he has all his stores sent from London.

It is this sort of absenteeism which is ruining the country, and unless some restriction is placed on the number of acres, anyone may own in a parish in which he does not reside, the evil is bound to go on increasing, for the nature of the entail on many of these large estates provides that, however extravagant and spendthrift the tenant for life may be, there is always some source of income he cannot touch which is available for investment.

Thus the thrifty farmer or cottager is not allowed to buy land, for what is dreaded more than anything is an independent neighbour who dare assert it is unlawful to close a footpath or enclose an open space. Neither does the owner always know what pressure is put on the tenantry by the agent, who invariably manages to grow rich whatever his master may do.—Yours &c.,
July 17, 1906. M. ORN.

How Tainted Butter is Made.

SIR,—One hardly expects to find, in these days of scientific sanitation, impure and foul water used in the manufacture of butter. That such cases are everyday becoming rarer is a matter for congratulation, but nevertheless, isolated cases are met with even to-day. A week or so ago the sanitary inspector at the Llangat (Somerset) District Council took samples of water from one of the villages in the union, the supply in this particular village being from wells. The samples were duly analysed, and found to be "all polluted with sewage," impure and unfit for dietetic purposes. The inspector, in reporting the matter to the

council at their last meeting, stated that a lady who made butter assured him that she did not use the water from the well on her premises when it "stunk," but that she used the water from another well close by. This, on analysis, proved to be worse than any other of the samples, all of which were to be "viewed with the greatest suspicion." Yet the extraordinary part of it is, that although previous samples from the same village have been condemned, and although a wholesome supply from a neighbouring town passes through the village, the inhabitants resolutely decline to be connected with that supply.

We are personally acquainted with this spot, and can vouch for the circumstances related above. A great deal remains to be done in the way of educating our rural people, particularly in the more remote quarters.—Yours, &c., L. F. S.

July 17, 1906.

Agricultural Depression.

SIR,—Just a few words with you on what is popularly called "agricultural depression," for which farmers have received (and still do so) so many suggestions and so much free "advice."

There is not the slightest doubt but that agriculture is being carried on at a disadvantage, and I doubt if the pinch was ever felt so acutely as at the present time.

Well, Sir, we have been told (I say we, I am a farmer myself and sorry to go in for fruit growing, to lay land down to grass, to farm on more up-to-date methods, to combine, &c.), and we have heard the cry "back to the land"; but, in my humble opinion, what is wrong with the whole business is this:—

Agriculture is suffering from over production. Of course there are a lot of side issues to this as to all else, one is lower rents. The daily papers (who so kindly give us such a lot of free and practical advice) have been emphasising the cry of "back to the land," but the farmer does not seem to have joined in to any extent.

Well, Sir, instead of awaiting the rush of the workers from the rural districts to the towns during the last ten years or so, including both labourers and farmers and their families, it would have been, in my opinion, better if as many again or more had left the ranks of food producers and migrated, not to produce food abroad, but to the towns. We want production reduced until such time as the demand will create a little bit more competition for the supply, and consequently raise prices on to a level whereby farmers can obtain a fair living and pay their helpers (workmen) as high a wage as any skilled workman in other trades.

The foreign producer is in about the same position as we are, he wants better prices (some farmers would say he wanted canned meat).

Of course, under co-operation and unionism prices might be artificially stimulated, but it would be a bad sign for agriculture I think, but with your permission I will write you again on this.—Yours truly,
July 18, 1906. F. A. H.

Back to the Land.

SIR,—The letters advocating some attraction for young countrymen to remain in the villages I have perused with interest, and the suggestions as to means of imparting cheer to life.

It will be well for them not to turn "back to the land" if they wish to avoid risk of rush to battle.

It is almost an unparalleled circumstance to criticise the effusions of humorous celebrities, but the *Daily Mail* of July 18 describes the verses by Punch as "A Bitter Gibe." The introduction is as follows:—

"O city clerk, in whom the hopes are stored
Of England's manhood, let me talk with you."

It would therefore seem that rural attendance will not be required, so the labourer can be dispensed with as far as military display is concerned, and continue to be jolly and merry on the farm.—Yours truly,
RURAL.

The Needs of Village Education.

SIR,—Shall we ever get an Education Act from any Government which shows any true appreciation of the needs of the villages? The inordinate distance which young children have to walk to school in certain districts is a grievance by no means confined to Buckinghamshire. We have it here also, and doubtless in other parts of the Midlands; but one looks in vain in the new Bill for anything to lessen it. So far, indeed, as the difficulty may be produced by feuds between the school authorities and Whitehall, and consequent closing of schools, the present Bill may rather augment it than otherwise. How long are we to wait for a really practical rural curriculum, adapted to fit the lad for work upon the land, or a girl for such tasks as full generally to the lot of a farm servant, dairymaid, or cottager's wife? We are moving slowly in that direction, I admit, but very slowly and

not so much by virtue of anything the House of Commons has done as in spite of it. How much longer, once more, is it going to be possible for local authorities to keep our lads and girls at school until the last chance of their turning out fit for a rural career is gone? By Mr. Birrell's account of it, "in about two-thirds of the rural areas of England and Wales children can leave school at twelve years of age" on passing certain examinations. So far, so good! But in the remaining third of rural England they cannot. Why should the determination of such a point be left to local discretion or indiscretion? Surely the adoption of regulations of such vital importance as this ought not to be made a matter of local option. At a time like this, when everyone is anxious to keep young people in the country and fit them for country pursuits, one would have supposed that Parliament might have given a strong lead; but, no! Legislation on the lines that farmers and country people generally like to see would not be popular with the rank and file of the party, or with the urban members, who cannot conceive that anything but an urban education is worthy to be called education at all.—Yours faithfully,
July 20, 1906. WORCESTER.

The Farming Outlook.

SIR,—I am glad to be able to report that prospects all round in this county (Cumberland) are so far above the average, and the empty barns are almost certain to be all well filled, which is much needed, as another scanty crop year like the last would have brought many small and even some large farmers to the verge of bankruptcy. However, as to questions which affect the welfare of farmers outside their own efforts and labours, the prospects become darker in the shape of feeding as well as teaching the labouring classes, and local taxation seems bound to increase.—Yours truly,
July 19, 1906. MID-CUMBERLAND.

Agriculture Handicapped.

SIR,—The season and the times seem all against agriculture. Take, for instance, the motor traffic, which is injuring the agricultural trade in more ways than one, but notably in the trade for hay and straw, which it has cut down considerably. There seems no remedy to help the British farmer. He has to be handicapped all ways, and I should like to know what will be the end of this. It must cause a great calamity before very long.
Bucks, July 20, 1906. J. H.

St. Boswells Fair.—The annual fair, which is one of the largest and most important of its kind in Scotland, was held on St. Boswells on Wednesday, when, owing to the Highland Society's show being held in the Border district the same week, the attendance was rather under the average, and horses were not so extensively shown as on some former occasions, the number forward being about 500. A fair trade was experienced for the best class of draught animals at prices up to £70, but secondary and inferior sorts were slow to sell. There was the usual attendance of wool buyers, but they were disposed to offer about 1s. per stone under recent quotations, and in these circumstances holders were inclined to wait till the later markets in the district in order to make better bargains. For all hoggy wool 30s. per stone of 21lb. was expected, and 28s. for all ewe fleeces, and the prices offered was only 27s. and 26s. respectively.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be stated; the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equivalised.	Phosphatic.	Dissolved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. —	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 12 6	s. d. —	s. d. —	s. d. —
" in Sulphate of Ammonia	—	—	—	—	10 6	—	—	—	—	—	—	—	—
" calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	—	1/10-2/	—	2 0	2 0	—	—	—
" assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
" insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

Albuninoids s. d. 2 8 to 3 0
Oil or fat s. d. 2 8 to 3 0
Carbohydrates s. d. 1 1 to 1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. of unit of albuminoids and of oil is at least 2½ times that of 1 per cent. of unit of carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1 × 2½ =	55.2
Oil	5.2 × 2½ =	13.0
Carbohydrates	33.2 × 1 =	33.2

Total feeding units 101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

How to Get a Good Hay Crop.

Good hay takes the first place among the fodder for animals, especially in winter time, and it should be the effort of every farmer to grow and gather crop so that it may possess in the highest degree both nourishing and appetising qualities. It the first place it may be noted that its feeding value is dependent on the character of the growth, which is greatly influenced by the soil, moisture, and system of manuring.

The fields should be cultivated with the view of developing the sweet grasses and to suppress the herbage of low value. This can be done through drainage, harrowing, spudding out the bad weeds, yearly application of fertilisers, with occasional dressings of lime, and in cases where there is an evident deficiency of good grasses, by reseeded with carefully selected seeds.

As a rule, the worthless grasses flourish from an excess of moisture, and therefore drainage is necessary to hold them in check, and then the application of slag and potash should follow. Nitrogen is not so necessary, as old meadows usually contain a good supply of humus; but if there is a sign of impoverishment, a dressing of farmyard manure or compost is desirable.

Next to the quality of the growth, the time of cutting it is important. This operation is very often deferred too long. Analysis has clearly demonstrated that the plant is richest in nourishment at the time of early flowering. At that stage of its development the growth ceases, the

seed formation begins, and the herbage becomes more hard and fibrous. Clovers at that time lose many of their leaves, the most valuable portion of the plant.

Experiments in the digestive properties of grass and clover have shown that the product obtained from three cuttings, the first very early, a higher quality was obtained than by two cuttings.

A late cutting has the further drawback that the time for the growth of the second crop is shortened, and the gathering has to be done in the short autumn days when the dew is heavy.

The growth of the first crop can be pushed forward by fertilisers, so that it can be taken early, leaving sufficient time for the satisfactory development of the second crop; and, again, if the first crop is cut late, the seed formation will have begun, and the capacity of the plant for the next growth will have thereby greatly suffered. Moreover, if the first crop is allowed to stand too long, a large part of the weeds will have seeded, and thus permanent injury is caused to the quality of the growth.

The quality of the hay is also very dependent on the way in which it is gathered. If the drying crop is subjected to heavy rain when spread out over the field, it will lose much of its best parts, especially will suffer in its albuminoid and aromatic qualities. The best period is generally the first half of June for the first cutting, and then the rains, which so often fall in the second half of the month and early in July, will be most beneficial for the second growth.

The hay should not be spread out, if possible, more than a couple of days, it should be frequently turned and on the second evening collected in cocks. If left spread out the dew injures it.

With the implements now in use, it is possible to cut the crop and collect it very quickly, so as to save the risk of exposure to bad weather.

The chief thing, it may again be remarked, is to cultivate the crop, so as to stimulate the growth for a first early cutting, and thus secure it in the most nourishing condition and leave time for the second crop to develop in a satisfactory manner.

Rye, rape and mustard are excellent materials for the formation of catch-crops, and their extended use is greatly to be desired on account of the many benefits they confer on the farmer

Oat Variety Trials.

In a report on oat experiments, 1904, just issued by the Aberdeen and North of Scotland College of Agriculture, the object of the investigation being to discover the comparative merits of some of the recently-introduced varieties, it is stated that experience in other districts has shown that the native oats of Scotland are inferior as grain producers to some, if not all, of the kinds which have been introduced from America and Germany or produced by crossing with foreign strains. As the oat is by far the most important cereal of the North of Scotland, and Aberdeen the largest oat-growing county, it is of the first importance to ascertain if the local varieties are giving the largest possible returns per acre.

In the trials of 1903 the superiority of American varieties such as Banner and Siberian was marked in the good climate of Morayshire, while even in the later climate of Ross-shire and in an exceptionally cold wet season the "new" varieties gave a good account of themselves. It is too early to place the oats which have been tested in a definite list according to their merits; they must run the gauntlet of more seasons, good and bad, and more soils late and early, before the older strains can be safely discarded in favour of the new, but from the knowledge already gained it is permissible to infer that the loss by the use of the old kinds like Potato and Sandy is, in some cases, equal to the rent of the farm, and in a few cases equal to twice that amount.

In the trials the lion's share of honours was obtained by the "Banner" oats, and the varieties "Thousand Dollar" and "Newmarket" stood second and third.

Longer experience may show that the older native varieties may prove more suitable in the long run; but, at any rate, the trials clearly illustrate the wisdom of not adhering too closely to old varieties, and of trying whether a change might not prove of advantage.

The investigations of the Aberdeen College are certainly helpful in affording guidance to farmers in this matter.

Cabbage is a valuable food for milch cows; it increases the quantity and quality of the milk, and the butter made from it is free from any unpleasant flavour.

The New Potato.

(*Solanum Commersoni* Violet).

The glowing accounts which have been published from time to time of the character and qualities of the new tuber have caused considerable attention to be attracted to it, so that the following particulars, summarised from an article by von Hasslach and Roumanille on the subject may be read with interest.

The ordinary potato was known in Peru before the Spaniards conquered that country, and was cultivated by the natives as a food crop under the name of "papas." No wild progenitor of the ordinary plant has ever been found in any part of the world. The credit of introducing the potato to England belongs to the celebrated botanist, Charles de l'Eluse, who lived in the sixteenth century. It was first grown in Vienna in 1583, and its cultivation gradually spread over Europe. It was brought to England from Virginia in America, where it was carried from Peru. In France there was at first a strong prejudice against the new vegetable, which was alleged to cause cholera and other diseases, but after the great famine of 1170, its nourishing properties were appreciated at their due worth, and its consumption became general.

To-day the cultivation of the potato crop throughout the world is enormous, and there are numberless sorts evolved by growers, each put forward as possessing some special virtue. The recent boom in different much-vaunted seeds and the attendant disappointments will not soon be forgotten.

The new blue potato from Paraguay seems, however, to be really of quite a new character, and to have a long future before it. The following special characteristics are claimed for it:—

Special Characteristics.

1. Unsusceptibility to dampness, and therefore well adapted for cultivation in wet soils.

2. Resisting power against disease.

3. Excellent eating qualities.

4. Great productive power, 50 to 100 per cent. over the ordinary kind.

The *Solanum Commersoni* has its origin in South America, where it grows wild on the banks of the rivers of Uruguay, where it produces small yellow tubers about the size of a hen's egg, and possessing a bitter taste. It was first reported upon by the botanist *Commersoni*, who noticed it growing on the moist banks of the river Mercedes, near Montevideo. In 1850 Felix de St. Quentin, attracted by its characteristics, which seemed to make it very appropriate for agricultural purposes, cultivated it in Uruguay. Then the Consul of Uruguay in Marseilles imported samples of the wild tubers, which were grown in the Colonial garden in that town, and catalogued as a new food crop for moist lands. The improved development of the plant was completed after four years' cultivation by Labergerie, and the new *Solanum Commersoni* Violet evolved in the process. Labergerie was successful in cultivating the plant so that the tubers lost their original bitter taste and possessed the high qualities before mentioned. The wetter the soil, the greater was the crop; thus in very dry ground about 10 tons, 50 tons in wet soil, and up to 90 tons in bogland per hectare of about 23 acres. The yield was in proportion to the moistness of the soil.

The immunity of the plant from disease was also shown by experiments.

The flavour of the tuber is excellent, surpassing that of the ordinary kind.

The tubers weigh from 2 to 4 lb., and the plants bear from five to seven tubers.

The satisfactory conclusion is formed that,

thanks to the patience and skill of Monsieur Labergerie, an addition to agricultural crops has been made which will prove of great service for the sustenance of man and animals, and also in the industries which use potatoes.

New Laboratory at Rothamsted.

On Thursday last Earl Carrington, President of the Board of Agriculture, visited the famous Experimental Station at Rothamsted, and opened the new laboratory for the study of agricultural bacteriology, erected and equipped at the cost of £1,000 by Mr. J. F. Mason, M.P., in memory of his father, the late Mr. James Mason, of Kynsham Hall, Oxon, who for many years conducted on his own estate extensive experiments on questions connected with the utilisation of leguminous plants and the unlocking of the fertility stored up in the subsoil. The new building consists of a main laboratory for microscopic work, &c., 25 ft. by 15 ft., a preparation room adjoining, a dark room for photography, &c., and a room for the director. It has been built to the designs of Mr. V. T. Hodgson, and is the only laboratory in this country, set aside solely for the study of agricultural bacteriology. It has been endowed by the donor with £50 a year towards its working expenses. The subjects of investigation at present in progress are those connected with the bacteria in the soil which manufacture or prepare food for the higher plants, particularly the bacteria which fix atmospheric nitrogen when living either alone or upon the roots of the leguminous plants. The conditions of the soil or of the plant which lead to "Clover Sickness" and prevent the continuous growth of leguminous plants, which is so manifest upon the field plots at Rothamsted, forms one important subject of investigation, as also the conditions which lead to the accumulation of fertility when land is laid down to grass. Some of the specimens on view in the laboratory served to illustrate these investigations.

At the inaugural proceedings, Sir J. Evans, chairman of the committee of management, presided, and there were present, in addition to Earl Carrington and Sir M. Foster, ex-member of the London University, Sir W. Church, Mr. James Maon, M.P., Sir T. Elliott, Secretary to the Board of Agriculture, Sir C. Lawes-Wittewronge, Dr. H. Müller, Dr. Voelcker, Mr. A. D. Hall (director), Professor Melilot, Mr. Channing, M.P., Mr. Laurence Hardy, M.P., Mr. A. H. Smith, M.P., Mr. G. B. Hudson, Dr. Armstrong, and Mr. Bowen (chairman of the Chemical Committee, Royal Agricultural Society).

The chairman said that the Lawes Agricultural Trust Committee had for many years been labouring under great pecuniary difficulties, even to curtail the original amount of research, which was inaugurated by Sir John Lawes and Sir Henry Gilbert at Rothamsted. He was thankful to say that, so far as bacteriological research was concerned—and that was one of the most important branches of agricultural inquiry at the present day—they had to a great extent been relieved by Mr. Mason's gifts (applause). The Lawes Committee had founded a society for improving and increasing the Rothamsted experiments, but he was sorry to say they had not received that amount of local support which he would have liked. He circulated appeals to the members of the county council of Hertfordshire, and especially with those connected with the agricultural department, and with, he was sorry to say, practically no result. He suggested the establishment of some central council of agricultural research, which should have placed at their disposal a certain amount to aid experiments carried on there and elsewhere. Unless something of the kind was done there would be very little hope for agriculture so far as it depended upon experimental researches for the immediate future. In

England they did not get anything like the amount allotted to agricultural research that was granted to Ireland (hear, hear)—and he thought, being the Mother-country, they were entitled to as much as the daughter (laughter and applause).

Earl Carrington, in declaring the new laboratory open, expressed the hope that the new buildings would result in a great work being done in solving the agricultural problems which still remained, and to meet the new conditions which arose from the later discoveries of agricultural science. The chairman had alluded to the Central Council for Research, which no doubt would do great and practical good, and he had naturally expressed a hope that the present Government would be able in some way to assist so praiseworthy an object. He sincerely hoped so, too (laughter)—but at the present moment he would remind them that the income tax was at a shilling. Ninety-four millions a few years ago seemed to be enough to run the country, but now the amount had jumped to £145,000,000. He looked, therefore, with some little apprehension to going to Mr. Asquith on the subject of a little more money for any of these good objects. He hoped times might mend. They were in hopes of having a good harvest, trade was reviving, and they were pledged as a Government to that detestable proposal of economy which made them so unpopular in the country (laughter). Still, he hoped at some time, if things went right, that, backed by the scientific world, he might be able to go with a good case to lay before the Chancellor of the Exchequer, and they might then be able to get some contribution to so desirable an object. (Hear, hear.)

Sir M. Foster, proposing a vote of thanks to Mr. Mason for his munificent gift, said that he and his fellow members of the committee had felt for years past that great and important as were the investigations they were carrying out, there was a want of one line of investigation, viz., the investigation of the part which organisms, the so-called microbes, played in the work of the soil and the plant. We heard a good deal about microbes now, and we especially heard of the enemies they are to us, and how they were doing their best to kill us. But there were microbes which were our friends, and, perhaps, some of the strongest of our friends among microbes were those working silently and unseen in the soil.

The struggle for existence, when they came to its basis, was the struggle for nitrogen, because it was nitrogen which we had to pay most for in our food. "There are now," continued Sir Michael, "microbes in the soil which are making this nitrogen of the atmosphere eatable by us and it is a very happy thing that the attention of the late Mr. James Mason should have been turned to this subject. Thanks to the gift of Mr. Mason, I hope that in the years to come, from this laboratory, there will be thrown much light upon the action of microbes in producing our national food. The microbes are valuable. Lord Carrington spoke just now of the money for which we are asking; but I venture to suggest that we do not ask for that money to be given us. We only ask for that money to be lent. It will come back to us sooner or later, and," concluded Sir Michael, "I venture to think that the microbes will in the future be important agents in reducing the income tax" (laughter and applause).

Sir T. Elliott seconded the motion, which, having been carried by acclamation, was acknowledged by

Mr. Mason, M.P., who expressed the hope that his gift would be the means of adding something to the sum total of scientific agricultural knowledge (applause).

After the opening ceremony was over, the company inspected the other buildings and the experimental plots, being evidently much interested in what they saw.

THE

"BIBBY" CAKE

IN THE FORM OF

"CAKETTES."

'Send me two tons o' they nobbs same as Mr. Brown is a using,' was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had o'ten thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untried paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown, who had often spoken favourably to him of our Cake, and on looking over his stock and noting the extreme hardness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's cattle and the manifest hardness of the "Cakettes" which had finally broken down this buyer's conservatism, and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best result obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good": It is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest: there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

SHOWYARD AUCTIONS.

The auctions held on the ground of the Royal Derby Show were so very successful that the question has been put whether all the county societies which hold more than a single day's exhibition might not profitably add this new feature to their catalogues of procedure. The live-stock exhibitors do not often now appear at them after the judging has been completed, but would have an inducement to do so if there were an auction sale of the kinds of animals they breed; and as after the opening day parades of stock form the leading part of the programme, and in many cases there is a difficulty in filling it up attractively, breeders would be unlikely to meet with opposition from the directors and managers of the shows if they took up the matter and pushed it forward earnestly. But it is just here that the object is allowed to slope. "What is everybody's business is nobody's" has often been experienced. Such an innovation requires organisation on the part of the breeders mostly interested. Besides which, unless a company of anxious buyers can be depended on, the first attempts to establish a showyard auction may prove a failure.

At the Derby auction the chief element of success was perfectly well assured beforehand. So thoroughly well convinced were Shorthorn breeders that buyers for the Argentine would attend with the object of buying every animal at all adapted for export to that country, that a considerable proportion of the entries were made solely that the animals might be offered and pass under the survey of the exporting agents. The entries of Shorthorns for the Derby Royal

proved a record one, to be attributed entirely to this cause, the desire to seize on such a good opportunity of sharing Argentine high prices. Such being the case, how was it that the other breeds for which there is a demand in Argentina were not entered for sale likewise? For instance, during 1905 there had been an increasing demand for Herefords for Buenos Ayres as well as for Uruguay. Yet, although this had undergone still greater development in the spring and early summer of this year, the sale of not a single animal of the breed is reported to have taken place at the Derby auction. The chief cause must lie in the unsuitability of the Royal showyard auctions when held far distant from Herefordshire for animals of the breed to be disposed of most advantageously. The fewer export agents looking out for Herefords must have home buyers to compete with at auction sales or they would fail to bid high prices. The Hereford men found that in the three successive annual auctions at Park Royal no satisfactory prices for their animals were realised. For the 1904 sale they entered twelve; for 1904, twenty-two; but for 1905, only seven; for Derby auction, one.

By this we learn that for the generality of breeds it is of little use offering animals by auction in any district foreign to them, but wherever the Royal pitches its tents the breeds native to that particular part of the country might be expected to have good sale at its auctions. Shorthorns are a cosmopolitan breed in demand everywhere except in Devon, the society of which county has ceased to offer prizes for Shorthorns at its shows, the alleged reason being that there are no pure Shorthorn herds in Devon. There seems no ground for doubt that showyard auctions, great and small, at which stock native to the respective district are sold, ought to be as popular as market auctions are.

EDUCATION OF COUNTRY CHILDREN.

We learn that the agricultural cottagers grievance in the Aylesbury and Newport Pagnell districts of Bucks has been abated, largely owing to the public spirited intervention of Mr. Robinson, of Newport Pagnell, who, aided by the Board of Agriculture, has prevailed upon the Education Authorities. But there are other counties besides Bucks where cottagers are liable to be harassed and prosecuted by the local educational authority. Where the nearest school is more than two miles distant, the enforced attendance of very young children is productive of much friction, and there should be means provided for suspending local action during the period of appeal to the authorities in London.

Weather, Crops and Stock.

Exclusive Reports.

Hampshire. THE Highclere district has suffered in common with the rest of the South of England from the inclement nature of the spring, with the result that crops of all kinds are generally below the average. Clover and hay crops are light, but sainfoin was quite up to last year. Benefiting by recent rains, the root crops up to the present show some promise, but want more sun; there is a good plant, but they do not grow as quickly as they ought. Mangolds have made good progress and will be above the average. Turnips and swedes, although suffering occasionally from fly, now give promise of an average crop. Wheat is the most successful of the corn crops and has filled well but wants more sun, while barley and oats are variable, especially the latter, which on some farms is decidedly bad, but that there will be a shortage of straw is now a certainty. Live stock are generally healthy, forage crops are good, which makes lambs dearer than last year, while hay ricks are smaller, making ewes cheaper. Sheep and pigs are short in number and likely to maintain, if not improve upon, their present prices.

Bucks.

THE season has been too dry and cold; we had frost up to May, which hurt the hay crop very much, and we have a rather short cut of meadow hay; the mixtures and clovers rather better, but much under average, although the weather being fine most of it has been secured in good condition. The dry season has very much hurt the late-sown corn, which is very short; the roots have stood the dry weather fairly well, and with some rain now will greatly improve them. The yield of corn has so far been very unsatisfactory.

Hereford.

TAKING everything all round, the season and prospects are better than we had for some years. The hay crop is not heavy, but is being got together well, and we have a fair amount of grass. Roots are looking well, especially mangels, whilst wheat, barley, oats, beans, and peas are all more than an average crop. There are not many really heavy crops, but they are regular and generally standing well, and with fine weather should be a good yield. Fruit and hops are our bad crops. Some apple trees have a good crop on, but the greater part have none. Pears are almost a failure. It is rather early to say, but it cannot be more than one-third of a crop. As to hops, those who have washed well will grow a nice little crop, but many yards are gone, and there is still a good deal of blight. It must be a small crop, possibly two-thirds of an average.

Norfolk (East).

CORNs generally are looking well, but straw is rather short. Hardly any beans and peas grown, but the few fields seen appear quite an average crop. Hay crop very short, stacks few and far between, but secured in excellent condition. Beet, swedes, and turnips will furnish quite average crops. Run would do them good, also the pastures and lands. Harvest from present appearances will not commence till the middle of August, but a few oats may be cut before then.

Notes of the Week.

The "Highland" for 1906 has come and gone, and from a strictly "show" point of view may be regarded as successful.

Peebles sustained its reputation as regards weather, and on no account would I have missed its accompaniments.

The isolated position of this pretty little Scotch village, reached by single lines from both directions, led one to expect none too rapid locomotion.

Nevertheless, in face of unmistakable difficulties, the railway companies acquitted themselves very well.

Indeed, I personally am grateful to the N.B. folk for a courtesy not often met with this side of the Tweed.

To wit, keeping a train fully three minutes for a straggling passenger, who had also the somewhat unique experience of a five-minute walk through streets to his train after leaving the booking office.

The show ground was picturesquely situated on the banks of the Tweed, and the lack of any display of bunting on the part of the villagers was amply made up by the glorious natural beauties of the place.

For the sake of the stand holders I am glad Edinburgh has been chosen for 1907, many and varied were the grumbles this week at lack of trade.

I must not forget to make mention of the happy avoidance on the first afternoon of what might have been a much more serious accident.

An excited animal in the harness classes broke away shafts and fencing of a big ring and bolted pell-mell down the show-yard towards the entrance.

Finally coming to bay on some timbers in the forestry department, fortunately, so far as I could gather, without injury to itself or the visitors.

Here and there one came across a familiar face from the South, and the several representatives of clans from the North, in full dress, added a dignity to the gathering.

I noticed, too, the indefatigable Mr. Chrystal, of the Durham Society, on his hunt for Clydesdales.

And a very representative lot of sheep men also, doubtless for the Border Leicester Society's meeting, which was quite one of the features.

As, of course, one would expect in what is essentially a sheep district.

The flocks, miles round, for all the admittedly bad spring for putting them out, looked wonderfully well.

Looking also from the train, the hay round about looked badly pitched as though getting over a bad period of weather.

Plenty of hemp and seeds about to "flush up the lambs a bit," as they say.

Our Scottish friends are taking interest in the possibilities for next year's rendezvous of the "Royal."

If Newcastle is decided upon, a very good attendance from over the border is assured both of stock and visitors.

Speaking of Newcastle, the question arises—Would Northumberland and Durham unite with Hanover Square to make a bumper gathering? I think they would if properly approached, and Tyneside is thought of seriously.

Everyone interested in agriculture should take the earliest opportunity of inspecting the Woburn Experimental Farm.

The Royal Agricultural Society of England places every facility at the disposal of visitors.

The field experiments carried on at Woburn, under the able direction of Dr. Voelcker and his courteous assistants, are practical object lessons,

and give proof of what science can do by proper cultivation and use of fertilisers upon various soils.

Many farmers would overcome difficulties and disappointments with their crops by devoting a

little time to the examination of the work done at this and similar experimental stations.

Although at this, the farmers' busy season of the year, it seems unlikely that he can spare the time, but we are sure that a day spent at Woburn would yield a profitable crop of knowledge.

If any of our readers care to act on our suggestion they would do well to get further particulars from Dr. Voelcker, 13, Hanover Square, London, W.

The Woburn Experimental Farm is one mile from Ridgmont Station (L. and N.W. Railway, Bedford and Cambridge branch).

The Luton Agricultural Society can boast of being almost the oldest in the country. Last Wednesday it held its 105th show, when the attendance was a record one in the long history of the society.

Suggestive! In the prosecution at the North London Police Court of a tradesman for selling poisonous bottled peas imported from France, the prosecuting counsel said:—"In France they would not be allowed to sell these poisonous peas, but it appears anything can be sent for consumption here."

The Board of Trade returns are not the sort of literature adapted to wile away the tedium of a railway journey.

But still some of the figures convey information of an interesting character in connection with agricultural matters.

For instance, in the returns for the past half year, it is recorded that the imports into this country of American agricultural machinery represent a value of £586,211 against £515,485 during the same period of last year.

This may be noted by the gentlemen who have been taking part in the interesting correspondence in this paper on British v. American Agricultural Machinery.

Then we see that the bulk import of hops was 5,039 cwt., against 4,505 cwt., whereas while the quantity was greater, the value dropped from £34,060 to £20,631, illustrating the great fall in the value.

Why should the imports of potatoes from Germany have jumped up from 10,366 cwt. to 92,343 cwt.? Was this a case of dumping?

Onions seem to be coming in more largely every year. The imports are given as 3,886,940 bushels, against 3,209,950 bushels for the six months last year.

It would seem that there is room for a far larger cultivation of this crop in England.

Strawberries were imported to the tune of 38,787 cwt., value £52,001, against 25,535 cwt., value £37,128.

On imported plums, currants, and gooseberries we spent over £32,000.

Four-fifths of the meat sold in the London market is of foreign origin and ranges in quality.—*Lancet.*

In London alone, before the introduction of motor cars and motor omnibuses, there were 6,000 veterinary surgeons in regular employment, but, according to an ex-president of the Royal College of Veterinary Surgeons, in three years' time there will not be employment for more than 300.

Rain fell heavily in some districts on the 15th inst., the day dedicated to St. Swithin. Many of us, although we have long outgrown any pious belief in the power of the saint over the weather, are still in the habit of saying as the date comes round, "This is St. Swithin's Day, I hope it won't rain."

St. Swithin was Bishop of Winchester in the reign of King Alfred in 850, and after death was canonized. When his sacred bones were being transferred to the interior of the cathedral, which was to have taken place on July 15, the operation was delayed for forty days by continued excessive rains.

Hence arose the popular superstition that, if rain should fall on that day, there would be rain on the following forty days.

Following a curious annual custom, new mown

THE FARMERS' DIARY.

TUESDAY, JULY 24—Sir Gilbert Greenall's Pedigree Horse Sale at Warrington. Sale of Knowledge Hall Pedigree Devons at Bridgewater—Sale of Shorthorns at Lechlade—Barnard—Howden Fairs—Reading Great Fair—Entries close for Whalley, Shirley and Cliffe Shows—Kettering Ram Sale.

THURSDAY, JULY 26—Second day of Shows at Birkenhead, Belfast and Newcastle. Shows at Framlingham, Hatfield, Maltby, Thorney, Norunbury Park, Thorney and Tunbridge Wells—Lower and Sherborne Wool Fairs—Tamworth Horse and Cattle Fair—Entries close for Castleford Show.

FRIDAY, JULY 27—Third day of Shows at Newcastle and Belfast. Second day of Thorney and Tunbridge Wells Shows—Kingsbridge and Bampton Fairs—Weyhill Horse and Cattle Fair—Rutherglen Sheep Fair—Entries close for Ayton and Whitchurch Shows.

SATURDAY, JULY 28—Exeter, Meltham, and Whitley Shows—Leek Cattle and Haring Fair—Gornish Cattle Fair, Menhericote—Winchcomb Agricultural Fair—Entries close for Haby Show, Bosworth Park Show, Denbigh Show, and for the Lutterworth Show.

MONDAY, JULY 30—Horse Show at Shirley, near Birmingham—Alwicks Agricultural Fair—Rugby and Stratford Fairs—Hornby Cattle Fair—Pulborough Great Market.

TUESDAY, JULY 31—Cliffe Agricultural Show—Abergavenny Fair—Alfreton Horse Fair—Guilsborough Wool Fair—Preston Cheese Fair—Linton Sheep Fair—Uttoxeter Fair—Market Harborough Agricultural Fair—Alford Sheep and Lamb Fair—Entries close for the Wisbech Show.

hay was laid down in St. Swithin's Church, Old Western Hunt's. Years ago a field was left by an eccentric donor to the parish clerk on the condition that it should be mown on St. Swithin's Day and some of the hay strewn on the floor of the church. The custom is said to have arisen from the fact that on Feast Sunday the parishioners sported new boots, and the hay was intended to deaden the sound of the squeaking boots.

The correspondence columns of this paper form interesting reading. Recently the topics have ranged over a good many subjects, and the contents of the letters illustrate how widely different are the opinions of the writers.

For instance, there were numerous letters on the question "British v. American Machinery." The general conclusion seemed to be that the British farmer will buy what suits him best.

It rests with English makers to be enterprising and liberal to their customers.

By the bye, I note the remark in the short, interesting description of the Swedish National Agricultural Show in last issue, that the implement section was almost entirely occupied by American machinery.

What are our manufacturers doing? Sweden lies much nearer to them, the carriage from England is all in their favour, so they ought not to let the trade go to America.

It is the same in Italy, Spain, and other parts of the Continent. We are being cut out by American competition.

The Prince of Wales said, in an address delivered after returning from his Indian tour, "British merchants and manufacturers must wake up!"

It would seem that the people of London-by-the-Sea, i.e., Brighton, are more fond of agricultural shows than Londoners, for only seven thousand odd people paid for admission to the Sussex County Agricultural Society's show at Preston Park on the two days.

True the weather on the second day was not altogether favourable, but this does not justify the poor attendance of only 2,956. Besides, the total for the two days is only 400 less than when the society last visited Brighton, and then perfect weather prevailed throughout.

No! The great majority of dwellers in the big towns do not care the proverbial "tuppence" for an agricultural show.

Notes and Jottings.

The show season still remains a very busy one, some six or seven very important events having taken place last week, and each of them more or less successful as exhibitions of cattle. The shows were in such vastly different localities that few exhibitors could avail themselves of more than one show to exhibit their animals, and it is quite surprising that after the numerous sales of our best for export, there should still be a sufficiency of first-class cattle to make a respectable representation at several different shows. Especially do these remarks apply to the Shorthorn breed, as these were in good force all round. The Highland Society, the Birkenhead and Wirral, the Staffordshire, the Lincolnshire and Sussex, and one or two other shows all having a good display.

A visit to, and stroll through, the cattle lairs and slaughter-houses at Birkenhead is very interesting to anyone whose business lies either in the breeding or fattening of cattle, or if engaged in the dual business. The immense number of live cattle landed at Birkenhead each week is quite astonishing, and yet all find a market, and in very short time, no animals being allowed to remain in the lairs to await markets longer than ten days, and no animals are, of course, allowed to leave those lairs alive. The lair-gaccommodation is supposed to hold something like near upon 5,000, and very comfortable the poor beasts appear. Provided with good water and hay, as well as other food, and in warm and well-ventilated buildings, with ample space, they lie and chew their cuds in the most homely manner, and the majority of them show but little fear of strangers; this docility probably being due to the long time they have been on board ship.

On the morning of our visit a cargo of 700 had just been disembarked and were awaiting veterinary inspection, our guide informing us that not for a long time has any suspicious case claimed attention, so that everything has gone on day by day in the usual course. Were any one animal in a cargo to be found infected, the whole cargo would have to be slaughtered forthwith, and all fodder, manure, &c., that had been in contact destroyed and the lairage thoroughly disinfected. These precautions are taken regularly and carried out rigidly, so that there is absolutely no fear of infection under the present system of importation and inspection.

A walk round the various lairs with their long lines of cattle all tied up calmly and resting or feeding calmly gave room for observations as to what is being done on the other side of the Atlantic in the way of improving the quality of the animals by breeding, and also in the way of maturing them. If the bulk of those cattle as seen at the time of our visit are to be taken as representative of the best class of cattle fattened in the States, then there is little doubt but there is plenty of room yet for the use of the highest class of pedigree bulls, as a great number of the cattle that had apparently come from farmed land were rather, or very, plain; and not too well finished whilst the ranch cattle were altogether coarser, and some of these very common looking. For the other side of the question, there were also in several lots a number of either pure or very highly graded Shorthorns that had been deboned in their youth that were as symmetrical and well finished up to good weights as the most fastidious could desire. There appeared to be also a few well-graded Herefords of good shape and quality.

As regards the general weight of the stock in some of the long rows of sides of beef that were just slaughtered and hung up, the weights were very light, and the thought struck us that, with land rising in price, and feeding stuff, too, as it is

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

SOME PRIZE WINNERS BELONGING TO MESSRS. ABBOT BROS., THUXTON, NORFOLK.

1. Three Shorthorn Heifers: Reading from left to right they are Montrava Winsome, a three-year-old, and winner of numerous first and other prizes; Thuxton Blossom, calved June 25, 1906; and Princess Royal 88th, winner of second prize, Wayland Show, and reserve at the Norfolk Show, Harleston.
2. A four-year-old Hackney gelding and a five-year-old Hackney mare shown in harness, both prize winners in saddle and harness.
3. Shorthorn bull Chanticleer, winner of the Shorthorn Society's £10 Special at the Suffolk Show, Ipswich, and 2nd reserve for the Championship at the Essex Show, Brentwood.

CORN & SEED CRUSHERS

SEPARATE OR COMBINED WITH

BEAN & MAIZE KIBBLERS.

Turner's Crushers were awarded **First Prize** by the R.A.S.E. in 1853, and still retain the high reputation which they then gained for durability and general efficiency.

THE MARK LANE EXPRESS

when writing to our Advertisers.

doing at the present time in the States, there could be but very small profits arising from the feeding of cattle to such light weights when the prices prevailing in our dead meat markets at the present time have to be accepted, and all costs, freight, and insurance deducted. From these points of view we came to the conclusion that highly-bred bulls would still be required, and that there would be little probability of the prices lowering for cattle from that quarter.

Whether the Argentine, that as a country is so highly favoured by Nature, will be able to supply beef at a profit with present prices ruling remains to be proved; but on the face of it there does not seem any probability of this. The expenses, even in that favoured, land will be increasing each year. Of course, to return to the quality of the animals seen once more, allowance has to be made for the shrinkage that must occur upon a long rail and sea journey as compared with our home-fed cattle that have come pretty direct from their feeding quarters. Though a great many of these sides of beef appeared good on the top, in quite a large majority of cases the animals had killed rather weak in kidney fat, perhaps not the worse for the beef at this hot season of the year.

Another thing that attracted attention was the very large proportion of red cattle amongst them, the very few roans, and the almost total absence of whites and blacks amongst them. Whether there were fewer of the latter colours on that particular occasion, or whether the absence of these colours is common, we cannot say. Quite the largest proportion of the stock had been disorned at some time in their lives, but there were some lots of ranchers and also firm cattle that had their horns on and fully developed. We were pleased to see the animals so well cared for and, as far as possible, kindly treated; indeed, one could scarcely imagine such numbers of animals being managed with so little trouble and hard measures.

The hairs being quite apart from the slaughter-houses prevents any unwholesome and disturbing smells being noticed where the live cattle have to abide their time; then the convenient and safely fenced pens in the large open alley adjoining the door of each slaughter-house is very much better than for the poor brutes to have to be driven into the place over blood and other smells. The pens mentioned appear to hold six or eight bullocks and this number are very quickly dispatched. You see them quietly standing in the pen awaiting their time, a youth slings a strong rope over the head of the bullock, and he is drawn up to the block and knocked down ere he knows about it. Indeed, every little matter from beginning to end was carried out, so far as could be seen (and everything was open to inspection), with the least possible abuse or cruelty to the beasts, and the meat kept as cleanly as possible, the sides as they hung looking bright and in every way calculated to give the greatest satisfaction to the salesman, the purchaser, and the consumer.

When one comes to think that the large establishment at Birkenhead here described is but one of several such in the United Kingdom, and that in addition to all the numbers of live cattle imported into these various places there are thousands of quarters of chilled beef arriving every day, one can but wonder what would be our position to-day and the price of beef were we depending upon our home resources. The increase in the consumption of meat, due in a great measure to the higher wages received, is altogether beyond conception, and is taking an enormous amount of money out of the country every day.

Our milk supply will be one of the next things to trouble us. It is yearly becoming more difficult to find anything like an adequate supply of dairy cattle for our milk-selling farmers, and higher prices are being given; even at the present time, with beef so low and grass and other feed fairly plentiful, a good milking cow finds a ready sale at a substantial figure. It is quite worthy the consideration of our breeders of beef cattle whether it would not be to their advantage to cultivate the milking properties of the breeds they patronise a little more than they are doing at the present time, when to give even a moderate quantity of milk is looked upon as somewhat of a sin as being damaging to the beef-making properties of the animal and his breed.

In calling attention to this point it is not intended for one moment to advise the cultivating the milk-giving properties of these breeds to the exclusion of beef, but simply to give the matter such attention as would ensure every cow yielding a good and sufficient quantity of milk to carry on her own milk; even this would be a great improvement upon the present state of things when many calves require a wet nurse on account of the absence of this essential food from their own

mothers. The calves would thrive better, and in the event of a calf being lost the dam would be able to pay for her keep in milk whilst breeding another young one, and other advantages would also accrue.

Sale of Mr. Harold Sessions' Short-horns.

The entire herd of Shorthorns, the property of Mr. Harold Sessions, was dispersed on Friday at Itton Manor, Rogiet, Newport, Mon., by Messrs. Thornton and Co. It was only of recent formation, but the death of the owner of the farm, and the absorption of much of the land for railway and quarrying purposes, necessitated the farm being given up and the sale of the herd. The cattle were mostly well bred, and having been bought with good judgment, a large number of breeders were attracted to the sale, and although the bids came slowly for some of them, the majority found ready buyers at capital prices. Several of the choicest lots were bought for South America, including the grand young red bull Quirinal, bred by Sir Arthur Stepney, Bart., which was taken by Mr. E. Jewell at 170 guineas, this being the top price of the sale. Mr. W. Hosken took Kirklevington Lassie, lot 1, at 32 guineas, and the Hon. C. Portman's Bellona 2nd, lot 2, at 40 guineas, a pretty red calf from her falling to Mr. E. Harwood, 21 guineas. After this there were no particular prices until Miss Blanche 3rd, lot 6, came forward, and again the Hon. C. Portman was announced a buyer at 83 guineas, her calf also going to Mr. Harwood at 47 guineas. Kirklevington Rose 2nd, lot 10, was the choice of many, and this attractive cow, which was bred by Miss A. de Rothschild, quickly ran up to 160 guineas. Mr. Horlick, of Cheltenham, taking her at that figure. Mr. Mitchell Innes secured several good cows that looked like paying their way in the dairy, and he also secured a first-class two-year-old heifer for Lord Tredegar at 81 guineas. Waterloo Queen, a red yearling, was thought about the pick of that age, and she ran up to 100 guineas before being sold, it was stated, to found a herd for Mr. Cleaver, in Northamptonshire.

Several of the young bulls, including two the property of Mr. R. Stratton, of The Duffryn, were purchased by Mr. Whigham for Buenos Ayres. The average of over 45 for the forty-seven head was considered very good, as a number of the animals were low in condition and others rather young. Altogether forty-seven Shorthorns were sold at an average per head of £45 5s., thirty-five cows and heifers averaging £46 8s. 6d., and the twelve bulls £41 16s. 6d. each.

A few Ryeland sheep were also disposed of. Mr. R. Stratton took three pens of ewes and one pen of lambs, the prices varying from 52s. to 62s. for ewes, and Mr. C. O. Liddell got a good pen of lambs at 51s. Ram lambs made up to 83s. A dozen pigs of the Large Black breed, which were in little demand, made up to £12.

Irish Cattle and Consumption.

Mr. R. T. Houston, secretary of the Armagh Agricultural and Technical Instruction Committee, in giving evidence before the commission appointed to inquire into the working of the Irish Department of Agriculture, which is presided over by Sir Horace Plunkett, said that at present there were many unimpaired animals at stud doing serious injury. In the last eight years he had subjected over 200 cattle to the tuberculin test. Of these 164 failed to stand the test, and four were doubtful—in other words a quarter of the cattle in Ireland were tuberculous. No one with his experience could doubt the reality of the test.

It was no wonder that the death-rate in Ireland from consumption was high, having regard to this state of affairs, because much of the meat was diseased, and children drank milk that was swarming with bacilli. No wonder the Irish death-rate was high. He held that tuberculosis in cattle should be a notifiable disease as well as many others, unless premium bulls were subjected to the tuberculin test. The end would be a country full of tuberculous animals.

Every animal at stud in Ireland should, he maintained, be licensed by the Department only after an examination which would leave no doubt but that the animal was absolutely free from disease. He advocated the establishment of stud farms in Ireland for the breeding and improving of horses.

Live Stock for America.—Since the month of July came in Alfred Mansell and Co., the well-known live-stock exporters of Shrewsbury, have been very busy, having shipped no fewer than 617 pedigree sheep, 24 Shorthorn cattle, 28 horses and ponies, 4 pigs, and 2 dogs to various customers in the United States and Canada. The sheep have comprised Hampshire, Dorset Horns, and South-downs, all from the flocks of well-known breeders, and these, as well as the horses and cattle, will doubtless render a good account of themselves on the other side of the Atlantic.

Notes and Jottings.

"He doth nothing but talk of his horse."
— "Merchant of Venice."

How soon a good brood mare can as it were "establish" a stud is seen by the history of Beatrice, Mr. W. B. Swallow's famous old mare who has now passed her twentieth year. Beatrice was bred in 1886 by Mr. Robert Leiper, of Stamfordham, in Northumberland, and is by Horizon who was by Land Mark, dam by Saccelarameter—Duty Free by Lambton, her dam Lady Elizabeth by Sleight of Hand. The pedigree of Beatrice's dam is not obtainable, but that she was a well-bred mare is evident both by her appearance and performance. She carried Will Dale for five seasons when he hunted Brooklesby, and I have often heard him say that he was never better carried than by the old mare. When her hunting career was over she came into Mr. Swallow's hands and her first foal, a colt by Minidosa by Galopin was dropped in 1899.

So Beatrice was several years old when she went to the stud, and she had been hard hunted for several years; yet, in opposition to all theories, she has proved an excellent brood mare. Her daughter Tugela, who was a frequent winner at the leading shows, is following in her dam's footsteps as a brood mare. Mr. Swallow has gone in for another strain of blood this year in addition to that with which his name is chiefly associated as a hunter breeder. This is Countess by Knight Templar, a purchase from Mr. F. B. Wilkinson, for whom she won many prizes. Her foal Recruit has never been beaten till the Lincolnshire show at Gainsborough last week, when his defeat caused some discussion.

Alpha, a good-looking yearling, that was reserve at the Royal, and that won in a good class at Gainsborough, where she had a London premium horse and a big prize winner behind her, is a daughter of Tugela—her first foal, if memory serve me rightly. Mr. Swallow certainly has no reason to regret sticking to the mares, and in Alpha he has one that can fill the place of her granddam when she chances to drop out, which, by the way, she is by no means like doing just yet.

"Stick to the mares," that was really the keynote of the debate on Horse Breeding in the House of Lords last week. There was nothing new said. The same old story was told of our needs and the difficulty of supplying them when the time of sudden emergency comes. The Duke of Portland urged the importance of the mares being kept in the country, and related his experiences with lending mares to his tenants. I have attended the Welsh Show for several years now, and I must say that there is a considerable improvement in the young hunting stock shown there. The Duke said, however, that in many cases the colts and fillies were sold, and so were lost to that part of the country which he wished to benefit.

There can be no doubt that a man who has a filly from a mare such as the Duke of Portland has provided for his tenants is acting a wise part if he keeps her to breed from. What a good brood mare can do I have shown in the case of Mr. Swallow's Beatrice. But at the same time it is only fair to look at the other side of the picture. Horses, especially young horses, go wrong at times. What is equally annoying, they go the wrong way. Indeed, I am not sure whether this is not the most annoying way in which a horse can "go wrong." When a man sees a good-looking one, of which he has formed high hopes, go amiss or happen on accident, it is discouraging enough. But in this case a man has bred what he set out to breed—a good horse; he has every reason to think that by following the same methods he will breed another good horse; and he naturally hopes for better luck next time. But when the promising foal and yearling begins to deteriorate as a two or three-year-old, and as a four-year-old is comparatively valueless, unless a man is a horseman born, full of perseverance and full of pluck, he is apt to give it up altogether.

So, after all, there is something to be said for the farmer who sells his colts and fillies when they

are young. To begin with, they have not cost very much, and if they are promising, they are easy to sell at a remunerative figure. The old Yorkshire proverb, "Better rue sell than rue keep," has a good deal to commend it after all, and in these bad times it is hardly to be expected that a man will speculate on horses unless he be a horseman and keen. And there is still another side to the question. The man who gets the "nimble nipper" is likely to remember with gratitude where it comes from and to go on breeding. I remember a man who, by no stretch of imagination, could be called a horseman—a man who thought but little of horses, and whose opinion of them at one time was scarcely thought much of by his friends and neighbours. But he got hold of an old mare or two—somehow by some lucky accident. They were good breeders, and their foals were sold every year at a very good price. It was what he called graphically "foul brass" that he got for them; gradually he grew keen, and when last I saw him had some very nice mares, and knew a good bit about horses and breeding. Success had encouraged him to take an interest in breeding and to study it carefully.

Probably if this man had kept his first foals till they were four or five years old and then sold them for only a few pounds more than he could have sold them for as foals, which is by no means a remote contingency when young horses are in some people's hands, in all probability he would have thrown up hunter breeding altogether, and so a very useful man would have been lost to the industry.

The Duke of Portland in his speech alluded to the motor car, which he said could not fail to have a weakening influence on the horse breeding industry. There can be no doubt that the motor is right in making this statement. The railway movement had a decidedly weakening influence on the horse breeding industry. A lot of men, jumping to the conclusion, that because stage coaches were to become a thing of the past, therefore, horses would no longer be wanted, gave up breeding light horses. The result, of course, showed that horses were as much wanted as ever, but there is no doubt that the scare, for such it was, caused a serious national loss in sending out of the country many valuable mares at a small price—mares such as could make half a plough on ordinary land and breed a high-class hunter or harness horse.

The difficulty that the motor car will make seems to me to be this. For light van work and omnibus work the horse will be less and less used. At any rate, there is a probability of this taking place when motor carriages are made safer modes of conveyance by being properly balanced and more judiciously driven. Then the question arises, "What will become of the bus horses?" There does not seem to be any other way to turn them to. And it is these very "bus horses" that are invaluable in time of war for transport service, for artillery, and even for the cavalry on occasion. The omnibus and the van also provided a market for horses, which were not of the very highest class; which market, if not a very remunerative one, still enabled the unfortunate breeder of the misfit to get out of his horse with the minimum of loss, or perhaps even at a small profit. With the market gone the outlook for the horse-breeder is certainly not so good as it is now. It is, however, some encouragement that there seemed to be no use for the coach horses and the post horses when the railways came to revolutionise travelling, and that yet there was always work for them to do, and a market for them of sorts.

Perhaps the most practical benefit to be derived from the debate will be found to be the prominence which has been given to the Brood Mare Society in it. One noble lord after another spoke of the society in terms of no limited praise. This should be brought to the notice of those who perhaps have never heard of the society, or if they have heard of it, know nothing of its methods. It should, I think, be apparent to every right-thinking man that, as our horse supply is a matter of national importance, the country gentlemen who have so far done all that has been done in the way of helping the farmer to breed good stock, should not be left alone in the good work. The rich dweller in cities is perhaps more interested in the question of our horse supply in time of war than is the country dweller, and it is certainly not too much to ask him to subscribe his guinea to such a good cause.

It is quite possible also that the fact of helping to supply a want may make the City man by

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the larger farmers and estate owners.

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets. Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

degrees form a new market for horses. He may find that all the good in life is not to be got by riding in a motor car, and he may help to create a demand as well as help to supply it. What is wanted is a revival of the national interest in horse breeding. Nothing else will do any good in the long run. Government subsidies, if must be remembered, carry with them Government interference, and the interference of Government with horse breeding can only result in harm. Experience teaches us that politicians frequently was the most eloquent on subjects of which they know little or nothing, and we should have meddling and muddling if once horse breeding came under State supervision. THE LOOKER ON.

The Dinarth Hall Pony Stud.

The annual sale of high-class pedigree Hackneys and Welsh pony brood mares, &c., from the well-known Dinarth Hall, Colwyn Bay, will take place on Tuesday, the 30th inst., Messrs. H. Manley and Sons, Ltd., being the auctioneers. The names of Messrs. John Jones and Son have for the last twenty-five years been prominently identified as owners of Welsh colts and ponies, and their remarkable success in the showyard has made Dinarth Hall stud a familiar name in all parts of the country, so that a description of the animals is not needed. Messrs. Jones have decided to considerably reduce the stud, and the sale will thus afford breeders an opportunity to secure the cream of Julius Caesar's blood, in the young stallions, three-year-old, two-year-old, and yearling fillies, including Lord Cesar, Julia Snorer, Action Again, and others.

The harness and saddle horses are all Welsh bred, either at the stud or purchased direct from the breeder, ensuring to the purchaser fresh and serviceable animals. They include several fine horses and future show-ring winners, and the choicest of the old type of Welsh colts and ponies. Following the precedent of the two previous sales held by this stud, with few exceptions all the animals catalogued will be sold without reserve.

Hackneys for the United States.

Mr. Frederick Pabst, of Milwaukee, Wisconsin, U.S.A., has recently visited several of the Hackney breeding establishments in the neighbourhood of Driffield, and has purchased several animals therefrom, to improve the breed on the other side of the Atlantic. Among those purchased are the following:

From Mr. John Atkinson, Highfield, Garton, a three-year-old mare by His Majesty, dam Island Beauty, by Danegelt; also a two-year-old by Chocolate Junior 4185, dam Ariosto, by Garton Duke of Connaught.

From Mr. Henry Moore's stud at Burn Butts, the three-year-old bay filly 16436 B.B. Carmenita (winner of the second prize at Driffield) sire Conquest II. 5560, dam 12055 Lobelia; the chestnut five-year-old mare 14918 B.B. Coronara, sire champion Connaught 1453, dam Minnie; and a brown filly foal, sire Chocolate Junior 4185, dam B.B. 14918 Coronara.

From Mr. George Wilson's stud at Cedar House, Garton-on-the-Wolds, the two-year-old chestnut filly Winifred, sire Danebury, dam Cedar Girl. This filly won the first prize both at the Otley and Driffield Shows.

Messrs. Franklin and Gale, of Wallingford, recently sold by auction two valuable cop-hold properties, viz., Saunders Farm, comprising an area of 47a. 3r. 5p., at Warrington, Oxon, and Allnatts Farm, with an area of 91a. 0r. 31p., at Brightwell, Berks. The first-named was secured by Sir Coleridge Grove, K.C.B., for £1,000, while the other was bought by various purchasers at a total of £1,632 10s. The same auctioneers have also disposed of the freehold commercial property known as the Crommarsh Mills, at Crommarsh, Oxon, for £2,500 to Mr. G. D. Faber, C.B., M.P.

Notes and Jottings.

The weather has been favourable for roots, but in places farmers were getting a little anxious for rain owing to the great heat, though this was generally qualified by a hope that there would not be too much wet for the corn; but on the whole, the little break in the weather was acceptable. In the hill districts there has been ample moisture to ensure a growth for a long time ahead, so that one way or another sheep-keepers have reason to be well satisfied.

Weather has generally been good enough for a big store of hay to be gathered in with little injury, consequently there has been no need to have recourse to ensilage to save the grass and clover. It is a long time since we had a long, cold winter when the roots became frozen hard into the ground for weeks together; but in accord with the climate of this country, as long as there has been any record of it, winters of exceptional severity from time to time come, and there are no indications that what has been will not be reproduced. In a cold, bad time there is nothing better to turn to than to a good heap of silage, especially of clover silage, as whilst the sheep have to break their teeth in gnawing at frozen turnips, and have to keep up their bodily heat from the same congested source, warm silage fresh from the stock is a very welcome change. For ewes with lambs it is undoubtedly the best food procurable when roots are frozen, as with it a good flow of milk can be ensured. Those who have used it for this purpose know from experience how valuable it is. For fattening sheep in the cold season it is most suitable, for in cold weather sheep have to eat an enormous quantity of roots to keep them going. Admittedly, a good ration of hay is a great help in such circumstances, for it greatly counteracts the chilling effect of the roots. On the whole, it is quite worth while considering if every arable land sheep farmer should not make some ensilage every year. Of course, after so many mild winters as we have had of late there are many who begin to feel that the difficulties of the sheep pen are not so great as they were accustomed to think, but it takes only one severe winter to put them back on their original line of thought. Aftermath hay is not so feeding as the first crop, but it makes good ensilage, even when the weather is not good for haymaking, and as there is a prospect of good aftermath growths, there are many who would act wisely in converting a portion into silage.

The loss of life among sheep from husk rarely seems to approximate to the proportion of those of young cattle, still there is no doubt that the hacking cough the husk worm causes is responsible for a great loss in value apart from those which really die. It must not, however, be thought that the gross number of deaths among sheep from this cause is inconsiderable, though it varies very much in districts, and also among those kept on grass land and on arable land. Those who have seen the marsh sheep come off the Kent marshes to winter on the Weald, know what a terrible time a large number of the young sheep go through for want of attention. There seems to be a special callousness in the way these sheep are sent out; there is a more or less recognised percentage of losses reckoned upon during the winter agistment, and it is certain that this could be much lowered if the lambs were freed from the worm before they were sent from home. Some of the Kent men now secure other food than grass for their sheep, but still, a good many sheep see little else than grass, no matter what the winter is like, and those who winter the sheep best are well repaid for the extra expense they incur. There are several ways in which the worms may be destroyed, such as subjecting them to sulphur or chlorine fumes, or by inter-bacterial injections. The cost per head is almost nominal, even where veterinary aid is called in to inject with a syringe, which takes some skill and necessitates more care than a shepherd is likely to exercise in respect to thorough septic cleanliness. Drenching is a useful, if less effective method of treatment, and any of the methods commonly adopted are better than the gross neglect which so frequently prevails.

English breeds of sheep keep up a steady invasion on Scotland, and as years go on Scotch sheep will be largely under the influence of the

Down breeds. The hardy Oxford, which is so suitable for cold or wet fair, has for some time made strong footing there, and many ram breeders look to the disposal of a large number of sheep at the notable Scotch fairs. Other breeds are becoming better known every year, the demand for meat of Down flavour and quality being steadily on the increase. In this Scotchmen are in the same position as Whiteface breeders throughout a large part of England, where a quarter of a century ago a Blackface was comparatively rare. But it is for cross-breeding that the sheep are in most demand, for most profit is found when the indigenous animals are to a large degree retained. There is no need for—in fact it would be a great pity if there were any—reduction in high class breeding of any breed. It is only by maintaining good blood on both sides that the best results can be obtained. One sometimes hears, though not so frequently as in the past, the statement in reference to an inferior ram, that it is good enough for crossing. It is a great mistake to think that one may be indifferent in selecting an animal for crossbreeding. Two bads will not produce a good one; and it is the good one that pays.

The sheep farmer is in a much better position than the cattle breeder. Milk production is done on such a large scale, and so many calves are bred from sires whose only good feature is that he can beget a calf and put the cow in milk, that the universal improvement of cattle is greatly hindered; it is always difficult to find a bunch of good cattle—that is as good as they might be, or approaching it, and when a good lot gets into a market there are plenty of eager buyers. The good ones are generally kept by the breeder. In sheep breeding there is nothing of this sort to hinder, and with skilled breeders interested in every breed there is no doubt as to the steady improvement in sheep stock. A little more courage in ram buying is still required by some, for the sheep breeder has no excuse to breed badly, as he has but two objects, the production of mutton and wool, and no distraction in the way of milk to hinder him.

Wool Fairs and Sales.

Aylesbury.

About 12,000 fleeces from the leading flocks in the Vale of Aylesbury were pitched at the sale held by Messrs. W. Brown and Co., and every lot was sold at satisfactory prices. The highest price was 15½d. per lb. paid for the wool of sixty Down tegs sent by Sir Oswald Mosley. This worked out at the satisfactory figure of 35s. 7d. per tod against 13½d. or 32s. 11d. per tod last year. Two lots made 14½d. per lb., or 34s. 5d. per tod—105 fleeces of Shropshire ewes sent by Lady de Rothschild, Aston Clinton, and eighty-seven Down ewes consigned by Mr. H. Jenner, Lodge Farm, Buckland. A large number of lots made from 14d. to 14½d. per lb.; indeed, the prices for washed ranged from 32s. 1d. per tod, last year's highest price, to 35s. 7d. per tod. For unwashed fleeces the prices realised were from 23s. 11d. to 25s. 1d., so that altogether they compared very favourably with those of other sales in the district.

Dublin.

Messrs. Ganly and Sons' second wool sale for the season was held at their sale room last week. The catalogue embraced some 315 lots, or nearly 500,000 lb. of the various descriptions of Irish grown wools, and it was generally conceded that the quality and get-up of the wools were above the average. Notwithstanding, bidding was slow and irregular, and prices showed a full penny drop on bred wools as compared with June rates, and in consequence, several lots had to be withdrawn. The following were the prices realised:—

	Washed.	Greasy.
Shropshires and Downs.....	14d. to 14½d. ... 11d. to 11½d.	
Fine Hogs.....	13½d. to 13½d. ... 10½d. to 11½d.	
Fine Wethers.....	13d. to 13½d. ... 10½d. to 11d.	
Strong Hogs.....	12½d. to 13½d. ... 10½d. to 11d.	
Strong Wethers.....	11½d. to 12½d. ... 10½d. to 10½d.	
Mountain and Sea-side.....	9½d. to 12d. ... 8½d. to 10½d.	
Blackface and Scotch.....	8d. to 9½d. ... 6½d. to 8d.	

Hawick.

Hawick wool fair was held on Thursday, and was well attended by buyers from all parts. Farmers were in expectation of a substantial advance on last year's prices, and as buyers were not inclined to give this, the day was far advanced before any transactions took place, and eventually a large number of clips changed hands at an advance on last year's prices. A considerable number of Cheviot clips were sold at an increase of 1d., 1½d., and in one or two instances 1½d. per lb., prices ranging from 27s. 9d. to 28s., with some

at 28s. 6d., the general rise being from 2s. to 2s. 6d. per stone. There was not much done in half-bred wool, but where business was transacted prices showed an advance on last year of about 2s. per stone, the price for half-bred ewe wool being 26s., and half-bred hogg 28s. A half bred clip with a third of hogg was sold at 27s. There was little business doing in black-faced clips, but transactions revealed a rise of 2s. per stone, prices making up to 17s.

Halesworth.

Messrs. Stanford and Brown held their annual sale of lambs at Halesworth on Thursday, when they had nearly 8,000 to dispose of. The dispersals in other centres had been pretty evident that the demand would be very brisk, and this became a certainty when refreshing rain showers fell whilst the lambs were being penned. There was a big contingent of buyers, and trade proved hot at rates somewhat in advance of the later sales. The leading prices were, for half-bred lambs, twenty-five from Mr. C. Goddard, Dennington, 46s. 6d.; and thirty from Mr. John Lee, Bramfield, 48s. 6d.; and for Suffolk lambs, forty ear-marked from Mr. Wm. Whatling, Wissett, 50s.; and twenty from Mr. A. E. Gray, Wenham, also 50s. Of nearly 250 Suffolk shearing ewes from Mr. Wm. F. Neave, Walpole, eighty went to Mr. Leonard Smith at 68s., and Mr. H. E. Catling, St. John's, made 67s. for thirty, whilst a score first-cross from Mr. Gray made 59s.

Lewes.

Nearly 200 lots, comprising about 40,000 fleeces, were offered at Lewes fair on Monday, and with a good attendance a satisfactory trade was experienced. Top price for washed wool was 15½d., whilst 15½d., 15d., and 14½d. were quite common figures. Unwashed sold up to 13½d.

Salisbury.

At this fair, at which 29,000 were penned, lambs made about late rates, but ewes were back at 2s. a head. Messrs. Waters and Rawlence held their usual sale of Hampshire Downs, the entry comprising 11,852 head, and with plenty of buyers the whole (excepting about six lots) were readily sold. It was generally considered that the trade for ewes was not quite up to last year, although in some instances it was fully so if not over, and for lambs it was undoubtedly equally good. Best regular draft ewes made from 46s. to 64s. per head, Mr. A. F. T. Drake's making the highest figure; second quality ditto, 40s. to 43s. 6d.; best draft ewes, good on tooth and udder, 48s. to 55s., Mr. J. H. Dibben's making the higher figure; others, 35s. 6d. to 44s. 6d.; grazing ewes, 31s. to 36s. 6d.; best two-teeth ewes, 50s. to 55s. 6d.; second quality ditto, 40s. to 49s. 6d.; mixed young ewes, 40s. to 50s.; two-teeth wethers, 51s.; a small lot of couples, 50s.; ewe lambs, 32s. 6d. to 40s.; wether lambs, 35s. to 40s.; and mixed lambs, 29s. to 35s. 6d. The show of other lambs of Mr. W. A. Hunt, which were highly commended, was also 51s. in the fifty. Messrs. Waters and Rawlence also sold by auction, in lots of five and ten each, 100 two-teeth ewes, the property of Mr. W. C. Young, of Stratford-sub-Castle; these elicited keen competition at from 44s. to 46 10s. per head, the average of the 100 being the good one of 45 2s.

Inverness Sheep and Wool Fair.

The annual sheep and wool fair at Inverness was held on the 13th and 14th inst., and proved as popular as ever, for there were good supplies, a large attendance, and a brisk trade. The keenest demand was experienced for Cheviot mid ewe lambs, which were selling at a rise of 2s. to 3s. as compared with last year. All classes of Cheviot sheep were selling at a rise of 3s. Blackfaced sheep also met with a similar animated demand, and there was a corresponding increase in prices. In one transaction of Blackfaced cast ewes a rise of 4s. 6d. was recorded. The advance in prices varied rather more than usual, for reasons that were not quite apparent on the surface, but the average rates were quoted as follows:—Cheviot wethers, 2s. to 2s. 6d. up; Cheviot ewes, 2s. to 2s. 6d. up; Cheviot lambs, 1s. to 2s. up; Blackfaced wethers, 1s. 6d. up; Blackfaced ewes, 3s. to 3s. 6d. up; Blackfaced lambs, 1s. to 2s. up.

The demand for wools was not so brisk as expected, probably owing to the fact that the manufacturers are not disposed to lay in large stocks just at present. They were in hopes that increasing supplies may bring about a slackening of rates. It is pointed out that since 1901 these have gone up steadily. In five years Cheviot hogg wool bettered by 4½d. per lb., Cheviot ewe wool by 6d., Blackfaced hogg wool by 5½d., and other classes of wool proportionately. The advance this year is again distinct, ranging from 1d. to 2d., according to the particular clips.

Nantwich Cheese Fair.

Mr. Challinor reports as follows:—Pitch forty-six tons. The attendance of buyers was large and representative. Business was brisk, all being cleared within the hour. Prices: finest lots, 63s. to 67s. 6d.; medium, 58s. to 62s.; lower grades down to 55s.

THE SHEEP SALES NUMBER of the "Mark Lane Express" will be published NEXT WEEK.

Killed in the Hayfield.—James Morrey, aged thirty years, a workman employed by Mr. Thomas Simpson, farmer and stockbreeder, of Winnington Grange, Market Drayton, was killed whilst working in the hayfield on Monday evening. Morrey was leading hay from the side of the wagon when the horses bolted. He was dragged under the wheels of the heavily laden cart, which passed over him, and broke his neck.

Presentation to a Secretary.—At the last meeting of the Polled Cattle Society it was announced that as the result of a movement on the part of the council of the society to recognise the services of their secretary, Dr. Alexander Ramsay, Banff, a sum of £150 had been subscribed, and it was decided to forward a cheque for that amount to Dr. Ramsay, who was unable to be present through failing health.

Early Barley.—Mr. J. B. Sainsbury, of White Cross, Ross, Herefordshire, knows throughout the land for his New Winter King two-rowed barley, commenced cutting forty acres on Wednesday last, or only two days later than last year, which, considering the backward season of a month or two ago, speaks well for the Winter King barley. Mr. Sainsbury claims that the New Winter King is the best and earliest barley in cultivation, for it ripens early and is of the highest quality, whilst it withstands the storms to which it is liable. That this claim is not an extravagant one has been proved over and over again by all who have used the New Winter King barley, and each year witnesses an increase in the growers of the early barley.

Some Suggestions for the R.A.S.E.

In the course of a speech at the luncheon held in connection with the Lincolnshire Agricultural Society's show at Gainsborough last week, the chairman (Mr. J. D. Sanders) made some appreciative remarks concerning the Royal show, and also made some suggestions he would like the society to adopt. He said that the success of the show at Derby was a matter of very great importance, not only to the society itself, but also to England, because he believed that in great measure it was owing to the success of the Royal that agriculturists were able to get the big prices for their cattle and other stock. When Lincolnshire agriculturists could make over £1,500 for a rare, he thought every body in the country should endeavour, as far as possible, to keep the Royal going as a centre of attraction for foreign buyers. In England they required something to help them to carry on agriculture. If, owing to the laws of the land, they could not make a profit on their stock when it was turned into meat, then let them make it out of live stock, exported to produce the meat which was eventually eaten here.

The Royal was now more or less on its trial, and its expenditure was being examined detail by detail. County councils were now spending in agricultural education and experiments £20,000 annually. When the Royal was started, there were no county councils to undertake agricultural experiments and the education of agriculturists, and it appeared to him that the experimental and educational part of the work of the Royal Society was not quite worth the money now expended upon it.

He hoped, that in the future this part of the expenditure might be curtailed, and that the show itself would be more encouraged. He believed that the investigations showed that the Royal shows for a period of twenty years had paid their own expenses. He hoped that in the future the society would spend more time and attention on the shows. The journal and literature of the society might also be made of greater use to the agricultural community as a whole.

In this connection he suggested the affiliation of the county societies with the Royal, so that, instead of having friction, as in the past, they should in turn yearly welcome the national society, and temporarily put their county shows into the background. He also threw out the suggestion that the Journal and literature should be circulated among the members of the Royal and the members of the affiliated county societies. It was important that agriculturists should be kept well posted in the latest scientific experiments. It was no good circulating those results among farmers in scientific language, and therefore he should like to see the Royal Society employ some one to read and digest all the scientific papers, selecting the best portions of them, and putting them in plain, homely language in the Journal.

The Lincolnshire County Councils had spent a lot of money on barley and potato experiments, but he did not think the country or the country had benefited to the extent that they ought to have done, inasmuch as the results of those experiments had not been properly published. He therefore hoped that the Royal Agricultural Journal might be developed on more useful lines.

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Lame Mare.

Will you tell me what to do with my mare who got it better. It is but at grass, and foaled a dead foal. It started foaling in the cart coming home, and was got out, but did not foal until two hours after, and then not without help. The cleanse came with the foal, which I think was dead before the mare was got out of the cart. It was all right the day it foaled, but since then is very stiff on all four, as if walking on crutches, short of wind when hurried, eats well, can lie down and get itself removed with shoes, but gets very lame a few days. It is a farm mare twelve years old, had a few foals, only one farm work, and was still before she foaled. Will it be any use for her again or is it likely always to be lame? Will it be fit for breeding purposes this season or in years to come? Is a little Indian corn bad for an in-foal mare, with plenty of roots in winter when on dry keep?—FARMER.

Answer:—The most obvious thing about the case is that the mare was worked too long in the cart. We can only suggest that the mare suffered from parturient laminitis, and that this has become chronic. Mares after foaling or abortion sometimes suffer an attack of congestion or inflammation of the feet, attacks which either occur suddenly or without any very definite premonitory

indications. If prompt and proper treatment is adopted there may be complete recovery, but sometimes the malady assumes the chronic form of "fever in the feet." If we are right in assuming that the mare did suffer from parturient laminitis—and we are very far from affirming that she did—it is fairly obvious that the disease has now become chronic. Owing to the uncertainty as to what was the matter and the requirements of the case now, we cannot dream of offering advice as to treatment or of giving an opinion as to whether she will ever be fit for work again, or is likely always to be lame. Assuming laminitis, we could not recommend you to breed from her, even if she became fit, because the use of unsound parents is not for the benefit of the race. As to the feeding, a little Indian corn with plenty of roots is not any more an ideal diet for an in-foal mare at work than is a cart an ideal vehicle for her to work in.

Tapeworm in Lambs.

What would you give to lambs for tapeworm? How young may they be drenched, must they be kept from their dams all night, and should all be dosed to prevent tapeworm?—A. W. L.

Answer:—It is not usual to dose lambs for tapeworm until after they are weaned, and therefore the question of keeping them all night from their dams does not arise. All worm medicine, however, acts with greater celerity and certainty when the stomach and bowels are comparatively empty, and lambs to be treated for the expulsion of tapeworm should be removed over night in a bare place, where they can get nothing to eat, and the medicine given in the morning. Many flockmasters now dose their lambs for tapeworm as soon as they are weaned, as part of the routine of management; some to expel the parasites they know are harboured, and others to prevent infection. Many, probably the majority, employ one or the other of the proprietary preparations advertised so extensively in this and other agricultural journals at this season of the year, and these are as cheap, convenient, and effective, indeed, more convenient, than anything you can make up for yourself, or get prepared by the chemist. Turpentine, in doses of one drachm, in one ounce of linseed oil, to which some gruel is added, is a cheap and useful remedy.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Destruction of Wheat by Rats—

Farmer Sues a Corporation.

Mr. James Taylor, a Deal farmer, sues the Deal Corporation in the Sandwich County Court for £44 12s. 6d., damages for the destruction of part of a crop of his wheat. Mr. Taylor's case was that the corporation had acquired land which they used as a refuse heap on the opposite side of the road to his farm. The result was that enormous numbers of rats were attracted there which destroyed the crops of neighbouring farmers.

Judge Shortt, in giving judgment, said that he had tried to discover whether there was any established principle of law which would justify him in holding the corporation responsible for this damage, but he had been unable to do so. The corporation did not intentionally bring the rats on to their land, but, on the contrary, paid a rat-catcher to keep them off and kill vast numbers of them. In order for the claim to succeed, it appeared to him that the plaintiff must show that no person could put his land to any use which would have the effect of attracting the rats of the neighbourhood. If that were the case, a man could not stack corn on his land or erect a granary, either of which would admittedly attract rats. He therefore gave judgment for the corporation, with costs.

Shooting Rights.

SIR,—If the owner of an estate lets the shooting, not to the tenant farmer, for one year, from February 1, subject to the tenant's right to kill ground game (no other conditions named), would the person renting shoot have a right to kill ground game? Also what would be a reasonable time to send in debit note for rent of shoot? The game is chiefly partridge and pheasant.—FARMER.

[There are two questions involved here. With reference to the first, the shooting tenant would have a right to shoot ground game, but not an exclusive right. The second question is a matter of taste, in the absence of agreement on the point. It is usually provided for by agreement, but if nothing is said the account might be sent in, say, a month before the expiration of the time it is due.—BARRISTER-AT-LAW.]

NORTHERN NOTES.

THE stacks of hay that are now being run up in such fine haymaking weather are more numerous and bigger than those which we were wont to see last season. Coupling this adventitious sign with the vastly improved outlook for the turnip crop—this remark applies even to strong land—the farmer has excellent reasons for wreathing his face in those happy smiles which are so becoming to the rubicund face of John Bull. The farmer is, in short, in good heart over the better prospects for winter keep, which are everywhere apparent. The King's most welcome visit North gave Novocastrians an opportunity for a genuine display of loyalty to Edward VII. and his most gracious Consort; but the elements were cruel at a most critical time. If they put an end to haymaking for that eventful day, the pitiless rain-fall failed to damp the spirits of the people.

THERE are many interested in agriculture who pin their faith to the legend of St. Swithin. We had rain on the 15th, and the weather having been unsettled since, the augury for forty wet days is progressing towards fulfillment! For all that, we hold it not put by our implements of husbandry and walk with folded arms forty days for the passing of St. Swithin. No exact observer of things as they are could ever say that the legend is true. It may come true, as it did when, in 1879, the 15th of July was wet, and it rained on the succeeding forty days. It came true again in 1893, when the day was fine, and was followed by more than forty fine days. Such instances are, however, rare, and the legend, which is certainly worthy of cherishing for the sake of the halo of romance about it, finds more supporters in the aged and the unsophisticated youth than in the staid person of middle age.

NATURE study is entering into the curriculum at teachers' centres in Yorkshire, and also into that of elementary schools, with a view to making the normal surroundings of country-bred children the more fascinating. A whole world of life and interest may be opened out before the mind of child and youth in this way. Mr. Squeers taught practical agriculture, in a way, to the pupils of Dotheboys Hall. Schoolboys have now happier moments and more pleasurable surround-

ings. The East Riding County Council is taking a leap in the cultivation of agricultural pursuits among school children. Interesting evidence of this is afforded by an experiment at Hemmingborough, where over a dozen children have each cultivated a plot of land and raised crops, the council supplying all requisite materials and seed. The land was worked by the boys from its crude state; and as an inducement to perseverance and intelligent appreciation of their work, prizes have been awarded to the cultivators of the best plots. Girls, too, are being interested in the land in a like manner.

THE incidents connected with the outbreaks and suppression of swine fever are the cause of much controversy. The Board of Agriculture directs the preventive measures by means of its inspectors stationed throughout the country at various centres. This plan, we have reason to believe, is not altogether to the satisfaction of local authorities, who naturally incline to the opinion that they could manage the business better. The property committees of the Hull Corporation have just "expressed their regret" that the Board of Agriculture have not been able to see their way to adopt their suggestion with reference to the local authority imposing restrictions on the movement of store swine. The committee are strongly of opinion that cases of swine fever are due to the unrestricted movement of such animals. A local market in one of the greatest agricultural centres in Yorkshire has been closed against swine for the last thirteen weeks. At the same time, pigs may be moved past the market in carts and taken to others. The market referred to has since been tarred and otherwise disinfected in all essential parts, and the reason for the continued application of the closure is scarcely obvious.

ALL MISCELLANEOUS ARTICLES of FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." The charge is very moderate, and consistent with the profit such small goods yield.

THE Holderness Agricultural Club, one of the most important and one of the largest organisations in the North of England in the farming interest, has got a grievance about some pigs, and this was very modestly ventilated in the House of Commons by Mr. Stanley Wilson, member for the division after which the club is named. A question of compensation was involved. It is usual when the inspectors are satisfied that a case of swine fever has been clearly established to order immediate slaughter of the animals affected. A Holderness farmer in May 1905 had 124 pigs on his hilling, and, strange to say, he had not, since the previous September, had any transaction in pigs; the outbreak, therefore, was not due to any carelessness on his part. Two neighbours within a very short distance of the farm also had outbreaks; the pigs, in both the second and third instance, were ordered to be slaughtered, and compensation was paid. In the case of the farmer with his six score and four pigs he was left severely alone (with the exception that his place was declared an infected area), and his pigs died one after the other until he has only a score left. The hardship of this case is that no order was given to slaughter, and consequently no compensation has been granted. Either the system of slaughter followed by the granting of compensation is right or it is wrong; whichever it may be, the practice ought to be uniform. It is fair to assume that the 104 pigs the uncompensated farmer lost were not all attacked at once; but he was in the predicament of being unable to remove the sound ones so as to isolate them from those attacked. Some satisfactory explanation may be forthcoming of this seemingly curious incident.

LORD Burghclere, speaking at the Osted and Goldstone Agricultural Association's Show on Wednesday, said that the breeding industry had become almost the principal mainstay of British agriculture. It was not the first time in our history that the cultivation of animals had superseded the cultivation of corn. Whether with regard to horses, cattle, or sheep, Great Britain was at the head of the breeding industry of the world, but if she were to maintain her supremacy, she must lose no opportunity of calling science to her aid. She had many possible rivals, and her most formidable competitors were those countries who most readily used science as their handmaid, whether in manufactures or agriculture.

THE "MARK LANE EXPRESS" REGISTER OF FORTHCOMING LIVE STOCK AUCTION SALES.

DATE.	NAME AND ADDRESS OF AUCTIONEER.	CLASS OF STOCK FOR SALE.	PLACE OF SALE.	NAME OF OWNER.
July				
*24	Mr. W. Bainbridge, Walton House, Warrington	Hackneys and Ponies	Walton Hall, Warrington	Sir Gilbert Greenall, Bart.
*24	Messrs. John Thornton and Co., 7, Princes Street, Hanover Square, W.	Shorthorn Cattle	Butler's Court, Lechlade, Glos.	Mr. D. Arkell.

A VIEW IN SWEDEN, GIVING AN IDEA OF THE BEAUTIFUL WOODS AND LAKES OF THE COUNTRY.

AGRICULTURE IN SWEDEN.

The opportunity was recently afforded us of forming one of a small party of agricultural journalists who, by the courtesy of the Swedish Government, had an opportunity of seeing the farming industry of that country. The party, which was only a small one, was under the guidance of Mr. Fred Bagge, the Agricultural Commissioner for Sweden in London, who had for his right hand and able assistant Mr. Ernest Petersson, of Ultuna College, Upsala; both of these gentlemen spoke English fluently, and to them we are largely indebted for the information acquired of the agriculture of a considerable part of Scandinavia.

The tour extended over a fortnight, and the first three days were profitably spent at Norrköping, at which town was being held the quinquennial show of the Swedish National Agricultural Society. Some particulars of this exhibition, together with illustrations, appeared in our last issue, and there are only a few points which need further reference.

A fact that cannot help striking the Englishman is that in other countries the term "agriculture" is far more of an elastic character than it is in this country. Only some few months ago many were disposed to laugh at the word "Fisheries" having been tacked on to the Board of Agriculture. But in Sweden such a frame of mind is totally out of place, for as far as we could gather, there the Agricultural Departments deal with anything appertaining to "Field, Wood, or Water"; for instance, the show at Norrköping, in addition to the usual classes of breeding stock of farm animals—and, by the way, the remount question was by no means the least prominent of these—there were also a number of other sections of an interesting character which we should hardly consider in place at an agricultural show. To give examples there were specimens of the different varieties of fish in lake and stream, while in the same building there were specimens of the different birds and beasts that are distributed throughout the length of the land, ranging from the magnificent elk down to the very smallest variety of duck.

Another feature which struck us as being very practical was the experimental plot in the show-yard. Here a number of trials of crops under different conditions of cultivation, manure, and seed were being carried out, and the plots themselves gave striking evidence as to the best means and method to be employed to wring the greatest yields from the land.

The system of small holdings carried out under the active patronage of the Government, who provide a sum approximating to £350, is interesting. The money is lent entirely free of interest and on an easy instalment principle of repayment for the purpose of providing houses and buildings for the small holder. That the Government of the country and King Oscar are quite alive to the fact that small holders must be encouraged by all legitimate means was evidenced at the banquet over which his Majesty presided, and which was attended by the foremost men of Sweden. The King, in referring to the show, alluded to the fact that times had changed, and that the future of the country lay in the hands of the peasant and the peasant proprietor.

The Adelsvärd Barony.

After three days at the show we had an opportunity of visiting a number of agricultural centres, the first of these was the Adelsvärd Barony. This estate is of an unusual character in Sweden, as it is held direct from the Crown under certain peculiar conditions, which we believe have no parallel in any other part of the country.

A drive round the estate gave us a wrinkle, which, although a common thing in Sweden, struck us as being capable of adoption in this country. We refer to a speedy method of getting hay into the barn. The cart on which the hay is loaded is provided with a net spread over the bottom, and when the necessary quantity of hay has been put in the waggon a rope is run through the four corners, and it is hoisted by a travelling pulley fixed in the roof of the barn, and it is slid along until the desired spot is reached, when the rope is released and the net pulled from under the load.

Where hay is stored in the barn the second operation of shifting by manual labour the hay from the waggon is avoided, and this simple

labour saving device seems to be worthy of adoption in this country. The power, we may add, to raise the load to the necessary height is provided by gears, and in Sweden all work of this character is almost without exception done by the bulls.

The barony is very extensive, running to over 23,000 hectares, or upwards of 50,000 acres, and naturally the farm stock is extremely numerous. The present owner, Baron Theodore Adelsvärd, only keeps a small portion of the land in hand, but he maintains a fine herd of Aigau cattle. This is a Swiss breed of nice type and pale silver colour, the general characteristics of which may be gathered from the portrait of a bull which appears on this page. The baron is the only breeder of this particular variety in Sweden, but they give very good results, yielding on an average 2,700 kilograms of milk per annum, with a fat percentage of 3.60.

There is a small stud of horses of different varieties including an English thoroughbred stallion, while the herd of Large Yorkshire pigs aggregating 250 strong are entirely disposed of locally.

The stock of poultry is a very large one, consisting almost exclusively of White Leghorns with a few representatives of the Faverolle breed. Inquiry brought out the fact that an egg average of 110 was obtained, and it would be interesting to know how this compares with the figures of this country. In conversation, the manager of the poultry stated that they were well satisfied with the White Leghorns, especially dwelling on their hardiness to withstand the rough winter. A suggestion that he should give a trial to some of the heavier breeds did not meet with much enthusiasm, as it was stated that they were quite satisfied with the performances of the White Leghorns, and that they could readily sell more than the eggs produced.

In connection with the barony there is an horticultural school run on essentially practical lines; great attention being paid to the production of trees and shrubs. We took the opportunity of inquiring as to whether the large exports of wood and wood-pulp had made any inroads into the extensive forests, but we were assured on good authority that during the past ten years replanting had been so general that there is not likely to be any decrease in the output for many years to come.

The creamery and dairy schools are partially supported by the State, in order to give practical and theoretical instruction in butter and cheese-making. The principal output is butter, which is exported to England, but there is also a considerable quantity of Swedish and Gouda cheese manufactured, all of which is consumed in the country.

The feature of the barony, as, indeed, in many of the estates in this locality, are the saw-mills, in which are manufactured all sorts of wooden articles ranging from door and window frames up to American roll-top desks. The wood exports go to England.

A Cottage Exhibition is now being held at Cleveleys, between Blackpool and Fleetwood, Lancashire, the object of which is to show not what can be done if the existing building laws were modified, but what can be done to day under the laws as they now stand. The fact that no limit was fixed in the cost of the houses gives an exhibition which appeals to a very wide class, and it is altogether an interesting one. Numerous prizes will be awarded, and seeing it is within easy distance of Blackpool, it should prove an attraction for many of the visitors to that popular resort. The exhibition was opened on Saturday, and will be continued until September.

If SHEEP DIPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

AN ALGAU (SWISS) BULL

MERRYWEATHER'S PATENT STEAM SPRAYING APPARATUS

Used by a large number of Hop Growers in Kent, &c
Ask Particulars and Expert Advice.
63, Long Acre, London, W.C.

NON-POISONOUS. "SPIMO" NON-POISONOUS.

HOP and FRUIT TREE WASH.

A SAFE, COMPLETE AND EFFECTIVE WASH.

Kills Aphids, Fly, Red Spider, Mould or Mildew, Caterpillars, American Blight, etc.

Does not clog horse washers, but acts as a lubricant.

"Spimo" Improved is a COMPLETE WASH for ALL PURPOSES.

Ready at a Moment's Notice. It is in fact THE THING that is WANTED.

HOPS.

The Coming Crops.

Further personal examination of some of the plantations do not give me any encouragement in expecting a successful hop harvest this year. It is, perhaps, hardly fair to the growers who are suffering from the misfortunes of this trying season to locate some grounds that I have seen wherein absolute ruin is evident. It is sufficient for me to say that, having journeyed many miles this week through certain parts of Kent, I have not met with a really good piece of hops, and have seen some grounds that are in such a sad condition as takes me back to the most disastrous year within my memory. I was not in touch with hops in 1882, but I am told by friends who have knowledge of what then occurred that they are very forcibly reminded now, by the appearance of some gardens, of what was almost universal in that year. Not only is the bine weak and deficient in nearly every garden, but the blight holds on, despite the washing that is being persevered in without cessation in all directions. Here and there one can find gardens where the foliage is black and perishing, and where the aspect of the whole of the plants is most lamentable. Such grounds cannot possibly yield any crop worth picking. In other places the courage of the planters has been rewarded by partial cleansing of the bine, and some development is apparent. But even here the attack of lice and fly still continues, and if any crop is to be gathered, washing must go on to the last possible moment. Happily there are some exceptions to such conditions, and it is pleasing for me to be able to speak of gardens where the combined advantages of situation, soil, and skill will secure for the planters crops that will, I trust, reward them well.

Notably the well-known Beltring plantations are distinctly in front of all others that have come under my recent observation. The careful attention given to every detail in cultivation, training, and washing, are very evident. Having gone through the whole of them, comprising about 150 acres, I can confidently say that, considering the special character of the present season, their condition leaves hardly anything to be desired. The bine is certainly lighter than usual, but it is healthy, and sufficiently strong to promise a good average yield. The foliage is practically clean, the pins on the laterals being sound and safe, suggesting the development of hops at every joint. One cannot visit Beltring without being persuaded that these results are due to scientific as well as practical good management. The company working this farm operates in the laboratory as well as in the field. Their long experience suggesting the object to be gained, it is sought for by the help of the microscope and the test tube. Experiments having achieved certain results, they are put into actual practice. By these methods Beltring has come to be recognised as the object lesson school of the hop world, and it must be satisfactory to the managers, in a critical season like the present, to find that their research and their judicious work have the promise of a successful issue.

Of course, speculation as to the total yield is now pretty active. Many estimates are being put forward, the highest that I have met with being 400,000 cwt. Observation and inquiry do not induce me to accept this as the probable figure. Taking the average of opinion, I should set the weight at about 325,000 to 350,000 cwt., and am disposed to favour the lower rather than the higher figure. But we are still in the region of uncertainty, and it will be well to wait a little before coming to any conclusion.

There is no change worth noting in the reports from the Continent. Generally speaking, an average crop seems to be anticipated, some improvements having taken place in the condition of the plantations. From America I have the following figure this week:—"We have never had a more perfect stand of hops in this country than we have at the present time. Some are estimating our crop as high as 350,000 bales. We do not think these figures will be realised, but we have to admit it is a possibility."

The London Market.

The conviction that the yield of the coming crop must be very moderate is evidently influencing the minds of buyers, as during the past fortnight we have had an active demand with a regular hardening of prices. The few growers who have hops on hand have withdrawn them from sale, therefore the principal business has been done by borough holders, who have seized the opportunity to make some profit on their earlier purchases. The result is seen in gradual advances in value, until we can safely say that prices are quite 15s. higher than they were at the beginning of the month. The present position is one of marked firmness, and if there is no change for the better in the plantation reports, we may expect to see the way prepared for a promising opening for business in September.

Midland Notes.

THE hay being stacked, the topic of the moment, wherever farmers congregate, is now the corn harvest and the expected date of cutting. In the fierce heat of a July sun blazing all day from almost cloudless skies the cereals have made rapid progress lately towards maturity, so that, notwithstanding the backward spring, the harvest should be no later on the whole than usual. There is no prospect of anything to compare with such years as 1899, 1900, and 1901, when many wheat fields were in stock in southern shires before July had run its course; but winter oats will probably be cut next week in many districts, while, as for wheat, the first week in August should see the reaper beginning everywhere. August 6 and 7, for instance, are named as likely days for making a start by farmers in Bucks, Gloucester, Worcester, Warwick, Northants, and mid-Nottingham; though probably the middle of August will be a more general date in Notts, as it will be, so far as one can judge, in Staffordshire and Salop. No doubt in many cases these dates of cutting compare a little misleadingly with those of earlier years, for even here scientific teaching has had its influence, and one finds in consequence an increasing tendency to cut before the wheat is fully ripe, so avoiding both the waste from lost ears during harvesting, and an excessive proportion of bran in the ear.

WHEN the ingathering does begin it ought to be a rapid and an easy one; that is, if the weather permit. Except in favoured districts the straw is apt to be short, and that must tend to reduce the amount of labour required, while up to the present time there is no large average of corn so lodged as to present any difficulties to the reaping-machine. Nor is there, as a rule, any marked scarcity of labour; and where there is, the migratory Irish, though fewer in number than they used to be, will help to redress the balance.

THE July sheep sales in the South have been watched with interest by Midland flock-owners, who see in them an indication of what may be expected at their own fairs and markets still to come. Apparently, we may look for prices about on a level with last year's for all sheep of good quality, but secondary grades may make a little less. Much, however, depends on the outlook for winter keep, and there is general agreement that the hay crop is better in the Midlands than the South, as it is better, by all accounts, in the North and East of England than in the Midlands. For the present the flocks are doing well, the recent rain and heat having stimulated the pasture wonderfully. After so poor a spring, it is inevitable that the lambs should be more than usually variable in growth and condition.

THE discussion by the Warwickshire County Council on Wednesday brings the motor traffic grievance to the front again. The feelings of country people are sufficiently indicated by the fact that seventy-six parish councils in the county have petitioned for a by-law limiting cars to a speed of eight miles an hour while passing through the villages, and that the dust created under present conditions is a source of even more complaint than the danger. It is said to see the cottages gardens smothered in it as they are, and along main roads the pastures on either side are rendered almost worthless for stock by the amount of grit deposited on the grass. Yet if the remedy is better—which means more expensive roads, it threatens to be almost worse than the disease. Already the main roads in Warwickshire cost £63 per mile each year against £50 ten years ago, and the increase is still going on. Worcestershire ratepayers are even worse off; they paid £64 per mile in 1900, and to-day the figure is £86; while the same story of advancing cost is told in Stafford and Nottingham. Heavy as local rates are everywhere, there is no item of expenditure concerning which agriculturalists are so bitter as this. Even the heavy education rate is acquiesced with without much grumbling, since it is felt to be in accord with what the majority of people feel to be the needs of the time. But country folk see no necessity at all for laying out enormous sums on roads in order to protect themselves against the motorist. He creates the nuisance; let him pay for remedying it, as he can well afford to do; that is the general view.

July 19, 1906.

THE Yorkshire Agricultural Society have formally accepted the invitation from Burnley to hold their 1907 show in that town, and have asked a deputation to meet the council on the show ground at Middlesbrough on Wednesday, August 8, to ratify the matter. The new site has been placed at the disposal of the society about a mile and a-half from the railway stations, with an excellent approach.

PRIZE DAY AT WYE COLLEGE.

Much disappointment was felt by the large company who assembled at Wye on Wednesday last hoping to meet the Right Hon. Earl Carrington, President of the Board of Agriculture. His lordship was detained in London by a Cabinet Council, therefore we were deprived of the advantage of hearing his views on agricultural education, which many had anticipated with considerable interest. We were, however, soled by the charming presence of the Countess Carrington, who most gracefully and efficiently fulfilled the duties assigned to her in opening the new buildings recently erected, and in presenting the prizes to the successful students. Her ladyship must have been gratified by the welcome assured to her husband by the crowd of influential persons who warmly greeted her as she took her seat on the platform. Amongst them were Lord Ashcombe (chairman of the Governors), Dr. Clowes, and Messrs Masham and Alfred Amos (Governors), Laurence Hardy, Esq., M.P., General West, Lieutenant-Colonel Honeyhall, Canon Tindall, Major Neve, Colonel Broomhead, Professor Lloyd, Messrs. H. S. Buss, James Dungey, A. Brown, F. Neame, W. S. Harnett, A. J. Burrows, A. Miskin, H. Amos, J. D. Maxted, W. W. Black, S. Thirkell, and many other hop planters, together with a large number of ladies.

The meeting, which was held in the new assembly hall, was presided over by Mr. M. J. Dunstan, Principal of the College, whose popularity with the students was proved by the hearty cheers which announced his appearance. Having expressed his regret at the unavoidable absence of Earl Carrington, and his hearty welcome to the Countess, he referred to the new additions to the college, which consisted of the hall in which they were assembled, a drawing office, some workshops and other buildings, for whole of which the governors were indebted to private munificence, the donors desiring to remain without publicity being given to their names. On behalf of the staff, the students, and the supporters of the college, he tendered his warmest thanks to their anonymous friends. He proceeded to say, with much satisfaction, that the college was filled to its utmost capacity, having 100 students on the roll, for nearly half of whom they were compelled to find lodging accommodation in the village. But in addition to the numbers of the students, he was gratified to be able to report that the standard of their work was advancing. About thirty to forty were leaving their ranks that term, and he was sorry to lose such good fellows. They had acquitted themselves well, and he wished them God-speed in their entry into their life work, in which he believed they would bring credit to the college. He always desired to imbue their students with a sense of their responsibility, believing in the efficacy of the American system, which recognised the value of young energy, and by placing their youthful citizens in responsible positions, tested their real value. The successful man was not only he who possessed ability and industry, and was not afraid of work, but he who could organise and supervise the labour of others. With that object their students were encouraged to accept responsibility as the ultimate measure of success. Mr. Dunstan, however, regretted the growing tendency amongst the young men of to-

day to give play and sport the first place in their consideration. He would and did encourage sport, but it must occupy the second place. But he abhorred any lack of earnestness, either in play or work, and regretted to notice that too many were content to be lookers-on rather than actors in the battle of life. He was proud to say that all were workers at Wye College. Whether in the actual labour of the farm, or in studying in the class room or laboratory, the method and manner of their work was always earnest and practical. The future openings for success and profit in English farming were within the reach of those who had studied and worked there, and their students went into the world with the benefit of the past experience of their forefathers, but with minds enlarged and open for the reception and examination of new ideas. He considered that Wye College was the most completely equipped and the best staffed in England. They had grants from the amalgamated county councils of Kent and Surrey, and also from the Board of Agriculture. The latter was willing to help them by larger grants, but were hindered by that more powerful body, the Treasury. They had advanced in extent and efficiency very considerably since the opening of the college, but were still developing, and had recently added to the staff a gentleman who would be entirely occupied in research, and from whose labours important results were expected, that would especially benefit the fruit and hop industries. More national assistance was needed and a fuller recognition of the value of their work by the State, and he earnestly trusted that the result of that meeting would be seen in the raising of the position of the college to a much higher point than it had hitherto attained.

The Countess Carrington, having declared the new buildings open, and having presented the prizes, Lord Ashcombe proposed a vote of thanks to her ladyship.

Mr. Laurence Hardy, M.P., who was very warmly received, seconded the proposition, and in doing so remarked that he thought one reason to which the success of the college might be attributed was the co-operation of the staff with the farmers. The union of science with practice which they thus secured, was most essential to their progress, the whole of the two counties being in effect their experimental farm. He was glad to know that a department for research was included in their curriculum. It was much needed, especially in farming that was dependent to so large an extent upon the operations of Nature.

Misfortunes that were frequently ascribed to the act of God might often be traced to the neglect of man. Such neglect might be corrected by research, and as the counties were doing their duty in that matter, an appeal might reasonably be made to Government to assist them further. He

had great faith in the influence of the noble Countess, who having seen something of their efforts, would be able to persuade the President of the Board to consider favourably any future application they might make for increased grants.

Major Craigie, representing the Board of Agriculture, returned thanks on behalf of Lady Carrington, and assured the meeting that his chief view was in full sympathy with the objects they had in view. The Agricultural Department recognised that science, such as was taught in that college, was necessary to enable British farmers to meet the competition of the world with which they had to contend. Unfortunately, the voting power of agriculture was not sufficient to influence governments, as it was in some other countries, therefore pressure could not be exerted at the opportune moment, when the Treasury was called upon for supplies.

The proceedings then concluded, and the company adjourned to the old cloisters, where tea and other refreshments were served, forming an agreeable finish to a very pleasant and interesting day.

Agriculture in 1905.

The Board of Agriculture and Fisheries on Friday issued their annual yellow book giving the agricultural statistics for 1905. These details have previously been published in other forms, but in the book form are handy for reference. The feature of the year was that while, as heretofore, there was a reduction in the acreage of arable land under cultivation in the United Kingdom, there was a large increase in the production of wheat. This was accompanied by a marked decline in the importation of wheat and flour; in fact, the proportion per head of population of the imports of corn, grain, meal and flour (excluding rice) fell to 509 lb., the lowest figure since 1897.

For the whole of the United Kingdom, including Ireland, the Isle of Man, and the Channel Islands, the arable land under cultivation is returned at 18,808,000 acres, against 18,978,000 in 1904; there were 28,805,000 acres under permanent pasture in 1905 against 28,693,000. The increase in the number of cattle was nearly 2 per cent.; there was also a slight increase in sheep, and a decrease of 15.3 per cent. on the year in pigs.

At Tuesday's meeting of the London County Council, quite a score of petitions were presented by various members asking the council not to adopt the proposals of the Public Health Committee to apply to Parliament next session for power to enable the council to establish food inspection stations and public abattoirs, and to provide for the inspection of all food entering London. The proposal was therefore dropped without discussion.

Successful Allotments.—The Spalding Urban Council have purchased for the sum of £975 eleven acres of allotment land from the representatives of the late Mr. H. F. Pollock, who formerly stood for the division in Parliament. The council's allotment rents, independent of this purchase, now aggregate £225 a year, and the receipts in the form of rents from the labourers—to whom the land is let—cover all the expenses which the council are put to in the matter, and there is, therefore, no call upon the rates.

FARMS

never remain unlet when advertised in the "Mark Lane Express."

The charge is Sixpence per Line per Insertion.

SUMMERSBURY, SHALFORD, GUILDFORD.

One mile from Bramley Station, L.B. & S.C. Railway; half a mile from Shalford Station, S.E. Railway; two and a-half miles from Guildford, L. & S.W., L.B. & S.C., and the S.E. Railways. SUMMERSBURY, ELIAS, ISLE OF THE WHOLE OF MR. EDWIN ELLIS'S PRIZE-WINNING PEDIGREE SOUTHDOWN FLOCK (registered and trade-marked, Reg. No. 12).—On WEDNESDAY, AUGUST 8 next, Messrs.

STRIDE AND SON (in conjunction with Stride, Son, and Ellis, of Guildford) beg to announce that they are in receipt of instructions from Edwin Ellis, Esq., who is giving up sheep breeding, to Sell by Auction, WITHOUT RESERVE, at Summersbury, on the above date, the whole of his famous Southdown Flock (which has taken over £4,000 IN PRIZES at the Principal Shows, both in England and abroad, during the last twenty years), comprising about—

- 630 HEAD, in ages, as follows:—
- 120 SHEARLING EWES.
- 60 FOUR-TEETH EWES.
- 38 SIX-TEETH EWES.
- 63 FULL-MOUTH EWES.
- 65 DRAFT EWES.
- 30 OVER-AGE EWES.
- 140 EWE LAMBS.
- 36 GRAND SHEARLING and FOUR-TEETH RAMS (including many Prize Winners) and
- 65 RAM LAMBS.

The Summersbury Flock was established in the year 1879 by the purchase of carefully selected ewes from the Flock of Messrs. Botting, where the old Higden blood had been freely used, and which had also been replenished by some of Mr. Colman's best rams and ewes.

At the dispersal of Lord Walsingham's noted Flock in 1885 many of the choicest ewes were purchased at prices as high as 12 to 15 guineas per head, together with the two rams "Merton" and "Ripon," one costing 105 guineas and the other 45 guineas. Many of the best Southdowns now in existence trace back to one or other of these two famous sheep.

Whenever a change of blood has been thought desirable some of the best Flocks have been drawn upon, and in one case a ram was obtained from Mr. Henry Webb at the price of 140 guineas.

In 1885 Mr. Ellis first sent specimens of his Flock to the leading show-yards, and then commenced that wonderful record of success which has probably never been excelled, if indeed it has been equalled, in the annals of the Southdown or any other breed. Not only at the Royal, the Royal Counties, the Bath and West, and other English Shows, but also at the great exhibitions of the United States of America, Canada, France and other countries have the Summersbury Sheep time and time again met with the most striking success, often forming one of the most notable features of the live stock classes, and in more than one season securing a larger number of First and Champion prizes than all the other exhibits of the breed added together.

Every sheep in the Flock is included in this Sale, and every lot WILL BE SOLD TO THE HIGHEST BIDDER WITHOUT RESERVE.

No sheep will be exhibited this season or will be sold before the Sale.

The Flock is open to inspection at any time by appointment with Edwin Ellis, Esq., Summersbury, Shalford, Guildford.

Luncheon (by ticket) at 12.30. Sale to commence punctually at 1.30. Commissions carefully executed.

Catalogues of the Auctioneers, Auction and Estate Agents Offices, East Street, Chichester, Sussex; or of Messrs. STRIDE, SON & ELLIS, 10, High Street, Guildford.

CHICHESTER, SUSSEX.
 (The great centre for the sale of Southdown Sheep).
 Great Annual Prize Show and Sale of pure-bred Registered Southdown Sheep, Thursday, August 9 next (the day after the sale of Mr. Edwin Ellis's famous Southdown Flock at Summersbury, Guildford).—Messrs.

STRIDE & SON beg to announce that this important great annual AUCTION SALE, which is held in the Market, Chichester, will comprise about 480 SOUTHDOWN SHEARLING RAMS and RAM LAMBS (from many of the best breeders), 6,000 SOUTHDOWN EWES, including a grand entry of SHEARLING, REGULAR DRAFT and DRAFT EWES, and many lots of four-teeth and six-teeth Ewes.

The Auctioneers beg to say that the sale of this year's sale, which will consist of the largest and best selection of pure-bred Southdown Rams, Ram Lambs, and Ewes to be sold anywhere this season. First Edition Catalogues on application.

Judging at 9 o'clock. Sales punctually at 10 o'clock. Commissions carefully executed.

Buyers arriving at Chichester overnight will find "The Dolphin" a convenient and comfortable hotel to stay at, and the Auctioneers will be glad to look rooms.

Auction Offices, East Street, Chichester.

PUBLIC NOTICE.

PROCLAMATION

BY HIS EXCELLENCY THE HONOURABLE SIR WALTER FRANCIS HELY-HUTCHINSON,

Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of His Majesty's Colony of the Cape of Good Hope, and of the Territories and Dependencies thereof, etc., etc., etc.

WHEREAS it has been shown to me to be expedient to alter and amend the Regulations, promulgated by Proclamation No. 75, bearing date the 21st day of April, 1900, providing for the examination and quarantine for the disease known as Tuberculosis of cattle introduced into this Colony from any country overseas other than the Colony of Natal:

Now, therefore, under and by virtue of the powers and authorities in me vested by the seventh section of the Act, No. 27 of 1893, intituled the "Animal Diseases Act, 1893," I do hereby proclaim, declare and make known that the Regulations contained in the subjoined Schedule shall be the Regulations for the examination and quarantine of cattle which may be introduced into this Colony from any country overseas other than the Colony of Natal, and shall have force and effect from and after the 1st July, 1906, in lieu of those promulgated by the aforesaid Proclamation No. 75 of 1900, which is hereby superseded and repealed.

GOD SAVE THE KING!

Given under my Hand and the Public Seal of the Colony of the Cape of Good Hope, this 5th day of May, 1906.

WALTER HELY-HUTCHINSON,

Governor.

By Command of His Excellency the Governor in Council

ARTHUR J. FULLER.

No. 156, 1906.

Schedule to the foregoing Proclamation.

1. The word "Cattle" in these Regulations shall be taken to mean and include all animals of the bovine tribe.

2. All cattle, save as hereafter excepted, shall upon arrival at any Port of this Colony from any country whatsoever overseas be liable to be subjected by a Government Veterinary Surgeon to the test, known as the tuberculin test, before being allowed to land.

It will, however, be within the discretion of the Veterinary Officer aforesaid to accept the certificate of any duly qualified Veterinary Surgeon of the country from which such animals have been brought, supported by a record of temperature re-actions, to the effect that such cattle were submitted to the tuberculin test immediately before being embarked and had given no indication of the presence of tuberculosis.

3. In the absence of a satisfactory certificate as aforesaid the cattle shall be removed to place provided by the Government or by the owners subject to the approval of the Inspecting Officer for quarantine purposes, and shall be subjected by a Government Veterinary Surgeon to the necessary testing by tuberculin to ascertain whether they are or are not affected with tuberculosis.

4. In the event of the test indicating the existence of tuberculosis, the animals shall not be removed alive from the quarantine station, but shall be destroyed there, and the owner shall be allowed to deal with the carcasses as he may think fit, provided, however, that the flesh shall not be used for human consumption unless the said officer shall give a certificate that it is fit for that purpose.

5. All expenses of inspection, quarantine, testing, destruction and otherwise shall be borne by the owner of such cattle.

6. The foregoing Regulations shall not apply to cattle entering by sea from the Colony of Natal, so long as similar regulations remain in force in that Colony, nor shall they apply to cattle imported solely for purposes of slaughter, provided that, before being landed, they shall be inspected by the Government Veterinary Surgeon and declared to the best of his belief to be not unfit for human consumption, and the owners or importer shall sign and deliver to such officer an undertaking to the effect that none of such animals shall be used or disposed of for any other purpose than for immediate slaughter for food.

Price 2s. 6d. to 5s., of chemists, or post free.—GREGORY & Co., Temple, Bristol.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised, Cash prices per lb. of 30 yds. 2 in. mesh, 2 ft. 4s. 5d.; 3 ft. 6s. 1d.; 4 ft. 8s. 1d.; 2 in. mesh, 2 ft. 5s. 8d.; 3 ft. 7s. 9d.; 4 ft. 10s. 3d.; 1 in. mesh, 2 ft. 9s. 5d.; 3 ft. 11s. 5d.; 4 ft. 17s. 10d. BEST GALVANISED SHEEP NETTING.—50 yard rolls, 3 ft. wide, 4 in. mesh, with centre strand, strong, 10s. 4d.; medium, 9s. 3d. per 50 yard roll. Strong steel, 6s. per dozen. Carriage paid on lots, netting or stakes, 75s. value. Iron and Steel Hurdles Fences, Gates.—Excellent quality; 6 ft. hurdles, 4 rails, 3s. per doz.; 5 bars, 3s. Steel fencing wire, 9s. per cwt.; galvanised wire strand, 15s. cwt.; galvanised barbed wire, 18s. cwt., 500 yards. Chained fold gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 8s. per yard.

Sp endall Galvanised Roofing.—Perfect quality, 5 ft. 1s. 5d.; 6 ft. 1s. 8d.; 7 ft. 2s. 8 ft. 2s. 8d.; 9 ft. 2s. 8d.; 10 ft. 2s. 8d.; 11 ft. 2s. 8d.; 12 ft. 2s. 8d. Galvanised Castles, corrugated steel, 30 gals., 9s.; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins, Sheds, Pig and Cattle Troughs at very low prices. Lists free.

J. PRIEST & SON, Ltd., Castle Iron Works, Victoria Road, Bristol.

MISCELLANEOUS.

WIRE NETTING—Cash prices per 50 yards, carriage paid on 70s. 2 in. mesh 30 in wide 5s. 10d.; 12 in. 7s. 4d.; 1 1/2 in. 8s. 10d.; 1 1/2 in. 12s. 10d. State wants, Fox & Co., Rochford, Essex, Sheep netting.

PALATINE CAKES and MEATS are maintained to a high standard. Good results made certain.—THE PALATINE OIL MILL, Liverpool.

KEEP YOUR PIGS SO THAT THEY WILL KEEP YOU.—And undoubtedly the best way to do this is to mix with the food for each pig one of WILLSON'S CANADIAN PIG POWDERS once or twice a week according to age. The result will astonish you. Sold in packets—7 powders, 6d., post free, 7d.; 10, 1s. post free, 1s. 2d.; boxes—48 powders, 2s. 9d., post free, 3s.; 144, 8s., post free, 8s. Sole Proprietors, STEPHEN WILLSON, Peterborough.

BASIC SLAG, 42.50, 38.45, 30.35, 25.30 per cent. phosphates. State quantities required and station, when prices, analyses, &c., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

THE SCOUR SPECIFIC.—The never-failing cure for White Scour in Calves and Scour in Cattle Calves, sheep, &c. Post free 2/9 and 5/, used by State Agricultural College, Quebec, Canada. Anti-Saw-Horn, guaranteed to prevent Horns from growing on young Calves. Post free 1/3 (sufficient for 15) from A. H. JONES, M.P.S.I., Chemist, Doneraile, co. Cork.

LADDERS, with wood sides and galvanised, steel tube rounds; 22 rounds or under, 6d. per round, carriage paid for cash.—JONES, Patentee, Sedgley.

FOR SALE, two or three hundred Bushels extra select stock of Purple Top Swede Seed; growth 50 to 60 per cent. Apply "D" this paper.

RATS! RATS!—A Truro Farmer writes:—"After using a 1/2 Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats. Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

SEED POTATOES.—From healthy, selected crops. Scotch Yorkshire or Lincolnshire grown. Quotations for autumn or spring delivery.—For prices apply, W. J. ATKINSON, Weston St. Mary, Spalding.

SEEDS of GILLIES CELEBRATED STOCKS, warranted First-class.—Early Large Yorks, Lates or Drum-heads, Navos, Curled Greens, Imperial Early M'Ewan, also selected Brussels Sprouts, 12s. per stone; 4s. per cwt.; Lates or Drum-heads, £37 10s. per hal-ton; £70 per ton. Prepayment or banker's reference from new customers.—GILLIES, Northfield, Prestonpans. Largest Cabbage plant grower in the world; largest market gardener in Scotland.

POULTRY.

IMPORTANT.—Everybody having old HENS for DISPOSAL should communicate with GEEKS & Co., Smithfield Market, London, the largest poultry buyers in England.

U.P.C. Prize Laying Stram Cornish, 10s. 6d.—SMITHWOOD Poultry Farm, Cranleigh, Surrey.

BANKS & INSURANCE.
BIRKBECK BANK
Established 1851.
Current Accounts. 2% Interest allowed on minimum monthly balances when not drawn below £100.
Deposits. 2 1/2% Interest allowed on Deposits and Accounts.
Advances made. Stocks and Shares bought and sold.—Apply SECRETARY, Southampton Buildings, High Holborn, W.C.
PHENIX FIRE OFFICE
15, Lombard Street, London, E.C.
Established 1752.
Lowest Current Rates.
Liberal and Prompt Settlements.

Bank Holiday. TO work a whole year round without a holiday is an exception rather than the rule in these days, and August is the month when all the world and his wife rushes away to recuperate in the pure air of the country or by the silvery sea. The fortunate amongst us can afford to snatch a week or a fortnight from the round of work of this season, but thousands have to be content with a week end or perhaps only a day, and who can blame them if they make the most of August Bank Holiday? Agricultural show committees know when the man in the street is out tripping, and several local societies, with an eye to the nimble shillings, arrange their shows on the general August holiday. This is not at all a bad idea, because at this season there is a slight lull in the pressure of labour owing to the haymaking being mostly finished and the corn-cutting not quite begun. And, after all, why should not farmer folk enjoy their bank holiday as much as their friends in town, and enjoy it in their own way at an agricultural gathering?

Farmhouse Lodgings. OF late years a new means of income has opened itself to businesslike farmers' wives in certain districts, and it has come about in this way. There are a good many people who do not wish to rush about and tie themselves during holiday time, but, on the other hand, get rest. Promenades and seaside crowds possess no fascination for them, and they look for quiet resorts in the country where they can do as they like, dress how they please, be idle and happy. Could a better place for such a life be found than a farmhouse, where the tired townsman get not only fresh air, but fresh, home-produced food that will do him just as much good? We know several farmers' wives who are as anxious about their summer letting as the lodging-house landlady at the seaside (though, as a rule, they are not so avaricious), and the money they make in this way comes in extremely useful. Of course, it is a matter of business with them, but in letting apartments during the holiday season farmers' wives are conferring a benefit on those who take advantage of this means of rest and recuperation.

Work amongst the Roots. WHILE haymaking is on, and all hands are employed in this important branch of harvest, it is not surprising that the root crops get a little neglected, and consequently work is waiting when the mowing machine has completed its task for the year. Never was there a more true saying than the old one that ill weeds grow apace, and a glimpse at the roots just when haymaking is completed is a clear demonstration of the foul or clean condition of the land. Some weeds which are difficult to

eradicate have a right, royal time of it while all hands are busy with the hay, and it is surprising what progress such pests as charlock, couch, creeping bindweed, cat's tail, &c., will make in a few weeks. Amongst earthed-up potatoes, in particular, it is difficult to get clear of these obnoxious plants when they have once got a good hold, and perhaps this is the reason why some dirty patches remain so to the end. Wise is the farmer who abominates weeds and will give them no quarter, for he can turn to his arable land and find it comparatively clean when the rush of haymaking is over.

Odds and Ends of Haymaking.

IT is no use beating about the bush when haymaking begins, and where there is a good lot to get there is nothing like setting about the task in earnest, provided the weather is favourable, and making the harvest season as short as possible. When the back of the task is broken, as it is now in most districts, one gets a little breathing space and time to look round with the object of gathering up the fragments that remain. It is always well to look after the odds and ends, and on most farms there are bits of grass in the orchard, by the side of bye-lanes, near hedgerows, and even in some pastures that are worth the trouble of cutting and making. It is waste to leave these odds and ends uncut, because nothing will eat them, and they come in useful for topping up ricks and to provide a bit of rough fodder in the winter. According to an old Scotch saying, "Many a mickle makes a muckle," and if the odds and ends are carefully looked after it is surprising what a substantial quantity they often make in the bulk.

The Small Holder's Hay Crop.

IN many farm establishments there are men employed who live on small places, keep a cow or two, and have several acres of hay to get in. Naturally these men are wanted by their employers during the pressure of the harvest, and consequently their little bits are left till somewhat late; but even though they are small, the few acres of hay which the small holder has to deal with are just as important to him as a hundred acres may be to his employer. The latter can help his servant considerably in his small harvesting operations, and in many cases he does this willingly. It is a real godsend for the small holder when his master will send his machine and a man to knock off his two or three acres of grass for him, and give him a hand with his wagon and team when it is ready for carrying. The employer loses nothing by small acts of generosity like this, and the man cheerfully lets his own haymaking wait, even at the risk of losing the aftermath, in order to give his time during the busy season to his employer.

The Value of Forage Crops.

THE present is rather a trying time for the keeper of dairy cows who want, and must have, milk. Dry weather and hot sunshine have browned the pastures to such an extent that cows can find little to eat there, and the animals refuse to go into the recently-mown meadows where there is no aftermath. Under circumstances like this, what a fine thing it is to have a good piece of lucerne to cut at, and how the cows revel in this juicy forage crop. On some farms there is wash or sewage land, which is very helpful in the culture of lucerne, because, if the moisture is turned on after cutting the crop is quickly ready for the scythe again. The other day we were talking with a large dairy farmer, who, with the knowledge that most of his hay was carried, was deploring the bare state of the pastures and sighing for showers. But for the large breadth of lucerne he had thoughtfully provided he would not know how to feed the cows, and, if we mistake not, there are many others who are realising the value of this important forage crop.

Tinned Meat Scandals and Home-grown Produce.

IT is an ill wind that blows nobody any good, and we are told that the revelations recently made about the tinned meat trade in Chicago have been the means of causing more attention to be paid to home productions, and consequently the price of cheese and bacon has gone up considerably of late. We are told, too, that bacon is getting more popular as a breakfast dish in America, which means that more pigs are wanted and there are less for export to this country. How will this increase in prices affect the British farmer? In the few districts where cheese is still made he ought to benefit, but, of course, most of the cheese consumed is imported, and the consumer will have to pay more for it without the farmer being much better off. As for bacon and hams, here again we depend largely on the foreigner, and feel the pinch of restrictions which prevent pig-breeding and bacon-curing being an extensive industry in this country.

Land Reform.

MANY of us remember the old Birmingham election cry of three acres and a cow, and the general impression may be that it is a cry, and will never be anything else. Be that as it may, the apostle of the doctrine, Mr. Jesse Collins, M.P., is not the man to let a thing drop which he has once taken up, and during a period of apparent inaction he has been preparing a book which is worthy of the careful perusal of all persons interested in the all-important land question. This paragraph is not intended to be a review of Mr. Jesse Collins's

"Land Reform," and it is not to be expected that it will be received without criticism, but it is a bold effort of a man who is in real earnest about the subject. Mr. Collings scornfully denies the idea that there is no demand for small holdings in this country, and of our county councils he speaks of the members as being mostly of the old quarter session type—the territorial class, who are kindly disposed towards the labourer, but have not yet accepted the idea that the creation of a class of land-owning peasants would be good for the community.

Water Supply.

AS yet there has been no general outcry about shortage of water such as we remember during the dry summers experienced a few years ago; but, nevertheless, it

may be observed that pits and waterings on some farms are getting low, and we have what is frequently a dry month before us. The farmer who has limpid streams running through his ground has none of those anxieties experienced by another who is not so well blessed, but in many cases scarcity of water is due to neglect. What a common thing even now it is to see pits with a few inches of water covered with green slime overlying a deep bed of mud. Apart from the question as to whether the water is really fit for animals to drink, it soon gives out in dry weather, whereas there would be enough to stand a siege if the mud were cleaned out and the holding capacities of the pond made the most of. We know what a blessing a good stream is, particularly for dairy cows, but where such a convenience does not exist let us have clean ponds, not the filthy mud holes which are far too common.

payers' macadam. He is to be made to pay for the maintenance of the road he despoils by means of a tax, the revenue from which is to be distributed among the local authorities. Whether that tax should be graduated according to the cars weight or according to the horse-power need not for the moment be discussed. Personally, I would rather have it by horse-power. The greater the horse-power the more stifling and devastating is the odorous germ-laden dust; and it is this dust which is our enemy. It is enough for us that the principle of the maintenance of the roads by the men who cut them up, by the scurrying rider who is careless of all but the sensation of dashing through air, and so indifferent to the public convenience that he regards himself as the possessor of a heaven-sent title to them, has been formally recognised in this report. Well that it is so. Else what would happen to the unfortunate ratepayer? This traffic is on the increase, and a greater expense in the maintenance of the roads is as fore-assured as is the rising of the sun in the heavens. Without such a tax, the rural ratepayer would be as much despoiled by these furious Mercurys as though they were themselves highwaymen.

Agricultural Politics.

BY A LOBBYIST.

Mr. Collings's Evangel.

Mr. Jesse Collings's work on "Land Tenure"—and, of course, I only deal with it because of its political purpose and aim—was confessedly and designedly undertaken with the idea of commending his own Purchase of Land Bill. I do not know how far Mr. Collings's original associates in the promotion of that Bill—which personally I always regarded as a portent rather than as a panacea—will share in his vividly-told story as to how the yeomen and the copyholders were dispossessed, or how they will appreciate his laudations (for laudations they are) of the peasants' revolts against those whom he regards as the authors of a despoiling landlordism. As a fact, this inquiry is not necessary. What is important is that representatives of this landlordism are willing to utilise the machinery of the State for replacing the very classes dispossessed, for recalling the yeoman class nearly banished from the land, and for reviving the smaller owners. Of course, if the strict law of logic be applied to Mr. Collings's arguments and contentions they must be adjudged to be faulty. He has allowed his native sentiments and his inherited detestation—but assuredly not present-day malice—of the evolution of landlord-ownership to distort his vision. If this evolution was spoliation, then the Government should not assist in selling to the occupiers on the basis of present rents; and this is what Mr. Collings suggests.

An Antidote to Socialism.

As a fact, however, this problem is not to be solved by the chop-logicians. A definite answer has been given, despite the economists, by the usage of centuries; and it is on this foundation—forgetting his own philippics and girdings against the past—that Mr. Collings rears his admirably-suggestive fabric. We have not to consider the laches of the past—with those laches condoned and accepted and legalised by the State for centuries. We have to consider the practical policy for the present. And Mr. Collings's purpose is the best antidote to the fantastic dreams of the emotional Socialists. The resurrection of the trinity—"the small landed gentry; the yeomen and the peasant proprietary" (I quote from Mr. Collings)—would render impossible and futile all the wild, impractical beliefs of those Socialists who, knowing no more of a fall than they do of the method of the traffic in Mars, would yoke the land cultivator to an impersonal State, careless of individual and immediate circumstances, and always insistent on a rigid code and an inflexible obedience to it, in which code neither the idiosyncrasies of the heavens, the fluctuating virtues of the soil or the temperament of the individual would have any consideration. As a fact, this evolution is inevitable and it is best to welcome it in the guise, which Mr. Collings suggests, a guise which would not be the habiliament of a wild revolution—a wild revolution not the less dangerous, because it would only be an experiment. Mr. Jesse Collings can at least point to example.

Who does Mr. Collings Mean?

But a word to Mr. Collings on his chapters dealing with the fiscal issue. Again, I beg of him—as I have besought of him in the past—to tell us how the encouraged dumping-down of colonial products in our home markets in competition with our home products is going to save

the British farmer. True, Mr. Collings suggests meat and corn duties upon the foreigner. If his own dream be realised those duties would be ineffective for his own purpose. He hopes that one of their first results would be to foster the inter-Empire trade; in other words, the sale of colonial produce. It is the hope of this prospective mart, which nerves our colonial brethren with such thrilling enthusiastic sympathy with the new economy. And this produce would come in not merely duty free, but would come from a land where rates and rent are comparatively unknown, and where extravagant transit charges are prevented by a Government, which also, in its paterfamilian sympathy, sees to it that the transit-method shall be practicable, reliable and speedy.

Farmers and "The Curse of the Age."

"The curse of this era is cheapness," said a manufacturer at a recent meeting of great British industrialists. I fear me that, with this competition against us from the Colonies operating to our hurt—and colonial dumping does not differ in its effects from foreign dumping because of its name—the cost of the manufactured articles which British farmers might have to buy would be increased. This is no captious criticism uttered by a mere partisan and schismatic. It is inspired by a personal appreciation of the career and sincerity of Mr. Collings, and by a generous sympathy of the purpose he has in view in this very remarkable work. If we are going to fight the foreign dumpers, should we invoke a worse affliction? If we are to have Protection, should we not have Protection all round? Now, Mr. Collings, wherein will the "colonial" dumper as a competitor differ from the "foreign" dumper, excepting that he will be better equipped and advantaged for the task, and excepting that he will not have attaching to him the prejudice which must, or at least should, attach to the foreign rival? This phase of the question ought not to be cavalierly disregarded by the advocates of the new economy.

Motorist to Pay for his Highway.

Every rural county council which is appalled with fear over the growing cost of the maintenance of the highways, every rural area which complains that the fertility of the land bordering on those highways is being smothered in the maleficent by-products of petrol whirlwinds, should bestir themselves to seek to realise the main suggestions affecting their areas made by the Motor Commissioners. The motorist—the man who does not confer any particular benefit on the particular locality because he is what may be called "a through trafficker"—is to be made to pay for the injury he now inflicts on the unfortunate rural rate-

SITUATIONS WANTED and VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

What about Damage from Dust?

But should not the demand of the rural authorities go further than this? As a fact, the suggestion that a portion of the grant to local authorities should be ear-marked as compensation for the destruction caused by dust does not, under the circumstances, meet the situation. The very readiness with which the motor-leaders have acquiesced in this suggestion seems to me to be an assurance that they do not assume it would be a serious infliction. Now, if there is to be no speed-limit—except that imposed by county councils at dangerous points, and the like—we may anticipate that this dust nuisance will assume an aggravated character. The Commissioners themselves admit, in effect, that the dust raised is increased in proportion as the vehicles travel more than ten miles an hour. Now, a rapid speed along a straight bit of road could not probably be described as reckless driving or negligent driving (and this under section one of the 1903 Act would be required to render the proceeding culpable), and would not in all probability be interpreted to be dangerous to the public. However, a thick, stifling vapour would be generated which would be perilous to vegetation and herbage. True, the Commissioners do promise drastic provisions against those who drive their cars "without regard to the discomfort and annoyance caused to every other user of the highway and dweller alongside it"; but this is indefinite enough to be meaningless. At all events, here is a point to which the local authorities concerned should devote a practical attention. It is all very well to promise a grant from a fund provided by the taxation of motor cars. This fund is primarily intended for the up-keep of the roads. How far would it compensate for the damage wrought to the roadside?

Only One Lesson from Bodmin.

There is, after all, only one lesson to be deduced from the Bodmin election. This is that the farmers, who are vitally interested in a reform of tenure-law, are yet willing to subordinate every personal desire of their own to the partisan ambition. True, at first the Land Tenure Bill was a feature of the fight, probably as a sequel to the association of Mr. Agar-Robartes with it and to the proximity of Callington. Then the anxiety thus expressed was drowned beneath the tornado of party declamations; and presently the issues associated with the Bill were not even whispered from the platform. This is a pitiful gibing comment upon the prophecies of those of us optimists who had dared believe that this election might be their prelude to a keener electoral interest on the part of farmers in the Bill and its possibilities in their zeal. When Bodmin, the neighbour of Callington, refuses to be practically interested, what can we expect elsewhere?

Mr. Collings's Tribute to a Woman.

As I close I am reminded that I have not referred to Mr. Jessie Collings's beautiful tribute to his mother, a noble peasant woman, contained in his dedication. No man could write that tribute who has not fidelity, affection, reverence in his soul; no man could pen it on whom the manes of his mother does not gaze with love.

The Sheep Sale Season.

PRESENT PROSPECTS—RAM SALES—PRICE OF WOOL—RAM SELECTION.

THE period between Midsummer and Lammas Day is the most critical of any in the year for sheep-breeders owing to the prospects of the root crop becoming indicated therein, on which the magnitudinous flock-tradings of the autumn in rams, wether lambs, and draft ewes so much depend. Thus, at Salisbury Great Sheep Fair, although lambs were considered to sell at about the prices realised at the sale of the previous year, there was reported to be a decline of about 2s. per head in ewes, the cause being entirely attributed to some degree of uncertainty having been prevalent at that time, the middle of July, in respect to turnip prospects. The Chalk Hill districts of the south-west had less of the copious rainfall which fell in other parts of the kingdom during the latter part of the spring as well as in the summer, when both the northern and western counties were satiated. Nor had they much of the rainfall in the last week of June and the first week of July. So far from there being a decline, advances in the rates of ewes as well as lambs are reported from Scotland and every part of the kingdom where the almost absolute certainty of a good turnip crop has been well assured. Moreover, as there appears to be a satisfactory plant of turnips, even where a fortnight since the soil wanted watering, and as showers have more or

less refreshed the latter since, we may fairly hope that the range of values will now appreciate everywhere throughout the season.

Ram sales had a grand, stimulating feature of a truly sensational nature at the Riby sale on July 12, by the record price of 1,450 guineas having been realised for a Lincoln ram, and an average of over £101 having been obtained by the sale of fifty-six. It will be asserted, no doubt, that the enormous demand in Argentina for rams of that breed was the chief cause; but according to experience in the past, high prices for the rams of other breeds have always been realised in the years when those of the South American buyers have swelled most. The export demand for some of the other breeds has attained high proportions, and the general harmony in the condition of things usually causes the home demand to be affected by the foreign. The higher rates for wool naturally affect favourably every description of sheep breeding and sheep-trading. The fact of the fleeces of most flocks yielding on an average from half-a-crown to four shillings each more than they did three or four years since is sufficient in itself to cause many farmers to return to sheep-keeping who abandoned it when the times were indifferent. Any active demand for sheep in ordinary markets leads to more breeding and to a larger number of rams being required. Hence the appreciation of wool affects shepherding all along the line until it reaches the ram breeder.

But there is another influence which has always exerted a far more powerful operative trend. Sheep

have ever been more effectively the agents and administrators of better farming than any other stock. By growing roots and green crops for sheep to feed off on the land the latter becomes replete of fertility to produce heavy crops of whatever will realise greatest revenue, so that the enrichment of the farm brings full stackyards and wealth to the operator. "Sheep have golden feet, and wherever the print of them appears the soil is turned into gold," so runs the old proverb. But some kinds of sheep do this far more effectually than others, by which arises the necessity of flock improvement and carrying out the best systems and arts of sheep culture. Rams play the most important part in these evolutionary processes. By the employment of a suitable one the character of progeny becomes changed more or less, according to his prepotency and suitability for the work desired. Skillful breeders, by the use of rams, have been able to mould the forms of their lambs almost at will. Great Britain's pastoral wealth effected by these agencies has become the world's envy, and numerous cargoes of rams leave our ports every year for the European Continent as well as for the more distant regions of North and South America, Australasia, &c. Some highly important ram auctions will take place this week, and henceforth throughout August and September, and for mountain flocks far into October. There will be ram auctions every week. The season has had a truly marvellous commencement, may it have a propitious continuation and a satisfactory course of results to the end.

Wool Preparation for Sale.

The breezy discussion which ensued at the conference of the National Sheep Breeders' Association at Derby, will perhaps be productive of good, but chiefly in a way different from what the reader of the paper supposed. The large flockowners who joined in it repudiated the charges seemingly thrown out that British producers of wool generally are neglectful of taking good care in clipping and tying up fleeces to have the latter free of extraneous matter.

The advice that shearing should take place on a cleanly swept floor seems superfluous. This was what was scrupulously attended to half a century ago, and, indeed, as long past as the old-fashioned and flocks in country districts can remember. More than this, octogenarians who remember the sheep-shearing of their childhood confirming this will also state that a broom was invariably kept at the shearing-floor to keep it perfectly clean during the operation. In fact, a great deal more than this might be testified to proving that sheep farmers have always been accustomed to employ every possible means to produce clean fleeces. Consequently when Mr. Hollings stated that "preparing wool for market as their grandfathers did will not do in these days," he must have had in his mind something entirely different. But if he meant sorting, that is an operation farmers can scarcely be expected to undertake.

Mr. T. Casswell declared this emphatically. They tied up their fleeces as free from dirt and other adulterants as possible, leaving the sorting to the manufacturers or the middlemen through whose hands the wool passed.

It was said that the charges in the paper were not directed against the progressive farmers who belong to the National Sheep Breeders' Association, or those who attend shows and move with the times, but to the stay-at-home men, the non-progressives.

And Mr. Hollings, in his reply to his critics, contended that there are "thousands of English farmers who prepare their wool for market in a way far different from what they ought to do."

If this be so, the inference to be drawn would naturally be that they would be unlikely to be influenced by a paper read before an association

Mr. C. E. HOWARD,
Nocton Rise Lincoln

Leicester Ewes and Lambs. Owner and Breeder: Mr. G. E. Ward, Stanthorn, Middlewich, Cheshire.

they take no interest in, and whose proceedings they seldom, if ever, become acquainted with.

Unless wool manufacturers believe it to be the duty of the association to educate the lower classes of the flock-owners who do not belong to it, there would seem to be very little use in bringing the evil complained of before that body. It must rather be regarded as one only to be remedied in the trade channel. There would appear to be something radically wrong in the traffic system wool passes through between the producer and the manufacturer.

In the times of our grandfathers the local wool-staplers knew the farmers among those they dealt with who took pains with their wool to offer it in a cleanly proper state. It offered wool by those not previously dealt with, or by producers whose fleeces had before been found carelessly or badly prepared, examination would take place previous to purchase. If there are now thousands of this class it is only because modern trade customs are so defective that those who, like Mr. Kidner and Mr. Casswell, take pains with their wool, get no more for it than the slovens and careless who keep mongrel flocks and whose management is the reverse of good.

Holding up the practices of Colonial farmers as an example to English ones was uncalled for, the circumstances being so entirely diverse. If the home farmer happens to own two flocks of different kinds of sheep, common-sense would cause him to keep their fleeces apart to be offered for sale in different lots.

Small farmers who have no permanent flocks and buy sheep from hand to mouth are only those likely to mix different sorts of fleeces together.

But there were few of these present at the reading of the paper, nor is it at all likely to come under the notice of many of them.

PUBLICATIONS RECEIVED.

Volume three of the South Devon Flock Book, recently issued, gives striking evidence of the success which has attended the efforts of the South Devon Flock Book Association, and seeing the hearty co-operation of flock-masters they have received, the association may be expected to still further progress. The flock book, which is on similar lines to flock books of other breeds, contains details of rams Nos. 1673 to 2569, ewes Nos. 1 to 40, and flocks Nos. 1 to 216. Applications for the volume should be addressed to the secretary and editor, Mr. W. Chapman, Room 4, Mowbray House, Norfolk Street, Strand, W.C.

The eighteenth volume of the Oxford Down Flock Book has now been issued, and is on similar lines to the previous volume, containing as it does useful information to all breeders of Oxford Downs. The rams entered are from Nos. 4504 to 4948, and ewes Nos. 1017 to 1707. It is issued by the Oxford Down Sheep Breeders' Association, of which Mr. Howard Sammons, 11, Queen Street, Oxford, is the secretary.

AGRICULTURAL IMPLEMENTS AND MACHINERY NOTES.

There was a very representative display of agricultural implements and machinery at the Highland and Agricultural Society's Show at Peebles last week. The directors of the society had to face the same difficulty as at Glasgow last year—namely, exigencies of space compelling them to rigidly enforce the regulation as to the exclusion from the implement department of appliances which are not directly related to the work of the farm. Manufacturers also, for the same reason, had to limit their displays. In the result, however, the exhibition did not in any way suffer, rather was it made more compact, a mean advantage to the visitor—and it proved as attractive on any previous occasion.

In all, 1,658 entries were catalogued, a smaller aggregate than at Glasgow last year, but it compared favourably with previous shows in the south-eastern district. Indeed, of the eight exhibitions which have been held in the Borderland the number has been exceeded only twice, at Truro in 1872 and in 1898, when the numbers respectively were 1,777 and 1,933. All the leading Scottish firms were well represented, while manufacturers on this side of the Border again took the opportunity of bringing the latest results of their ingenuity before Scottish farmers. The number of individual exhibitors was about the same as last year—over 190—against over 200 at Perth, and their stands occupied nearly 3,000 ft. of shelving the same as at Glasgow last year, or a decrease of about 1,000 ft. from the previous year. The society usually arrange for a series of trials of some selected class of machine; but this year there was no competition of the kind.

Two-shear Lincoln Ram. First Prize and Reserve Champion at the Royal Show, Derby.

Sheep-Farmers' Root and Fodder Crops.

Sheep farming has undergone very considerable revival in many parts of England during the past two years, and fortunately prospects just now are altogether favourable to flock extension.

A tolerably reliable opinion can be formed at the middle of July on root crop prospects. At least, so far as success in getting a plant is concerned, which must be accounted a very considerable factor, the estimate is altogether assuring. Scarcely have reports from all parts of the kingdom afforded more favourable statements in regard to this. The late rains have had marvellously beneficial influences wherever the issue was previously at all doubtful. Mangel and early-sown swedes have during the past week been making extraordinarily rapid growth, and later-sown turnips have escaped fly ravages satisfactorily.

Complaints, it is true, have come from some districts of light hay crops, but with a grassy autumn it may be possible to make up this shortage by conversion of surplus aftermath toilage. Some farmers strive to make hay of it, with the result of oftener stacking spoiled fodder than good. Adoption of the ensilage system would be the wiser course, as being perfectly reliable, especially if the grass be made pies of and clamped. The same course should be invariably adopted with surplus green crops, such as vetches and trifolium, which make indifferent hay but excellent silage.

The recent rains have also favoured plantings of young kale seedlings where trifolium or vetches have been folded off and the land reploughed for a second crop. This up to a recent period was almost invariably turnips, but by raising a nursery-bed of young kale to plant into such lands, more reliable and heavier crops have been obtained, especially after the second week of the present month. But the character of the soil itself makes a great difference as to this, as well as for substituting other crops for turnips and swedes at any time.

On some soils turraips fail far oftener than on others. For late croppings after the middle of July, however, it would be advisable on land generally to plant seedlings rather than sow seed; and kale seedlings have always been found to succeed better than any others. When kale culture was new to most farmers, some thirty years since, and the late Mr. R. Russell read a paper thereon the Farmers' Club, one well-known authority declared that the plant, according to description, was the most accommodating one ever known. However this may be, it is certainly the most available to farmers for transplanting.

One of the greatest cares root growers have been having lately, and which just now presses rather severely, is that of singling out young plants before they get too big in their rows. A considerable proportion of the work has come pressing in the haying season, and only trained, experienced

labourers are qualified to perform it. The latter often demand a high price per acre for doing it, and when the plants grow rapidly and large breadths await the singling process, the operation will scarcely brook delay, as the bigger the plants get the more difficult does the task become. Nor is this the entire trouble, for if bulbous root plants are not thinned in proper time and effectually, their bulbing becomes seriously impaired.

Kale is stated to have accommodated some sheep farmers even in coping with this difficulty. Experience has proved, it is stated, that if the seed is drilled in April or May into the land to bear the crop, the latter can be grown successfully without any hand singling whatever. The only plant thinning required, apparently, is that of drawing a light pair of harrows across the rows when the plants are quite young and the land is in proper condition for the operation.

Lagos Agricultural Show.

The Commercial Intelligence Branch of the Board of Trade have received a communication from Mr. C. A. Birtwistle, Commercial Intelligence officer for Southern Nigeria, who is at present in this country, with regard to the agricultural show which is to be held in Lagos in November next. Mr. Birtwistle, who is also the manager of the show, calls attention to the fact that the steamship companies will carry exhibits freight free.

The necessary shipping forms may be had on application to the Commercial Intelligence officer for Southern Nigeria, care of the Crown Agents for the Colonies, Whitehall Gardens, S.W., up to July 31. Copies may also be obtained at the offices of the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Exhibits of implements or machinery must be in the hands of the shipping companies at Liverpool or Hamburg not later than September 25.

Guardians and their Pigs.—The Nottingham Board of Guardians and the Local Government Board are at loggerheads concerning the keeping of pigs at the workhouse. Already the guardians have about 100 pigs, but this number is insufficient to consume the large quantity of waste food and refuse from the land under cultivation. Application having been made to the Local Government Board for permission to provide another run, that authority has replied refusing the request, and suggesting that the guardians might turn their attention to the reduction of the

quantity of waste food. The matter is to be further pursued by the farm committee.

Sheep Notes and Jottings.

Weather has been severe on sheep keep in many districts during the past week, and little as there seemed to be a possibility of it a fortnight ago, rain is anxiously looked for for the seeds and root crops in places. The July sun is very scorching, and it works a long day, so that when once the land loses moisture its influence is great, and a good general rain now on the eve of harvest would be much appreciated. The effect of the drought has not been without its influence on the sheep trade, and badly as sheep are wanted prices have given way in places to some slight extent—more in the case of ewes where a spring supply of food will be needed than for lambs for fattening during winter, for which there is a reasonably safe amount of food visible. Yet apart from the food supply, ewes must be sound having so far as the likelihood of a demand for mutton and wool in the future demand.

The dry weather has made it necessary to think of autumn sown catch crops. As a rule, there does not look to be much anxiety as to the supply of autumn food, but there is that critical period between roots and grass in the spring to be provided for. At the same time, the value of the sheep as a means of keeping up the fertility of the farm can never properly be lost sight of, and the early-sown catch crops to provide autumn sheep keep and conserve much plant food which otherwise would be washed out of the land by the winter rains, and at the same time do much towards keeping the land clean. They also enable the swedes, which are very indigestible and liable to scour the sheep when fed too young, to become properly matured. Such mustard and white turnips as can be got in now and during the next few weeks are more valuable to the flockmaster than might appear on casual observation.

A very satisfactory feature in connection with this season's successful sheep sales is that although there is such a strong invasion by foreign purchasers, home breeders only yield to them when specially good animals are under the hammer, when the full value has been reached. The strong bidding of Messrs. Dean for Mr. Dudding's record-making ram is a case in point; but it is only one of many. There seems to be a feeling among breeders that they have got the breed, they have got the sheep, and they've got the money too, and they mean to maintain the supremacy of the flocks unless they are exceptionally pressed. The world knows the position of the British flockmaster, and so long as the present attitude of flockmasters is sustained there is no fear of our breeds deteriorating.

In respect to the exportation of sheep we can better afford to let an occasional speculative ram go than part with our best ewes. Such a ram can work wonders in a flock abroad, and can scarcely be bought too dearly, for it can influence a vast number of

The pen of Hampshire Down Ram Lambs with which Mr. Cary Coles, Winterbourne, Stoke, Salisbury, won the 25-Guinea Challenge Cup at Salisbury Fair on July 18, 1906. Inset is a portrait of Mr. Cary Coles.

animals immediately and in the future; and no one would grudge the purchaser any success he achieved through it; but it is important to retain ewes which can produce equally good rams as those which leave the country. It is doubtful if much harm has ever been done by parting with males; but if we look for an instance where the exportation of females has wrought unmistakable and lasting harm, one has only to refer to the sale of Irish Hunter brood mares. Foreign governments recognise the importance of the dam, and bought for many years all they could lay hands on which showed special merit, and rare good bargains they made. The endeavour to breed up a stock of mares such as existed years ago has been by no means too satisfactory, although both skill and money have been systematically expended to accomplish it. It is open to question if some of our good ewes are not sold too cheaply. A good ewe may be the foundation of an excellent flock in the future. It is hard to refuse a paying price for a lot of ewes, especially when the price is in advance of what could be made to home purchasers; but the ewe is the mother of the ram, and in our mind many of those who purchase ewes for other countries often get very fine bargains.

The shepherd's life is ordinarily one in which much bad weather and rough work over long hours have to be faced, but no class of labourer grumbles less at his lot. The prize for the shepherd who has been longest in that capacity in Lincolnshire has been won by a man with the creditable record of forty-one years. Doubtless the country can find a vast number who have far longer records, as "once a shepherd, always a shepherd," holds good more certainly than most axioms. Whether master or man, one who has once gained a liking for sheep rarely loses it; but shepherds in the past have generally learned to love being among sheep when they were very young, and town attractions are not strong enough to draw them away. What will happen

Mr. W. T. GARNF,

Southdown Shearling Ewes. Winners of many prizes this year including First and Champion at the Norfolk Show. The property of Mr. J. Colman, Gatton Park, Surrey.

Southdown Rams. Prize winners at several Shows, and sold by their breeder, Mr. J. Colman, Gatton Park, Surrey, to go to Chili.

Cotswold Shearling Ram. First Prize at the Royal Show, 1905.

in the future is difficult to say; but undoubtedly long schooling at the Board School makes many bad clerks out of stuff that might have been developed into excellent shepherds.

The Hampshire Down sales have had a good send off, and with the prospect of a big root crop in spite of a check in growth in some districts there is likelihood of a keen trade throughout the season. With the foreigner busy with high-class sheep, some especially high prices are likely to be recorded. If the South Americans make Guernsey a slaughtering depot, the Down breeds will prove more attractive to them than they have been. Other countries have appreciated their value for a longer period, and are increasing their demand.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

The fair held at Boyle, co. Roscommon, on Wednesday, was a small one. Three-year-old cattle were bought up at good prices, but two-year-olds were not in so good demand. Springers sold well, whilst lambs met a ready sale. Prices: Calves, 1st class, £2 10s. to £2 16s. 8d.; 2nd class, £2 5s. to £2 7s. 6d.; yearlings, 1st class, £8 5s. to £8 10s.; 2nd class, £3 15s. to £7; two-year-olds, 1st class, £11 10s. to £12; 2nd class, £8 to £10; three-year-olds, 1st class, £15; 2nd class, £12 to £12 10s.; Springers, 1st class, £17 10s. to £21 10s.; 2nd class, £12 10s. to £13. Lambs, 1st class (170), £1 12s. to £1 17s. 6d.

Sheep Fairs and Sales.

Lord Rothschild's Hampshire Downs.

Messrs. W. Brown and Co. sold at Tring on the 20th inst. 65 ram lambs, 3 shearlings, and 74 ewes from Lord Rothschild's famous flock. Over 200 visitors attended the sale, many coming from a distance (three buyers from South America being present), and throughout the sale there was no lack of biddings, every lot being cleared. Never has a more even, good charactered lot of sheep been offered from this flock. The sale started with 3 lambs to be let for six weeks, the first sired by Stonehenge (bred by Mr. C. Coles), a grand, lengthy sheep, with excellent wool, was secured by Mr. J. Flower, Chilmark, at 60 guineas; number two, sire Friend at Court (bred by Mr. Flower) made 36 guineas, to Mr. Caire; and number three, by Stonehenge, went to Mr. Holmes at 32 guineas. Amongst the sale lambs one went to Mr. Holmen at 42 guineas, one to Mr. Thompson Woodperry at 42 guineas, one to Mr. Welch at 37 guineas, one to Mr. J. G. Williams at 23 guineas, one to Mr. Hardy Pearce at 18 guineas, Mr. Croshaw buying at 16 guineas. Major Porteous, for the agricultural flock, took 15 lambs at an average of 10 guineas each; others made from this down to 6½ guineas, every lamb offered being cleared at the satisfactory average of £11 each, and £11 9s. 4d. average for the three let lambs. Three shearlings made 13 guineas, 12 guineas, and 10½ guineas. The ewes were not many in number, and not very forward in condition, and comprised 28 two tooths, which made from 64s. to 76s.; 11 four tooths, 69s. and 81s.; 11 six tooths, 58s. to 61s.; and 24 draft ewes, 47s. to 58s.

Mr. T. F. Buxton's Hampshire Downs.

A large company of breeders put in an appear-

Leicester Shearling Ram Property of Messrs Simpson, Pilncor House, Hunnamby, Yorks.

first-class pedigree Hampshire Down ram lambs and twenty ewe lambs from Mr. W. Shaflon James's well-known Broughton Lodge, Kettering. There was a good attendance, and sale prices ranging from 4 to 10 guineas, the average per head being 6 guineas.

Bridport.

At this Dorsetshire fair held on Wednesday the number of sheep penned fell rather below the average of previous years, and trade was rather slow at about late rates. Down ewes ranged from about 42s. to 46s. 6d.; Down and cross-bred lambs, 27s. to 32s. 6d.; horn couples and cross-bred lambs, 48s. to 55s.; fat ewes, 43s. to 47s.; fat lambs, 26s. 6d. to 33s.

Exeter.

At Exeter Cattle Market on the 20th inst. Messrs. J. Risdon and Son disposed of about forty pedigree Devon Longwool rams at satisfactory prices. Twelve from Mrs. M. L. Thorne's flock at Cudon, Wilton, made from 5½ to 13 guineas; Mr. F. White, Torwinton, Williton, got 2½ guineas for one, 13½ guineas for another, and sold others from 7½ to 13 guineas; seven from Mr. R. D. Hancock's flock, Taunton, made

up to 12 guineas; Mr. Skinner's shearling rams made 19½, 13, 9½, 9, and 6 guineas, and those from Mr. W. Brent's flock made up to 7½ guineas.

Harleston.

Harleston lamb sale was held on Monday, when Messrs. G. Duncant and Sons brought under the hammer something like 5,000 sheep and lambs. Trade was very fast indeed, in fact, taken all round, the best of the season. The top figure for Suffolk lambs was 52s. (for 50 ear marked ewe), made by Mr. J. B. Dimmock, who sent a consignment of 495. Mr. A. R. Todd had 500 first-cross, and came second with these in the catalogue. The fastest trade came directly his big lot had been sold, otherwise his best forty ewe lambs would in all probability have reached a higher figure than 35s. 6d., which tied with forty-four from Mr. F. Snelling, both, however, being exceeded.

Mr. T. S. MINTON,
Montford, Shrewsbury.

This Shropshire Ram won the First Prize for two shear rams of the breed at the Royal Dublin Society's Sheep Show last year. Our photo, however, shows it as a shearling ram. It is the property of Mr. R. F. H. White, Aghavoe Grange, Ballacolla, Abbeylisk.

ance at Waters' Place, Ware, Herts, on Monday, for the sale of a choice selection from Mr. T. F. Buxton's well known flock of Hampshire Downs. Messrs. Waters and Rawlence were the auctioneers, and they had no difficulty in disposing of the various lots, for all were brought out in the best of condition and were of the highest quality. The proceedings commenced with the letting of seven ram lambs, of which the Marquis of Winchester took one at 105 guineas; Mr. J. Flower one at 75 guineas; Mr. H. C. Stephens another at 50 guineas; Sir W. G. Pearce one at 32 guineas; and the Hon. D. P. Bouverie another at 23 guineas, whilst Mr. J. A. Keith Falconer got the other for but 11 guineas.

The ram lambs, which numbered seventy-two, were then disposed of at prices ranging from 8½ guineas to 23 guineas, the average working out at £13 11s. per head. Nine shearling rams made from 7½ guineas to 11 guineas each, or an average of 19 8s., and 120 ewes sold as follows:—Shearling ewes 64s. to 78s., two-shear ewes, 53s. to 62s., three-shear ewes, 62s. to 64s.; draft ewes, 58s. to 76s.; the average of the whole being 65s. 6d.

The Broughton Hampshire Downs.

Messrs. Berry Bros. and Bagshaw, of Kettering, on Tuesday brought under the hammer forty-five

Shropshire Ewe Lambs.

One hundred five-months'-old and four six-months' old Oxford Down Ram Lambs, bred by Mr. J. H. Large, Crudwell, Malmesby.

Wool Fairs and Sales. Bury St. Edmunds.

At their annual Bury St. Edmunds sale Messrs. Salter, Simpson, and Sons disposed of numerous consignments of English wool, comprising about 15,000 fleeces from some of the leading flocks in the neighbourhood. Some Southdown wool from the Home Farm of the Duke of Grafton made the top price—14½d. per lb. Some similar hogget wool, also consigned by his Grace, fetched 14½d. Southdown ewe wool from the Savham Farm of the Marquis of Bristol, 14½d.; Earl Cadogan's Southdown hogget wool, from the Home Farm, Culford, went up to 13½d., similar prices being realised by others. An average of wool classified showed that washed wool included Southdown hogget, which fetched from 14½d. to 13½d. per lb.; Southdown ewe, 14½d. to 13½d.; half-bred hogget, 14d. to 13½d.; half-bred ewe, 13½d.; black-faced hogget, 13½d. to 13d.; black-faced ewe, 13½d. to 12½d. Unwashed wool: Half-bred ewe and hogget, 10d. to 9d.; black-faced ewe, 9½d. to 8½d.; black-faced hogget, 9½d. to 8½d.

Hawick.

The old-established wool fair at Hawick, as usual, attracted a very large company of buyers from all parts. Farmers were in expectation of a substantial advance on last year's prices, and as buyers were not inclined to give this, the day was far advanced before any transactions took place, but eventually a large number of clips changed hands, at an advance on last year's prices. A number of Cheviot clips were sold at an advance of 1d., 1½d., and, in one or two instances, 1½d. per lb., the prices ranging from 27s. to 28s., with some at 28s. 6d., the general rise being from 2s. to 2s. 6d. per stone, the advance which this class made last year being from 4s. 6d. to 5s. per stone.

There was not much done in half-bred wool, but where business was transacted prices showed an advance from last year of about 2s. per stone, the price for half-bred ewe wool being 26s., and half-bred hogget 28s. A half-bred clip with a third of hogg in it was sold at 27s. The advance last year in this class was also about 2s. per stone. There was little doing in black-faced clips, but those transactions which were revealed showed a rise also of 2s. per stone, up to 17s., the advance in this department last season having been 1s. per stone.

Ipswich.

About 8,000 fleeces were offered at the annual wool sale held at Ipswich on the 20th inst. by Messrs. Bond and Sons. The number was rather less than usual, owing to the fact that because of the dry season the growers were enabled to get it into the June sale, which then totalled some 40,000 fleeces. There was a fairly good trade, but the prices realised showed a general reduction of 1d. to 1½d. per lb., which is quite in accordance with the market fluctuations. The highest price realised was 14d. per lb. for a sheet of Southdown ewe, consigned by Mr. H. Squire Dawson. Black-faced hogget, black-faced ewe, and half-bred hogget all touched 13½d.

The price for unwashed wool fell at the same rate as compared with the June sale; the top price realised was 10½d. for Southdown lambs from Mr. K. M. Clark, for half-bred hogget from Mr. G. J. Buxton, and black-faced hogget from Mr. E. J. Keeble. Black-faced ewe, unwashed, fetched from 10d. to 8d., and half-bred ewe 9½d. to 9d.

VETERINARY.

Advice of a Veterinary character, by an M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Royal Veterinary College.

In presenting the report at the annual meeting of the Royal Veterinary College held on Monday, Sir Nigel Kingscote, Chairman of the Governors, said that although they might congratulate themselves on the fact that a larger percentage of students had passed the examinations, they had to regret that there were fewer students in the college. They could hardly account for this, but it was probable that both Dublin and Liverpool had taken students away from them. Beyond this, many young men who had intended to follow the veterinary profession, in view of the mechanical machines which were now going about in such numbers, thought they had better turn their attention to them. No doubt many were afraid that the motor would take the place of the horse, but he trusted that this would not be the case.

As to the work of the college, there had been a decrease in horses, but an increase in dogs and cats, and there had been 11,376 gratuitous inspections. They had to report a decrease in subscriptions, but in response to an appeal which they had made they had received an intimation from the Board of Agriculture that the Lords of the Treasury had agreed to provide £80 for the further extension of the teaching staff. This would help them to meet the requirements of the University of London, with which they were shortly to be affiliated. In this connection they had sent out a special appeal, but, with two exceptions, the response had been very poor. Messrs. Elliman

had sent a donation of £500, and promised £100 a year, and Spratts (Limited) 100 guineas.

Lord Coventry seconded the adoption of the report, which was carried unanimously.

Sheep with Foot Rot.

Can someone help me with advice as to best way to get rid of foot rot in a flock of ewes and lambs?—X. L.

Answer: Your manner of expressing your requirement suggests the disease indigenous to the soil, or that you farm land that, to use a common, if incorrect, expression, is subject to foot rot. These cases are difficult to deal with, and the complete eradication of the contagious form of foot rot on stiff, wet land is anything but easy. With reference to individual treatment, there are a great many agents available for dressing the feet, but most of them are powerful caustics, and between

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the larger farmers and estate owners.

these and the injudicious use of the knife, the sheep are subjected to a great deal of unnecessary suffering. We have found a mixture of equal parts of butyr of antimony and aloetic tincture of myrrh quite as effectual, and much less painful to the animal, as the strong mineral acids. The feet should be carefully examined, if necessary poulticed, and all loose and decayed horn carefully removed. Nothing that is sound should be cut away, as denuding the foot of its horn encourages fungoid growth. The perchloride of antimony dressing should be applied with a feather or small brush. Dry lying is essential to quick recovery from foot rot. When the disease is not very bad, and as a preventive on farms where the disease is rife, a kind of wholesale treatment is practised—the sheep being driven through a shallow trough containing an astringent solution—arsenic or sulphate of copper—but in all cases of actual disease the feet require individual attention in the matter of paring and evacuating imprisoned matter.

Horse with Bad Forefeet.

I have an eight-year-old horse in sound condition, but he has very bad forefeet under him. I have tried cow-dung, but they do not look to improve any. He had the inflammation in them last summer.

Answer: "A horse in sound condition that has very bad forefeet under him" seems a bit of a paradox, for the generally received opinion is that the measure of a horse's soundness is the soundness of his feet. You do not say what is the condition of the feet, or in what respect they are "bad," but the statement that he "had the inflammation in them last summer," suggests that you have to deal with that common sequel to acute laminitis—dropped soles and brittle walls. If this be so, it is not a matter for surprise that you have to record that "they do not look to improve," as the result of the trial of cow-dung. It would have been more surprising if they had improved. We cannot here go into the changes of the foot structure that lead up to flat or convex soles following laminitis, but they are changes that are permanent, and for all practical purposes it may be said that the condition is *incurable*. Something may, however, be done to prevent the changes that have taken place becoming aggravated, and to improve the going by special shoeing.

What are Lungs?

I should feel much obliged if you would tell me what the lungs of a pig really are—if they are what the butchers commonly call lights or not—to settle the dispute between me and a friend, and oblige.—FARMER.

Answer: Lungs and lights are synonymous terms, or rather "lights" is a name applied not only by butchers, but their customers as well, to the lungs, which are the organs of respiration. Probably the name arose from the extreme elasticity, buoyancy, and lightness of the lungs as compared with other organs in the body, such as the heart, liver, and kidneys, whose structure is dense and heavy. The lungs consist of an infinite number of little cells, each not larger than a millet seed, fixed upon foot stalks, each foot stalk being a tube, which is a branch of the windpipe. These cells are filled with air. Even when the lungs are empty these cells always contain a considerable quantity of air—called the residual air—and they are therefore never entirely collapsed, and always float in water.

"Fly" or "Maggot" in Sheep.

(Concluded from page 91.)

According to Steel ("Diseases of Sheep"), fish oil smeared over the fleece is a deterrent to the fly, but he carefully points out that it gives to the wool a peculiar smell, which it is difficult to get rid of, and makes the sheep unpleasant to handle. He says:—"A few drops sprinkled on the animal in May will protect it for a whole season," but it would be better to trust to a reliable dip.

What constitutes a good dip is a point on which opinions may differ, and it must be left to the flockmaster, or his shepherd, to decide as to what dip they will use; but it may be pointed out that carbolic dips, whatever their merits as vermin destroyers, are valueless for this purpose, because they are too evanescent. To be efficient and lasting it is necessary that the dip should be poisonous, and contain sulphur as an indispensable ingredient, and such a dip, by remaining in the fleece, will, if employed in the early part of the season, confer immunity from fly attacks to a surprising extent, as well as prevent the development of the larvae, which are hatched from the eggs into a poisoned medium.

Sprinkling is very much akin to dipping, a solution of the same material being used. It is practised when it is not convenient to set up a regular bath for dipping each sheep individually. In sprinkling, sheep are penned as close together as possible, and the solution applied to the fleece by means of a watering-can with riso-attachment. Remedial measures are very simple, and when a sheep is found to be "struck," the essentials are

to destroy the maggots and keep the wound clean and aseptic. Some of the agents employed are unnecessarily drastic.

The Board of Agriculture recommend that the maggots "should be picked or rubbed off, or where they have got to work the wool may be shown a little, the affected parts being dressed with a mixture of turpentine and rape oil in equal parts, or with dilute paraffin oil, finishing off with a dusting of sulphur."

Some shepherds use what they call a "fly-stone"—a lump of perchloride of mercury—which they rub among the maggots. There is no doubt about its killing them—it would kill half the parish—but it is unnecessarily severe, and a milder and equally efficient dressing is: Perchloride of mercury, 1 drachm; hydrochloric acid, 1 drachm; spirits of tar, 2 drachms; oil of turpentine, 1 oz.; boiling water to 8 oz. This can be carried in the pocket. On finding a "struck" sheep, the wool should be clipped from over and around the part affected, and a little of the dressing poured in among the maggots, care being taken to involve the whole of them.

A wooden skewer or piece of pointed hard wood is useful for dislodging the larvae.

The isolation of "struck" sheep is desirable, but is rarely practicable without considerable interference with the routine management of the flock.

M.R.C.V.S.

Water Finding.—Whatever may be the views of scoffers of the water finder, they are certainly not shared by the Wirral and Bikenhead Agricultural Society, for at their recent show they awarded one of their silver medals as an award of special merit in the discovery of springs of water for the benefit of agriculture to Mr. B. Tompkins, of Woolley Manor, Huntingdon, an expert water finder and author of "The Theory of Water

Finding." This is the first occasion on which a medal has been awarded to a water finder by an agricultural society or other public body, and Mr. Tompkins is naturally highly pleased with such a distinctive honour. It may be mentioned that there were over twenty competitors in this class of various inventions and exhibits for use in agriculture, but the three judges considered Mr. Tompkins's of the greatest utility and benefit to have discovered the power and ability to discover springs of water underground for pure water supplies.

Mr OWEN PRICE.
Nantyrharn Cray, Brecon.

Welsh Mountain Shearling Ewes. Winners of First Prize at the Royal Show, Derby, 1906.

Welsh Mountain Ram, Twm or Nant II. First Prize at the Royal Show, 1906. Property of Mr. Owen Price.

Champion Border Leicester Ram. Exhibited and bred by Mr. David Hume, Barrelwell, Brechin, N.B. Sold to the Rt. Hon. A. J. Balfour, M.P., for £75.

Champion Border Leicester Ram. Bred by Mr. David Hume, Barrelwell Brechin, N.B. Sold for New Zealand.

Saxmundham Sheep Fair.

Messrs. Flick and Son's thirty ninth annual lamb sale at Saxmundham took place on the 20th inst., when there was a catalogue of about 8,000 lambs and ewes from 35 consignors, and including fourteen registered flocks of the Suffolk breed. The sale was very largely attended and trade was good throughout at rates similar to those prevailing at Harleston. Mr. Tyrrell's first cross averaged close upon 41s., and 50 picked ewes brought the unusual figure of 47s. 6d., at which they went to Mr. Robert Minter, of Huntingfield. Of the Suffolk lambs, a pen of ewes from Mr. Grenville's Exors. made the top price of the day, 53s. 6d., and the average was 40s. 4d.; Mr. Kenneth Clark coming next with a pen at 51s., and Mr. Harry Fulcher third at 50s.

Good Prices for Hackneys.

Fifty-four pedigree Hackneys and ponies, the property of Sir Gilbert Greenall, Bart., Walton Hall, Warrington, were sold by auction recently for a total of 3,019 guineas. The feature of the sale was a pair of harness mares, Terrington Virago and Vera, which Mr. F. S. Pearce, of New York, secured for 350 guineas. Mr. Kerr, of Tickmansworth, gave 120 guineas for Terrington Victory, 110 guineas for Tissington Hall Mark, and 110 guineas for Terrington Josephus, whilst Mr. Smith, of Birmingham, paid 100 guineas for Terrington Divinity.

Motor Car Dust Nuisance.

The Royal Commission on Motor Cars has now issued its report, and it has naturally been the sole topic of conversation amongst all users of motors and others. To our readers, perhaps, the most important and interesting part of the report is that in connection with the dust nuisance, to which the Commission devoted much attention. They do not think that the dust nuisance can be much cured by any alteration in the design of cars. It is the speed above ten miles that is the trouble, and they do not feel able to recommend that the production of dust should be made a statutory offence; it would be too difficult and uncertain. Their conclusion really is that as motor cars are here and must increase, the question must be faced by a general improvement of the roads. They think that British roads are not good as a whole, and soft stone is far too freely used, and no proper binding material is employed.

Generally speaking, they say the evidence suggests that the best type of macadam will probably be found to make the most effective and economical road for all kinds of traffic, including both heavy and light motor cars. Such roads should be made with solid foundations and surfaced with granite or similar hard stone, the binding material being of screened gravel or chippings of the stone used and being properly rolled in.

When provision had to be made for exceptionally heavy traffic the system of armouring a metalled road surface with stone blocks known in Liverpool as random sets is, in the commissioners' opinion, well worthy of careful consideration by road authorities. In roads and villages tarring, though expensive, would not be too expensive for an effective remedy.

The commission recognise the financial difficulty, and their proposal is that the revenue from taxation of cars (they refuse to recommend allotting fines for this purpose) should be used for improvement, not for maintenance of roads, should be collected and administered by a central department, and should not be for main roads alone, but for any important road of through communication. It is with the object of raising more money for this purpose that they recommend a revised scale of licence duties.

Mr. R. F. H. WHITE,
Aghavoe, Ballacolla, Abbeylisk, Queen's County.

Shropshire Shearling Rams. Winners of the Challenge Cup for the best three Shearling Rams, and Champion Challenge Cup for best group of Shropshire Sheep, at the Royal Dublin Show, 1905.

On the initiative of Mr. R. Winfrey, M.P., and Mr. George Nicholls, M.P., a movement has been started to form an agricultural labourers' organisation in the Eastern Counties in order to aid its members in efforts for better housing, allotments, small holdings, and various social reforms. The first meeting was held on the 20th inst., North Walsham, when a provisional committee was appointed, and it was decided to start the union in the autumn. An appeal will be made to the trades unions for financial assistance.

Mr. J. P. Halliott,
Sherford, Plymouth.
Breeder of South Devon Sheep.

Leicester Shearling Ram, Royal Derby First Prize at the Royal Show, Derby, 1906.

Leicester Shearling Ram, Park Royal. First Prize at Royal, Bath and West, and Yorkshire Shows, 1905. Property of Mr. E. F. Jordan, Eastburn, Driffield.

Mr. E. F. JORDAN,
Eastburn, Driffield.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equated.	Phosphate.	Dis-solved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. 10 6	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
" in Sulphate of Ammonia ...	—	—	—	—	—	—	—	—	—	12 6	—	—	—
" calculated from Nitrogen in Nitrate of Soda	—	—	—	12 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water ...	2 0	—	2 0	—	—	—	1/10-2/	—	2 0	2 0	—	—	—
" assimilable ...	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
" insoluble ...	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure) ...	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids ...	2 8	3 0
Oil or fat ...	2 8	3 0
Carbohydrates ...	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. of albuminoids and of oil is at least $2\frac{1}{2}$ times that of 1 per cent. of unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by $2\frac{1}{2}$ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids ...	22.1	$\times 2\frac{1}{2} = 55.2$
Oil ...	5.2	$\times 2\frac{1}{2} = 13.0$
Carbohydrates ...	33.2	$\times 1 = 33.2$
Total feeding units		101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *non de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Spraying Potatoes.

Now is the time that the development of disease in the growing potato plants should be hindered or at least kept in check by spraying, and, as prevention is better than cure, it is best to begin the spraying operations before symptoms of the complaint become apparent.

The Midland Agricultural and Dairy Institute conducted a set of field trials last year in order

1. To determine the effect of Bordeaux mixture and solutions of sulphate of ammonia respectively in preventing disease

2. To see what effect the different dressings had on the total crop.

To ascertain which gives the best result—one, two, or three dressings.

The trials with the solution of sulphate of ammonia proved to be a failure; it became evident

that the solution increased rather than diminished the disease, for those plots which were treated dropped the leaves and haulms, in consequence of disease, much earlier than the rest of the field. On lifting it was found that the amount of disease increased with the number of dressings. This treatment, therefore, cannot be recommended as a preventive of disease, as it fosters the enemy by feeding it, and, as a consequence, reduces the crop.

The application of Bordeaux mixture, on the other hand, proved, as might be expected from

Bordeaux Mixture.

previous experience, effectual in reducing the amount of disease and increasing the yield, and results generally justify its application being recommended, provided the details of mixing are carefully attended to.

It is found that three times spraying, at intervals, gives better results than either one or two applications.

The spraying mixtures were applied first on July 28, second on August 11, and third on September 7. The yield from the

Thrice-sprayed plot was valued at 19 9 3

Twice-sprayed plot was valued at 18 13 0

Once-sprayed plot was valued at 18 9 8

Unsprayed plot was valued at 18 1 0

Calculated at 50s. per ton for large tubers, and 20s. per ton for small and discarded.

The first dressing had apparently little effect in preserving the haulms, but the plots that received the second and third dressings kept green fully eighteen days longer than the rest of the field; this was very marked and could be seen from a considerable distance. Stress is laid on the necessity of preparing the mixture with care as follows:—

3 lbs. of copper sulphate (blue vitriol) were dissolved in 12½ gallons of water in a wooden vessel—

iron will not do—and 2½ lbs. of

freshly burnt lime were slaked in another 12½ gallons of water.

The solutions were poured, both at the same time—and this is very essential—into a third receptacle made of wood. The resulting solution, after well stirring, had a steel knife blade immersed in it for one minute; if no copper was deposited on the blade during immersion, the solution was considered fit for use; if copper happened to be deposited, more lime was added until no deposit of copper formed. After straining well, and repeated stirring, the solution was applied, by means of a Knapsack Sprayer, at the rate of 40 to 80 gallons per acre, according to the size of the haulms, on a calm day.

It is calculated that of the quantity of water which falls in the form of rain, 1 in. is equal to about 100 tons to the acre, each ton being about 224 gallons.

The Diamond-Back Moth.

It is reported that this unwelcome visitor has made its appearance in Norfolk, where it has already done considerable damage. Farmers should examine their turnip fields at once and take the necessary steps to protect their crops. The Board of Agriculture call attention to the importance of prompt action in this matter, and will send on application, free of charge and post free, copies of their leaflet giving a description of the insect, with the suggested remedies and methods of prevention. It may be mentioned that letters of application should be addressed to the Intelligence Branch, Board of Agriculture, 4, Whitehall Place, London, S.W., and need not be stamped.

Quality of Feeding Stuffs and Chemical Manures.

At the recent meeting of the council of the Yorkshire Agricultural Society, the analyst of the society presented his half-yearly report, in the course of which he stated that one of the samples of linseed cakes which he analysed contained an unusually large proportion of oil, viz., 17.1 per cent. In view of the statement that mineral oil is sometimes substituted for the original linseed oil, the extracted oil was examined and proved to be free from adulteration. Among the phosphates and bone manures was a sample of tillage sold at £11 5s. per ton, whereas his valuation showed that it was not worth more than £6 10s. Another sample had been sold as dissolved bones; the analysis showed it to be superphosphate of lime. In three of the examinations for poisons, the poisonous alkaloid strychnine was found to be present. Twenty-eight of the forty-seven waters analysed were bad and unfit for use, three were doubtful, and sixteen were reported to be of good quality.

A Visit to Hadlow Experimental Station.

A small company of gentlemen spent a pleasant day last Tuesday in a visit of inspection round the experimental grounds at Hadlow (Kent), and were fortunate in having as guides on the occasion Dr. Dyer and Mr. Shrivell.

These experiments were begun about eleven years ago with the principal object of investigating whether the large quantities of purchased stable-manure generally used by hop-growers and market gardeners could not be reduced without prejudice to the yields obtained, and how far a portion of the dung could be profitably supplemented by artificial manures.

Market gardeners very commonly use 25 tons, and occasionally as much as 30 tons stable manure per acre, involving an excessive expenditure, and it was felt that it would be doing the grower a great service, if it could be demonstrated, that a great part of this heavy outlay could be avoided.

The experiments have been made with nearly every kind of market garden crop, and have been arranged to contrast the effect of dressings of 25 tons of dung against a moderate dressing of 12½ tons supplemented by artificials, and against artificials alone.

The growth of the crops on the various plots at the present time, owing to the cold spring and the long drought, is not sufficiently advanced to enable any definite inference to be drawn, but so far as an opinion can be provisionally formed, the results seem to confirm the conclusions arrived at from the experiments of previous seasons, which, as want of space precludes us from giving details, may be summarised by the statement that the best results are in the average obtained by the use of a moderate dressing of 12½ tons of stable manure, supplemented by an application of nitrogen and phosphate, and it is also important to give potash to some of the crops. Market gardeners who have not yet studied the report of Dr. Dyer and Mr. Shrivell on "The Manuring of Market Garden Crops" should get it and read it carefully before deciding on the treatment of their crops next season.

The hop plots have suffered in common with the hops throughout the county, and will produce a small crop, but the best yield will apparently again be obtained from the plot dressed with a small quantity of stable manure supplemented with phosphate, potash, and 8 cwt. of nitrate of soda, applied in successive dressings from January to May. The hop-growing trials are becoming a feature, as many hop-growers visit the station to see the progress of the plants, and guided by the striking results obtained in previous seasons, are now lessening the applications of dung and other bulky manures, and using more freely nitrate of soda with results of a satisfactory character.

This season, for the first time, the experiments include trials on grass for hay. Almost adjoining the station there is a field of nearly 70 acres of grass, and by an arrangement with the owner an acre has been portioned off for the experiments. This acre has been divided up into plots to test the effect of dressings of phosphate, phosphate and potash, and phosphate, potash, and nitrate. When the field was visited the hay had been recently cut and the yield of each plot piled up in a separate cock. The extra yield on the plot that got the complete manure was quite striking, and seemed double the size of the yield on the plot that received no manure. The latter was estimated at about 15 cwt. to the acre against 30 cwt. for the complete manure, making a difference in value of about 45s. per acre, or a net profit, after deducting the cost of the manure of 20s. per acre. One could not help reflecting how greatly it would be to the advantage of farmers if they would study such results and put into practice the obvious lessons.

Experiments with Calcium Cyanamide.

To this month's issue of the *Journal of the Board of Agriculture* Mr. A. D. Hall, director of the Rothamsted Experimental Station, contributes an article on the results of experiments made by him last season with this new form of fertiliser.

Calcium cyanamide, or lime-nitrogen (Kalkstickstoff), seems likely to have a practical interest before long, as it will possibly be offered in this country on a commercial scale during next season. Last winter and spring the German National Society of Agriculture supplied many of their members who desired to make trials with small parcels at the price of £11 per ton on the basis of 19 per cent. nitrogen, so that the unit of fertilising ingredient in it was substantially cheaper than in sulphate of ammonia. As it was tried by a great many farmers, there will be, before next season, information of the results obtained in farming practice. Meanwhile, the report of Mr. Hall will be read with interest. The material supplied to Rothamsted by the Cyanid Gesellschaft of Berlin was a fine black powder, which yielded on analysis 20.3 per cent. nitrogen, being thus only a trifle poorer in nitrogen than ordinary sulphate of ammonia, which contains about 20.5 per cent. In all cases it was compared with sulphate of ammonia, the trial plots being also supplied with phosphate and potash, so as to provide a complete manure, and make the test between the nitrogen in the cyanamide and an sulphate of ammonia a fair one.

The trials were made in barley and mangels, and taking the results together, as well as those obtained in 1904, it is clear that the nitrogen in calcium cyanamide is practically of the same value as

that in sulphate of ammonia. There is a slight balance of evidence in favour of the sulphate of ammonia, chiefly manifested in the early stages of the growth of the crop, probably because the cyanamide is a little slower in coming into action, but the differences in the results are small and within the range of errors of experiment. Again, the Rothamsted soil is fairly well supplied with carbonate of lime, hence the sulphate of ammonia can exert its proper action, while no benefit is derived from the carbonate of lime which is produced in the soil from the cyanamide. Calcium cyanamide is decomposed within the soil into ammonia and calcium carbonate, 1 cwt. of cyanamide giving rise to at least 140 lb. of carbonate of lime. On many soils, particularly the clays and peaty soils, for which sulphate of ammonia is an unsuitable manure because it behaves like an acid, this carbonate of lime would be of value and should be counted to the credit of cyanamide as a manure.

The chief practical drawback to the use of cyanamide lies in the fact that it cannot be mixed with manures like superphosphate, but must be sown separately and scuffed into the soil some days before the seed is sown.

We hope that before another season begins this new material will be available in this country, but if not, we would suggest that the Royal Agricultural Society imitate the example of the German Society and arrange to place small quantities for trial purposes at cost price at the disposal of their members.

The quality of permanent pastures, writes Sibson, varies to a greater extent than any other kind of cultivated land; while some districts are remarkable for the richness and luxuriance of their grass land, in others the natural pasture is so poor and scanty as to afford little subsistence to the animals kept upon it, but such poor pasture can be greatly improved by treatment, especially by the application of suitable fertilisers.

Humus and Soil Fertility.

The following is a summary of the relation of humus to soil fertility, as given in the U.S. Year Book of Agriculture:—

1. The decline in the crop-producing power of many soils is due to a loss of the partially decomposed animal and vegetable matters known as humus.

2. The humus of the soil is decreased by the continuous cultivation of grain, cotton, potatoes, or any crop with which the land is kept constantly under the plough without the addition of any humus-forming materials.

3. The loss of humus involves a loss of the nitrogen, which is one of the elements composing humus. The loss of nitrogen from the soil is not always due simply to the nitrogen removed by the crop, but is frequently caused by waste of the humus by improper methods and systems of cultivation.

4. The humus of the soil is increased by the use of well-prepared farm manures, and by a systematic rotation of crops in which grasses, or preferably clover, form an important part.

5. The loss of humus from the soil results in decreasing its power of storing up and properly supplying crops with water. Soils with a liberal amount of humus are capable of more effectively withstanding drought than similar soils with less humus. In arid regions the loss of humus from the soil is more serious than in the regions of continuous summer rains.

6. In sandy soils the loss of humus is most severely felt. In poorly drained soils, where there is a deficiency of lime, potash and other similar materials, the humus may form sour mould, but this can usually be corrected by a dressing of lime, marl, or wood ashes.

7. Humus-forming materials, like the decaying animal and vegetable matters in farm manures, have the power of combining with the potash and phosphoric acid of the soil to form humates which are readily assimilated by plants when acted upon by the proper soil organism. These humates thus increase to a marked extent the available plant food of the soil.

8. Farm manures and other humus-forming materials are not only valuable for the elements of fertility which they contain, but also for the power of making the inert material of the soil more available to plants.

9. In soil where there is a good stock of reserve matter it is cheaper to cultivate fertility through the agency of humus than it is to purchase it in the form of commercial fertilisers.

According to the report of the Analytical Department of the Midland Agricultural Institute for 1905—

Refuse materials often well repay the cost of analysis. In several cases analyses of samples have shown the worthlessness of the bulk, whereas on the other hand some waste materials have been shown to be exceedingly valuable as manures.

A sample of nitrate of soda contained 93.44 per cent. with a guarantee of 95 per cent. There is also further evidence that nitrates of lower quality are now on sale in the Midlands.

A new feature this year is the introduction of sixteenpenny tests for fat in milk. These tests are made by a reliable mechanical apparatus (The Gerber Milk Tester), and though not a chemical analysis, the results are quite trustworthy. The reports can be sent by return of post, and much benefit has been derived by farmers who have made use of the tests. The practical bearing of many points of interest have been brought up by these tests.

The difference in quality between the nights' and mornings' milk, which has been shown to be largely due to the length of the interval between milkings, is a serious source of trouble to some farmers.

LIVE STOCK TO ACREAGE AND POPULATION.

In his preface to the complete volume of the Agricultural Returns for 1905, recently published, Major Cragie treats on an interesting subject by making a comparison of the numbers of live stock to acreage and population, or, in other words, the cattle and sheep fourteen different European countries have to every 1,000 acres, and the number of persons to each 1,000 acres. Belgium and Holland possess denser populations than the United Kingdom, and have more cattle but considerably less sheep. The statement is made that with scarcely an exception the number of cattle corresponds to the density of populations. Thus, while the United Kingdom can boast of 558 persons and 150 cattle to 1,000 acres, Belgium has 972 of the former and 245 of the latter; Holland, 685 and 210; Germany, 424

and 145; Austria, 360 and 128; France, 300 and 168; Switzerland, 346 and 135; and Denmark, 269 and 194. The British Isles very much exceed the other countries in numbers of sheep, the count being 374 to every 1,000 acres, whereas Germany owns only 59. Of the countries named, France has the nearest approach to our quotient, this being 137. Apparently there have been heavy losses in the flocks of the continental nations to partly account for these discrepancies.

In another place Major Cragie gives the proportions of the principal crops grown on every thousand acres in the different European countries, by analysing which we perceive one principal reason for our supremacy in sheep returns. In the British Isles 125 are appropriated to roots, but in Germany only 46, and in France 38, no European country comparing with the United Kingdom except Belgium, which, according to the statement given, stands highest as a root-growing country, 200 being the figure set down, which would be a fifth part of the entire arable area. If, however, the acres which grow beet for the sugar factories be deducted, the roots grown in Belgium for stock-feeding would probably not exceed our own. In 1904 the Belgian root acreage had the following division:—Turnips 355, 314 acres, mangels 147, 346, carrots 32, 851, sugar-beet 109, 426.

Potatoes are no doubt grown more largely for stock on the Continent than in this country, and it may be of interest to add some statistics in reference to them. While in the United Kingdom 68 acres to every 1,000 are grown, in Germany the proportion is 126, in France 57, in Austria 102, in Belgium 117, and in Holland 170. If these figures are reliable, the Dutch are more extensive potato growers than the Germans. There was a strong movement two years since for extending the culture of the esculent in this country.

Whether Major Cragie had this in mind or not does not appear in his suggestion to the British agriculturist of making a closer comparison between the agricultural position of the German Empire and our own. But apparently we already grow enough potatoes for the edible wants of our population, and the speculations of theorists consequently rest solely on the profits to accrue by extending the culture to the heavier-cropping, coarser kinds only available for stock-feeding or distilling purposes.

FARM MACHINERY and IMPLEMENTS have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

Delay on the Railway: Farmer's Successful Claim.

At Lynn County Court last week Richard Allen, a fruit grower, St. Germans, Norfolk, sued the Great Northern Railway Company for £5, damage to cabbage plants. The plaintiff's case was that he sent 30,000 cabbage plants from Swineshead to King's Lynn on September 11 last, and they did not arrive until the 14th, when they were spoiled.

The plants were consigned at owner's risk, and the company's solicitor contended that such delay as there had been was unavoidable, the size of the consignment not warranting the provision of a special through truck. The plants were sent off from Swineshead at 5 p.m., and delays at Boston and Spalding were due to transhipment, the plants arriving at Lynn at midnight the following day.

Judge Willis, K.C., held that there had been wilful misconduct on the part of the company. As they stated nothing to the contrary, he must hold that they had undertaken to forward the goods within a reasonable time. The delay complained of was not caused by accident or by neglect, but was caused intentionally by the company. Having regard to their obligations to deliver the goods within a reasonable time, they had caused such a delay as to destroy the life and worth of the plants. Judgment would be given for the plaintiff for £4 and costs.

Polluted Water.

What remedy have I in a case where the water provided for my cattle to drink is polluted by my neighbour's sewage? What is the proper way to proceed in the matter?—R.

[Probably the best way to proceed is to place the matter in the hands of a solicitor, and see if you can abate the nuisance by the aid of a solicitor's letter or two. He would probably advise you in case of your then being unsuccessful, to apply for an injunction to prevent the person who is polluting your water from continuing to pollute it. This, no doubt, would be by action in the County Court. At the same time you would claim nominal damages. You have only very generally stated the facts that your water is polluted, but you have not given me any information or details to enable me to judge whether your neighbour has any prescriptive rights in the matter.—BARRISTER-AT-LAW.]

Chester Cheese Fair.

Mr. Challinor reports upon the above as follows:—There was a pitch of 50 tons; good attendance of buyers. Though the prices of last week were maintained, the tone was hardly as good. Prices:—Best, 63s. to 67s. 6d.; medium, 58s. to 62s.; lower grades down to 55s. All cleared.

Death from Anthrax.—An inquest was held at Portsmouth on Wednesday afternoon on William Robert Lipscombe, journeyman butcher, who was found to have died from anthrax. He was not a slaughterman, and how he contracted the disease is a mystery. His employer's son has also been ill from anthrax, but is making a good recovery. The doctor stated that this disease did not often occur in the south of England, and he had never known a case before in Portsmouth.

Notes of the Week.

Mr. Drysdale, of Haddington, told the Railway Rates Committee that the charge for fresh meat from Glasgow to London was 70s. per ton, and on frozen meat 45s. per ton.

A single concrete case like this is conclusive proof of preferential railway rate, and should be vigorously taken up by the Board of Agriculture.

Sir Edward Strachey, representing the Board of Agriculture, does not agree that the farmers have nothing to complain of in the matter of railway rates.

We suggest that all farmers suffering from unfair treatment in this matter should send full particulars to the Board.

In this instance it will not be necessary for the Board to consult that terrible bogey, the Chancellor of the Exchequer, before taking action.

The hop crop, as seen during a drive round Tonbridge, seems to be in a parlous condition.

Delayed in its growth by the cold spring, attacked by fly and lice, it is past praying for.

The worst crop for thirty years, said an old hop grower.

The expense of the continual washings is enormous. The planter said that his crop would cost him over £60 per acre, and the yield will be not more than 8 cwt. per acre.

And yet it is not improbable that the financial result will be more satisfactory than last year when he grew 20 cwt. to the acre.

It is a paradoxical crop to cultivate; but there is a fascination about it that the Kentish hop grower cannot resist.

The Russian Duma has been dissolved by the acidity of the Government, but, like superphosphate, it will revert to an insoluble condition, and will continue to fertilise the popular growth of discontent.

That remark is not out of place in an agricultural paper, because it is the neglect of agrarian grievances which has led in a great measure to the present lamentable position.

It illustrates the fact which no Government should overlook—that the bedrock of a country's internal happiness rests on contented agricultural classes.

Mr. Jesse Collings, the apostle of "three acres and a cow," has written a book on "Land Reform," which is an interesting contribution to a most difficult problem.

He advocates measures which, in his opinion, would result in the resurrection of the old yeoman class and the peasant proprietor.

The peasant proprietors of France are the foundation of the remarkable prosperity of that country. It was their savings that paid off the enormous indemnity paid to Germany after the disastrous war of 1870.

Wellington said that the battle of Waterloo was won on the cricket fields of Eton and other public schools. It would probably be more true to say that the victories of the Peninsular War ending in Waterloo were won by the muscles and stamina of the sons of British yeomen and hardy British peasants.

The increase and maintenance of such men is a consummation devoutly to be wished, but it is not consistent under the existing fiscal system.

The French and Belgian small holders would be soon starved out in this country. No doubt they work hard and live sparingly, but the source of their success is the protection afforded them by their Government.

Small holdings in this country near to towns can exist, but if created on a large scale scattered over the country in districts away from towns where land is cheaper, they could not make a permanent living under the system of free imports.

We can keep on tinkering with land reform and express a sentimental sympathy with the idea, but without a radical change it is simply a waste of energy.

In another manner, the cry of "Back to the

land" is taking a novel and burlesque turn—parties of the unemployed have become land grabbers of waste plots of land in the neighbourhood of Manchester, London, and Bradford.

It is said they intend to also capture a part of the historic forest of Epping.

That some of them belong to the rough element of society is shown by the fact that one man threw a piece of bacon in another man's face, and afterwards bombarded with bricks the other men who were quietly eating in their tent.

They are now engaged in reaping a fine harvest by the sale of picture postcards illustrating their camp.

That is probably the only crop they will get, and won't last long. Earning their bread by the sweat of their brows is a proceeding many of them don't seem to appreciate.

"Refuse may be shot here" is the idea which foreigners have of this country.

Growers and producers should take energetic measures through their associations to instruct the public as to the purity and greater wholesomeness of home products.

The West Indian Committee, with the meritorious object of protecting the interests of West Indian cane sugar, prosecute any tradesman selling beetroot sugar as cane sugar.

And they are disseminating, by means of appropriate literature, information about the superior quality of their goods.

Our home-grown products should be similarly pushed against inferior importations.

In a novel, "Frankenstein," widely read some years ago, a scientific man made a mechanical giant, and succeeded in inspiring it with life.

The monster, docile at first, soon developed qualities which made it an object of hatred and fear.

When last seen it was chasing its unhappy maker towards the confines of the North Pole.

So, it seems to me, will the Liberal creation, Free Trade, unless kept under control, eventually drive the party, whose perception of it at present takes such exaggerated forms, into the cold shades of oblivion.

It is not necessary to be a whole-hog—to use an inelegant but expressive phrase—protectionist to hold this view, because it will be shared by any man willing to consider on their merits questions as they arise.

For instance, it is under the aegis of this artificial giant that efforts are being made to promote arrangements which might spread disease among our stock.

Or, take another case. There are now several infant agricultural industries struggling into life, but this monster threatens to strangle them.

Consider the sugar beet industry. Unless the hands of the creature can be kept from smashing up the Brussels Convention, it will certainly be crushed out of existence almost directly after birth.

The Earl of Crewe stated the other day in the House of Lords that sugar beet growing had already "entered the sphere of commerce" in this country. Has a ton of home-made beet sugar been sold commercially?

His statement might, perhaps, be characterised as a terminological, &c.

Then there is tobacco cultivation in Ireland. The experiments have made most satisfactory progress.

It is demonstrated clearly that the soil and climate are suitable.

But can the infant industry in the first stages

THE [FARMERS' DIARY.]

TUESDAY, JULY 31.—Cliffe Agricultural Show—Abergavenny Fair—Alfreton Horse Fair—Horse Sales at Wrexham and Colwyn Bay—Sheep Sales at Salisbury—Mr. Eaton's Lecture on Plant Breeding, 10.30 a.m., Horticultural Hall, Vincent Square—Guiseborough Wool Fair—Preston Cheese Fair—Linton Sheep Fair—Uttoxeter Fair—Market Harborough Agricultural Fair—Alford Sheep and Lamb Fair—Entries close for the Wisbech Show.

WEDNESDAY, AUGUST 1.—Agricultural Shows at Whitechurch, Darlington, Bridlington, and Addington by Macclesfield Joint Agricultural and Horticultural Show at Wadebridge—Great Annual Sale of Southdown Sheep at Chichester—Hackney Sale at Monmouth—Oxfordshire Down Ram Sale at Upper Winchendon, near Aylesbury—Suffolk Sheep Sale at Ingwich—Potato Lifting Experiments at Marks Tey—Barnard Castle, Clitheroe, and Oswestry Agricultural Fairs.

THURSDAY, AUGUST 2.—Alford Horse and Agricultural Show—Wooler Agricultural Show (for Glendale)—Buckingham Agricultural Show at Aylesbury—Pembroke Agricultural Show at Haverfordwest—First day of the Lancashire Show at Cheltenham—Chalks Ram Sale at Cambridge—Chapman's Ram Sale at Totnes—Ram Sale at Rotherhithe—Sale of Guernsey Cattle at Bangor—Banquet of the Plant Breeding Conference—Acrington, Doncaster, and Newark Agricultural Fairs.

FRIDAY, AUGUST 3.—Second day of the Show at Lancaster—Ayrton Show—Hampshire Down Sheep Sale at Winterbourne Stoke—Shrewsbury Great Market—Suffolk Sheep Sale, Melton, Suffolk—Sheep dog Trials at Plas-y-Vlod (Vale of Llangollen)—The International Conference on Plant Breeding visits Kew and Gunnersbury—Redruth and Stockport Agricultural Fairs.

SATURDAY, AUGUST 4.—Lancaster Show, third day—Padiham Show—Blandford Agricultural Fair—Many cheap trains for the Bank Holiday with tickets available till Tuesday should be noted by those wishing to visit the Agricultural Shows of Monday—Buckingham Fair—Entries close for Weylesdale Agricultural Show.

MONDAY, AUGUST 6.—Bank Holiday: All Corn Markets closed—the Battle closed—Last day of the Lancaster Show—Hereford Great Horse Show—Horse Shows at Bekeley, Lydford, Stamford, Rugby (Yorkshire), Kingston-on-Soar, South Brent, Tisbury, Wisbech, and Waltham Cross—Agricultural Shows at Ludlow, Lutterworth, Clumber Park (Notts), Durham Down (Glos.), and Hexham—Large Fairs at Abingdon, Bicester, Boston, Dorchester, Northampton, and Trowbridge—Entries close for Bognor Horse Show.

TUESDAY, AUGUST 7.—Welbeck Tenants' Agricultural Show—Welbeck Open Show—Compton Stud Show at Templecombe—Hampshire Down Sheep Sale at Salisbury—Hackney Sale at Market Weighton—Trowbridge Great Fair, second day—Derby Cheese Fair—Entries close for Cheshire Agricultural Show at Chester.

hope to meet with success the competition of America and the East Indies?

Directly it shows signs of entering the commercial stage the monster will crush it out of existence.

Is there no *via media* between being a hide-bound protectionist or a slave of this creation labelled "Free Trade"?

Young industries, like young people, should be encouraged and helped until able to stand alone.

Then later on they add stability, employment, wealth, and comfort to the position of the country or parent who had the power and wisdom to give them a start in life.

Agricultural Education in Lancashire.

The Lancashire County Council offers free education to farmers' sons and daughters and others engaged or likely to be engaged in agricultural pursuits who are residents of the administrative county of Lancaster, and in addition makes an allowance in aid of board and lodgings at Preston, or for travelling expenses there. The classes are held at the Harris Institute, Preston, and the session lasts from about the last week in September to the end of April in each year.

Education, with board and lodging, is given in butter-making and cheese-making, milk sterilisation and bread-making, and poultry keeping, free of cost, to students attending the dairy school at the County Council Farm, Hutton, near Preston. Instruction in butter-making and cheese-making is given where required in the county free of cost. Lectures and advice are given in agriculture, horticulture, beekeeping, and poultry keeping, whilst valuable scholarships and exhibitions are offered annually. Full particulars may be obtained from the Director of Education, County Offices, Preston.

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of the last MARKET SUPPLEMENT.

Notes and Jottings.

The rains of the past week appear to have been very partial. In some districts, notably parts of Northamptonshire and adjoining districts, the grass feed has become very short during the last few days and the ground presenting quite a parched and burned appearance. This, together with the plague of flies, which have inficted the greatest torture upon all kinds of cattle out in the fields, must have had a very prejudicial effect upon both the yield of milk and the growth and progress of the young cattle and fatting beasts in those parts. Travelling last week through some good tillage and mixed farming lands, the more than usual fields and parts of fields set apart for the growth of green fodder now being cut, gave very material evidence of the value at a time like the present of a good cut of spring sown tares, or where the soil is suitable, that succulent and durable plant lucerne.

In some parts of Ireland there appears to have been a wasting disease rather busy amongst young cattle of from ten to eighteen months old that has caused investigation to be made into the causes, and possible remedies of and for the disease. Such a disease is not by any means uncommon in England, though it seldom assumes the form of an epidemic, usually satisfying its ravages by causing the death of one or two yearlings, perhaps, out of a rear of fifteen or twenty animals. We cordially endorse at least one of the preventive remedies suggested by the Dublin authorities, that of dressing the grass land upon which these young stock have to be grazed with a good dressing of lime—say, three tons per acre.

The complaint referred to has also, in the writer's experience, been much minimised, and in many cases prevented altogether by herding the calves of the first year and up to Midsummer of their second year upon first or second year's seeds. By doing this there is no danger of their picking up any ill effects that may have been left upon the land by the cattle grazed there the previous year, and whilst the animals are so young they are certainly much more liable to be some affected by things that you do not want than when their constitutions have strengthened and their stomachs enabled to stand older and richer grass, and to withstand with impunity any slight infection that may have been left from the previous grazing.

Lime as a dressing for pastures has the greatest possible sweetening effect upon the herbage, cattle after a dressing of this will eat of the fields to the very roots, invariably doing better upon lime than has been so dressed than upon fields that remain sour and coarse, and when cattle of any age appreciate their pasture so as to keep it eaten off evenly and pretty close (not to starvation), they invariably thrive and grow amazingly, and whilst their rapid growth and thriving go on, disease of any kind has much less chance of obtaining a footing, the constitution being strengthened so very much by the thriving that the suitable pastures have brought about.

There is one other matter that is more often than not a fruitful source of the disease referred to above, and that is the allowing the calves during their first year to have received a check in their growth by having perhaps during the summer changed them from a pasture that suited them to one that they did not thrive upon as well; this changing frequently has to be done from force of circumstances, such as shortness of keep or otherwise, and it is often difficult to keep the young stock at the proper level, it also frequently happens that in the winter season the root supply will run short, and they have to be put upon curtailed rations. An easy way of preventing this is by substituting a small quantity of cake or meal for the lessened root supply. Every effort ought to be made, at whatever cost, to prevent shrinkage, at this early age, or this wasting is pretty certain to give trouble.

The Sussex breed of cattle has made very rapid strides in recent years both as regards the matters of symmetry and also early maturity, two qualifications that very generally go hand-in-hand. The stronghold of the breed is in the county—lies rather at an extreme portion of the country, away from what may be

called the farmer's beaten track, that little is seen or heard of these beasts by the general stock-breeding public except on the occasions of the Smithfield and Royal shows, when the classes open to them are most frequently about as attractive in appearance, and so far as development for age and quality of beef, about as good as anything in the shows mentioned. If the Sussex Cattle Society has funds at its disposal it might do worse than offer an attractive sum for prizes at the Birmingham Christmas Show. That show is visited by a very great number of feeders of cattle each year, and the classes would prove an additional attraction and help the show society as well as probably by introducing the breed to feeders of the Midlands, be the means of many droves of steers being purchased for feeding in those parts, and so help business in every way.

This beautiful breed of cattle are said to have made a most attractive display at their own county show at Brighton the other week, and travelling through their district recently, the herds, as seen from the railway, mostly appeared in very good condition. Like some or most of the other beef breeds, these cattle are not quite satisfactory at the pail, and in common with the other like breeds would benefit much in value were their patrons to pay a little more attention to the lactal product. We do not suggest any going to the other extreme, but simply to breed with the object of producing neat and square udders of a capacity that would turn out eight to ten quarts a day for a few weeks when freshly calved and well fed.

The recommendations given in the milk and food preservatives inquiry is quite open to considerable questioning as to the use of these preservatives being necessarily so restricted. Speaking from personal experience, we have upon occasions found that the additions of some preservative to the new or skimmed milk given to calves being of the greatest possible benefit when an attack of scour has been troublesome. Of course, to make such use of the articles would not be offering the food for sale to the public, and therefore the user would not be liable to prosecution, at the same time material that has proved so beneficial to calves of a few days old one would scarcely think could be very harmful to human beings. The evidence of large dairymen, whose extensive business will pay for any expensive and extravagant means for cooling and storing milk and butter is one thing; but the small farmer and consumer, whose business will not run to these expensive methods of preserving these perishable articles, are very differently placed.

The adulteration of butter and substitution of other mixtures for pure butter is a matter that we have for many years pointed out as demanding most urgent and strict attention. There is no doubt that there were many of these mixtures looked into and their manufacture noted and made public, the recent tinne-meat scare would pretty nearly find a parallel. Pure and good fresh butter for the medical profession to-day declare to be one of the most wholesome foods we have, and therefore nourishing; but depend upon it, many of the substitutes would be far from giving such results, and the manufacture and sale of these articles has had such a deterrent effect upon butter-dairying by lowering the price that very few farmers in England with herds of any extent care to follow that branch of the dairying industry.

The meat markets appear to be more variable this year than usual as regards prices obtainable; why this should be is rather difficult to see, for whilst in some districts sellers express their ability to obtain 7d. per lb. for good beef, sinking the offal, others within say, 100 miles by rail, are unable to get more than from 6d. to 6½d. on the ninety stone bullock, 1d. a lb. on the carcass means 31b. per head upon the beast, and this means going a long way towards making either profit or loss. Dealers as a rule reduce these variations to practically nothing beyond the cost of transit from the quay to the dear market, but for some reason or other the variation appears to be greater than it used to be between markets in one part of the country and those in another neighbourhood. Whether the weighing machine accounts for any of this alteration is not known, but it is quite possible that the loss in weight during transit is now taken into account, and the dealers, probably, have to take a lesser profit, or that their profit has to be made by charging a higher price per pound than when they used to buy and sell by hand, as it is termed, when the allowance to cover costs and profit was anywhere between 5s. and 25s. per head.

ALL MISCELLANEOUS ARTICLES of FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." This charge is very moderate, and consistent with the profit such small goods yield.

Sale of Mr. D. Arkell's Shorthorns.

The entire herd of Shorthorns belonging to Mr. Daniel Arkell, of Butler's Court, Lechlade, Gloucestershire, was sold by auction on Tuesday, Mr. Thornton, of the firm of Messrs. Thornton and Co., acting as auctioneers. Favoured by a hot, fine day, large crowds of breeders and stock-raising farmers assembled to witness the sale, and were entertained to luncheon before the proceedings commenced with true Gloucestershire hospitality.

The herd was of very long standing, as it has been in existence since 1872, and is descended from animals purchased from Mr. Arkell's father, who kept a herd at Dadgrove as long ago as 1811. The stock was in a healthy, regular breeding state, and although not got up for sale was in nice condition, and most of the cows showed square, well-shaped udders, and had strong rich-coloured calves running with them. Most of the herd consisted of the First family, the original cow of which was brought down from Yorkshire by Messrs. Strickland and bought by Mr. Arkell's father at Appleby Court, Tewkesbury, in 1848. The remainder of the herd were of the Pye tribe bred for many years by Messrs. Garne and the Lady Dennisons which came from Lord Sherborne.

The prices were even and good, the highest being 149 guineas given by Mr. Samuel Sanday for Frost 108th, a fine red cow by Royal Oak. Mr. E. S. Godsell gave 135 guineas for Frost 95th by Mr. Garne's Roan Wrestler, and her roan bull calf, a month old, goes to Mrs. Fox for 38 guineas. The sale started well, for several of the old cows made up to 50 guineas, one going at that price to Mr. Howell, Ireland, and another to Mr. E. Phillips in the county. Frost 86th was selected by Mr. W. Hipwell, of Bedfordshire; this was a large-framed fine cow, and a red two-year-old heifer of the same tribe went to the same buyer. The first Pye cow, Princess of Fashion 7th, was bought by Mr. E. W. Bishop, who also gave 50 guineas for a red red Frost yearling. Frost 116th and her red bull calf went to Mr. J. H. Yeomans at 85 guineas the pair, with a roan three-year-old at 85 guineas. Mr. W. T. Garne bid well for some of the best lots, among them being Lady Dennison 38th, 145 guineas; Frost 124th, 48 guineas; and Primrose 10th, a grand white heifer, 41 guineas. Sir R. P. Cooper paid 83 guineas for the roan two-year-old Frost 130th, and others of this age went to Mr. H. Wilson, 57 guineas; H. Webb, 46 guineas, and Mr. J. N. Attwater, 40 guineas. The top figure in the yearlings was given by Mr. S. Sanday, a red Frost making 85 guineas; Mr. F. Phillips, Mr. Ro's, and Sir A. Henderson, Bart., also got good ones of this age.

The bull in service was Mr. A. Hiscock's Dorset Hero, and he must be reckoned at the 50 guineas he received from Mr. Thompson. Mr. Thompson got a pair of good bulls at 60 guineas and 52 guineas, and one was bought for Portugal at 43 guineas. The capital average of £52 18s. 10d. was realised for the fifty-eight head, the total of the sale being £3,070 14s. 6d.

Aspatira Agricultural College.

In presenting the prizes at the Aspatira (Cumberland) Agricultural College, Mr. G. Langridge, president of the Surveyors' Institution, stated that the science of agriculture and its companion subjects of forestry and land agency still held many secrets for the good of mankind yet to be revealed. Of some they had faint clues to follow up, and others yet lay hidden. Agriculture in England had been passing through a stage of deep depression. The clouds had not yet rolled away. Changed circumstances required change of practice, with the requisite knowledge to make these changes on the right lines and to avoid serious mistakes.

The late Sir Wilfrid Lawson, Bart., M.P., one of the founders of the College thirty-two years ago, and its first president, had promised to take the chair, and his place was taken by the new baronet, who has consented to succeed his late father as president.

In his annual report the principal, Mr. J. Smith Hill, stated that though not characterised by any specially brilliant achievement, the report was a record of steady, honest, solid work on the whole. Farming and the management of land were perhaps, occupying not so attractive as other careers to the boy who carried off many prizes at school; to engage in the former there must be a decided bias towards a country life. It was therefore gratifying to find, specially as was the case this year, that an agricultural course brought out, in several instances, powers lying latent during their school careers, which had not caused the possessors of them to appear specially among prize winners, or to figure successfully at examinations while at school. The trainer of youth gained renewed encouragement in his work in meeting with such cases and with the recognition which they generally brought.

Sale of the Ruddington Pigs.

Large Whites.

The entire herd of Large White pigs, bred for some many years at Ruddington by the late Mr. Philo L. Mills, was sold by auction on Wednesday last by Messrs. John Thornton and Co., at the Home Farm, near Nottingham. A large company assembled, among them being representatives of North and South America, Germany, Hungary, and many well-known English and Scottish breeders. Like all the stock on the farm, the pigs were in excellent condition, and a brisk sale was experienced. Mr. W. Wallace gave the highest price, viz., 37 guineas, for the three-year-old sow Miss Hollingworth 180th, and Mr. M. Marshall 27 guineas for Empress Elect, both of which go across the border. Mr. H. R. Hankins paid 28 guineas for the fine prize boar Benet-plate, and 31 guineas for a sow Miss Hollingworth 157th, to go to Germany with several others at good prices. Some capital purchases were also made for the Argentine. Altogether the sale was most satisfactory, an all round average of £9 5s. being obtained for the 157 pigs catalogued.

Derk-shires.

The choice herd of Berkshire pigs were sold on the following day, to the Large Whites by Messrs. Thornton and Co. There was again a good company, many distinguished breeders being represented. The pigs were brought out in excellent condition by the old pigman Button, and a most satisfactory sale resulted. Lord Carnarvon's worth £19 guineas for the fine old sow Honeydrop. Mr. R. W. Hudson 30 guineas for one of the Ruddington Pattie's, and Mr. C. H. Burners 21 guineas for her own sister. The Hon. Claud Portman secured several good lots to go to Goodie, among them being Crown Gem 2nd, a stylish gilt, at 15 guineas. Among other principal purchasers were Lord Middleton, Lord Polwarth, Sir Thomas Gooch, General W. Wood, Mr. J. R. Brown, Mr. G. J. Chetwynd, and Mr. T. N. Parr. The sale resulted in an all-round average of £9 6s. 6d., many of the later lots being very young.

Northern Notes.

ANY movement, how ever humble it may be, which has for its object the knitting together of the units which go to make up the world of agriculture, is deserving of hearty recognition. Landlords and persons might do a great deal more than is attempted in fostering amongst villagers a love for the surroundings in which they were born. Our county councils have done something on the lines we suggest by promoting lectures on horticulture and dairying, by the setting up of experimental farms, and by offering scholarships tenable at agricultural colleges. Something is accomplished when the people are asked to rely somewhat upon their own efforts; self-help is an ideal that needs to be inculcated. Where this is done in the villages, a ready response is the result. Just such a society as we have conjured up exists at the village of Kitham (once a market town), in the east of Yorkshire. A fifth annual show has just been held there by a society established by a former vicar for encouraging amongst the cottagers allotment cultivation, dairying, poultry rearing, and home industries.

THE villagers of this populous parish are well off with regard to allotment land, there being set apart from 100 to 150 acres of excellent tillage, let in reasonable plots up to ten acres by two landowners at a reasonable rent. A settled interest is thereby established, and the tenants are placed in easier circumstances than are other labourers where allotments are not provided. Floral culture is also encouraged, as well as fruit and vegetable growing. Plain cookery and the making of confectionery are included in the prize schedule; while the specimens of industry worked by juveniles were a pleasure to behold. One could not but reflect upon the future of the industrious youths of Kitham, and predict for the women folk happy homes and contented husbands.

A WRITER in a northern paper gives a hint how we may usefully employ orphan and other children who are committed to the care of orphanages and other homes, instead of sending them out of the country to pick up the elements

of farming. They may be taught equally well at home to become good and useful citizens. If available land could only be purchased on suitable terms. At any rate, no difficulties ought to be experienced in the acquisition of training centres. Such places, it is suggested, might be found in many parts of the country where corn growing is unprofitable, and they could easily be made the medium for imparting horticultural and agricultural knowledge to stalwart members of both sexes. The college at Swanley, in Kent, is a notable example of what women can do under proper guidance as agriculturists and gardeners. Women will in the time to come be able to supplant men now filling posts as head gardeners. They may also provide the brains on our farmssteads.

THE police in the north are busy giving warning to farmers and graziers in the matter of the sheep-dipping orders. Such like duties are pressing hardly upon rural police, coming as they do on top of the swine fever order work. Soon the poor police officers will hardly have any time on their hands in which to perform their ordinary duties, and the game preserves will be left entirely to the care of the "keepers." The North Riding of Yorkshire is a sheep-dipping area; the East Riding is not in the schedule. It is not anticipated that there will be anything like the difficulty experienced in carrying out the sheep-dipping orders as there is in connection with the swine fever orders, which are of so complicated a nature as to have drawn from a representative of a county council in the north the frank admission that the administrators of the orders themselves are not infrequently perplexed as to whether they rightly interpret them, or otherwise. When officials are in a dilemma, what shortcomings will not the poor laymen be innocently guilty of?

A RUMOUR referred to in this column a fortnight since as to the probable sale of portions of two Yorkshire estates, has since crystallised into fact. I had previously good authority for the statement. Now it appears to be settled that in September the outlying portions of the Lonsborough and Seamer estates, which extend to over 13,000 acres, and yield a net roll of nearly £2,000 per annum, are to be offered by auction. Not so long since a lot of the Earl's property in the business portions of the town of Selby were disposed of by auction. The other estate, portions of which have, it is said, been offered to the sitting tenants, is that of the Viscount Downe. The estate is a very large one, and includes some of the best farmland in East and North Yorkshire. Lord Downe recently practically rebuilt Wykeham Abbey, his place a few miles distant from Scarborough, at great cost, and this, the family seat, contains many valuable portraits by old masters. His lordship entertained Earl Roberts there since its completion. Lady Downe has a magnificent rose garden at Wykeham.

THE situation agriculturally in the North is, generally speaking, favourable. Heavy crops of hay are now secured, for the most part in the best of condition. A heavy thunderstorm on Monday "laid" some of the heavy fields of oats as if a "slape" roller had passed over the corn. The rain accompanying the thunderclaps and forked lightning was very searching, and has done immense good to root crops, which are developing well after a somewhat precarious start. Here and there one hears of the irrepressible finger-and-toe. A Wold farmer assured me that more rain fell in his neighbourhood during the storm in forty-five minutes than in the previous two months. Some oats will be ready for cutting by August 1. The same farmer calculated that the corn crops were one-fifth better than last year. The wheats flowered imperfectly, he says, and "yellow maggots" are attacking the ears, causing, as last year, a deficiency of grain. The vagaries of the climate up here are extraordinary. A West Yorkshire friend wrote only this week on an invitation: "Bring all kinds of clothing with you, as yesterday one would have been all but suffocated with the Biblical fig leaf, and to-day we can almost persuade ourselves to the belief that we hear the he ad angels singing the Christmas hymn!"

DAIRY.

How Sweden Deals with the Butter Question.

In connection with the report of the Butter Committee, which has already been dealt with in our columns, the notes on the Swedish Margarine Law which appear in the June number of the Journal of the Board of Agriculture afford particularly interesting reading. In the new law dealing with margarine, which came into force on May 1st last in Sweden, margarine and margarine cheese are defined as substances resembling butter and cheese respectively which contain fat not derived from milk; and artificial fats (for human consumption) as substances which contain fat other than swine-fat. The Act does not apply to unadulterated fats of animals or plants when they are sold under a designation which clearly indicates their origin.

Sesame oil must be added to margarine during the process of manufacture in the proportion of at least 10 per cent. of the fats or oils employed. The proportion is at least 5 per cent. in the case of margarine cheese. The percentage is calculated apart from the amount of sesame oil which is added.

Persons who manufacture butter or cheese for sale are not allowed to manufacture margarine or margarine cheese on the same premises, and it is forbidden to keep margarine, or the fats employed in its manufacture, on premises where butter is made, packed, or stored for export.

Any person desirous of manufacturing margarine or margarine cheese otherwise than for his own household must inform the authorities. The factory is placed under the control of a Government inspector, who sees that the regulations are properly carried out, and that only good and wholesome materials are used and produced, according to the direction of the Academy of Medicine. The inspector has access at all times to premises where the goods are made and stored, and he is bound to respect trade secrets. He receives a fee which is paid in advance by the manufacturer to the local authority, who determine the amount according to the size of the factory and other circumstances. If the manufacturer allows the payment to fall into arrear, the authorities have power to stop work at the factory until the arrears are paid. If the inspector resides more than two kilometres from the factory he can also claim travelling expenses.

Persons who, except for consumption in their own households, manufacture or trade in margarine, must keep it in vessels which are either quadrangular, or of such an oval form that the length is at least half as much again as the breadth. The words "margarine," or "artificial fats," as the case may be, must be clearly branded, or otherwise durably imprinted on the base, top, and sides of the receptacle. In letters at least 3 centimetres high, together with the name of the manufacturer, or of the importer if the article has been imported. In the retail trade the goods may be exposed for sale in smaller quantities, but they must have a clearly visible label with the proper designation. Margarine cheese must have the words "margarine cheese" impressed upon each surface in letters at least 3 centimetres high, as well as the name of the dairy where it was produced; and the exterior must also be coloured with Oleans red or some other non-poisonous dark red colour.

The above regulations concerning packing, colouring, &c., apply equally to imported and exported goods. If the goods are not offered for sale in vessels of the prescribed form, they must be delivered in a wrapper bearing the words "Margarine," &c., in clear type. Shops, markets, booths, vehicles, &c., where such goods are on sale must also have clearly visible notice indicating the fact, and in all commercial papers such goods must be specified under their proper designation.

Imported goods, declared at the Customs House to be margarine, &c., if not packed according to the regulations, cannot be removed until they are properly shaped and packed by the importer. Margarine which is imported must be marked as of foreign manufacture unless its Swedish origin is proved. Imported and exported margarine or margarine cheese must contain the legal amount of sesame oil, which must be duly declared and attested. If imported or exported goods which are not declared as margarine, &c., are nevertheless suspected, or if the regulations are not followed, the Customs officers must immediately inform the local authorities, who will cause a sample to be taken for examination, after payment of the duty. The cost of analysis is paid by the State unless the goods are adulterated, in which case the owner pays. Samples of margarine and margarine cheese may also be taken generally by various officials.

Contravention of the regulations is punishable by fines, confiscation of goods, notices in local newspapers at the defendants' expense, or by imprisonment.

THE 'INKOOS' MILL

Designed
and
Constructed
in 1895.

Has taken **FIRST PRIZE** wherever entered in competition, defeating the Leading Makers of England and the Continent.

The Plates are Reversible, are More Durable, and Grind Finer than any other Plates on the Market.

CHEAP PORTABLE WOOD BUILDINGS

No. 152.

Any Size Made to Order.

Tenant's Own Fixture.

THE BEST AND CHEAPEST IN THE MARKET.

Suitable for Workshops, Store Rooms, Tool or Potting Sheds, Offices, Wash houses, and many other purposes.

These superior Buildings are constructed in complete sections on strong framework, morticed, tenoned, and pinned; sides and ends covered with best match boards, tongued, grooved, and planed, made from 7-in. boards. Roof covered with match boards and patent asphaltic felt (which requires no tarring). Door with strong lock. Two windows in any position, one to slide open and the other fixed. Fitted with strong floor, necessary bolts and nuts, barge boards and finials. All our houses are erected before leaving our works; every part is marked, so that any handy man can easily erect them in a few minutes.

The Dogs Bill.—In the House of Commons on Tuesday the Dogs Bill, as amended by the Standing Committee, was considered. Lord R. Cecil moved that the owner of a dog should be liable in damages for any injury done by that dog. Sir E. Strachey having explained that the amendment was beyond the scope of the Bill, it was withdrawn. Some discussion ranged round a proposal by Mr. Keir Hardie to remove from the owner of a dog the onus of proving its innocence. Sir E. Strachey and Lord Hemsley opposed the amendment, which Mr. Keir Hardie eventually withdrew. An amendment by Mr. H. Marks that the expression "cattle" should include turkeys, ducks, and geese was rejected by 203 to 31. A motion by Sir P. Hambury to omit the words preventing dogs chasing sheep was withdrawn, and the Bill was read a third time.

The Proposed Regulations for England.

A comparison of the above with the Butter Committee's recommendations should prove interesting to all connected with the butter trade, and we therefore give below the committee's recommendations in full:—

1. That inspectors of the Board of Agriculture and Fisheries and the Department of Agriculture and Technical Instruction for Ireland should have power to enter any premises where they have reasonable grounds for believing that butter is made, blended, reworked, treated by any process, adulterated, or stored.
2. That premises where butter is blended, or reworked, or treated by any process, or where abnormal butter is habitually produced shall be registered with the local authority of the district as a butter factory.
3. That no fat other than butter fat, and no vegetable or other oils, nor any substance capable of being used as an adulterant of butter, should be brought into or stored or be allowed to be in any registered butter factory.
4. That no substance be added to butter whereby the percentage of moisture in the butter is increased.
5. That the addition to butter at any stage of the process of manufacture of any fat not derived from milk be expressly and directly prohibited.
6. That margarine when sold by retail should be handed to the purchaser in a wrapper on which the word "Margarine" shall be printed in black, solid capital letters, not less than half-inch square, and if more than one wrapper is applied to the margarine, the word "Margarine" shall be printed as above on the inner wrapper; that no fancy name or description should be permitted which refers to butter or anything connected with the dairy industry; that the outside wrapper as well as the inside wrapper should contain nothing but the word "Margarine" in type as aforesaid; and if any fancy name is printed on any other wrapper the word "Margarine" should be suffixed or affixed to the fancy name in letters of the same size, colour, and type as those in which the fancy name is printed.
7. That no margarine made in any margarine factory shall, when the process of manufacture is complete, contain more than 16 per cent. of water, and no margarine shall be imported containing more than 16 per cent. of moisture.
8. That premises where margarine is re-worked or submitted to any process shall be registered as margarine factories.
9. That sub-section 3 of section 20 of the Sale of Food and Drugs Act (1899) be amended so as to provide that a warranty or invoice given by a person resident outside the United Kingdom shall not be available as a defence to any proceedings under the Sale of Food and Drugs Act.
10. That penalties for the importation of adulterated butter should be proportionate to the magnitude of the consignment.
11. That all practicable steps should be taken to bring about international agreements as to the prevention of adulteration.
12. That section 4 of the Sale of Food and Drugs Act (1899) should be amended so as to give the Board of Agriculture and Fisheries and the Department of Agriculture and Technical Instruction for Ireland power to fix standards for current and to give the Local Government Board power to fix standards for preservatives.
13. That the Department of Agriculture for Ireland should have power to take proceedings under the Merchandise Marks Act.
14. That nothing should be sold under the name of butter which contains more than 16 per cent. of moisture.
15. That substances other than butter (not being margarine) containing butter fat should be sold with a limit of 24 per cent. of moisture under a name approved by the Board of Agriculture and Fisheries, provided that such name should not be calculated to prejudice the sale of the article.
16. That such substances when sold by retail should be delivered to the purchaser in a wrapper approved by the Board of Agriculture and Fisheries containing a description of the natural substance, and quality of the article, and, as far as possible, under the same conditions as apply to the sale of margarine.
17. That the provisions of the Margarine Act of 1887 as amended by the Sale of Food and Drugs Act (1899) should apply to all such substances.
18. Inspectors acting under the special direction of the local authority should have power to enter butter factories to inspect any process and to take samples.
19. That butter having been treated by any process shall not be allowed to be replaced in the original packages.

Best Sporting Powder is Normal.—The new illustrated catalogue proves this, copy of which, as well as gratis samples, will be sent to all sportsmen on application to THE NORMAL POWDER AND AMMUNITION CO., LTD., Renter's Lane, Hendon, London, N.W.—[ADVT.]

Weather, Crops and Stock.

Exclusive Reports:

Hunts. (South).

THE weather of late has been dull and cool, not altogether unsuitable for the growing crops, if the haymakers would have preferred a little more sun, although, in the opinion of the writer, a great proportion of the hay now gathered has already had most of its feeding qualities converted into fibre and seed. There is still a good deal of brown seedly stub, nicknamed grass, to cut. The owners have made a terrible mistake in leaving the bents in the vain hope that the bottom grass would grow after the rain of a fortnight since. At present the quantity of hay is less than it would have been if the grass had been cut at the proper time, and the quality is very decidedly disimproved. A stroll through the growing corn leaves a favourable impression; it is true that the wheat shows that the blossoming period was not good, but the ears are large, so that each ear may give an average number of kernels. Barley will prove to be over an average in quantity, but just what the quality will be remains to the future. Hay is about two-thirds of a crop. Roots growing well.

Hampshire (Kingston).

WHEAT in this district not much sown, and what there is I do not think will be average crop. Barley and oats are about the same. The crop varies considerably, some being very good and some very bad; on the whole not quite average crop. Clover or field hay mostly light. Water meadows good. Dry meadows very light crop. Mangels are fairly good, plant growing very fast, whilst swedes are a good plant and doing well. Cattle and sheep are healthy, and doing well.

Wiltshire (Devizes).

THE writer of the Wiltshire Survey, which appeared in our issue of July 16, points out a printer's error which crept into his remarks. He was made to say that "I only saw 2,003 pieces of wheat up to the full average," whereas it should have been "two or three pieces." The mistake was an obvious one, for few would suppose that our correspondent would look at 2,003 and be so precise as to the old three. In pointing out the error our correspondent adds a few remarks about present conditions of farming in his district. He says:—"Since my last we have had a few refreshing showers—I mean neither heavy or continuous—and so I take it the hay crop may be called safe, with the crops, taken all round, something under average; but, as usual, quality good where cut early. The barley seems to me to be still improving."

Cumberland (Mid.).

AFTER a cold and most unfriendly May, which seriously retarded the preparation of strong land for green crop, we were favoured with a month of most genial weather, which quickly carried out the old proverb of soon putting all things in tune and produced abundance of grass in all directions, a considerable quantity of which has now been cut and converted into hay and secured in splendid condition. Meadows are now being cut, and are equally as heavy as the seeds that are now chiefly secured. The light and dry land farmers have once more had a great advantage over their strong land rivals. May, though cold and showery, was not so seriously wet as to prevent the sowing of mangels and swedes, so that owing to the extremely suitable weather in June pushed the early sown turnips into rough leaf and ready for thinning a week before the late sown braided above the drills, and the succeeding hot weather suspended their growth. We have had a little rain which will set them at liberty, and there is yet time for the green crop to be a bountiful one all round. The corn crop (oats), almost the only grain cultivated, is very irregular. There are some very promising crops and others very indifferent, and, strange to say, on some of the best land there is the worst prospect, but taking prospects all round so far they are above an average, and the empty harrows are almost certain to be all well filled.

Warwick.

CROPS of corn, as a rule, look well, having been much benefited by recent rains. Wheat is very much, as while some crops appear to be thin, others are very good. Oats, too, will be much better than they were some time back. A good root crop is now practically assured, and altogether this year promises to be a better one for farmers.

ROYAL LANCASHIRE SHOW AT LANCASTER.

The Royal Lancashire Agricultural Society, whose show takes place at Lancaster on Thursday, Friday, Saturday, and Monday next, has made enormous strides during the past few years, and the good work it is doing is known far beyond the borders of the County Palatine. The society has, and is, endeavouring to still further work in closer union with the district societies of Lancashire, and one of the most prominent workers in this cause has been Mr. Edward Bohane, the popular secretary of the Royal Lancashire Agricultural Society. Thanks to his and his associates' work the district societies have by the system of amalgamation helped one another considerably in contracts, &c., and the county society has been brought into closer sympathetic touch with their work. But, apart from this, the county society has this year decided to adopt an entirely new feature in visiting Lancaster. The well-known district society—the Lancaster Agricultural Society—having withheld its show and joined hands with the local committee in making the visit popular, the Royal Lancashire Agricultural Society resolved to hold on the last day of the show what will be practically a replica of the Lancaster District Show, when £235 will be offered in prizes for all classes of live stock, limited to a radius of fifteen miles of the Town Hall, Lancaster. This schedule has been drawn up with the help of the Lancaster Agricultural Society, and the prizes are an increase on what has been usually offered at the Lancaster Show. The result of this movement is already evident from the way in which subscribers to the local show have joined hands with the local committee and working enthusiastically to ensure a successful visit.

Last year, it will be remembered, the Royal Lancashire Agricultural Society undertook the fitting up of their own showyard for the first time. The improvement in the stability of the erections and the general all round appearance of the showyard won for them the commendation of the exhibitors, members, and public, and when everything was settled up they found that they had saved a matter of over £1,200 on the year in this department alone. This enabled the society to close the year's workings with a handsome balance, although the weather was unfortunately very inclement during the period of the show. In doing their own erecting, four-fifths of the labour employed was local labour, and the whole of the timber was bought locally, and although this year Lancaster is not such a timber-importing

district, the society have placed the contract for the supply with a local firm, and this again spells popularity.

Having succeeded in the fitting up, the society have, this year for the first time, attempted to solve what is one of the greatest difficulties at any agricultural show—viz., the catering question, and the whole of the catering throughout the show-

Mr. EDWARD BOHANE,
Secretary of the Royal Lancashire
Agricultural Society.

yard will be undertaken by the society's staff. This is to be far and away the greatest project yet entered upon by them, and to give some slight idea, it involves the engagement of a staff for this department alone during the show of 250 hands. Their ambition is to give what may be tersely described as "better meat and drink" at a more reasonable cost, and particular attention will be paid to exhibitors.

In 1904 Mr. Bohane produced a scheme of children's essay and drawing competitions in connection with the district then visited by the society, and it has been continued annually with remarkable success. No fewer than 23,000 last

year competed, and again at Lancaster the scheme has been taken up, and at the present time in every school within thirty miles of Lancaster children are endeavouring to give on paper an idea of their capabilities and interest in natural history subjects. These ideas will be exhibited in a gallery at the showyard. The society have received numerous applications for particulars of this scheme, and it must be a personal pleasure to Mr. Bohane to feel that this year nearly forty societies in the United Kingdom are having similar competitions.

A new feature this year will be an amateur judging competition, limited to young men not exceeding twenty-five years of age, who have never judged at any show or sale. Two sections have been provided, one for cattle and the other for heavy horses, and this will take place in connection with the local show classes on the fourth day. Already the society are assured that the venture will be a great success, and the system of points arranged will secure the awards being made to the best all-round competitors.

In addition there will be a military tournament on two days, and the engagement of the full band of the Royal Marines to attract the man in the street, and altogether with a prize list of £3,100 in cash prizes, besides £1,000 in challenge cups, &c., will be sufficient testimony that as a society the Royal Lancashire is determined to endeavour to keep in the forefront in furthering the best interests of agriculture and all that appertains to it, particularly in the county it represents.

Details as to the entries have now been made public, and these show in a most striking manner the progress of the Royal Lancashire Agricultural Society since it last visited Lancaster—eighteen years ago. This year there are 3,369 entries, whereas at the last Lancashire show the number was but 1,510. The average for the last five shows is 3,061, so that this year there is again substantial growth. This increase is marked in nearly all the important classes, as shown by the following list:—Cattle 258 entries, compared with 249, the average for the last five years; light horses 363, compared with 351; heavy horses 88, against 122; sheep 127, against 92; pigs 178, against 130; cheese 95, against 70; butter 155, against 130; honey 93, against 120; poultry 344, against 371; eggs 49, against 31; local exhibits 394, against 179; implement stands 231, against 225. Confident anticipations have been expressed that the 1906 show will eclipse its predecessors in excellence, and all that is needed to make the event a complete success is fine weather, which we sincerely hope will be favoured the society.

sheep, and pigs number 930, against 807 last year. During the past five years the entries have averaged 826.

Tring Agricultural Show, which has endeared itself to all classes as a show, although agricultural in its bearing, and making this its main point, has so many attractions apart from the main object that all the countryside put down the fixture for Thursday, August 9, as one not to be missed. This year none of the salient points are absent, and many others are introduced, so that the frequent figure of speech, "the same old show," does not apply to Tring. The King, as patron, still shows his appreciation of the show by sending entries. The milk and butter tests will be held as usual, an entry of 100 having been secured, and which is well backed up by good entries in nearly all the other sections.

The famous sheep dog trials will be as interesting as ever, a good entry having been made, and, as a good sound authority has said, "they are second only to the great Llangollen trials." The entries in the open harness classes are excellent, and will bring together a grand lot of horses. Seeing that £1,500 is given in prizes (a large sum for a one-day show), it is not to be wondered at that such an excellent entry has been obtained in all sections. The secretary, Mr. F. J. Brown, Tring, is always ready to give prospective visitors any information, and a post card sent to him will bring a programme setting out the full details of this the most interesting one-day show.

The Loughborough Agricultural Association offer awards of £300 in prize for competition at their sixty-eighth annual show, to be held on Wednesday, September 20, at Southfield, Loughborough. The money is well spread over the various sections, which include classes for horses, cattle, sheep, pigs, dairy and farm produce, poultry, &c., whilst among the most popular features are the awards to labourers in husbandry and long service, and shepherds who have reared the greatest number of lambs. Entries for the show close on Thursday, August 30, but entries at double fees will be received up to Tuesday, September 4. The secretary is Mr. F. W. German, Cattle Market, Loughborough.

SHOW GOSSIP.

No fewer than 1,062 entries have been received for the Welbeck Tenants' Agricultural Society's Show on Tuesday, August 7, horses numbering 302, cattle 67, sheep 154, and pigs 30, whilst in the other sections the totals are—wool 23, butter 18, eggs 30, cheese 10, shepherd dogs 28, showing smiths 20, poultry 179, long service 9, employees' poultry, &c., 183. It will be seen that the exhibition is a most varied one, and provides continuous attractions for the visitor. In addition to the above interesting items of an altogether interesting show, there will be an horticultural show, consisting of fifty classes for all kinds of garden produce, for workmen on the estate; a parade of the Duke of Portland's thoroughbred stock at Hunciccroft Paddocks, at close of show; demonstrations at intervals during the day by Miss Rowland, of the Midland Agricultural and Dairy College, Kingston, of butter making, milk testing, cream separating, &c.; lectures on bee-keeping by Messrs. Pugh and Scattergood, of the British and North-Notts Beekeepers' Association; and bands of the 4th Battalion of the Sherwood Foresters and Creswell Colliery Boys' Brigade. Special trains will be run by the Midland, Great Central, Great Northern and L.D. and E.C. railway companies from the principal towns in the Midland counties, and it is safe to assert that the attendance will, providing weather is favourable, be on the usual big scale seen at Welbeck.

Owing to the increasing popularity of the Birmingham Autumnal Shorthorn Show and Sale, as evidenced by the large number of animals entered at the past shows, it has been decided by the council of the Birmingham Agricultural Exhibition Society to extend the show and sale this year to two days, viz., September 5 and 6. An important alteration has been made in the classification, there now being three classes for bulls, with prizes in each class, instead of only one as formerly. The four classes for females remain as before. In the whole seven classes there are seventeen prizes

offered, ranging from £15 to £3. The entries close on Thursday, August 9, and prize lists and entry forms may be had from the secretary, Mr. W. H. Lythall, Bingley Hall, Birmingham.

The Highland and Agricultural Society, it is believed, will for the first time in the history of their Border shows be able to record a balance on the right side as the result of the exhibition at Peebles. The attendances, all things considered, were exceptionally good, except on the last day, when rain and the early closing of the show (four o'clock) were the cause of the small takings. The result of the four days' show was £2,574 3s. 7d., as compared with £2,191 16s. 8d. at Kelso in 1898. This is the year on which a fair comparison can be made, and it speaks well for Peebles, but the totals are naturally very short of the takings at more popular centres. For instance, at Glasgow last year the takings were £4,433 18s. 1d., and at Perth in 1904 £4,990 1s. 8d., whilst at Edinburgh in 1899 they realised £10,222 11s. However, the Peebles folk are to be congratulated on the success of their first Highland Show, and it is hardly likely to be their last.

At a meeting of the Local Committee of the Yorkshire Agricultural Show, held at Middlesbrough last week, it was announced that the £1,800 which has to be raised by local subscriptions has been almost obtained, and that within a day or two the full amount will in all probability have been received. The entries of horses, cattle,

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

Midland Notes.

FARMERS are complaining again of the inconvenient and inelastic regulations of education authorities, who insist on keeping boys of under fourteen years of age at school until the arrival of the regular holidays. During such days of muggy and almost tropical heat as we have had lately, it is hard to believe that much serviceable work is done in the close and stuffy classrooms of the village schools; and beyond any doubt the lads who are intended for a country life would have been happier and more usefully employed in the hayfields, learning there something of the management of animals by leading the horses from field to stack, and economising labour at a time when every hand is valuable.

TO be frank, it must be admitted that there is also something to be said for the school authorities. One is reminded of their difficulties by recent prosecutions of parents in the Black Country in respect to children taken or sent into the county to pick peas and fruit. During last year no fewer than 2,200 left Dudley alone for the hop-picking, and the committee has rearranged the holidays this year in order to enable them to go hopping without missing school. But, evidently, it is impossible to suit everybody, and Mr. J. M. Wynne, the secretary of the Dudley Education Committee, spoke no more than the truth when he declared that if the children were to be allowed to indulge in all the rural occupations some parents would put them to, they would be away from school from May to October. In the villages the difficulties are less, and might generally be overcome if there were the will to do it. The by-law in many districts which enables children to leave school at twelve years on passing certain not too hard examinations works well wherever it has been tried, and has, apparently the sympathy of the Board of Education. If this were put into force universally it would do much to relieve the situation and give our youngsters a chance to learn something of the work of their lives at an early and receptive age.

NOT many of the model cottages displayed at recent exhibitions commend themselves as particularly well adapted to the needs of rural landowners and labourers, nor can one look with confidence for anything more practically useful from the competition whose terms have just been announced by Miss Edith Bradley, late of the Lady Warwick College at Studley Castle, and now warren of the Women's Horticultural Instruction Centre at Providence House, Bredon's Norton. With a view to putting in many model cottages on her estate, she sends, Miss Z. M. Woodhall (for whom Miss Bradley is acting) offers two prizes. One, however, is for detached cottages, in brick or stone, to cost £300 to £400, site being given; the other for a pair of cottages to cost from £500 to

£600. Each is to contain three bedrooms and bathroom, living room, and parlour, kitchen, scullery and offices, so that the workpeople—if workpeople they be—who inhabit them will be well provided for. But, then, so they should be at the money. There is at least one London firm of high repute prepared to build and furnish a "week-end" cottage for people who are used to comfort and refinement for less money than is to be laid out on these detached dwellings. "Is to be," I say, because it is a condition of the competition that cottages upon the approved plans must be put up on the estate within six months after the Agricultural Market (Gardeners' and Cottagers' Show at Bredon's Norton on August 21, at which the miniature models in wood or plaster are to be exhibited.

FARMERS in the Coventry district will wish good fortune to the petition which is being sent to the Town Council against the present unsatisfactory of the old market arrangements. Perhaps the closing of the old market was inevitable, and no doubt it may be a more profitable possession to the corporation when devoted to its proposed new purpose. But the relegation of local grain sales to so unsuitable a building as the King's Hall in Vicar Lane is much regretted, and apart from the inconvenience involved is felt to be hardly worthy of the city of the three spires, whose market dates back into Saxon days and ranks among the oldest in the kingdom. In the circumstances there is ground for hoping that the Corporation may see fit to build a new market; and if that is to be done local farmers would like to see the work put in hand as speedily as possible.

MR. JAMES'S sale at Kettering on Tuesday attracted some amount of newspaper comment from the fact that while the county is Northampton the cattle were Aberdeen-Angus and the sheep Hampshires, which it is not usual to find so far north. But it is the tendency of the day for pure breeds once confined to special areas to find their way to new localities, sometimes far from their original homes. If, for instance, the Hampshire is moving north the hardy Cheviot sheep are coming south, being now bought in Scotland in the autumn by not a few farmers, who find them fatten quickly and cheaply in the milder conditions of the English winter, and can sell them profitably as young fat mutton after the wool clip has been taken in the spring. Then, again, to how many new districts has the comparatively new Shropshire breed penetrated? And the new Oxford Down flock book just to hand bears witness that this capital Midland variety is known now far afield. Oxford, indeed, are kept to-day in the Lake country, in Lancashire and Yorkshire, in Wiltshire, South Wales, Cornwall, Scotland, Ireland and France. Mr. A. J. Balfour, M.P., is, by the way, among the Scotch adherents of the breed, which seems to enjoy a good name wherever it has penetrated.

WE have had another hot and droughty week. If there has been any rain it has been purely local, and the roots are languishing in the heat. Unless mangels, which seem to revel in the heat, and show more of barley of high quality will be scarce, and oats are generally backward for want of moisture. One hears of failure of wells and springs in many parts, especially on the Nottingham side, where the rainfall has been very small this season.

July 26, 1906.

SHOWS.

Tiverton.

Beautiful weather favoured the showing of the Tiverton Agricultural Society held on Thursday, and it proved most successful. The total entries numbered 1,012, compared with 786 last year, and a little over 800 in 1904. The open classes for Devons contained some of the best cattle and sheep in the country. In the Shire horse class there was a slight falling off in numbers as compared with last year, but the local hunting classes were well filled. In the cattle and sheep classes there was also a big advance. There were about a hundred exhibits more than last year in the dead poultry show, the increase being due to better prizes.

Newport.

The seventeenth annual exhibition of the Newport and District Agricultural Society took place in the Victoria Park, Newport, on Thursday, in brilliant weather, and was one of the most successful ever held by the society. The increased public support must have been very gratifying to the committee. The entries compared very favourably with previous years. There was a slight falling off in the entries of horses, but this was more than compensated for by the improvement in the quality of the animals shown. No pigs were exhibited in consequence of the Swine Fever Ordeal. The entries of cattle and sheep were satisfactory, and some of the animals shown would have probably held their own in a larger exhibition. One of the strongest sections in the whole show was that devoted to honey. Butter was also of fairly good quality.

Thorney Foa.

The annual show of Shire foals at Thorney took place on Thursday in splendid weather, and was a great success from all points of view, and was a great success as regards the display of stock. It was the seventeenth of the series, and, without doubt, was the best of the lot. The entries were considerably in advance of last year—141 compared with 110—and there was a consensus of opinion that the yearling class, at any rate, was without parallel in the society's history, and that it was not beaten at Peterborough. Other classes were also good, and the society is to be congratulated on its success and continued progress.

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

GREAT YORKSHIRE SHOW,
Park Vale Road, Middlesbrough,
Wednesday, Thursday,
and Friday, August 8,
9, and 10, 1906.

Stock and Implements,
&c., Jumping Competitions,
Military Tournament,
Band.

Admission:—Wednesday,
9 a.m. to 5 p.m., 2 6;

Thursday, 8 a.m. to 8 p.m.,
1/-; Friday, 8 a.m. to 6 p.m., 1/-.
Season Tickets, 10/- each. Reserved
Seats on Grand Stand, 5/- each.
JOHN MAUGHAN, Secretary.

DURHAM COUNTY AGRICULTURAL SOCIETY ANNUAL SHOW at WALSINGHAM.

On WEDNESDAY, August 7, 1906.
Upwards of £1,000 given in Prizes for Cattle, Sheep, Dogs, Horses, Leaping, Poultry, Milking Demon- strations, Rabbits, Butter, Eggs, &c. Harness.

Entries close Monday, July, 30, 1906.
Prize Schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flax House, Durham.

Prize Schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,

WM. CHRYSTAL,
Houghton-le-Spring.

BIRMINGHAM NORTHORN SHOW AND SALE.

The SIXTIETH EXHIBITION and SALE will be held on SEPTEMBER 5 and 6.

£125 in Prizes—viz., £55 for Females in four classes and £70 for Bulls in three classes.

Entries close August 9.

W. H. LYNTHALL,
Bingley Hall, Secretary.
Birmingham.

BATH HORSE SHOW,
SEPTEMBER 5 and 6, 1906.

Nearly £700 in Prizes.

Great Jumping Competitions.

Entries close August 18.

Schedules and all particulars to be obtained of

LEWIS C. MENBY, Secretary.

41, Milson Street, Bath.

HARROGATE AND DISTRICT AGRICULTURAL SHOW.

President: H. W. WILLIAMS, Esq., J.P., will be held

On WEDNESDAY, AUGUST 15, 1906.

About £500 in Prizes. Schedules

now ready. G. SAVILLE,

Whitworth.

THE TUNBRIDGE WELLS SHOW.

Having the advantage to be held year after year on the same ground, being so loyally supported by the neighbouring nobility and gentry, and managed and controlled by a thoroughly practical council, there is no room for surprise at the continued success of this important annual show. This year's fixture took place on Thursday and Friday last under most favourable circumstances, and this year's president, Lord Leconfield, will have the satisfaction of being able to look back upon the work of his first year's presidency of this society as being one of pronounced success.

Taking the show as a whole, there did not appear to us a single department in which there was other indication than success. The entry and display of agricultural implements as well as those interesting displays made by seedsmen and vendors of cattle food, cake, medicines, &c., were very attractive, and for a show of this description much above the average. Our space does not allow of any descriptive account of any particular stand, but we may mention that the more local industry—hop and fruit growing—was well represented in this display by many of the most recent and up-to-date machines for spraying, washing, &c., some of these being exhibited in the section for machinery in motion.

The poultry section was a notable success, and we were pleased to note that the interest taken by the general public in this excellent section of the show was very noticeable. It is well that this is the case, because it indicates there is being given

to show to the public what the breed was really capable of achieving under proper management and control. A comparison with the entry at the 1887 show and that held this week clearly indicates the noticeable improvement made since the Flock Book Society came into existence and secured the united co-operation of the principle breeders of this breed of sheep, now in demand for so very many of the leading importing countries.

It may be urged that the foregoing remarks are not strictly applicable to a report of this or any show; but, on the other hand, had it not been for these annual exhibitions, at which opportunity was given those who were engaged in the work of improvement not only above to show their neighbours the result of their work, it is quite certain that the general improvement that has been brought into effect would not have been accomplished.

Horses.

The Shire horse classes were as good as we have ever seen them, a real good one, amongst which there were several of very outstanding merit. Notably amongst these were that fine upstanding two-year-old colt Shustoke Monarch, that won first in its class and Lord Leconfield's Challenge Cup for best Shire for Mr. R. W. Hudson; Mr. L. Solomon's Nubary Menestrel, second as a two-year-old and the runner for the Challenge Cup; Childwick Young, first in the Brood mare class that won the Shire Horse Society's Gold Medal for Mr.

prize, Mr. R. J. Balston's Grand Duke of Reddingdon 9th, a choicely-bred and valuable bull. The cow and heifer classes were most typical of the breed, and the winning specimens were most meritorious. Mr. J. Colman's entries were well to the fore. Hawthorn Flower and Diana 27th were first and second in the cow class, and Snow Queen second in the two year olds, in which class Mr. R. W. Hudson's Maisie 2nd took first honours. The yearlings were a handsome lot, notably that grand young heifer Silver Streak, that won first honours for Mr. H. S. Lenn. The contest for best group of four Shorthorns entered in the foregoing classes was an interesting one, Mr. Colman's group taking the cup.

The Sussex cattle—a breed largely kept in the society's district—were represented by one of the best entries we have seen of this breed at this show for some considerable time. The high value of these cattle for beef production is well known amongst those who have tested its capabilities in this direction, and also, as is shown by the Smithfield Show results, and yet, strange to say, few, very few indeed, are exported. Lord Leconfield, this year's President, gave a handsome challenge cup for the best bull in these classes. This was won by Mr. E. E. Braby's Lord of Dungewick 5th, first prize two-year-old bull, quite one of the best of its age we have seen for some time. The Earl of Derby's grand old stud bull, very typical of its breed, being runner for this honour and first in its class. Mr. Braby's herd also provided the second winner in the two-year-old class, Mr. A. J. Hickman's Prince of Dungewick 5th. The Earl Winterston's herd has been most successful at this year's show, and deservedly so, for its exhibits have been of sterling quality. Shillinglee Gold 2nd was first in the yearling bull class, Sunlight 5th in the three-year-old cows or heifers, and Sunlight 7th in the two-year-old class. The Earl of Derby's grand cow, Fancy, was winner of the special for best cow or heifer, and Mr. Sillard's Bewbush Evelyn won first in a very capital class of yearling heifers, in which Mr. W. F. Winch's Tilsden Jessie took second honours.

The entry of the Aberdeen-Angus was not a large one, but its merit was very choice, Mr. W. S. James' Lord Fearless, winner in the old bull class, Mr. G. Drummond's Ebiniser taking second honours won the championship prize as best animal in these classes. Mr. J. H. Bridges had a real good lot of bulls, cows, and heifers forward, and he won first for young bulls, first for cows with Barbarian, to which the runner for championship went, and also first in the two-year-old heifer class, and second for yearling heifers. Here Sir G. Cooper, won with Evera, a beautiful heifer, and the same exhibitor was second in the yearling bull class with Justice of Ilorsley.

A grand entry of Jerseys were present, the slightly reduced numbers adding materially to the high average of merit. The best bull and winner of the Wadhurst Challenge Cup was that capital two-year-old Aurifer, first in its class, owned by Mr. W. Buckley Redford, Garsdale. Garsdale's Glorious Lad, first in the old bull class, taking runner. Mr. A. Miller Hallett, who had a nice lot of animals present, including some good females, won with Abiston's Pile, first in the yearling bull class. Lady de Rothschild was winner of first and second for cows with Whitewood 5th and 4th. Mr. Miller Hallett, in the three-year-old heifers, won first with Tapon's Bluebell, whilst in the two-year-old and yearling class the winners were those beautiful and symmetrical animals owned by Bishop Fisher (Bargh) Snowflake and Sir E. Stuart's Galsborne's Guernsey breed had one of the best entries we have seen at this show for some few years, the merit was high in each case, and competition very keen. For cows Mr. E. A. Hambro won first and third, Mr. F. Hargreave taking the second place. In the three-year-old class Hayes Imperial, another from Mr. E. A. Hambro's herd was first, and the same owner 1st in the yearling class with Hayes Montrose 2nd. The winning two-year-old was Mr. J. P. Morgan's Cnatford Maid of the Mill, a most promising heifer. In the heifer class, Mr. H. F. Winter, Putnam, was runner for, taking first honours in each class with real typical bulls.

The Kerry entry was a small one, Mr. T. Waite was the winner.

The Dexters made a thoroughly good entry, but the competition was somewhat limited. The Duchess of Devonshire was leading winner in the female classes with animals of high merit, and Messrs. A. F. Perkins and B. de Bertoda divided the honours in the bull classes, the latter breeder was also successful for cows and heifers.

There was a capital entry in the butter test classes, in which the ewas very large entry indeed, numbering in the three classes thirty-eight entries.

Sheep.

The sheep section was one full of particular interest, the Kent or Romney Marsh sheep classes, one of which, that for ram lambs, contained no less than twenty-seven entries. An instance occurred in the award of the champion prize in this section that has not often been recorded. The judge, Mr. A. Amos, was interested in the ram lambs, having purchased one of the exhibit; therefore

Aberdeen-Angus Bull, Lord Fearless. First Prize and Champion at the Tunbridge Wells Show. Owned by Mr. W. S. James, Bright in Lodge, Kestring. Bred by Sir G. M. Grant, Ballindalloch.

in this district very considerable attention to this important section of the farmers' business. Probably there is none in which there exists at the present time greater need of improvement than in the poultry of the farm. Generally speaking, this section does not secure that position in the management of the farm it should, and we consider in giving such prominence to it at their annual show that Tunbridge Wells Society is doing good work on behalf of the agricultural industry in their district. All agree that much more ought to be done in connection with the poultry in history on our farms, and hence such exhibits as those seen at Tunbridge Wells this year are most valuable and instructive. On our way to the show ground an old acquaintance of the writer called to mind our first joint visit to this show, namely, in 1887, and remarked upon the numerous changes that had taken place during the period between that date and the present time. Referring to the show he said, 'what do you attribute the notable improvement in the agricultural horses, and the Kent Romney Marsh Sheep?' The reply was an easy one, for at the period of the writer's first visit the full value of the Shire Horse for agricultural purposes had not been realised in the district nor had that great benefit given to the agriculturists by the magnificent manner in which many of the leading landowners in securing for their respective districts the services of reliable and sound Shire stallions had time to prove its value. Then in respect to the Romney Marsh sheep this was then a breed practically unknown outside its own district, with no organisation to push its interests, and hence few, if any, efforts were made

Salomons; and Marden Fan, second in the same class that won the runner for the Gold Medal for Mr. T. Jones. In addition to these there were several other very good animals, such as Marden Conqueror, that won for Mr. W. Grunwell in the Old Stallion class; Westby Regent second in the same class for the Marquis Camden; Mr. Mix Michaelis' winning yearling colt King of Tandrige. In the Mare and Filly classes which were equally good amongst the winners, in addition to the medal winners were Bascot Chloris for Mr. L. Salomons, first as a barren mare; Patton Sorais, first as a three-year-old, from Mr. Mix Michaelis, whose Alexander of Tandrige was first as a two-year-old; and Mr. L. Solomon's Nubary Narsese, first in the yearling class. The tenant farmers' classes were well supported, and it was in these classes that the notable improvement in the merit of the agricultural horses of the district was so noticeable. Messrs. T. Jones, of Glaston; E. Nave, of Chart Sutton; W. Wood, of Emdridge; and J. G. Wright, Apple-dore, were the principal winners.

Cattle.

The cattle section was a first-class one in the aggregate; there was a decrease in the Jersey entries, but an increase in that for Shorthorns, this breed's entry being a noticeable one by reason of the high average of merit. The bulls were a good lot, and amongst the more valuable included in the classes may be mentioned those two grand stud bulls, Ascott Constellation from Messrs. Denny's and Millhill's Favourite from Mr. J. Colman's herds, first and second in the older class of bulls. Gattion Baron, Mr. J. Colman's winning yearling that won also the Shorthorn Society's

Mr. Collard was asked to adjudicate upon this and the champion prize for males. When, however, the rams were paraded for the award, the second prize winners in the class were put in line with the prize winners, and Mr. Collard found to award the championship would, in effect, be to alter a previous judgment of his, he after consultation with Mr. Amos left the matter to Mr. W. E. Long, who awarded the champion prize to the second prize two-shear ram owned by Mr. W. Millen, and the first prize two-shear ram owned by Mr. H. Ridgen, although the result was a protest, which on being considered by the council was decided in Mr. Ridgen's favour, who thus won first in the two-shear ram class and champion honours, leaving Mr. W. Millen second in the two-shear ram class and first for champion. Mr. Millen was notably successful in the other class with sheep of striking good merit for he won first for yearling rams, first and second for yearling ewes, first, second and first for ram lambs, and first and third for ewe lambs. Mr. H. Ridgen was second for ewe lambs, and Mr. J. B. Palmer third for ram lambs. Amongst the other winners were Messrs. F. N. Macne, C. F. E. Quested, H. Walters, &c.

The South Down entry was not so good as in some former years, but the merit was good. Mr. J. Coleman was the most successful exhibitor,

for, in addition to his class prizes, he also won the Coleman Group prize for best group, the Southdown Society's medal for best male, and the Blythwood bowl for best Southdown male or female. The Duke of Devonshire's notably fine pen of ewes won the medal for best pen of females, and a grand yearling ram won first for Mr. W. M. Cazalet. Lieut. Col. W. W. Hammond had a specially good lot of sheep present, but the judge did not appreciate their merit so highly as was the case at the East Kent show, where they won a large proportion of the principal awards.

The competition in the wool classes was not large, but the quality was good.

Goats secured a large entry, and quite an interest in these classes, which were most interesting.

Light Horses.

The hunter classes, and those for the hackney's, riding and driving horses, and other ring display classes, were as large as usual, and the competitions all through were notably keen. The manner in which the grand stand was filled, and the crowded attendance all round the large horse ring, showed most distinctly how much the society's receipts are dependent upon these ring displays, which here, as at most of the county shows, are one of the main sources of revenue.

NORTHUMBERLAND SHOW AT NEWCASTLE.

The feature of the cattle department was the display of Shorthorns, which was certainly the best ever seen here. The old bull class was headed by Mr. F. Millar, of Birkenhead, with his well known Linkfield Champion (champion at Dublin), and Sir R. P. Cooper's Meteor had to be content, as at the Royal Show, with the second position. Two-year-old bulls were also a grand class, and there was close competition between Lord Polwarth's British Renown, a finely developed youngster which was highly commended at the Royal, and Royal Ensign, belonging to Mr. George Harrison, of Gainford, which was third at the Royal. Eventually the judgment at the big show was reversed, and Royal Ensign was placed second to British Renown. With four bulls entered, the Duke of Northumberland gained one first. This was in the yearling class, which was headed by Alnwick Favourite, which was also adjudged to be the best bull in the show from the county of Northumberland. Mr. William Bell, of Alnwick, who was second to him, Grace, gained a similar distinction for tenant farmers' animals. The female classes were also well filled. Two of them were headed by Mr. Harrison and one by Mr. Bell, and Mr. Harrison's successes in the classes made him practically certain of the group prize which is awarded to the owner of the best four animals in the section.

The show of Aberdeen Angus was disappointing as regards numbers, only twenty-five entries being given, but the quality was good. Mr. W. B. Greenfield, of Haynes, of Gainford, and Mr. T. H. Bainbridge, of Felton, divided the honours between them. With Darling of Haynes II., which was female champion at the Royal, Mr. Greenfield headed the cow class, and also won the special prizes for the cow and the best animal in the section. He also took the group prize. Mr. Bainbridge's Elandslaagte was adjudicated the best bull, beating Mr. Greenfield's Royal winner, Gay Boy of Danesfield. There was a very small entry of Galloway cattle, Mr. R. Graham, of Auchengarsell, sending all the animals but one—a bull, with which Messrs. Raine won the second prize. Mr. Graham naturally took all the other prizes.

Sheep came next in the catalogue, and they made a good show, Border Leicesters predominating, and these gave the judges a difficult task. The ram classes were headed by Messrs. J. and J. R. C. Smith, of Kelso, who also won the ewe and ewe lamb classes. Cheviots, in which Mr. Jacob Robson was the chief winner, ran the Leicesters very close, and there was also a good display of black-faced mountain sheep, in which section Mr. John Robson took all the premier awards. Cross breeds were few in numbers, but there were two good classes of Oxford Down lambs.

Compared with the last Newcastle show, there was an increase in the number of agricultural horses, though they were fifteen fewer than last year at Berwick. A finer lot it would be hard to get together, and all round there was nothing but praise for them. It was especially gratifying to note the splendid display of brood mares and foals. The first prize in this class was taken by Mr. W. Wood, of Carlisle, with Cedric Princess, a well-known winner and a dam of the very best type. Her foal, however, failed to get placed. The Seaham Harbour Stud, who were second in this class, came to the front in the brood mare class with Kitty Everard, a stylish brown bred by Lord Londonderry. Four-year-old geldings or mares under 16-2 hands made only a medium class, out of which a thick heavy bay, shown by Mr. J. John-

son, of Hexham, stood out a clear winner. The class for animals over 16-2 hands was, on the other hand, an exceptionally good class, containing some horses of the best type. All three prizes went to Mr. Fenwick Wilson, of Marden, Whiteley Bay. A good, straight-going horse, shown by Mr. W. C. Bowe, of Innerwick, headed a strong class of three-year-old geldings, but he was run very close by Messrs. F. Smith and Sons' Harry, which won in its class last year. A moderate class of three-year-old fillies was won by the Seaham Harbour Stud, who also took the group prize with four first prize winners.

The light horses, on the whole, made a good show, but some of the classes might have been better filled. They varied considerably in quality, and the clashing of the show with one or two other important fixtures with attractions for Hunter breeders had something to do with limiting the competition. The local exhibitors were especially good, and made up for the non-appearance of animals from a distance that under other circumstances might have been entered. With Lady Mombay, a finely-formed brown mare full of quality, Mr. Andrew Rutherford, of Haydon Bridge, carried off the gold medal of the Hunters' Improvement Society, and also the first prize in its class. The three-year-olds, both geldings and fillies, comprised some promising performers, the entries in these classes, as also in the two-year-olds, coming principally from the county. As a whole, the class for hunters up to 13-2 stone was poor. Mr. Henry Kidd, of Melrose, took the first two prizes with a mare and a gelding respectively which have done a lot of winning in the north. The heavy-weight class was much better, and contained at least four or five hunters of the finest type. There was no doubt about the winner, as Mr. J. H. Stokes, of Market Harborough, showed his famous bay gelding Whiskey, whose long series of successes was topped by a first at the Royal. The four-year-old Hunter class was a close thing between a gelding shown by Messrs. T. and H. Ward and Barley Sugar, a beautiful chestnut gelding belonging to Mr. Henry Watson, of Longbenton. The latter showed the best quality, but after a long consultation the judges placed the former first on account of its very fine going.

There were several interesting classes of Hackneys, the section being stronger than at the last Newcastle show. Adolton Rosina, the well-known mare of Mr. A. W. Hickling, of Nottingham, was first in the brood mare class, beating Paddock Queen, which won a third for Messrs. Cockayne Bros., of Sheffield, at the Royal. Paddock Queen's foal, however, was first in its class, whilst Adolton Rosina's offspring was unplaced. The three-year-old class attracted only twenty entries, but there was good competition amongst the two-year-olds, Mr. A. W. Hickling winning with a fine specimen of the Rosador strain. Mr. John Robinson, of Harrogate, won the first two prizes in the class for Hackneys over 15 hands. Coronation Flower, a stylish mare by His Majesty, with elegant action, was placed first, with Champion Mornington Cannon second. Mr. Thomas Boddy, of West Auckland, secured the award in the 14 hands class with Woodlatch Connaught Queen, an attractive chestnut mare by Captain Duke of Connaught. The pony classes brought out some pretty little roadsters, the most noticeable being the well-known Fernhurst Fortuna of Mr. George Waud, of Baildon. The leaping competitions as usual proved most attractive, as did the displays of dogs and cats, whilst the flower show was quite a feature of the exhibition.

Malton.

The show of the Malton Agricultural Society was held on Wednesday, and like so many other shows this year suffered through clashing with other fixtures near at hand. The entries totalled only 325 as compared with 370 in 1905 and 429 in 1904, horses—the feature of the show—alone showing a decrease of over 50 when compared with last year, whilst the total was 115 less than in 1904. Horses last week numbered 230, cattle 55—an increase compared with the last few years—and sheep 40. The falling off was much to be regretted, and the society should see what they can do to prevent it in future years, for decreases have been the rule rather than the exception of late.

Of the eight classes in the Hackney section five contained only a very small number of entries, the actual figures being seventeen amongst them. The other three made up a fairly good show, but it was noticeable that nearly all the animals exhibited were locally bred. Messrs. T. and A. Hall, of Copmanthorpe Grange, figured well in the prize list, taking the first in the yearling colt or filly class with a smart colt by St. Thomas, and the first in the stallion class, three-year-old and upwards, with the same sire. Mr. Arthur Hall, from the same address, with his chestnut, Copmanthorpe, secured the premier award in the two-year-old entire colt class, whilst Mr. A. W. Hickling, of Adolton, Notts, had the class for brood mare and foal practically to himself. The principal award for gentlemen's hack, over 14 hands 2 in. high, was awarded to Authority, a bay gelding, six years old by Ganymede, bred and exhibited by Mr. S. R. Tennant, of Vold House, Driffield, whose name figured several times in the catalogue.

Hunters showed up better than did the Hackneys, though the schedule did not seem to have appealed with much success to distant breeders. Local exhibitors were, however, well represented. The quality of the animals was good, especially the youngsters and the light-weight carriers. Lord Middleton's beautiful filly Modena, which filled the pride of place at the Royal and Driffield, had to take a secondary position to Mr. Rickaby's filly, Miss Moorethorpe, which certainly is a most attractive animal. His lordship, however, was successful in carrying off the premier award in the brood mare and foal class with Scornful, an aged mare by Gordon, with a brown filly foal by Red Eagle. The president's prize for four-year-old gelding or mare was a gift for Splasher, now owned by Mr. J. H. Stokes, of Great Bowden, Market Harborough. Special praise was given by the judges to the three-year-olds, which, though few in number, were exceedingly fine animals. The weight-carrying five-year-olds made a good show in the ring, the class having well filled. Here the prizes went to Mr. Brown, of Slingby, Mr. Simpson, of Harrogate, of Harrogate, and Lady Grant-Lawson, in the order named. The five-year-old geldings or mares up to 13 stone received special commendation, and although comparatively unknown, will most probably be heard of in the future. Mr. Richardson, of Salton Grange, Mr. Brown, of Slingby, and Mr. John Lett were the owners of the animals that secured the coveted positions.

The four classes provided for coach horses were well filled; especially was this the case with the three-year-olds. The young stock were a most promising lot, and attracted a good deal of attention in the ring. Mr. George Grandage, of Moor Croft, Yeaddon, was successful in receiving the first prize in three of the four classes in this section—namely, with a yearling colt by Star of Yorkshire, with a two-year-old bay filly by Beacon Prince, and with a four-year-old bay, Woodland Briar. Mr. Lett's exhibit, which was second at the Royal this year, had again to be content in the three-year-old class with a second place, the judges giving preference to a brown gelding shown by Mr. E. W. Pickering, of Pickering, which made its *début* in the show ring.

Though not very numerous, the exhibits of agricultural horses were most commendable, and favoured the conviction that heavy breeding is still well studied in this part of the country. Mr. J. A. Coulson, of Watton Abbey, secured the first award for gelding four years old and upwards with a powerful roan, which won premier honours at Driffield, and more recently at the Brough Show. In company with a bay mare bred by the exhibitor, the gelding won the first prize in the class for pairs of agricultural horses.

Shorthorn cattle made one of the best displays of the show, the quality all round being high class. In the old bull class Mr. Alfred A. Haley had an easy win with Sir George, a grand, massive roan by Abbotsford. There were twelve yearling bulls, and they were very meritorious. Captain Clive Behrens was the most successful exhibitor with Hartgrange Marquis, a big, heavy roan, full of Shorthorn character, and of good colour. The

VETERINARY PREPARATIONS.

Small Articles of a Portable Character, all readily when brought regularly before the readers of the "Mark Lane Express."

winning bull calves, of good breeding and type, came from Birdshall House and Highfield. Captain Behrens's Daisy Clifford and Lord Middleton's Birdsal Duchess 5th competed among the cows, and were placed in the order named. For yearling heifers Mr. Haley scored with Whitehall Millicent, whilst the heifer calves were headed by Mr. Hall's Settrington Fairplay.

The sheep display was an average one. Only two animals were entered in the shearing Leicesters ram class. These were from the flock of Messrs. Simpson, of Pilmoor House, Hunmanby, and as a matter of course they received the prizes. The Lincoln Longwools were a much better class, and the number of entries is indicative of the growing popularity of this heavier type of sheep. The first prize for shearing rams was awarded to a massive sheep, belonging to Mr. J. M. Strickland, of Warren House, Brandsby, Mr. Haley, of Whitehall, having second honors placed to his credit with a well-formed tup which was commended at the Royal. The same exhibitor was successful in the two remaining classes, taking the first prizes for the pen of three gimmer lambs.

land), and the Tenant Farmers' prize. The silver championship medal for the best Shorthorn bull under twelve months old went to Mr. John Nelson, of Mungroisdale. There was a nice show of Galloways. The Countess of Carlisle took first prize with a young bull that won at the Highland, and was second at the Royal, the other principal prize winners including Mr. James Wilson, Tundergarth Mains; Mr. T. Graham, Marefield; and Mr. A. H. Fox-Brockbank, Kirkcanton.

Sheep showed a marked improvement on last year. There was an especially good show of Border Leicesters and Black-faced sheep. Mr. James Fleming, of Rigg, with a ram, carried off the champion silver cup for Border Leicesters, and a champion medal for the best exhibit in the sheep classes. Pigs were few in number but of good quality.

CUMBERLAND SHOW.

The annual show of the Cumberland Agricultural Society, held at Carlisle on the 21st inst., was an all-round success, for the entries were numerous and good, the weather fine, and the attendance of visitors a record one—what more can a society desire? Following so close on the Peebles show, a good many animals came from there direct to Carlisle, whilst there were also several animals that had come well at the Royal and London spring horse shows; so that the quality of the stock can well be imagined.

The heavy horses were more of the Clydesdale than the Shire horse type—lacking the substance of the latter, but showing plenty of stamina, and well suited to the requirements of this hilly part of the country. The Royal champion brood mare, Cedric Princess, by Baron's Pride, was sent by Mr. W. M. Wood, of Draw Dykes Castle, and in a very good class she had no difficulty in asserting her supremacy. Another winner was Mr. George Hodgson's King Harry. Last year he was invincible, and now he not only won his class prize (where he had little competition to face), but got the challenge plate as the best male in the agricultural horse section. His strongest challenger here was Messrs. D. and J. Curr's entire yearling colt, sired by Hiawatha.

Light horses showed a distinct improvement upon previous years. The young classes of hunters were filled by an exceptionally promising lot. The best of the brood mares was found in Mr. John S. Rigg's Tyng a-Lyng, from Appleby—a typical hunter brood mare, and still looking well in spite of her eighteen years. The second prize winner—owned by Mr. R. Holliday, of Carlisle—is the dam of a two-year-old brown gelding, Gilnockie, belonging to Mr. Lewis Beattie, of Canonbie, that won a first at the Highland the other day and was second for the championship. He was now beaten by Mr. Michael Young's chestnut Adonis by Lord Garvaghi—a nice, well-made horse that has had a winning record in Ireland. In addition he gained the champion silver medal for the best hunter colt or gelding foaled in 1903, 1904, or 1905. In a choice class of three-year-old hunters the winner, the property of Mr. Joseph James, of Outerbridge Mill, was a beautiful type of a 13-

stone hunter. There was a good muster of four-year-olds, and here the first winner was Forethought, a grey owned by Mr. Henry Kidd, of Melrose, and a Pinchinthorpe representative—an old showyard hero—was second. A strong rival was Mr. J. S. Rigg's Cousin Job, who, in the opinion of many ring-side critics, was entitled to something more substantial than the reserve number. In the light-weight class the same winners retained their positions. Rosebud is probably as fine a galloper as can be seen in a showyard ring, but though she appeared to be rather short in condition, she succeeded in defeating a Highland winner. The local class was an exceptionally good one, Mr. Rigg being awarded first honours for Myrna, a foal full of substance and quality.

There was keen competition in most of the Hackney and Harness classes. Mr. E. D. McNaughton, of Milnthorpe, was very successful with his Ariel, who boasts of Royal Denmark for sire, and who, besides winning three first prizes, secured the challenge bowl for the best gelding or filly in the Hunter, Harness, and Hackney classes from one to three years old. Mr. A. W. Hickling, of Adbolton, Nottingham, obtained the Harness Horse Stud Book medal with a well-known winner; and Mr. J. Varty, of Lincoln, got the bronze championship medal for his pony, Lincoln Squire, which won at Islington in the spring.

As was only to be expected, the show of Shorthorns was a very fine one, both bulls and the females being of very high-class quality. Of the bulls two years old and upwards the best was shown by Mr. J. C. Toppin, of Musgrave Hall, Penrith. This was Moonstone, three years and two months old, and the winner of numerous prizes before he came from South Wales into the possession of his present owner. He is a big, level bull, a son of Moonlight, and half-brother to Meteor, the champion at the Highland Show. Yearling bulls were a grand group; the winner was May Duke, fourteen months old, possessing beautiful quality; he was bought at the Birmingham sales by Mr. John Gill, of Stainton. He also won the Shorthorn Society's prize for bulls calved in 1905 (open to the county of Cumber-

Agricultural Imports.

CORRESPONDENCE.

Referees and Breed Societies.

Sir,—I had the pleasure of visiting the Lincolnshire Agricultural Society's show at Gainsborough on Wednesday last, and an incident which came under my notice during the judging of Shires struck me as being one which must, if repeated, cause discontented exhibitors and friction between members of one society and another.

The society were fortunate in having Messrs. James Whinnerah and W. H. Potter as judges of this section, and, but for the incident I speak of, were equally fortunate in having Mr. C. W. Tindall and Mr. T. W. Dean as acting stewards, for they have always struck me as being gentlemen of such ripe experience as to be relied on to "rise" to any occasion. Nevertheless, on Wednesday I felt keenly disappointed on seeing them "fall" instead of "rise" when a little tact would have saved the situation and have prevented the little incident of which I will now speak.

In the two-year-old filly class the judges failed to agree, and asked for the society's appointed referee to be called in. Unfortunately this gentleman was not at hand, and Mr. F. W. Buttle, the celebrated Hackney breeder, of Kirkbrun Manor, Driffield, was brought to settle the matter, which he did to the entire satisfaction of many well-known Shire horsemen who happened to be interested spectators at the time. This Mr. Buttle ably acquitted himself, and perhaps you may think that I might very safely let the matter end with his decision; but that is not the point I wish to raise.

What I want to lay before you is this. Both Mr. Tindall and Mr. Dean are members of the Shire Horse Society, yet we have both of them seeking the ruling in a matter of this kind of an exponent of another breed of horses quite opposite to those he was put to decide between practically non-interested in Shires, and, above all, not even a member of the Shire Horse Society, in preference to that of men at the ringside who are not only members of the society, but are looked upon to day as being its strongest supporters and best judges of the breed about us.

One may be excused for wondering what either of the stewards will say if their historic action ever repeats itself. But, of course, their opinion on such matters as these must be quite different to my own, and they will naturally feel honoured by the repetition. All the same, I put it to them. Have they ever heard of a Shire horse judge being called in to adjudicate in a Hackney dispute?

Before closing I hope you will allow me to say that if one word of mine appears in any way disrespectful to Mr. Buttle, I am extremely sorry, and I only hope he will take this in the way I have given it, for I have no wish to create ill feeling.

I only ask, and I feel sure you will agree, that in all such cases as these preference should be given to members of the Shire Horse Society.

Thanking you in anticipation for space in next issue. Yours faithfully,
July 24, 1906. A MEMBER OF THE S.H.S.

Fertiliser Manufacturers and Agricultural Shows.

Sir,—I notice in your issue of July 2 a very interesting article headed "Fertilisers at the Royal Agricultural Show," in which you lamented that fertilisers were almost omitted from representation at the Royal Show.

May I ask you to be kind enough to advise your readers that, at the forthcoming agricultural show at Bredon's Norton, on August 21, we are most anxious to have a representative exhibit of fertilisers and feeding stuffs? We will gladly allot space to any firms willing to send samples with explanatory charts, diagrams, and printed matter of any description; they can either have them sold afterwards at the auction (which is forming an essential part of the show), when the value will be returned to the exhibitors less 10 per cent., or an arrangement can be made with the Mercia Agricultural Association, Ltd., to become agents for the same on trade terms.

I feel sure that, if you are good enough to call the attention of your readers to this development, we shall have a very good exhibit of fertilisers and feeding stuffs, and this will greatly aid us in making our district show of distinctly educational value. I beg to remain yours very truly,
FORTH BRADLEY, Hon. Secretary.
Bredon's Norton.
July 2, 1906.

Liquid Manure.

Sir,—I read with interest your remarks on page 79 about liquid manure I imagine only applicable to *gardens*. I may say that for many years I drilled fifty acres with the liquid manure drill, and always with good results; in fact, the inventor of the liquid manure drill was an old

friend of mine, who died only about three years since, and I can also say that I saw his very first attempt at using it. I think it was something like fifty years since, and it certainly was the case that the better the season the better the results.
Devizes, July 21, 1906. W. F.

Combination Wanted—But in what Form?

Sir,—To organise the farmers into co-operative societies—viz., agricultural trading societies—does not succeed only with a small few isolated cases. Several of our small trading societies are doing nothing. We here had a society, but have cancelled the registration. The scheme also of association farming failed.

If we could in some way combine it would be a great help to the ordinary tenant farmer, but it must be in some other form than that taught by the Agricultural Organisation Society of Ducre Street, Westminster.—Yours sincerely,
The Fields, E. HANCOCK.
Southam, S.O., July 22, 1906.

Half-Holidays for Farm Labourers.

Sir,—All due respect to your correspondent "Red Rose," who is doubtless a well-meaning man and actuated by a laudable desire to benefit agriculture and the farm labourer; but will these very desirable objects be effected by advocating impossible weekly half-holidays for the labourer, and representing his employment as a continual dull, monotonous grind?

In my opinion it would be easier effected by solving the problem so neatly put forward by "Another Rose."

I adhere to my contention that the farm labourer in a regular situation, wet or dry, is equally as well off, if not better, than the high-priced wage-earners in other vocations, who are obliged, either by slackness of trade, or regulations of trade unionism, to remain idle nearly half their time.

Why sons of farm labourers do not follow in the occupation of their fathers is to a great extent due to the derisive taunts and jeers to which the young labourer and his occupation are subjected by earners of the big wage, and he is thus led away in his inexperience, and learnt to despise the honourable and noble occupation of his father; and I would add that the painting of his work in such doleful colours does not tend to improve matters, but, on the contrary, makes him feel that he is a very ill-used individual. Better treat him as a man, and appeal to his self-respect and intelligence, than to subject him to uncalled-for patronage and pity, bearing in mind that it was mainly from such material that furnished the great Duke with the grit which enabled him to win Waterloo.

I would also add that the agricultural Jack is by no means the dull boy that exists in the imagination of "Red Rose" and his sympathisers.—Yours respectfully,
July 19, 1906. WHITE ROSE.

Sir,—In reply to "Another Rose," page 70, it was only natural that the argument should crop up as to who should feed and attend to the livestock on a farm on the weekly half-holiday, and doubtless this presents a difficulty; but is it insurmountable? Even a modification by which men should take turn and turn about would be a boon to the labourer, even if he did not get his half-holiday weekly but fortnightly. "Another Rose" argues that farm labourers do not work from choice, but from necessity, and I would not work at all if they could live comfortably without doing so. Just so, and there are a few other people in the world (perhaps including "Another Rose") to whom the same argument might be applicable; but this is not the point just now, nor does it prevent the farm labourer from leaving his occupation for another if the chance crops up in which the pay is better and the hours of labour less tedious. The sole object of my argument is to bring the position of the farm labourer more into line with the labouring fraternity in other occupations, so that he will have fewer inducements for leaving the land. Of course, if agriculture is not in a position to do anything more for the labourer, things must go on as they are, and we shall continue to have the doubtful satisfaction of seeing the best, most intelligent, and sturdiest of the labouring fraternity leave the land for the sake of occupations offering better prospects and more freedom.
July 25, 1906. RED ROSE.

The "Mark Lane Express" is a

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

Occupation for Farmers' Sons.

Sir,—Nothing is more desirable than to see a farmer's son following in the footsteps of his father and becoming tenant of the holding which the latter occupied when he has done so. This order of things is good for both landlord, tenant, and the district at large, and it exists on more than one estate. This kind of thing is most excellent for all parties concerned, provided the farmer has only one son, or, on the other hand, plenty of capital, but it is a different thing when a man has three or four sons all brought up on the homestead and not much money. Numerous cases could be recorded of farmers bringing up three or four sons to work at home. They perhaps receive no regular wages, but father provides them with the money they require, and naturally their scope for gaining experience of the world is limited. All goes on well for a time, the lads grow into men, and through most of the work being done by members of the family, the farm is worked economically and comfortably. But the day comes when death snatches away the head, leaving perhaps a widow to be provided for, and when the estate comes to be divided there is little enough for each individual member. What are the sons to do then? Farming is their occupation, but they are without the capital to take farms, and their position is not an enviable one. Perhaps they help to crowd still more the already overcrowded ranks of farm bailiffs; they may content themselves as farm labourers, but that is a come-down; they may emigrate, or drift out of farming altogether and take up some other occupation. Whatever they do, however, they are handicapped, and this is no fine picture but a hard fact, as many farmers' sons can testify. What I contend is, that a man with limited capital and a big family should hesitate and look into the future before he decides to bring up all his boys to work on the homestead.—LUX.

The Filgrove Schools.

The following letter from Earl Carrington, the President of the Board of Agriculture in Fisheries, has been received by Mr. Robinson, of Filgrove, Newport Pagnell:

"Board of Agriculture and Fisheries,
"4, Whitehall Place, S.W."
July 13, 1906.

"DEAR MR. ROBINSON,—I am very pleased that the Board of Education have been able to grant the request that the Board of Agriculture made according to your desire—and that the schools at Filgrove were re-opened according to their instructions under date of July 3.

It seems a very happy case that little children should be compelled to walk so long a distance daily to school.—Yours very truly,

"CARRINGTON."

The countryside owes you a debt of gratitude for bringing these facts under the notice of the Government.

The Agricultural Holdings Act.

Two appeals by the Duke of Northumberland against abstraction awards under the Agricultural Holdings Act were heard at Newcastle County Court on Thursday. In the first case, William G. McFarlane and William McFarlane, tenants of several acres of land, had been awarded £436. It was contended for the Duke of Northumberland that part of the land had been treated as a nursery, and not as a market garden, and that, therefore, there was no claim. For the McFarlans it was submitted that the land had been a market garden for thirty years or more.

In the second case, William Stevenson had received the award. He was a strawberry grower, which, it was contended, was no market gardening.

His Honour decided that growing strawberries was market gardening, and allowed the award to stand, less £22 18s. In the McFarlane case his Honour also held that fruit growing was market gardening, but he reserved his decision until he considered whether the tenant was entitled to compensation under the Act.

What is the Outlook?

St. James's Day has come and gone, and the critical moment of the season, according to ancient tradition, having passed, we should be able to express a definite reply to our query, *Tot homine, tot sententia*, and in this matter, as in most others, opinions vary. Our experience this year is exceptional. We have hop-growing weather, with plenty of sunshine that usually helps the development of the crop, and banishes all hindrances. But we are completely at fault this time, as reports, which are so consistent that we cannot question them, continue to disturb all our calculations.

A circular issued by a leading merchant firm at the beginning of this week says:—"There has been no material improvement in the prospects in England. The plantations that have been thoroughly well washed and cultivated, though slack of bine, promise a fair average yield, but a large acreage in all districts has been neglected, and consequently only small crops can be obtained."

Looking at further details which have come to hand, I think we must conclude that the position is most unsatisfactory from the point of view of quantity, and may almost say that gloom is now taking the place of hope. There is hardly a single district in which the futility of the labour and cost of washing has not been proved, as the blight remains unconquered almost everywhere. The sunshine is hastening the development of the burr, and washing will now be discontinued, so that the harvest is in great danger. But yet there are some experts in the Borough who refuse to accept the facts that appear to be unquestionable to others, therefore, debates are frequently warm, and the impartial observer is much worried. Perhaps the safest test is the state of the market, and this certainly confirms my view, that the crop will be a poor one as a whole.

In addition to vermin, the weather seems to encourage the spread of mould, and if this pest be further developed, the result must be fatal to any faint hopes of recovery. Even supposing that by the help of favourable weather during the next month, some improvement may be accomplished, there can be no more increase of strength in the bine, which is everywhere so weak that a full fruitage is beyond the range of possibility.

From the Continent I hear that the plantations have suffered from variations of temperature, the days being hot and stuffy and the nights cold, due to the extent of occasional frosts. Vermis is also persistent, and even in Bohemia, where the recent condition appeared to be favourable, it has now changed for the worse. The Belgian grounds are in a very poor way, and the crop prospects are getting more doubtful. Similar reports come from Alsace and other German districts, and also from Burgundy and the North of France.

America stands out as the exception this year, a letter received this week stating that the recent hot weather, assisted by spraying, had cleared the vermin away throughout the whole of the hop-growing states. The vines are throwing out strong arms, and every indication points to an immense yield in all districts, this being now estimated at the record quantity of 340,000 to 350,000 bales.

The Markets.

LONDON.—The trade is active, and prices have advanced further. The principal business is being done in local stocks, as the few growers who are holding have withdrawn from the market, being confident of better values following upon the assured deficiency of the coming crop. Hops of fairly good quality are now worth 75s. to 80s., these figures showing an improvement of at least 20s. since the alarm was first aroused. The week closes in strength, and with an upward tendency.

NUREMBERG.—Advanced values of 15s. to 25s. for medium qualities and 10s. to 15s. for better sorts have been established. At these prices a large trade is being done, the business being far in excess of the average at this period of the season. The present currency is approximately 35s. to 45s. for commonest, 50s. to 60s. for mediums, 60s. to 70s. for good mediums, and 75s. to 90s. for best.

BRUSSELS.—There is a strong and constant de-

mand for 1905's, and sales are made at 67½ to 70 frs. values having more than doubled within the past two months. The news from the plantations is stirring up speculation in the coming crop, and Alosts are now quoted at 120 francs, and Pops at 125 francs for October-November delivery. Belgium has imported, principally from Germany, about 18,200 cwt. of hops during the past six months, this being much in excess of her imports during the same period of 1905. Belgian exports during the same months amounted to about 10,000 cwt., her chief customers being England and France.

AMERICA.—The trade is quiet, being apparently unaffected by the unfavourable crop reports from Europe. The large dealers, brewers, and speculators cannot be aroused to take interest in the 1906 crop as yet, so far as local business is concerned, but operators who are agents for English firms have contracted heavily at 10 to 11 cents. These transactions throw some light on the views held by important English houses, indicating their expectations of strength in the market when new hops come forward.

Saccharomyces Thermentitum.

These formidable words will doubtless be incomprehensible by the majority of my readers. Let me explain. They literally mean, "Heat resisting ferment," and are applicable to a discovery of Messrs. Johnson and Hare, of a specific germ obtained from the cucurbitus plant, which ferments at a high temperature, and therefore introduces into the brewing industry a new element whereby many advantages are apparently secured. My introduction to this novel process took place a few days ago, when I was invited to meet a number of Belgian brewers, who had journeyed to England for the express purpose of investigating its results at a model brewery, which has been for some time in operation at Nurbury, near Croydon. I found about sixty brewers busily engaged in sampling beers from various casks, each of which was labelled with the materials of which its contents were composed. There were Pilsener and Munich, pale ale and stout, and it is satisfactory to be assured that they were all brewed from malt and hops, without any chemical additions. The tastings were sufficiently copious to demonstrate the satisfaction of the tasters as to the quality of the products. Their comments, volubly expressed in French and Flemish, were entirely favourable, and I have pleasure in adding my testimony to the excellence of the beverages supplied. The inventors of the process have proved in actual practice that, by the use of this ferment they can produce beer without coolers or refrigerators, that the wort can be cooled without coming in contact with the germs existing in the atmosphere, that the production of the finished beer is hastened, with improvement in its keeping quality and stability, economies being effected in every stage, and that consequently the total cost is reduced and profits are improved.

But my readers will wonder why I have occupied space in noticing an invention, the main object of which seems to be to assist brewers who are so well able to take good care of themselves. My chief anxiety in this matter was to ascertain how far the interests of the hop-growing industry were likely to be affected. In one respect it may possibly be advantageous to us, as if light beer can by this means be produced in tropical climates, where brewing is now impracticable, a larger demand for hops may arise. In such regions, thirst is hardly ever quenched, and Europeans who are compelled to dwell in hot climates pay high prices for imported beers, which are not infrequently far from palatable. The new process, therefore, promises to help us in this respect. But when we look at the question from another point of view, I can hardly be enthusiastic, inasmuch as any process which lessens the time required for the maturing of beer is usually accompanied by a reduction of the quantity of hops necessary for its preservation. Should English brewers take up this invention, and find that it fulfils its promises, I fear that it may tell against the hop grower, in diminishing the demand for his produce. To be forewarned is to be forearmed, and it is desirable that we should all be awake to future possibilities, as it is impossible to retard the progress of science. I trust, therefore, that while the product with the unpronounceable name may be successful and beneficial to the consumers of beer, our hop growers may share in its advancement, and still find good outlet for their growths at remunerative prices.

The Board of Agriculture's Harvest.

In the course of a speech delivered at a meeting of the Highland and Agricultural Society, held at Peebles during the show, Sir Thomas Elliott said he wished that either the president of the Board of Agriculture or Sir Edward Stachey, who looked after their interests in the House of Commons, could have been present, for he felt sure it would have done them good to see the fellowship that existed amongst farmers on that side of the Tweed. As a fact, however, they were both doing a bit of harvesting at Westminster. They were looking after a little crop of Bills designed for the welfare of the farming industry. They might not be big measures; but they would do something to remove grievances under which farmers at present suffered.

There was the Fertilisers and Feeding Stuffs Bill. It was hoped that that Bill without doing any injury to the trade would be a great benefit to farmers in seeing that they got value for their money in manures. Then there was the Dogs Bill, the object of which was to put a stop as far as possible to sheep worrying. It might not altogether do away with the sheep-worrying dog, but it would help local authorities to deal with the grievance.

Again there was the measure relating to the use of open spaces that might be used for purposes of recreation grounds for the people's use and enjoyment. And last, but not least, there was the Adulteration of Butter Bill. The task of preventing the adulteration of butter that came from abroad was an arduous one, but the Department had tackled it in real earnest, and he hoped successfully.

NON-POISONOUS.

"SPIMO"

NON-POISONOUS.

HOP and FRUIT TREE WASH.

A SAFE, COMPLETE AND EFFECTIVE WASH.

Kills Aphid, Fly, Red Spider, Mould or Mildew, Caterpillars, American Blight, etc.

Does not clog horse washers, but acts as a lubricant.

"Spimo" Improved is a COMPLETE WASH for ALL PURPOSES.

Ready at a Moment's Notice. It is in fact THE THING that is WANTED.

and Show Sheep of all classes. Cattle and
Sheep brought from the best Herds in Scotland.

Highly Important Forthcoming Sales
of pure-bred Southdown Sheep on
WEDNESDAY and THURSDAY,
AUGUST 8 and 9.

SUMMERSBURY,
SHALFORD, GUILDFORD.

One mile from Framley Station, L.B. &
S.C. Railway; half a mile from
Shalford Station, S.E. Railway;
two and a half miles from Guildford,
L. & S.W., L.B. & S.C., and S.E.
Railways. UNRESERVED SALE
OF THE WHOLE OF MR. EDWIN
ELLIS'S PRIZE-WINNING PEDIGREE
SOUTHDOWN FLOCK
(registered a d trade-marked, Reg.
No. 12).—On WEDNESDAY,
AUGUST 8 next, Messrs.

STRIDE AND SON, (in conjunction
with Stride, Son, and Ellis, of
Guildford) beg to announce that they
are in receipt of instructions from
Edwin Ellis, Esq., who is giving up
sheep breeding, to Sell by Auction,
WITHOUT RESERVE, at Summers-
bury, on the above date, the whole of
his famous Southdown Flock (which
has taken over £4,000 in PRIZES at
the Principal Shows, both in England
and abroad, during the last twenty
years), comprising about:—

630 HEAD, in ages, as follows:—
120 SHEARLING EWES,
60 FOUR-TEETH EWES,
38 SIX-TEETH EWES,
63 FULL-MOUTH EWES,
65 DRAFT EWES,
30 OVER-AGE EWES.
140 EWE LAMBS.
36 GRAND SHEARLING and FOUR-
TEETH RAMS (including many
Prize Winners) and
65 RAM LAMBS.

The Summersbury Flock was estab-
lished in the year 1879 by the purchase
of carefully selected ewes from the
Flock of Messrs. Bunting, where the
old Kielder blood had been strictly used,
and which had also been replenished
by some of Mr. Colman's best rams
and ewes.

At the dispersal of Lord Walsing-
ham's noted Flock in 1835 many of
the choicest ewes were purchased at
prices as high as 12 to 15 guineas per
head, together with the two rams
'Merton' and 'Ripon,' one costing
105 guineas and the other 45 guineas.
Many of the best Southdowns now
in existence trace back to one or other
of these two famous sheep.

Whenever a change of blood has
been thought desirable some of the
best Flocks have been drawn upon,
and in one case a ram was obtained
from Mr. Henry Webb at the price of
140 guineas.

In 1885 Mr. Ellis first sent speci-
mens of his Flock to the leading show-
yards, and then commenced that won-
derful record of success which has
probably never been equalled, in that
it has been equalled, in the
annals of the Southdown or any other
breed. Not only at the Royal, the
Royal Counties, the Bath and West,
and other English Shows, but also at
the great exhibitions of the United
States of America, Canada, France
and other countries, have the Sum-
mersbury Sheep time and time again
met with the most striking success
often forming one of the most notable
features of the live stock classes, and
in more than one season securing a
larger number of First and Champion
prizes than all the other exhibitors
of the breed added together.

Every sheep in the Flock is included
in this Sale, and every lot WILL BE
SOLD TO THE HIGHEST BIDDER
WITHOUT RESERVE.

No sheep will be exhibited this
season or will be sold before the Sale.

The Flock is open to inspection at
any time by appointment with Edwin
Ellis, Esq., Summersbury, Shalford,
Guildford.

Luncheon (by ticket) at 12.30. Sale
to commence punctually at 1.30. Com-
missions carefully executed.

Catalogues of the Auctioneers, Auction
and Estate Agency Offices, East
Street, Chichester, Sussex; or of
Messrs. STRIDE & ELLIS, 108,
High Street, Guildford.

CHICHESTER, SUSSEX.
(The great centre for the sale of
Southdown Sheep).

Great Annual Prize Show and Sale
of pure-bred Registered Southdown
Sheep, Thursday, August 9 next
(the day after the sale of Mr. Edwin
Ellis's famous Southdown Flock at
Summersbury, Guildford).—Messrs.
STRIDE & SON beg to announce
that this important great annual
AUCTION SALE, which is held in the
Market Chichester, will comprise about
480 SOUTHDOWN SHEARLING
RAMS and RAM LAMBS
(from many of the best breeders),
6000 SOUTHDOWN EWES,
including a grand entry of SHEAR-
LING, REGULAR DRAFT and
DRAFT EWES, and many lots of
four-teeth and six-teeth Ewes.

The Auctioneers beg to call special
attention to this year's sale, which will
consist of the largest and best selection
of pure-bred Southdown Rams, Ram
Lambs, and Ewes to be sold anywhere
this season. First Edition Catalogues
on application.

Judging at 9 o'clock. Sales punctu-
ally at 10 o'clock. Commissions care-
fully executed.

Buyers arriving at Chichester over-
night will find 'The Dolphin' a con-
venient and comfortable hotel to stay
at, and the Auctioneers will be glad
to book rooms.

Auction Offices, East Street, Chi-
chester.

80 grand OXFORD DOWN and RAM
WOLD SHEARLINGS and RAM
LAMBS, from James Horlick, Esq.,
Messrs. Charles Barton, William Houl-
ton, and others.**

Offices: Cold Aston, Cheltenham.

AUCTION SALES ANNOUNCEMENTS.

HANTS.
THE GRANGE ESTATE.

Important Sale of Registered Hampshire Down Flock of 880 EWES and LAMBS.—Messrs.

JAMES HARRIS and SON are favoured with instructions from the Right Hon. Lord Ashburton to **SELL by AUCTION**, on the Fair Ground at Alresford, on **THURSDAY, AUGUST 9, 1906**, the whole of his Swanton Farm Registered FLOCK of HAMPSHIRE DOWNS, comprising 650 EWES of regular ages and EWE LAMBS, together with 230 young EWES from his Chilton and Candover Farms.

The total will comprise:—

245 Two-Tooth EWES,
205 Four-Tooth EWES,
190 Six-Tooth EWES,
80 Full-Mouth EWES,
160 EWE LAMBS.

The Flocks from Lord Ashburton's Farms are well known to all Hampshire Down Flock Masters. They have never been exhibited in the Show Yards, but the annual drafts of Full-Mouth Ewes and Wether Lambs which have for many years been regularly sold by auction at Overton and Alresford Fairs have invariably realised the highest prices in those Fairs.

They have also been very successful in the Hampshire Down Flock Prize Competition, taking the leading prizes. The Sheep now offered for sale are bred on the careful lines which have produced the above results.

They are offered in Stock order only. Luncheon (by ticket) at one o'clock and Sale immediately after.

Catalogues of the Farm Bailiff, Mr. TERRILL, Brown Candover, Alresford; or of the AUCTIONEERS, Winchester.

The best All-round Sale of Breeding and Feeding Sheep in the Midlands.

KIDDERMINSTER GREAT ANNUAL SALE,
FRIDAY, SEPTEMBER 7, 1906.
5,550 SHEEP and LAMBS.

250 Oxford, Hampshire and Shropshire Rams and Ram Lambs.
3,300 Shropshire, Kerry and Clun

Ewes.
Store Wethers and Store Lambs.

NOCK & JOSELAND,
Auctioneers,
Kidderminster and Wolverhampton.

KENT.
ANNUAL LAMB SALE, ASHFORD.
Close to the S.E. & C.R. trucking siding, where a large supply of trucks will be on hand, and every convenience made for the quick removal of stock.—Messrs.

W. & B. HOBBS will hold the above SALE in the Cattle Market Field on **FRIDAY, AUG. 3, 1906.**

11,600 KENT and HALF-BRED SHEEP and LAMBS,

from the best flocks in the district, including:

6,037 Kent Ewe and Wether Lambs,
5,423 Half-bred Lambs,
120 3-lamb Ewes,
20 Ewe Tegs.

Sale to commence punctually at 10 o'clock. Luncheon provided.

Catalogues may be obtained at the Auction and Estate Offices, Ashford, Kent.

SUSSEX.—LINDFIELD PAIR LEWES SHEEP FAIR.

To Flock Masters, Flock Breeders, and others interested in the noted breed of Southdown Sheep.

THESE GREAT FAIRS will be held on **AUGUST 8, 1906**, at **LINDFIELD**, one and a half miles from the first-class Station of **HAYWARDS HEATH**, on the **L.B. and S.C. Railway**.

And at the County Town of **Sussex, LEWES**, on **SEPTEMBER 21, 1906**, about one mile from **LEWES STATION**, on the **L.B. and S.C. Railway**.

The Stations are within 1 hour and 14 hours from London.

Sheep penned, including Ewes, Lambs, and Rams, at **LINDFIELD, 13,000;**

At **LEWES, 18,000.**

IPSWICH.
ANNUAL SALE OF SUFFOLK SHEEP.

ROBERT BOND & SONS (in conjunction with the Secretary of the Suffolk Sheep Society) will **SELL by AUCTION**, at Gipseswyk Park, near the Railway Station, on **WEDNESDAY next, AUGUST 1, at 12 noon**, 2,000 excellent Suffolk Shearling and other Ewes and Ewe Lambs, registered, or eligible for registration.

THURSDAY next, AUGUST 2, at 10.30 a.m.,

300 Grand Suffolk Rams, registered, or eligible for registration, from the noted breeders of the district. Included in this Sale are consignments from large prize-winners at the Royal and County Shows, and in point of breeding and quality this will be the finest collection of pure Suffolk Sheep seen together this season.

Catalogues forwarded on application to Messrs. **ROBERT BOND & SONS**, Old Bank House, Ipswich, Suffolk, who will execute commissions for those unable to attend.

IMPORTANT SHEEP SALES BY
MESSRS. FRANKLIN & JONES,
AUGUST 8 and 9, 1906.

At Oxford Great Ram Fair, Wednesday, August 8.—194 Grand OXFORDSHIRE DOWN RAM LAMBS and SHEARLING RAMS from the pure-bred flocks of Mr. A. H. Wilson, Mr. W. Arkell, Rev. C. R. Powys, Mr. J. Worley's Exors., and others.

Also upwards of 1,500 HAMPSHIRE DOWN and OXFORDSHIRE DOWN DRAFT EWES, THEAVES and STORE LAMBS from many old-established and well-known flocks in the locality.

At Manor Farm, Brize Norton, Oxon, Thursday, August 9.—Important dispersal Sale of the pure-bred OXFORDSHIRE DOWN FLOCK of the late Mr. John Worley, comprising

120 GRAND RAM LAMBS,
6 RAMS (their sires),
245 EWES and THEAVES, and
110 EWE LAMBS.

Catalogues, with pedigrees and further information, may be obtained of Messrs. **FRANKLIN & JONES**, Auctioneers, Frewin Court, Oxford.

THE
LECONFIELD LINCOLN
LONG-WOOL RAMS,
No. 38 in FLOCK BOOK.

MESSRS.

SUGDON and PEARCE-BROWN have received instructions from Mr. Robert Fisher to **SELL by AUCTION**, on **WEDNESDAY, AUGUST 15, 1906**, 80 SHEARLING RAMS from the above Registered Flock; when Mr. Fisher will be glad to see his friends.

Sale after 1 o'clock luncheon.

Conveyances will meet the trains at Beverley and Arram Stations.

Auctioneers' Office,
Market Place, Beverley.

HAWICK AUCTION MART (one hour's run from Carlisle). 120,000 LAMBS of all classes and 40,000 EWES and FEEDING SHEEP will be **SOLD** during **AUGUST, SEPTEMBER and OCTOBER**. Dates of Sales, special railway rates and full particulars sent on application. Commissions carefully executed.—**ANDREW OLIVER & SON**, Auctioneers, Hawick, N.B.

BROMSGROVE GREAT ANNUAL SHEEP SALE (one of the largest in Worcestershire).

WEDNESDAY, SEPT. 5, 1906.

NOTE.—The supply of Breeding Ewes and Store Sheep in this district is very small, and Breeders and Flock Masters would do well to truck to Bromsgrove, as a grand trade is expected. Good keeping found.

COTTON & CHAPPELL,
Auctioneers.

IMPORTANT SALES OF PURE-BRED SOUTHDOWN SHEEP.

FERRING GRANGE, WORTHING, SUSSEX.

JOHN THORNTON & CO. will **SELL by AUCTION** on **FRIDAY, AUGUST 17 (1.30 p.m.)**, at East Ferring Farm, half a mile from Goring Station, L.B. & S.C.R., Mr. E. Henty's entire prize-winning flock of **SOUTHDOWN SHEEP**, comprising 250 Shearling and older Ewes, 120 Ewe Lambs, 20 Rams, and 35 Ram Lambs.

COCKFIELD HALL, BURY ST. EDMUNDS, SUFFOLK.

JOHN THORNTON & CO. will **SELL by AUCTION** on **FRIDAY, AUGUST 24 (12 noon)**, at Cockfield Hall, adjoining Cockfield Station, Mr. F. H. Jennings' old-established flock of pure-bred **SOUTHDOWN SHEEP** and herd of **BERKSHIRE PIGS**, comprising about 300 Ewes, 100 Ewe Lambs, and 20 Rams and Ram Lambs, and 70 Berkshire Sows, Gilts and Boars.

Catalogues may be had of **JOHN THORNTON & CO.**, 7, Princes Street, Hanover Sq., London, W., who will execute commissions.

FRIDAY, AUGUST 3, 1906.

THE MANOR FARM, WINTERBOURNE STOKE, WILTS.
Four miles from Wishford Station, six from Wilton, and nine from Salisbury.—Messrs.

WATERS and RAWLENCE are instructed by Mr. Cary Coles to **LET and SELL by AUCTION**, on the Premises, on **Friday, August 3, 1906**, 99 **RAM LAMBS & 1 SHEARLING**, from his highly-bred Registered **HAMPSHIRE DOWN FLOCK**.

For many years it has been with the greatest confidence that the Auctioneers have extolled the many merits of the Winterbourne Stoke Flock. The excellent sale last year will be remembered for the keen competition and individual record prices then realised, and Messrs. W. & R. have no hesitation in saying that Mr. Coles will again place before the public a selection of Ram Lambs that, if possible, will eclipse those of last season, and which should readily command the attention of all Breeders either for Home or Foreign Service.

N.B.—At the great Show at Salisbury on July 16, Mr. Coles won the First Prize and Challenge Cup for the best Pen of Eight Ram Lambs, and also the First Prize for a similar pen of Ewe Lambs, a feat which, we believe, has never before been accomplished by any breeder.

Luncheon at 12.30 and Sale after.

Conveyances will meet the trains until mid-day at Salisbury, Wilton, and Wishford.

Catalogues of the Auctioneers, Canal, Salisbury.

ISLEY FAIR.—AUGUST 1, 1906.

Two miles from Compton Station, G.W.R.

THE CHILTON LODGE FLOCK.

MESSRS. WATERS and RAWLENCE are instructed to **LET and SELL by AUCTION**, in Mr. Stevens' Close at the above Fair, on **WEDNESDAY, AUGUST 1, 1906**, at 10.30 o'clock

60 **SUPERIOR RAM LAMBS**, and 3 **SHEARLINGS**, from the well-bred Registered **HAMPSHIRE DOWN FLOCK** of Sir W. G. PEARCE, Bart., Chilton Lodge, Hungerford.

This sale was originally fixed for August 6, at Newbury, but on account of that day clashing with other important fixtures it has been decided to hold it at Isley Fair, as heretofore, when a consignment of sires of exceptional size, quality, and high breeding will be placed before the public, and such as should demand the widest possible attention from Breeders generally.

Catalogues of Mr. J. B. HARDING, Estate Office, Chilton Lodge, Hungerford, and the AUCTIONEERS, Canal, Salisbury.

IMPORTANT SALES OF PURE-BRED STOCK.

JOHN THORNTON & CO. will **SELL by AUCTION** as follows:—**THURSDAY next, AUGUST 2**—Col. H. W. Shakerley & Mr. Hambro & GUPPENSEYS, at Bargaie, Godalming.

FRIDAY, AUGUST 17—Mr. E. Henty's entire prize **SOUTHDOWN FLOCK** at Ferring, Worthing, Sussex.

FRIDAY, AUGUST 24—Mr. F. H. Jennings' entire Flock of **SOUTHDOWN SHEEP** and Herd of **BERKSHIRE PIGS**, at Cockfield Hall, Bury St. Edmunds.

FRIDAY, AUGUST 31—Mr. G. J. B. Chetwynd's **DENTER CATTLE** and **BERKSHIRE PIGS**, at Wyndthorpe, Doncaster.

TUESDAY, SEPTEMBER 4—The Rt. Hon. the Earl of Feversham's **SHORTHORNS**, at Duncombe Park, Helmsley, Yorks.

FRIDAY, SEPTEMBER 7—The late Mr. J. P. Cross' **SHORTHORNS**, at Calthorpe Towers, Rugby.

MONDAY, SEPTEMBER 10—Mr. C. Howard Taylor's Stud of **POLO PONIES**, at Middlewood Hall, Barnsley, Yorks.

FRIDAY, SEPTEMBER 14—Mr. H. J. Vermer's and Mr. J. Atkinson's entire Herds of **SHORTHORNS**, at Churchill, Moy, Co. Armagh.

FRIDAY, SEPTEMBER 14—Mr. W. J. Chick's **BERKSHIRE PIGS**, at Stratton, Dorchester.

TUESDAY, SEPTEMBER 18—The Right Hon. Lord Amherst's **RED POLLS**, at Didlington, Brandon, Norfolk.

THURSDAY, SEPTEMBER 20—Mr. W. D. Cradock's Herd of **SHORTHORNS**, at Haughton Castle, Humshaugh, Northumberland.

WEDNESDAY, SEPTEMBER 26—The Rt. Hon. Lord Lifford's **SHORTHORNS**, at Lifford, Oundle.

FRIDAY, SEPTEMBER 28—Sale of **SHORTHORNS** at Chipping Norton Junction, Oxfordshire.

TUESDAY, OCTOBER 2—The late Sir Wilfrid Lawson's **SHORTHORNS**, at Brayton, Carlisle.

WEDNESDAY, OCTOBER 3—Mr. John Graves' **SHORTHORNS**, at Hesketh Hall, Wigton, Cumberland.

THURSDAY, OCTOBER 4—Mr. J. H. Shore's **JERSEYS**, at Whately House, Frome, Somerset.

FRIDAY, OCTOBER 5—Mr. R. W. Hobbs' **SHORTHORNS**, at Kelmescott, Lechlade, Glos.

FRIDAY, OCTOBER 19—Sale of **SHORTHORNS** at York.

Catalogues may be had of **JOHN THORNTON & CO.**, 7, Princes Street, Hanover Square, London, W., who will execute commissions.

SELSEY, near CHICHESTER.

Sale of the well-known **PAGHAM HARBOUR SOUTHDOWN FLOCK.**

WYATT & SON have received instructions to **SELL by AUCTION** in **AUGUST** the above well-known flock, consisting of 370 EWES, 400 LAMBS, and 30 RAMS.

Auction and Estate Offices,
East Street, Chichester.

TUESDAY, AUGUST 14, 1906.

LEWES, SUSSEX.

SECOND ANNUAL SALE OF SOUTHDOWN RAMS AND RAM LAMBS.

MR. J. R. THORNTON begs to announce that he will hold the above sale in the Field adjoining the **LEWES CATTLE MARKET** on

TUESDAY, AUGUST 14, 1906, at 2 o'clock.

Present entries comprise about 40 **GRAND SHEARLING RAMS** and **RAM LAMBS** from the well-known Southdown Flocks of His Grace the Duke of Devonshire, Messrs. Allan Cooper, A. Heasman, A. G. Paul, G. S. Harris, and others.

Further entries are solicited, so that they may be properly advertised, and should be sent to the AUCTIONEER, at his Office, 173, High Street, Lewes.

PUBLIC NOTICE.

PROCLAMATION

BY HIS EXCELLENCY THE HONOURABLE SIR WALTER FRANCIS HELY-HUTCHINSON,

Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of His Majesty's Colony of the Cape of Good Hope, and of the Territories and Dependencies thereof, etc., etc., etc.

WHEREAS it has been shown to me to be expedient to alter and amend the Regulations, promulgated by Proclamation No. 73, bearing date the 21st day of April, 1900, providing for the examination and quarantine for the disease known as Tuberculosis of cattle introduced into this Colony from any country overseas other than the Colony of Natal:

Now, therefore, under and by virtue of the powers and authorities in me vested by the seventh section of the Act, No. 27 of 1895, intituled the "Animal Diseases Act, 1893," I do hereby proclaim, declare and make known that the Regulations contained in the subjoined Schedule shall be the Regulations for the examination and quarantine of cattle which may be introduced into this Colony from any country overseas other than the Colony of Natal, and shall have force and effect from and after the 1st July, 1906, in lieu of those promulgated by the aforesaid Proclamation No. 73 of 1900, which is hereby superseded and repealed.

GOD SAVE THE KING!

Given under my Hand and the Public Seal of the Colony of the Cape of Good Hope, this 5th day of May, 1906.

WALTER HELY-HUTCHINSON,
Governor.

By Command of His Excellency the Governor in Council
ARTHUR J. FULLER.

No. 156, 1906.

Schedule to the foregoing Proclamation.

1. The word "Cattle" in these Regulations shall be taken to mean and include all animals of the bovine tribe.

2. All cattle, save as hereafter excepted, shall upon arrival at any station of this Colony from any country whatsoever overseas be liable to be subjected by a Government Veterinary Surgeon to the test, known as the tuberculin test, before being allowed to land.

It will, however, be within the discretion of the Veterinary Officer aforesaid to accept the certificate of any duly qualified Veterinary Surgeon of the country from which such animals have been brought, supported by a record of temperature reactions, to the effect that such cattle were submitted to the tuberculin test immediately before being embarked and had given no indication of the presence of tuberculosis.

3. In the absence of a satisfactory certificate as aforesaid the cattle shall be removed to place provided by the Government or by the owners subject to the approval of the Inspecting Officer for quarantine purposes, and shall be subjected by a Government Veterinary Surgeon to the necessary testing by tuberculin to ascertain whether they are or are not affected with tuberculosis.

4. In the event of the test indicating the existence of tuberculosis, the animals shall not be removed alive from the quarantine station, but shall be destroyed there, and the owner shall be allowed to deal with the carcasses as he may think fit, provided, however, that the flesh shall not be used for human consumption unless the said officer shall give a certificate that it is fit for that purpose.

5. All expenses of inspection, quarantine, testing, destruction and otherwise shall be borne by the owner of such cattle.

6. The foregoing Regulations shall not apply to cattle entering by sea from the Colony of Natal, so long as similar regulations remain in force in that Colony, nor shall they apply to cattle imported solely for purposes of slaughter, provided that, before being landed, they shall be inspected by the Government Veterinary Surgeon and declared to the best of his belief to be not unfit for human consumption, and the owners or importer shall sign and deliver to such officer an undertaking to the effect that none of such animals shall be used or disposed of for any other purpose than for immediate slaughter for food.

LEDICURA FOR HORSES. Cures Thrush, Seedy, Brittle, Shelly Hoof, Foul Smell of Feet, Greasy Heels, Itchy Mane, Tail or Legs, Mange, Skin Itch, and Lice in all Animals. Tins, 2s. 6d.—GREGORY AND CO., Temple, Bristol; or through Chemists.

JOHN PRIEST & SON, Ltd., Castle Road Works, Bristol.

Wire Netting.—Best Galvanised, Cash prices per roll of 50 yds. 3 in. mesh, 2 ft. 6 in., 5 ft. 6 in., 6 ft. 6 in., 7 ft. 6 in., 8 ft. 6 in., 9 ft. 6 in., 10 ft. 6 in., 11 ft. 6 in., 12 ft. 6 in., 13 ft. 6 in., 14 ft. 6 in., 15 ft. 6 in., 16 ft. 6 in., 17 ft. 6 in., 18 ft. 6 in., 19 ft. 6 in., 20 ft. 6 in., 21 ft. 6 in., 22 ft. 6 in., 23 ft. 6 in., 24 ft. 6 in., 25 ft. 6 in., 26 ft. 6 in., 27 ft. 6 in., 28 ft. 6 in., 29 ft. 6 in., 30 ft. 6 in., 31 ft. 6 in., 32 ft. 6 in., 33 ft. 6 in., 34 ft. 6 in., 35 ft. 6 in., 36 ft. 6 in., 37 ft. 6 in., 38 ft. 6 in., 39 ft. 6 in., 40 ft. 6 in., 41 ft. 6 in., 42 ft. 6 in., 43 ft. 6 in., 44 ft. 6 in., 45 ft. 6 in., 46 ft. 6 in., 47 ft. 6 in., 48 ft. 6 in., 49 ft. 6 in., 50 ft. 6 in.

Iron and Steel Hurdles Fences.—Excellent quality; 6 ft. hurdles, 4 rails, 3ss. per doz.; 5 bars, 3ss. Steel fencing wire, 3ss. per cwt.; galvanised wire strand, 13s. 6d.; galvanised barbed wire, 13s. 6d.; 500 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 8d. per yard.

Sp. ended Galvanised Roofing.—Perfect quality; 1 ft. 10 in., 6 ft. 10 in., 7 ft., 2s. 8 d.; 2s. 3d.; 3 ft., 2s. 4d.; 10 ft., 2s. 8 d.; 24 ft., 3s. 6d.; Best Wire Nails, 11s. cwt. Galvanised Cisterns, corrugated, 70s. 80 gals., 9s.; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs at very low prices. Data free.

J. PRIEST & SON, Ltd., Castle Road Works, Victoria Road, Bristol.

MISCELLANEOUS.

MY SPECIALITY.—Galvanised Corrugated Roofing, of imperishable quality, as supplied to largest estates for 25 years. At present cost of labour it pays best to fix highest quality only, and to avoid all renewals. Full particulars, cash prices, and all necessary fittings in free Catalogue. The noted house for Iron Fencing, Water Tubes, Wire Netting, Tanks, Troughs, Roofing Felt, and every estate requisite.—JOHN ATTWOOD REEF, Stony Stratford, Bucks.

WIRE NETTING.—Cash prices per 50 yards, carriage paid on 70s. lots. 3 in. mesh 36 in wide 5s. 10d.; 2 in. 7s. 4d.; 1 1/2 in. 10s. 10d.; State wants, Fox & Co., Rochford, Essex, Sheep netting.

PALATINE CAKES AND MEALS are maintained to a high standard. Good results made certain.—THE PALATINE OIL MILL, Liverpool.

WHY PAY MORE when you can buy all Farm Requisites from DAVID & CO., Taff Vale Iron-works, Cardiff, at rock bottom prices? Your inquiries solicited.

TRACTION ENGINES and Fixed Wagons, Portable Ploughing, and Fixed Engines, Thrashing Machines, &c. second-hand, for Sale, cheap, or to be let on Hire-purchase. Full list free. Inquiries for all classes of Machinery collected. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions. HENRY LEWIS & SONS, Thames Bank Iron Works, Reading.

POWDER FOR DESTROYING LICE IN CATTLE AND HORSES, AND FLEAS AND LICE IN DOGS AND POULTRY. Sure remedy; is simply sprinkled on, no washing; quite harmless; 1s. 6d. per lb., over 10 lbs. post free. E. J. LEMSEY & CO., Rhinelandt Fawc. Carnarvon.

BASIC LAG PHOSPHATE. Remarkably successful on Grass land. Obtain our prices and book requirements to ensure delivery. Binder Twine, all brands; Rick and Wagon covers; Implements, at very lowest prices. Write us to day, it will pay you.—CANNOCK AGRICULTURAL CO., LTD., Cannock, Staffs.

MACHINERY FOR DISPOSAL.—Patent Adjustable Wheat Grader with 6 ft. Cylinder, complete with frame, close boarded and under hopper. List price £20 10s. Lane Dust Collector, 4 ft. 6 in. diam., complete with fan and spare set of bag frames. —Can be seen KEEN & CO., LTD., Denmark Street, E.

RATS! RATS! RATS!—A Truro Farmer writes:—"After using a 1/2 Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d. 1s., 2s. 3d., 3s. 6d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

SEED POTATOES.—From healthy, selected roots. Scotch Yorkshire Lincolnshire growth. Quotations for autumn or spring delivery.—For prices apply, W. J. ATKINSON, Weston St. Mary, Spalding.

SEEDS OF GILLES CELEBRATED STOCKS, warranted first-class.—Early Large Yorks, Lates or Drum-heads, Savoy, Curled Germans, Imperial Early McEwan, also selected Brussels Sprouts, 12s. per stone; 4d. per cwt. Lates or Drum-heads, 23/ 10s. per half ton; 470 per ton. Prepayment or banker's reference from new customers.—GILLES, Northfield, Prestonpans. Largest cabbage plant grower in the world; largest market gardener in Scotland.

EDUCATIONAL.

ROYAL AGRICULTURAL COLLEGE, GIRENCESTER.
Patron.—H.M. KING EDWARD VII.
President.—THE EARL SPENCER, K.G.
For Land-owners, Land-agents, Surveyors, Agriculturists, intending Colonists, &c.

Farming and Colonial Branch.
Estate Management and Forestry Branch.

For Prospectus of Curriculum, Fees, Entrance Exhibitions, Scholarships, Diplomas, &c., apply to the PRINCIPAL. Next Session begins TUESDAY, OCT. 2.

ROYAL (DICK) VETERINARY COLLEGE, EDINBURGH.
EIGHTY FOURTH SESSION.

Trustees:
THE LORD PROVOST, MAGISTRATES, AND COUNCIL OF THE CITY OF EDINBURGH.

THE only endowed Veterinary School in Great Britain. Under arrangements which are now being made, the equipment of the College will be strengthened and modernised, and the teaching facilities greatly increased.

An Examination in General Knowledge, for intending students, will be held on SEPTEMBER 6, 7, 8.

Next Session commences TUESDAY, OCTOBER 2, 1906.

Further particulars may be learned on application to—

PRINCIPAL DEWAR.

ROYAL VETERINARY COLLEGE.
Principal and Dean:
Prof. Sir John McFadyen, M.B., B.Sc., M.R.C.V.S.

SESSION 1906-1907.

The Winter Session will commence on TUESDAY, OCTOBER 2, when the Chair will be taken by the Right Hon. the Earl Carrington, G.C.M.G., President of the Board of Agriculture and Fisheries, and the Introductory Address delivered by Prof. Woodruff, M.R.C.V.S., at 12 o'clock.

An Examination in General Knowledge will be held at the Royal Veterinary College, Camden Town, N.W., by the Educational Institute of Scotland, on September 6, 7, and 8.

The College Calendar, with full particulars of Fees, Prizes offered, duration of Terms, and other information will be forwarded on application to—

RICHARD A. N. POWYS,
July, 1906. Secretary.

EDINBURGH UNIVERSITY.
Agricultural Course. Prospectus, Edinburgh Agricultural College; also regulations, degree of B.Sc., and Garton Lectures on Colonial and Indian Agriculture.—Apply to CLERK of SENATUS.

UNIVERSITY COLLEGE, READING.

Principal: W. M. CHILDS, M.A. DEPARTMENT OF AGRICULTURE. Director: JOHN PERCIVAL, M.A.

This College is one of the Collegiate Centres of the Board of Agriculture. Complete courses of practical and theoretical instruction in Agriculture are given at the College, and at the College Farm (115 acres), Shinfield, Berks.

Complete courses of practical and theoretical instruction in Dairying are given at the College and the British Dairy Institute (Manager: Mr. Miles Benson).

Special courses of instruction in Poultry-keeping at the College Poultry Farm, Theale (Lecturer: Mr. Edward Brown, F.L.S.).

Illustrated Prospectus will be sent post free on application to the REGISTRAR, University College, Reading.

ARMSTRONG COLLEGE, A NEWCASTLE-UPON-TYNE.

(In the University of Durham.)
Professor of Agriculture—DOUGLAS A. GILCHRIST, M.Sc.

Secretary—F. H. PRIEN.

For full particulars of B.Sc. (Agriculture), College Diploma, and courses in Agriculture, Forestry, Estate Management, and Dairy Farming, apply to the Secretary.

Session commences SEPTEMBER 24, 1906.

Seasonable Topics.

August. ONCE more we are in August, the crowning month of summer, when everyone who can rushes away from business to enjoy the delights of holiday time. We do not blame the holiday-making world, because it is good for everyone to have change and relaxation at times, though we are aware that much of this is denied to the majority of the agricultural fraternity. With the passing of August we have to face the fact that the summer is wearing its way to the end. There is an aspect of ripening to harvest about the country in general, and each day the shadows gather in a little earlier than they did the evening previous. That fresh green-ness which was so refreshing over woodland and meadow a month or six weeks' ago has passed away, and somewhat bare aftermaths point to the end of the hay harvest. Still, August is a glorious month, and while the holiday makers rejoice in it, we all must make the best of it, because with its departure the back of the summer will assuredly be broken.

The Advent of the Corn Harvest. OATS have made rapid progress towards ripening during the past few weeks, and the shocks standing in many fields remind one that the corn harvest has begun. According to different reports the straw does not appear to be very long, generally speaking, though in several cases that have come before our notice where the treatment was liberal, oats have grown to more than the average height and the heads are bright and clean. There has been little or no respite this year between the finishing up of haymaking and commencing on the corn, and before July was ended we saw haymaking going on in one field and oats being cut in another just over the hedge. Speaking generally, corn looks well, though in districts visited by storms it is badly laid in places. Barley growers are anticipating that they will have some good samples for the brewer this season, but the pity of it is that the average beer drinker has no means of knowing whether his liquor has had any acquaintance with barley at all. Surely the power of chemicals is magic in these days, and the farmer suffers in consequence.

Amusement at Agricultural Shows. IN the cattle, implements, and other things to be seen at any agricultural show, the farmer visitor finds plenty to amuse and interest him, but the fact remains that shows can hardly be run successfully without the nimble shuffling of the man in the street who soon tires of staring into pens of animals and studying machinery that he knows little or nothing about, and consequently his amusement has to be catered for as well as that of the farmer. A really good

band of music goes a long way in this direction, and as feats of horsemanship appeal to Englishmen of every occupation, the driving and jumping ring provides a centre of attraction. Jumping and driving, however, are now such matter-of-course items of the agricultural show programme, that the novelty of these competitions has departed, and the thing is to find something fresh. We do not want to turn the showyard into anything approaching a pleasure fair nor lessen the purely agricultural side of it one whit, but so long as the gate is not entirely independent of the man who is not particularly interested in agriculture, provision has to be made for his amusement.

Parading Stock at Shows.

WE think the Highland Agricultural Society has acted wisely in doing away with the regulation that no owner or exhibitor should parade his stock in the show ring. The object of the rule was apparently to keep the judges' mind quite free from prejudice in favour of any particular owner that the judges might happen to know. Doubtless the rule was made in the best of faith, but it also cast some reflection on the integrity of the judges, who, as a class, have a desire to award the prizes to the best animals, quite irrespective of ownership. Again, there can be no doubt that certain animals that are sent from show to show get to be known, no matter who parades them in the ring. A rule like the above falls particularly hard on a tenant farmer who may be put to the expense of having to take an extra man to the show to perform a little task that he could do better himself, and in view of this and other points we congratulate the Highland Society on abolishing the regulation.

Village Flower Shows.

DURING the early weeks of August hundreds of tents are erected in as many rural villages in England, and hundreds of cottage gardeners compete with each other on the exhibition table with the products of gardens and allotments. It is an interesting sight to see a sturdy agricultural labourer staging his vegetables on the morning of the show, and no one but himself knows how many hours of labour before six o'clock in the morning and after six in the evening the production of these specimens have meant to him. It is a still more goodly sight to see our friend after the judging is over with a half-inch stump of lead pencil figuring down on the margin of his well-

thumbed schedule the amount of his winnings. All the labour and the trouble are forgotten, however, in the evening when the lowly exhibitor steps up to the raised platform to receive his prize, touches his forehead by the way of thanks, and falls back to receive the congratulations of his friends. Without arguing the matter, we contend that no object is more worthy than that which encourages a taste for gardening amongst the rural labouring fraternity.

Motors and Veterinary Surgeons.

IN a recent issue of the MARK LANE EXPRESS a correspondent was deploring the increase in motor traffic on the grounds that it is cutting down the trade in hay and straw considerably. This is certainly not encouraging to the farmer; but in the same issue there was given an expression of opinion of an ex-president of the Royal College of Veterinary Surgeons to the effect that whereas before the introduction of motor cars and 'busses there were 6,000 veterinary surgeons in regular employment in London alone, in three years there will not be employment for 300. These matters call for grave consideration. Motor traffic is robbing farmers of an item of trade, but it is taking the living of veterinary surgeons, which is far more serious. Look at the matter how one will, there can be little doubt that motors have come to stay, and to what extent they will take the place of horseless remains to be seen. On the other hand, of course, the introduction of the motor has led to the establishment of a new industry, and the man who is thinking of bringing up his son as a veterinary surgeon, would do well to consider whether it would not be wiser to make a mechanic of him.

The Apple Crop.

APPLES are now swelling on the trees in the farm orchards in the West Country, and one can form some estimate of the prospects of the crop. At one time it looked as though we were going to have a bumper crop of apples to make up for the shortage of pears and plums, but insect pests and easterly winds in the spring have left their mark in more than one orchard. In spite of failures here and there, however, there are plenty of apples in many of the orchards in the west, which means that there will be plenty of work for the cider-mills later on. A good, old-fashioned English beverage is cider, but the genuine cider-maker, like the men who grow malt and hops for beer, suffer considerably through the sale of the adulterated stuff which is made and sold to the public under the name of cider. If people like to drink a liquor made out of wholesome chemicals, which may or may not be mysterious, that is their look out; but they certainly ought not to do it under the impression that they are consuming the pure juice of the apple, and

The "Mark Lane Express" is a
SPLENDID MEDIUM
for the Disposal of all kinds of Farm Seeds and Plants.

this is where the West Country cider-maker needs legislation to protect him.

Trouble with Potatoes.

THE other day we were called in to inspect a field of potatoes, composed of one acre of Duke of York, one acre of British Queen, and one acre of the Factor. The last two varieties looked excellent, and promised well for a good crop, but the former were an absolute failure. Only here and there was a well-grown plant, and for the most part the stems were thin and spindling, the leaves small and curled, and when the roots were lifted the old seed tubers were found as sound and firm as the day they were planted, with two or three marble-like specimens attached to the root-stems. Of course it was a bad case of the "leaf-curl" disease, about which a good deal has been heard of late, and a very important question is how to protect one's self against it. We know Duke of York is a good early potato, and the seed in this case was bought fresh for the land. It was picked seed, and there was apparently nothing wrong with it when planted, but the crop will not pay for the seed, to say nothing about labour. It seems to us that this peculiar disease

in potatoes is getting to be a matter for grave concern.

Land Grabbing.

THE action of the bands of unemployed who have taken possession of bare pieces of land in different places is providing a considerable amount of copy for the daily press, and it remains to be seen what the outcome of the whole affair will be. But land grabbing is not confined to the unemployed in towns, because it also exists in the country and to the detriment of agriculture. Of course the term may not be permissible because in the latter case the land is bought and paid for, but it is grabbing nevertheless on the part of people with money who have already got more land than they want or can manage properly. We have spoken before against the growing custom of buying land and grouping farms, which is nothing more or less than grabbing, and is detrimental to the agricultural interests of rural districts. It is the splitting up of large ownership rather than further monopoly that is really wanted, and when one sees the slipshod methods of farming adopted on some big estates the need of this is all the more apparent.

British Possessions beyond the Seas

AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

vealed when he held the office of Secretary of the Local Government Board, and who are not aware of his sedulous anxiety, his persevering personal investigations, and his admirable forethought. Perhaps in no political sphere has Sir Walter a greater distinction than in that of land reform. He is no mere intransigent, but he has clear, bold ideals which he seeks to embody in law—a fact which presupposes and illustrates a warm-hearted sympathy with the farming class. This is the type of man we now require—such a man as we are persuaded would both lend distinction to a distinguished position and carry on the admirable tradition associated with the name of Sir Frederick Peel.

Agricultural Politics.

BY A LOBBYIST.

A Great Duty for Authority.

What will the Board of Agriculture do? What will the Board of Trade do? What will the Local Government Board do? For, I opine, that all these executive authorities are concerned over the secret conspiring effort by which Argentine meat traders, acting in conjunction with money-grubbers on the Stock Exchange, propose, despite the nation's regulations, to evade the law preventing the landing of slaughtered animals from the Argentine into Great Britain. If all that is required is to build big abattoirs in Alderney and there to kill the Argentinian animals, in order to be able to import into this country, then the law and the nation's power becomes worse than asininely ludicrous. Mind, too, the live animals when they are landed in the islands may become a fecund source of foot-and-mouth disease, whose importation into the motherland would be attended with little difficulty. The whole business is, indeed, environed with the menace of a grim danger to the herds and flocks and farmers of this country. It must be interrupted, never mind how deep the chagrin of the Stock Exchange men at their deprivation of an anticipated profit. Their mouths may have watered at the prospect their cupidity may have opened out. Let their pleasure be arrested at once—let it stop at the anticipation. Frankly, I think we can trust the powers that be. Earl Carrington is not only a practical minded man, but is himself a farmer. Mr. John Burns has shown that he intends to be a rigorous enemy of the loathsome in our food supplies. This is a sufficient assurance that they will not allow a great danger to be invoked in order that the disciples of Mammon may put undesirable pelf in their purse!

The Misapprehension of Mr. Haldane.

It seems to me that Mr. Haldane does not altogether regard the question of the meat supply of the British Army from the right standpoint. "It is so little," quotes he in effect; "the sum involved is so small, the profit must be so infinitesimal that it is not worth considering." We need not argue the question of Protection or Free Trade—it has no part in this scene. The fact, however, that the British Army, which is maintained out of British taxes, should, in its food necessities, provide profit, not for the British food-producer, but for the foreign food producer, is an anomaly. If it be just to make the British Army a source of profit to the foreigner who may by and bye be our foe, it is also wise to call that Army into existence not so much for the defence of the British Islands as for the advantage of the foreigner. If it is wise to benefit the foreigner through his pocket by means of our great national military machine, it is right to benefit him in the more dramatic fashion, to make the British Army an instrument of his wealth rather than of our own. And the anomaly becomes more grotesque when it is confessed that much of this foreign meat actually masquerades as English, Scottish, or Irish. Only a little trade, forsooth! Small or

big, the principle that the British Army should be supplied from British sources must not be relinquished. The holy principle that "we must not buy in the cheapest market" is not so much at stake as is a fraud. Foreign meat is palmed off as the real article to our hurt!

Who will succeed Sir F. Peel?

More than once in this column emphasis has been placed upon the fact that the successor to Sir Frederick Peel on the Railway Commission should be a man of similar distinction, who, as did Sir Frederick, possesses some appreciation of the peculiar position of the agrarian interest and of its vital concern in a just and fair policy in connection with railway rates. The appointment cannot be much longer delayed, and it is well to consider the type of man on whom the eye of the executive authority may have alighted. Human nature, and particularly political human nature, being what it is, it is wise to assume that the gentleman thus honoured will have some political affinity to the Administration. We have, however, a right to expect, after the self-laudatory poems which the Government has passed upon its own incommutate purpose, that the selected personage will possess the judicial temperament, be something, indeed, more than a mere partisan instrument. We have also the right to demand that he shall have some direct and sympathetic knowledge of the rural problem; and it will not be out of place if he have some appreciation of the intricacies of local government. Withal, he will not be the less commended to us if he bear a name (like unto that of Sir Frederick Peel) already honourably known in the field of public administration. The judicial and the commercial elements are already represented on this Commission; we require a man in sympathy with an interest as vitally concerned as either the law or commerce.

The Type of Man Needed.

I admit that here is a conjunction of qualities which it may be difficult to find centred in one man. The fact that they should have been centred in Sir Frederick Peel shows, however, that there be men who answer to this high standard of requirement. Frankly, the type of man I should like to see associated with the Commission is provided in the personality of the Right Hon. Sir Walter Foster, M.P. Whether Sir Walter would accept the position is another matter, but he has the equipment which would make him an eminent success in it. First of all, he is a man of the highest personal and Parliamentary distinction. He has already achieved a national eminence in the professional sphere. He holds, it is true, very strong and decided views, but he associates with them a courteous appreciation of the motives of his antagonists, and he never permits them to be warped by a jaundiced personal prejudice. In other words, though a strong politician he has what is most required in this position, the judicial temperament. Then, there are few men who have studied the problem of local government who do not comprehend the grasp of its intricacies which he re-

Why Lord Loreburn is Unpopular with his Friends.

The real meaning of the interrogations of the Premier in regard to the Liberal appointments to the magistracy is that Lord Loreburn has woefully disappointed his erstwhile associates. The political past of the Lord Chancellor—the close association with the left wing of Liberalism, his inflexible fidelity to the Radical ideal, his abhorrence of all that was assumed to be Toryism, and the imagined readiness on his part to adopt the rôle of a modern day Hampden—had opened out pleasing fascinating visions to many a Radical. He had in fancy perceived this ermined "Bob Reid"—thus he always spoke in other days of the then ex Attorney-General—grasping the county Tory magistracy by the throat, and holding it still the while he invited on to the bench a counter-balancing Liberal and Labour element. These Radicals had in their picturesque imaginativeness become, in not a few instances, self-persuaded that the invitation would be specially addressed to themselves. And the Lords-Lieutenant and the qualifying conditions necessary for the position? Well, the latter the Lord Chancellor would peremptorily abolish, and the Lords-Lieutenant he would disregard, just as Lord Herschell disregarded them. Lord Loreburn has done neither. He has actually gone out of his way to disavow the intention of promoting a man to the magisterial bench just because he happened to be a political enthusiast or had hinted antagonistic views towards the squirearchy, or imagined that the preponderating body of Tories on the county bench reflected their faith in their judgments. It is, of course, the fact that Tories do preponderate on the county bench. It is an inevitable incident both of the exacted conditions and of the social character of the counties. Lord Loreburn, however, has shown that he is not going to outrage decency by inviting every Jack, Tom, and Harry to the position because he happens to be a Radical. The man should not, of course, be kept off because he is a Radical, but he should not inevitably be put on because of his faith. Hence this fuming, hence the fact that Lord Loreburn is no longer affectionately regarded as "dear old Bob Reid," which, perhaps, his lordship does not altogether regard as a serious punishment!

Mr. Robert Cock, F.R.H.S., horticultural lecturer and instructor in gardening and bee-keeping for the Staffordshire County Council, died at his residence in Stafford on Sunday last. He was a familiar figure in the rural districts of Staffordshire, and was very enthusiastic in that particular branch of his work which brought him into contact with the elementary school children, to whom he taught practical gardening after school hours.

OIL and GAS ENGINES

are getting more than ever in demand, and should be still further "boomed" if regularly advertised in the "Mark Lane Express."

SHOWS.

Herts.

The Herts Agricultural Society has every reason to be gratified with the result of their show at Hatfield, for it was an all-round success, and certainly one of the best on record. And this is as it should have been, for the society is a most enterprising one, worthy of support, and it is due to their unflinching efforts that the show ranks amongst the best of our one-day agricultural shows. Local agriculturists give the society whole-hearted support, and those in other counties are well represented in the open classes, so that the entries assume big proportions. This year they totalled no fewer than 1,451, the highest number attained since 1899, when the total was 1,543, but the record number is 1,589, which was secured in 1896. In only one department was a decrease shown this year, and that, unfortunately, was in one of the most important sections, namely, agricultural horses, which touched a point lower than for many years. There were 161 entries against 174 last year, but the section has fluctuated considerably during the past seventeen years, the totals ranging from 174 to 291. In striking contrast, the nags were more numerous by 46 than last year, and within ten of the satisfactory figures of 1901, when they were represented by 237 entries. In the cattle classes, there was an advance of 32 upon last year's figures, Shorthorns numbering 134 and Channel Island cattle 74. Seventy-two sheep were entered, as compared with 70 last year, and 50 pigs against 47 at the previous show. Such a good show deserved a large attendance, and it is satisfactory to be able to report a record in this respect.

them all round, may be described as only fair, although there were one or two good horses in each class. Entries were rather short, in consequence, no doubt, of the fact that some of the usual habitués of this show were competing at Tunbridge Wells, whilst the animals entered in the riding classes were of a very mixed description. The jumping contest excited the usual interest among the spectators, who witnessed some good performances.

It was generally conceded that the show of Shorthorns was one of the best seen at the Herts show, and certainly better than any previous at Hatfield. Mr. C. E. Wodehouse was again a leading exhibitor with members of his Woolmers Herd, winning the first in the open cow class with Violet 3rd, first in the yearling heifer class with Corisande 17th, first in the family class for cow and two of her offspring, and first in the old bull class with Chewton Victor 5th, a grand beast of great substance and quality, which also carried off Lord Mount Stephen's Challenge Cup. Mr. C. F. Raphael was represented by several animals of excellent stamp, and was, as usual, a leading prize-taker. His Shenley Victor was singled out from distinguished company for Mrs. Thornton's Challenge Cup for the best Shorthorn bull entered in Coates's Herd Book, and the same animal was reserved for Lord Mount Stephen's Challenge Cup for the best Shorthorn in the show, while his Belle of Boyne 15th carried off Mr. R. Farley's Challenge Cup. Mr. W. Jackson's Lady Olga being reserved both for that trophy and for the President's Champion Cup. The last-named cup went to Mr. Jackson for an exhibit of fine symmetry in

although the last-named was somewhat disappointing. A military tournament, however, was quite the feature of the show with many of the visitors.

Exeter Horse.

The Devon and Exeter Horse Society's show at Exeter on the 27th ult. was a most successful one, the entries being good, the weather capital, and the attendance most satisfactory. There was a slight variation in the classes, the principal being that park hacks were not included this year, giving way to a class for heavy weight cobs, which drew a capital entry; in fact, the entries all round are a better percentage than last year, though the aggregate was slightly less. The reason for this is that there were one or two fewer classes. The grand total was 235 entries in thirty-four classes. About £300 was offered in prizes, and, as usual, the Hunter and Hackney Improvement Societies gave medals. The quality of the exhibits was exceptionally good, the Hunter classes drawing some remarkably fine animals, many of which were well-known winners. Hacks and cobs, too, were very strongly represented, and though the agricultural classes were not very largely filled, they comprised some typical horses. The driving classes were quite a feature of the show, and seldom has there been keener competition, whilst the jumping, trotting, and pacing competitions were watched with keen interest.

Burton Horse.

Brilliant weather favoured the show of the Burton and District Shire Horse Society, and had a beneficial effect on the "gate," the attendance being very large. The entries were, however, slightly down as compared with those of last year, owing very largely to the close proximity of the Royal Show at Derby. There were nineteen

Mr. W. Millen's First Prize and Champion Kentish Ram at the Tunbridge Wells Show.

Mr. G. T. Inman's Berkshire Boar Highmoor Mikado. First Prize at the Royal Lancashire Show.

Agricultural horses occupied the premier position in the catalogue, and though there was a decrease in numbers the same cannot be said of the quality, which was all round high class.

The Aldenham Challenge Cup was secured by Mr. E. Piggy with his Brothertoft First Lady, which was placed second reserve for the President's Champion Cup, as well as for the Shire Horse Society's silver medal, having also gained first prizes in four of the classes in which she was exhibited. Mr. E. E. Pearson carried off the Shire Horse Society's silver medal with his smart yearling filly, Brickendon Pandora, which was placed at the head of her class in good company, while Mr. J. Lloyd's Challenge Cup for the best gelding under six years of age was secured by Mr. D. Crawford's Jolly, who, with Charlie, shared the honour of first prize in the class for pairs of geldings. The President's Champion Cup, offered to tenant farmers, was awarded to Mr. W. Hammond for his Catterall Black Prince, an entire colt of considerable promise, which was certainly fortunate in being placed above. Mr. Clement Kevel's Blagdon Beauty reserved for the championship.

Hunters made a good show in most of the classes, particularly that for foals, which gave the judge some considerable trouble. The lightweights were more numerous than the heavyweights, but were hardly so good in quality. The Hunters Improvement Society's silver medal for the best hunter filly went to Capt. W. P. Jeffcock's Harpenden Common, and silver medals of the Imperial Hunter Stud Book Society were awarded to the same filly, as well as to Mr. H. Arnold's chesnut brood mare by Surefoot, Mr. C. F. Sibley's Union Jack, and Mr. A. Cory Wright's Ebony. The harness classes, taking

Waterloo Duchess, and his Sportsman was reserved for Mrs. Thornton's cup, of which he was the holder. The President (Viscount Enfield), Lord Rothschild, and Sir R. P. Cooper were also among the winners of the leading prizes.

The dairy cattle, generally speaking, were good, as were the pure-bred and cross-bred cattle, judged from a dairyman's point of view, whilst Channel Island cattle were well represented, and here Lord Rothschild, as usual, attained a large measure of success with the representatives of his well-known herd. With his Oxford Snowdrop he won the Blythwood Champion Bowl, whilst last year he won the trophy outright. The first prizes in every class, save two, were awarded to his exhibits, and in the other cases Dr. H. Corner and Sir James Blyth were the successful competitors.

Sheep, like the cattle, showed a noticeable improvement, both Hampshire Downs and Southdowns being well represented. Quite the feature of the former section was a pen of three ewe lambs which were exhibited by Mr. T. F. Buxton. They were excellent, and were deservedly given the first, second, and third prizes respectively, and also the Hampshire Down Sheepbreeders' Association's champion prize for the best pen of Hampshire Down lambs.

Pigs, too, were another highly creditable lot. Berkshires were the breed, and many excellent animals were forward in the numerous classes. The best class of the lot was that for Berkshire sows farrowed in 1905, in pig or with litter of pigs; there were, it is true, only five entries, but all were typical specimens, and Mr. A. D. Achard did well to secure first prize. His exhibit was a magnificent sow in the pink of condition, and well deserved her other award, namely the championship of the Berkshire pig classes.

Other features of an altogether interesting show were shepherd dogs, poultry, pigeons, and butter,

classes, and the majority were well filled, and some first animals were forward. The colt foals were particularly strong, as were also the two and three-year-old geldings. The special awards were won as follows:—The President's Cup, for the best foal, by Mr. F. Farnsworth, Hinckley; the Gretton Cup, for yearling or two or three-year-old Shire filly, Mr. Orme, Etwell; the Bass Cup, for best foal (open), Earl Egerton of Tatton; Desford Challenge Cup, for Shire brood mare, Mr. F. Farnsworth; Challenge Cup, for yearling filly, Mr. Orme; the Shire Horse Society's gold medal, Sir P. A. Muntz, Bart.

Shirley Horse.

The enterprise of the Shirley (near Birmingham) Horse Society in increasing their prize fund to £250 odd was duly rewarded as it deserved to be with a marked increase of entries; in fact, they created a record, and this in the thirteenth year of the show, should make the superstitious think. There was a representative collection of agricultural horses—a distinct advance upon last year's exhibits—and most of them were of county class. The Hunters and light horses generally were never better represented at Shirley, including, as they did, many animals which have been distinguished at the Royal and the county shows, whilst the farmers residing within the limits of the North Warwickshire, Warwickshire, Worcestershire, Atherstone, Albrighton, and South Stafford Hunts entered a number of capital animals. The jumping classes were well filled, and with the spectators these competitions were amongst the most popular features of the show.

Reuben Pratt, who has worked on one farm for seventy-four years, has been awarded a prize for long service by the Herts Agricultural Society.

SHOW GOSSIP.

It is hardly necessary to call further attention to the show to be held at Tring Park on Thursday next the 9th, but as the event is of such widespread interest and the show has so many special features, we feel that a reminder is not out of place. The showground is in excellent order, and many of the cows in the milk and butter tests are already on the spot. There are special and ordinary trains from Euston at convenient times for cross-country visitors, and Rugby, Northampton, and Bletchley are all specially linked up with special trains. Given a fine day we may even expect last year's record of 20,000 visitors exceeded.

The Airedale Agricultural Society have issued the prize schedule for their fortieth annual show, which will take place on Wednesday, August 29. It is as usual a comprehensive one, providing classes for horses, cattle, sheep, poultry, pigeons, dressed fowls, eggs, butter, rabbits, cats, &c. Fairly good prizes are offered in all classes, and, in addition, there are numerous specials, so that another good entry should be received. Entries close on Saturday, August 25, with the Secretary, Mr. B. Bartle, Myrtle Place, Bingley.

The schedules have now been issued for the great Brewers' Exhibition, held annually at the Royal Agricultural Hall, Islington. The date of this year's fixture—the 28th—is October 20 to 23, and as usual some valuable prizes are offered for competition in classes for malting and seed barley. The schedule is on similar lines to last year's, but there is one alteration to which particular attention may be drawn, and that is, that separate classes are now provided for Chevalier varieties and Goldthorpe, or any other varieties except Chevalier. The special awards are as valuable and as numerous as ever, and the 1906 exhibition should in no way fall below that of 1905. All official announcements will appear in our columns from time to time. Entries close on October 3 with Messrs. Dale, Reynolds and Co., Limited, 46, Cannon Street, London, E.C.

Nearly £700 is offered in prizes for competition at the annual Bath Horse Show, to be held this year on September 5 and 6. This fixture is as popular as ever with horse-breeders, and shows no signs of falling off as a big event of the season in the country, so that the forthcoming show should be as good as former ones, for the usual liberal prizes are offered, and the classes are practically the same. Following in the footsteps of other societies, a sale has been decided upon in connection with the show, and this will take place on the second day. Entries for the show close on Saturday, the 18th inst. Mr. L. C. Mundy, 41, Meson Street, Bath, is the secretary.

The Northumberland Agricultural Society's recent show at Newcastle proved a record success, the sum taken on the three days being no less than £2,053 6s. 6d., the largest amount ever taken at the society's show. The society certainly deserved this result, for they worked hard to secure it, as they did the local townspeople, but they were certainly fortunate in having three such glorious days for the event, and without doubt the clerk of the weather did as much as anybody to ensure the

financial success of one of the best shows held by the society.

A feature of the prize list of the Mid-Somerset Agricultural Society is the offer of over £200 in cash as special prizes by the Molassine Company, Limited, 39, Mark Lane, London, E.C., to users of Molassine meal. In the Molassine classes there is a £30 first prize for cheddar cheese and other handsome cash prizes for dairy cattle, fat stock, poultry, horses, as well as a butter class, and a

take place in October, during the London Dairy Show week.

Meanwhile the hon. secretary will be pleased to receive the names and addresses of any gentlemen wishing to join the committee and any promises of subscriptions, which should be addressed to Mr. G. F. Strawson, "Dr. Fream Memorial Committee," 71a, Queen Victoria Street, London, E.C.

The Motor Dust Nuisance.

At a cost of £2,000 the Surrey County Council has made a number of experiments with a view of abating the motor dust nuisance, but, on the whole, they have not been satisfactory. The county surveyor in his report states that tarmacadam, and tarring the roads had been tried, and the last appeared to be the best and most economical method so far discovered of abating the dust, but even in that the surface of the tarred lengths was apt to lift up in the winter after rain and frost, making the roads, if the treatment was extended, liable to become most unpleasant for wheel-d traffic during bad weather in the autumn. "I think roads through the country, such as the Portsmouth road," adds the surveyor, "will soon become locomotive tracks, and apart from the intolerable nuisance caused by dust, the roads will be unsafe for tree cars themselves, and absolutely dangerous for every other kind of traffic."

The Farnham Rural Council have also carried out tarring experiments, and consider them so satisfactory that at a recent meeting it was suggested that the whole of the roads in their district—180 miles—should be treated with a dust preventive. It was, however, pointed out that this would involve an expenditure of £11,000, and in view of such heavy cost it was decided not to carry out the suggestion, but to send a circular letter to all the councils in the county of Surrey asking if they would be willing to join in a conference, or would give expression to their opinions as to the best remedies to adopt to abate the nuisance.

In the course of a speech at Hagger's Agricultural College last week, Mr. Jesse Collings said he considered that whatever Government was in power more monetary help ought to be given to agriculture. He was of opinion that the £135,000 was a beggarly sum to devote to what to his mind was the most important industry of their country, and one upon which depended every other success or failure. He considered farmers as a class were largely to blame for this state of things. They would probably have noticed how farmers' questions were put off for anything, because farmers were looked upon as a long suffering class of individuals. Chambers of agriculture should be as persistent in their demands as the Irish were—they got what they wanted, and refused to be put off.

With its fine connection amongst Live Stock Owners, the "Mark Lane Express" is undoubtedly ONE of the BEST MEDIA for the Disposal of Pedigree Live Stock, either by Public Auction or Private Treaty.

The Journal goes directly into the hands of likely purchasers at home and abroad.

SHOW SECRETARIES.

Mr. H. W. WOODS,
Webeck Tenants' Agricultural Society.

record number of entries in these classes is anticipated.

The Dr. Fream Memorial.

A meeting of the sub-committee of the Dr. Fream Memorial was held on Monday afternoon last, the 30th ult., at the Farmers' Club, 2, Whitehall Court, under the chairmanship of Mr. Martin J. Sutton. The hon. secretary, Mr. G. F. Strawson, reported very satisfactory progress had been made, and that 120 gentlemen had already joined the committee under the presidency of the Earl of Jersey, P.C. Sir Geo. Barham, the hon. treasurer, reported the receipt of many subscriptions, large and small, as well as promises of financial support from all parts of the kingdom. The first meeting of the general committee will

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

GREAT YORKSHIRE SHOW,
Park Vale Road, Middlebrough,
Wednesday, Thursday,
and Friday, August 8,
9, and 10, 1906.

Stock and Implements,

£1,500 PRIZES. ONE DAY'S SHOW.

FAMOUS SHEEP DOG TRIALS,
20 ENTRIES.

The largest and most complete display of Dairy Cattle in the Tests held during the year.

All sections of Stock well represented.

Harness Horses, Tandems, Pairs, Ponies, &c.

Special trains from London and other stations on the system.

Programme sent on application to—

F. J. BROWN, Secretary.

TRING HAY HORSE SHOW, September 20, 1906. Entries close on September 6; double fees September 12.—RECK MORRIS, Secretary, Broad Street, Hay, Hereford.

THE GREAT YORKSHIRE SHOW AT MIDDLESBOROUGH.

Given fine weather, the show of the Yorkshire Agricultural Society at Middlesbrough this week should be one of the most successful of the long series, for the entries are above the average for the past five years in every section, whilst the townspeople have entered most enthusiastically into the proceedings, and it will not be their fault if the show be not a success. Neither have the society itself left any stone unturned, so that if not earned, the success will be deserved. The prize fund, for instance, is the magnificent one of £2,278 10s., as compared with £2,060 15s. at Hull, and £2,041 1s., the average for the last five years, and this has drawn 1,196 entries, of which 930 are live stock. The gross total is 99 more than at Hull in 1905, when 1,097 entries were received, live stock then numbering 967, while the respective totals of the last five years' average are 1,074 and 444. The following table will show at a glance how this year's entries in the various sections compare with 1905, and the past five years' average:—

	CATTLE.	1906.	1905.	Five Yrs. Average.

Aggregate.....	1196	1097	1074	1074

Turning to the implement department, there is a large decrease in the number of entries to be noted which is attributable to the fact that Middlesbrough is in a remote corner of the county, and also to the enormous exhibition at the Royal Show at Derby. Some satisfaction, however, comes from a close examination of the statistics available, for the shedding containing the machinery in motion, gas and oil engines, &c., will have a frontage of 1,274 ft., as compared with 1,316 at Hull, and 1,330 the average for the last five years. The open space allotted for implements, carts, carriages, rustic houses, greenhouses, building material, &c., only covers 793 square yards, as against 1,730 yards last year, which was a record, and 1,118 yards the five years' average.

The showyard is about 1½ miles from the railway station, and may be reached by riding in the Linthorpe electric car to the entrance of Albert Park, and then a six or eight minutes' walk through that charming recreation ground, or by chartering a conveyance and driving along Marton Road and Park Vale Road.

The main entrance is formed of the picturesque wooden structure with which visitors are familiar, but the shape and contour of the ground has necessitated a departure from traditional lines. It is a peculiar site of forty acres, but it has been turned to the best advantage.

The principal implement shedding is to the left of the entrance, and access to the stock-yard is obtained by means of the main avenue, which goes by a couple of bridges across a stream. After a short walk there is a sharp turn to the right, and you are at once at the block of buildings forming the education department, which will represent some of the work of the University of Leeds, Oxford University, the Board of Agriculture, the Midland Dairy Institute, and the Middlesbrough Education Committee, as well as comprise dairy and forestry exhibitions. This extension is a step

which will no doubt be thoroughly appreciated. Near to are the various dining rooms and the council room.

From the educational and catering departments the main avenue turns to the left, the walk to the centre of the grand stand being over more or less broken ground, which is not adapted for the erection of shedding. Owing to the hilly nature of the site the bulk of the stock is housed on the lower ground adjoining the east and west boundaries. The stock entrance is off the Marton Road. The sheep pens are on the right, and the cattle stalls and pig pens on the left. The shedding then follows round the boundary of the site, with the exception of some of the horse shedding,

which it has been found possible to erect on the hill. As usual, the horse and cattle judging rings are grouped well together near the grand stand, which is at the south end of the site. An attractive programme has been drawn up for the three days, all the usual popular features being retained, whilst a new attraction in the shape of a tournament by the 18th (Princess Victoria Mary of Wales's Own) Hussars is provided for the last day. The charge for admission is 1s. on each day except from 9 to 5 p.m. on the first day, when the fee is 2s. 6d. During that time practically the whole of the judging will be accomplished, so that the extra charge is perhaps justified by the extra attraction.

CORRESPONDENCE.

Half-Holidays for Farm Labourers.

SIR,—In answer to the reply of "Red Rose" to my former letter on the above subject, I do not consider that his suggestion of farm labourers taking their weekly half-holiday once a fortnight to be any solution of the problem which I put forward therein.

By expressing his agreement that farm labourers work from necessity and not from choice, he evidently understood my words to mean likewise, but if he will read my letter again he will find that I referred to those men who have left the land because they do not like the continuous attention required by farming. He is also quite wrong in including myself amongst these who work from necessity and not from choice, because for a quarter of a century I have worked on a farm from choice, and the fact that two years ago I met with an accident that incapacitated me from doing any work at all, and can still manage to live comfortably, proves it.

The exodus of farm labourers to the towns, which was so general a few years ago, has lately been almost entirely stopped, because the town has no work to offer them, and if a farmer now advertises for a labourer, he will find that many who have left the country will be only too glad to return to the farm with all its disadvantages.

So far as this district is concerned, I can fully endorse the contention of "White Rose" that the farm labourer is as well, if not better, off than labourers in other vocations. Wages here are 18s. per week all the year round, with cottage and garden rent free, extra pay for overtime during the harvest, besides beer then and at all other times of the year when any extra work is on hand, and always a pint a day at the most ordinary work, even on wet days, when they are under cover, sharpening thatch-pens or some other such trivial work.

They also have land on the farm provided to grow sufficient potatoes to last them all the year, and in quite frequent cases enough grass land is provided at a nominal rent for them to keep a cow, with the advantage of having their master's team, free, to get their bit of hay, draw coals, and do any other little jobs that they require a horse and cart to do.

I know several men from these small beginnings are now farmers themselves on a comparatively large scale. So that I do not think the case of the farm labourer can be quite so devoid of hope or prospect as "Red Rose" would have us believe.

And I can prove the truth of all the statements contained in the above letter. Yours truly,
August 1, 1906. AXOTHEE ROSE.

SIR,—In the first place let me thank "White Rose" for his courteous reply to my letter, and also for crediting me with a desire to benefit agriculture and the farm labourer. I can assure your correspondent that the above is my sole object in taking the stand I do in the present controversy, because I believe that by improving the condition of the farm labourer we shall have a better class of workers on the land, and farmers will reap the benefit. I am afraid "White Rose" has got a mere fanciful idea as to the reason why sons of farm labourers do not follow in the honourable occupation of their fathers, and my opinion is that they would not care "tuppence" for the tales and sneers of anybody if farm labour could offer them better wages, some recreation, and a prospect for the future. In almost every other occupation an energetic young fellow has a chance to rise; but where is the scope for the farm labourer? Let the door be unlocked which keeps such a grip on the land, and let the labourer see that there is a chance of getting a holding of his own, and he will have more inducement to stick to the occupation of his fathers. There is no need to paint the work of the labourer in doleful colours, because facts speak for themselves, and I take this argument on the part of "White Rose" to be the weakest point in his letter. I maintain that it is the grit of the labouring fraternity which helped

the Great Duke to win Waterloo, that has also prompted so many of the best of them to give up the occupation of their fathers for the sake of emigration and other means of livelihood offering better prospects. Unfortunately agriculture has never shown a marked desire to help the labourer, and even in the palmy days of farming, when corn and wool and other products were fetching prices which would make us stare now, the poor labourer had to be contented with his paltry 9s. a week, and his condition was little better than that of a galley slave. I have no wish to patronise or pity the farm labourer, and it is because I treat him as a man that I advocate giving him the same privileges that are enjoyed by workers in other occupations. RED ROSE.

August 2, 1906.

A Medley.

SIR,—Not the least interesting page in the issue of the MARK LANE EXPRESS for July 23 was that devoted to correspondence, as it contained a number of letters of general importance, written apparently by individuals who feel strongly about the various matters discussed. "M. or N." set out to write about teaching agriculture, and finished up with a gentle dig at land agents and their ways. Not being a land agent, I have no intention of taking up the cudgels on their behalf, but surely some member of the fraternity will have a word to say in defence.

I do most emphatically agree, however, with "M. or N.'s" remarks about the deplorable custom of large landowners buying estates which they do not live on, and throwing farms together in a manner that is very detrimental to the welfare of the district. The big absent proprietor is not much good to agriculture, and I am sure that if estates were smaller, and landlords lived on them and took an interest in their farms, agriculture would be in much better condition than it is now. It is claimed as a right that a man may do what he likes with his own. Just so, but land is an exception, because in spite of individual ownership it really belongs to the nation.

"F. A. H." in his letter on agricultural depression throws a new light on this ever important question. We are suffering from over-production, he argues, and if the supply of commodities were reduced prices would be raised and farmers would be able to pay as good wages as skilled workmen obtain in other trades. This sounds reasonable enough in theory, but if the workers had to pay more for the necessities of life, I do not quite see how they would be much better off even if wages were increased. However, I shall look with interest for "F. A. H.'s" promised letter on the subject.

Oh dear, this education question! Whenever will it be settled satisfactorily? "Worcester" (page 105) sighs for an education system that will show true appreciation of the needs of the village. Just so, and we all look for that "really practical rural curriculum" which seems so long in coming, but in fairness to education authorities it must be said that there are villages which will not have it when it is offered to them. I could mention several instances now where it is desired to take practical gardening as a subject in village schools, but nothing can be done in the matter for the simple reason that no land can be obtained for the purpose. Yet in every case the district is purely agricultural, and there is land in abundance. Still, no one can spare a bit for a school garden, in spite of the fact that the authorities are prepared to pay well for it, and all the while there are grumbles about the need of a rural curriculum.

J. H. certainly takes a very pessimistic view of the farming outlook, but I hope things will not turn out so bad as he anticipates in spite of the fact that, years ago, when railways were established, it was predicted that they would ruin farmers, but where would the farmer be now without railways? Perhaps the day will come when he will be equally dependent on motors. LEX.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June, 1906.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.	s. d.
Albuminoids ...	2 8	3 0
Oil or fat ...	2 8	3 0
Carbohydrates ...	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. of unit of albuminoids and of oil is at least 2½ times that of 1 per cent. of unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids ...	22.1 × 2½ =	55.2
Oil ...	5.2 × 2½ =	13.0
Carbohydrates ...	33.2 × 1 =	33.2
Total feeding units		101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *nom de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

An Insecticide Case.

A case of some interest to market gardeners and farmers was recently tried at the Shoreditch County Court, when a nurseryman was sued by Messrs. Adams, Webster and Co., Ltd., of the Manor Chemical Works, Hackney, London, for the sum of £4, representing the value of goods supplied.

The plaintiffs' case was to the effect that they supplied a special chemical fly exterminator, and sold the defendant two tons of it at an agreed price of £2 a ton. Mr. Cripps, for the defendant, said that there was no denial of the order or delivery, but the defence was a breach of warranty, as instead of exterminating the flies the whole of the crop was eaten up by them, entailing a loss of £25. No counterclaim had, however, been entered.

Mr. Sieberg, t aveller for the plaintiffs, said that he sold the stuff to the defendant.—Mr. Cripps: You showed your printed circular on which were a number of unsolicited testimonials?—Witness: I was supplied with that by the firm. Mr. Cripps: And are the testimonials true?—Witness: I suppose so. Mr. Cripps: But can you say so? Have you not seen them?—Witness: I was told that they could be seen by any customer at the offices of the company. Mr. Cripps: Are they like the general run of unsolicited testimonials, liable to be very seriously questioned at times?—Witness: I can only say they are

printed as a list of testimonials. Mr. Cripps: Did you believe that this chemical fly exterminator would do what was suggested?—Witness: I was told so. Mr. Cripps: Now, of what is it composed?—let us have this dread secret?—Witness: I am to answer this question, I suppose, your Honour? His Honour: I think if it is a secret chemical manufacture the witness would be quite right in not disclosing what it is composed of, although of course he is naturally at liberty to do so if he likes.—Witness: Oh, I don't mind. Mr. Cripps: I should like to press for it.—Witness (laughing): Well, it consists of soot, gas lime, and cinder ashes. Mr. Cripps: And this is the composition of this wonderful fly exterminator!

The defendant was called, and said that he had tried it every way, but it was of no use. Judge Smyly said that before giving a verdict he would hear the evidence of the defendant in a second case, Mr. A. H. Maxwell, of College Farm, Enfield Wash, who was also being sued for £4. This gentleman said that he had lost an entire crop through using the stuff, entailing a loss to him of £125. Two pounds a ton was nothing to farmers to pay for a good insect exterminator; in fact, it would be cheap to them at £20 a ton if anyone could produce an article that would do as it was suggested to do. He was going to use lime in future. A verdict was returned for the defendants.

Fertiliser Distributing Scales.

When applying concentrated artificial manures, it is most important that the manure should be evenly distributed over the soil, and a method which would ensure this being done should prove of service to farmers. Messrs. John Austin and Son, of Allsott, Wellington, Salop, have sent a circular of their Fertiliser Distributing Scales, which are intended to help the agriculturist to apply accurately any desired weight per acre of artificial manure.

Lime soils of all descriptions are particularly adapted for the growth of leguminous crops, such as clover, peas, sainfoin, &c. Sainfoin is particularly suitable for thin soils resting on limestone rocks, since it has the power of sending its roots to great distances, and extracting and bringing to the surface the fertilising material.

Fertiliser and Feeding Stuffs Bill.

The Fertiliser and Feeding Stuffs Bill passed the ordeal of the third reading in the House of Commons without further debate, and has already been read a second time in the House of Lords, so that there is now a reasonable prospect of this useful measure becoming law before the present session closes.

Feeding Stuffs.

According to the analytical report of the Midland Agricultural Institute on feeding stuffs:—

The percentage of water in some linseed cakes is higher than it used to be: this is brought about by pressing water into the cakes. One sample sent in December contained as much as 15.75 per cent. of water, while many contained over 14 per cent.

Apart from the fact that one cannot afford to buy water at £7 per ton, this two or three per cent. of added water will injure the keeping properties of the cake. The remedy rests with the buyer, who would do well to insist that a reduction in the price be made when the cake contains more water than usual.

The objectionable so-called guarantee of 95 per cent. pure is still made to cover undesirable impurities, such as spurry, corn cockle, &c. Buyers should bear in mind that as this guarantee cannot be verified, it is a statement of no use to the buyer, except that it informs him that the cake is not pure. Fortunately, however, most cakes that have been sent for analysis were pure and clean, and the 95 per cent. guarantee was only a reflection on them.

The cotton cakes were pure, and generally made from Egyptian seed. The Bombay seed, Niger seed, and other substances, which would not fetch a high price in their own names, frequently find their way into feeding cakes, compound cakes, and meals.

One feeding cake was so acid that the stock would not eat it. It was probably made from some partly fermented material, and contained among other components Niger and Bombay seed.

In more than one case death of pigs was found to be due to the presence of castor-oil seeds found in the meals on which they were fed.

Report of the Principal Government Chemist.

This document, dealing with the year which closed on March 31 last, contains details of considerable interest to farmers. The number of samples analysed for the Board of Agriculture and Fisheries was 2,590, made up as follows:—

Imported butter	1,875
" margarine	92
" cheese	88
" milk	50
" condensed	131
" cream	83
Sheep dips	221
Miscellaneous	50

2,590

Butter.—Of the imported butter samples, 937 were found to contain boron preservative, and 617 contained added colouring matter. It is satisfactory to note that with the accumulation of more analytical data, and with the advantage of other aids not formerly available, it has been found possible, in spite of the absence of legal limits, to detect admixtures of other fats with butter in a considerable number of cases, and to prove the adulteration to the satisfaction of the magistrates. In some instances, not only was the butter adulterated with foreign fat, but the quantity of water in the butter was greater than is allowed by the Sale of Butter Regulations.

In seventy-one cases, where the butter was found to be sophisticated, the results were submitted to the Board of Customs for consideration, with a view to legal proceedings being taken by that Department against the importers. Convictions have, so far, been obtained and penalties imposed in thirteen cases. The remainder are still *sub judice*, with the exception of a few cases which, for various reasons—as, for example, where two or more samples referred to the same importation—were not proceeded with.

The proportion of samples of butter containing boron preservative is practically the same as in the previous year. Those containing added colouring matter show a diminution in number.

Margarine.—There is good reason to believe that a notable amount of butter adulteration takes place in this country, the substances employed for fraudulent addition to butter being, amongst others, fats such as are imported in quantity for the manufacture of confectionery, or as constituents of shop margarine. These last-mentioned usages are, of course, quite legitimate; but there is no doubt that the fats in question are in some cases fraudulently mixed with butter.

To assist in tracing the destination of imported margarine, and to guard against the diversion of this substance into improper channels, the Legislature has enacted that all packages of margarine imported into the United Kingdom shall be conspicuously marked "Margarine."

During the past year a number of samples of the fats referred to have been submitted by the Customs in order to ascertain whether, having regard to their composition and properties, the fats in question came within the legal definition of margarine, and ought, consequently, to be so marked. Ninety-two such samples were examined, and in the case of fifty-nine the article proved to be, in our opinion, margarine. Proceedings were instituted by the Customs Department to ensure that the substances should be properly marked in future. Generally these proceedings were successful in their object, but in the case of two of the fats the magistrates decided that the substances were not, legally, margarine, apparently on the ground that to come within the legal definition the article must so closely simulate butter as to be indistinguishable therefrom except by analysis.

Cheese.—Of the 88 samples of cheese examined, 44 were imported from Holland, 22 from Canada, 15 from the United States (two being indicated as Canadian produce), 5 from France, and 2 from Belgium. Ten samples were "skim-milk" cheese, containing in one instance only 33 per cent. of fat. All these ten samples came from Holland.

Milk.—Thirty-one of the samples shown as "condensed" milk were "milk powder" or "dried milk," and in one instance the goods were described as "humanised" condensed milk. In twenty cases the condensed product was found to have been prepared from milk deficient in fat, or from skim-milk, without the packages being marked to this effect. In certain of these cases proceedings were instituted against the importers by the Commissioners of Customs, and penalties were imposed.

Of uncondensed milk, a smaller number of samples are described as fresh, and a much larger number as "sterilised" than was the case last year. Four of the samples were found to be deficient in fat, and in six other instances the milk was not entirely satisfactory; these were reported to the Commissioners of Customs, who initiated legal proceedings in such cases as seemed to demand this step.

Four of the samples forwarded as "cream" were shown by the analyses to be merely condensed milk. In the true cream the percentage of fat was found to range from 24.7 to 57.9 per cent., and most of the samples contained boron preservative. Some of the specimens of cream had been thickened by the addition of gelatin, and proceedings were instituted by the Commissioners of Customs against the importers. Technical legal objections were, however, raised at the hearing of the cases, and these objections were upheld except in one instance, where the points are still *sub judice*.

Sheep Dips.—As mentioned in the last yearly

report, it has been necessary to analyse sheep dips submitted by manufacturers to the Board of Agriculture and Fisheries, in order that the Board might be advised what articles, having regard to the dipping tests made by the Departmental Committee, might possess a *prima facie* claim to be included in the official schedule as efficient preparations. During the year, 221 such products have been analysed and reported on, twelve of these coming from the Department of Agriculture and Technical Instruction for Ireland. In the great majority of cases the chemical constituents of the dips were found to be, in fact, substantially what they were stated to be.

Fertilisers and Feeding Stuff.—Under the provisions of the Act of 1893, five samples of fertilisers and two of feeding stuffs were referred to the principal analyst for analysis. The former comprised three samples of prepared bones, and one of ground phosphate; three of these contained, as alleged, less phosphate than had been guaranteed; the third was not deficient in phosphates. The remaining fertiliser was ammonium sulphate, said to be deficient in ammonia, but which we found fully equal to the guarantee. In the case of the two feeding stuffs, one was stated to contain less than the specified percentages of oil and albuminoids, and this we found to be so; the other was a feeding cake with which the buyer was not satisfied, but which our analysis proved to be genuine cottonseed cake.

Arsenic.—1,533 samples of beer, wort, and materials used by brewers have been tested for the presence of arsenic. Of these, seventy-nine samples were found to contain in excess of the limits given by the Royal Commission on Arsenical Poisoning—namely, the equivalent of one hundredth of a grain of arsenious oxide per pound in the case of solids, or per gallon in the case of liquids.

Of the 226 samples of malt examined, twenty exceeded the limit; the highest amount found was one-thirtieth of a grain per pound. Of 737 samples of glucose, invert sugar, caramel, &c., only one contained more than one-hundredth of a grain per pound—namely, a sample of caramel which was found to contain one-fiftieth of a grain. The highest amount found in any sample of wort or beer was one-twentieth of a grain per gallon. The highest amount found in any sample was one-tenth of a grain per pound, this quantity being present in an article intended for flavouring stout.

The chief use of fertilisers is to supply plant food. It is good farming to make the most of the natural resources of the soil and of the manures produced on the farm, and to depend upon artificial fertilisers only to furnish what more is needed. It is not good economy to pay high prices for materials which the soil may itself yield, but it is good economy to supply the lacking ones in the cheapest way.

MILK RECORDS.

OFFICIAL TESTS under the auspices of the HIGHLAND & AGRICULTURAL SOCIETY of SCOTLAND

These, the most extensive official Milk Record Tests carried out in this country, are doing capital work in showing the best methods of profitable milk production. We have always contended that **A GOOD COW** and **A GOOD CAKE** are necessary for securing the best results, and our opinion, founded on practical experience from many tests made at our experimental farm, is daily receiving ample corroboration from dairy farmers among our numerous customers.

THE GOOD COW & THE GOOD CAKE.

The tests above-mentioned made at the farms, under ordinary conditions, extended over 34 weeks, and 12 herds were entered. The first place was secured by our esteemed customer, Mr. A. M. Baird, Garclaugh, New Cumnock, Ayrshire, with the following record:—30 cows averaged 909½ gallons per cow; butter fat 3·94% (during August 4·32%). One cow yielded 1,267 gallons, and ten cows averaged over 1,000 gallons. The feed was 4 lb. of Silcock's Dairy Cake and 4 lbs. Silcock's Dairy Meal per day.

Our Customer writes:—"I am highly pleased with the result of your Meals and Cakes; in the H. & A.S. Milk Record List we came out at the top of the list, one cow giving 1,267 gallons of milk in 3½ weeks, and ten cows over 1,000 gallons of milk in the same period; these were fed on Silcock's Cake and Meal."

Many of our Customers have won 1st Prizes for Milk Yield and Butter Tests at various shows, including the Royal this year. If you are to secure the best results, you must use the best Cake as well as the best Cow. The combination pays.

SILCOCK'S DAIRY CAKE & MEAL are carefully compounded, well-balanced foods, which will improve the quality and quantity of the milk yield, maintain the condition of the cow, and produce the highest results at the lowest cost. Others have found it profitable to use these foods; we simply ask you to give them a trial, they are sold at a price to meet the economical production of milk.

For further particulars apply to Local Agent, or to—

GREEN PEAS AS A FIELD CROP.

Some farmers having a railway station within easy reach, from which they can send green peas to the metropolis or a large town, raise several acres yearly for that object, and in some seasons realise profitable returns by so doing. But in drought summers the pickings are small, and the returns fail to compensate for seed and labour. Large farmers seldom care to add this to their big enterprises, but there are a host of smaller ones always ready and eager to engage in it, their enterprises being often gilded with golden anticipations. The crop has much to recommend it owing to the short period it requires to occupy the ground. Whether it fail or succeed, a second crop of some kind or other can be grown in autumn after it. Moreover, it does not require heavy dressings of manure, for being of the leguminous species, which are admitted by the agricultural chemists to supply themselves with nitrogen from the air by nodules at their roots, the food required from the soil is solely of a mineral nature, and the quantity actually extracted is by no means large.

Half a century since the most unlettered farmers found that peas could be grown cheaper than almost anything else, and that they generally left the land better than they found it, even although no manure was applied to grow them. Our great-grandfathers before the railway age were not accustomed to grow green peas for marketing in their fields, the common dun-coloured late kinds, which were ripened that their grain might serve for stock feeding, being chiefly produced.

The green pea season is just passed at its meridian, for market rates are at their lowest during July, but it is of little use for farmers to strive to compete with market gardeners for the early trade and best prices, or to grow in open fields the wrinkled high quality sorts. They must be content to have their returns in July with the hardy round sorts. Nevertheless, there is immense variety even in these. Our leading seedsmen by the arts of cross-fertilisation and selection, have thoroughly revolutionised edible peas. The vigorous growing tall sorts by crossing with dwarfs have been shortened from a foot to a foot and half in height, and their loss in stalks and leaves have been made up in pods. The field grower should take pains, therefore, to select not only the hardiest adapted for his particular soil and climate, but the most productive member of the class. For instance, Prince of Wales used to be a very famous field pea for green-pod picking, but almost every seedsmen has now his improved Prince of Wales, and the members of the family all bearing this name differ amazingly.

As to methods of culture, several kinds of

dual cropping have been recommended, chiefly that the peas may have the advantage of more sunshine and air by the rows being at a greater distance apart from one another. Some market gardeners grow their earliest field potatoes between rows of peas, to the advantage of both, for the peas shelter the potatoes from April and May frosts. Another kind of dual cropping, far better adapted to the farm, is that of seedling peas and beans together in rows wide enough for the intervals to be horse-hoed. The beans not only shelter the peas from frost, but serve as stickers for them. Instead of trailing on the ground they climb up and twine themselves round the stalks of their stouter neighbours, and their affluence of bloom when afforded this advantage is sufficient indication how pre-eminently beneficial the increased sun and air derived has proved to them. But there are other benefits. The intervals can be horse-hoed and stirred as often as seems expedient, and on the last operation of the kind taking place the seed either of kale or turnips may be sown, that after the green pea pods have been picked and the bean crop has ripened and been harvested there will be found still another to occupy the land. Horse-hoeing would now take place where the peas and beans had been grown, which would in late autumn and winter serve as the intervals for the growing kale or turnips. Even this, if properly thinned, might produce a considerable amount of sheep-keep the following spring.

Agricultural Instruction at Armstrong College.

From the Armstrong College, Newcastle-on-Tyne, has come a prospectus of the Agricultural Department for the session 1906-7, and it shows that a very comprehensive scheme is carried out here, all branches of our greatest industry receiving attention.

The Agricultural Department, which was formed in 1892, is subsidised by the Board of Agriculture and by the Education Committees of the four northern County Councils, and is under the direction of Professor Douglas A. Gilchrist, M.Sc., F.R.S.E. Cockle Park, the Northumberland County Council experimental station is worked in connection with the department. The station extends to about 400 acres, and the extensive experiments on land and live stock carried out there are of great practical value in the agricultural teaching.

The Durham County Council dairy station is at Olferton Hall, a dairy farm of nearly 600 acres, where about sixty milk cows are kept. A special laboratory and the entire use of a byre for ten cows are available for daily research work, and this farm is of great service to the college for instruction in dairy farming.

By an arrangement with H.M. Office of Woods, the Chopwell Woods, which extend to about 900 acres and are within a few miles of Newcastle are now placed under the control of the college, and are of great value in connection with the courses in forestry.

The courses of instruction include agriculture, forestry, estate management and dairy farming, in connection with which scholarships are offered by the four northern county councils and by the Surveyors' Institution, while many of the college scholarships are open to agricultural students. The tuition fees (composition) vary from £10 for a winter's course of instruction in agriculture to £20 a session for the degree course.

Past degree students are now, it may be added, in good positions in all parts of the British Empire and over eighty former students of the department are now engaged in practical farming in the north of England.

After the sale of the late Mr. Philo L. Mills' Yorkshire Large White breed at Raddington (reported in our last issue) Mr. W. B. Wallace, Broomhouse, Corstorphine, visited the Stoke Farm herd of the Corporation of Nottingham, and purchased of Mr. A. A. Avis a very good young boar by the famous stock boar Nottingham Ben 9219. No doubt this pig will be heard of again.

FARM MACHINERY AND IMPLEMENTS have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

Weather, Crops and Stock.

Exclusive Reports.

North Lincolnshire.

THE season of 1906 was propitious for getting in the spring corn, and it came up well, both it and the wheat progressing famously until the excessive drought damaged somewhat the oats and barley; but except on the extremely thin lands the wheat liked the sunshine, and will yield well, I think; in certain fields it is a little thin, and a few were ploughed up. Nothing is out here, but several will begin on the old field to-morrow. Roots went in well, but the fly got some swedes, which had been pitched with white sorrel, and they look well. Early turnips for sheep romped away at first, but now they are burned much and are prematurely ripening, which will curtail the supply, and at a time when lambs so much require a start. Miserably small are the hay and clover stacks, but never get so well; the aftermaths are conspicuous by their absence. Mangolds and cabbages look well after their two doses of nitrate, and should be a big crop. Potatoes have looked well up to now, but the drought has caught them, and they will superabundate if much rain comes, without which they must be a small crop. Dates and Edwards seem the order of the day, no others being much inquired for.

Wilts, Hants, and Dorset.

THE Salisbury Journal of July 28 contains the annual reports on the harvest prospects and the condition of agriculture in Wilts, Hants, and Dorset, and from these give the idea that on the whole the season is very favourable, and promises to be the best for some years past. The sunshine and hot weather of the past two months have done much to counteract the backward and cold spring, whilst the rain storms which have been experienced in many parts of the district have had a very beneficial effect on the crops. The season, however, is a little later than last year, and harvest is not likely to be general until the second week in August. Of cereals, wheat, although not so heavy as last year, is likely to give a fair average yield. One or two correspondents speak of a slight blight, but on the whole the crop at present is very free from disease.

Barley is likely to be a good crop, and better than last year, the majority of correspondents describing the yield as average or over average. Of the quality of the grain it is too soon to speak with confidence, so much depending on the conditions under which barley ripens. Oats again appear to be the poorest of the cereals, but on the whole are better than last year; whilst a few correspondents speak of a heavy yield. In one or two cases the crop has suffered from wireworm; but the complaints of disease with regard to cereals generally are exceptionally few.

The crop of hay is not so heavy as last year, and in very many cases is spoken of as light. Although less in bulk, in almost every instance the quality is good; and, thanks to the fine weather which prevailed at the haymaking season, the whole has been well secured.

The reports with regard to the roots are of a very promising character. In a few cases the plant is patchy, and in some instances had to be resown; but the recent rains have considerably benefited the crop, which, generally speaking, is an excellent plant, clean, and free from fly. A little more rain would still more improve the crop, which is likely to be one of the heaviest for many years past.

Nottinghamshire.

GRAIN crops are rather badly laid in parts of South Notts, where the cutting of wheat and barley should have begun by the end of the week. Round Nottingham wheat is generally over average; barley under average everywhere where not sown in good time. On the strong soils of the north of the county wheat has done better than on the lighter fields; barley and oats here are unusually variable, and the oats on light friable soils especially disappointing. Winter oats are generally better than those sown in spring, and reach or exceed a full average. Hay was a short crop everywhere, but especially in the higher lands, where one hears of a third to half an ordinary yield being stored. The slow growth of eddishes in the recent droughty weather makes the profitable management of the growing lambs a matter of unusual difficulty; but the mangels promise abundant fodder in due season, and swedes and turnips are by no means the failures in the southern districts that they are in the north.

Notes of the Week.

THE FARMERS' DIARY.

Lincoln is the venue for next year's Royal Show, and the society is to be congratulated upon its decision in accepting the invitation.

Lincolnshire is essentially an agricultural county, and the geographical position of Lincoln places the city within easy reach from many thickly-populated townships.

From what we hear, the ground offered to the society by the corporation is in every respects most suitable for the purpose.

And with the Great Northern, Midland, Great Eastern and Great Central running direct to Lincoln, the railway accommodation should be good.

These two important factors—a good site and good railway facilities—must always have great weight with the Council of the R.A.S.E. in coming to a decision.

Thus it was that Ipswich, through whose Mayor, the Corporation, and County of Suffolk sent such a cordial invitation, was placed at a disadvantage.

With that whole-hearted support likely to be accorded the society, it may be hopefully anticipated that the "Royal" at Lincoln, will prove as successful as the "Royal" at Derby.

This expression the MARK LANE EXPRESS feels voices the wishes of all interested in agriculture, and the work of the R.A. Society in particular.

The Newcastle City Council had under consideration the advisability of asking the Royal Agricultural Society to hold their show at Newcastle next year, but after hearing the pros and cons, referred the matter to their Finance Committee, with a view to issuing an invitation for 1908.

THE MARK LANE EXPRESS must take some credit to itself over this, as it was in this column the suggestion was first mooted.

Let us hope that Newcastle will be visited—1908 or 1909.

Begin at once a movement to amalgamate all the adjacent county shows on both sides of the Border.

A mammoth show would result that would beat all records. Imagine the Royal prizes, and in addition a local county show on every day in the Royal showyard.

The idea is only crude, but it is a suggestion that could be worked into a glorious success.

The 1909 show is also being looked after, for the Blackpool Town Council have decided to invite the society to hold their show in that borough in the year named, and a specially strong sub-committee has been appointed to carry out the detail work, with the Mayor as the chairman. It is recalled that three or four years ago, when there was a prospect of a similar invitation being accepted, a subscription list reached £2,000 within a week.

The resignation by Dr. Somerville of his position on the permanent staff in the Board of Agriculture will be a matter of general regret.

For a number of years he has done good work in the Educational Department of the Board.

He represents in a marked degree practice and science, and the leaflets issued by his department have been distinguished by a degree of lucidity which is not always a prominent feature in official publications.

The retirement of Major Craigie is also a serious loss to the Board of Agriculture. He had been assistant secretary since 1897, and probably knows more of British agricultural statistics than anyone else.

But, to employ a phrase very popular just now, *la donna est morte vive la donna*, which may be taken to signify that, Major Craigie having retired, his place is taken by another good man.

ALL MISCELLANEOUS ARTICLES of FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." The charge is very moderate, and consistent with the profit such small goods yield.

The appearance of the prize sheet of the Smithfield Christmas show is a reminder that the summer is now on the wane.

Our thoughts are carried from the contemplation of cool salads and iced drinks to Christmas fare and the comforts of a bright fire.

There is an enormous consumption in this country of condensed milk. It is so convenient to mix a couple of teaspoonsful with water for the baby.

But do the mothers and nurses realise the poor diet they are, in many cases, giving to their little ones?

The Government analyst reports that many of the samples were found to be prepared from milk deficient in fat, or from skim milk, without the packages being marked to that effect.

Some of the imported cream was shown to be merely condensed milk, and other samples had been thickened by the addition of gelatin. Most of the samples contained boron preservative.

Now is the time to rub all these facts into the minds of the public. The Chicago scandals have arrested attention, so that the ordinary house-keeper is in a frame of mind more impressionable than usual.

Advantage should be taken of the opportunity to advocate the greater use of British produce.

It may be thought that there is too much iteration on this subject in these notes.

It is, some of our readers may say, commented on *ad nauseam*.

Nauseam is a suitable word; the details of the imported food are often nauseating.

I feel that the foreign food fraud should be kept in the forefront of public opinion.

Quite as much in the interest of British consumers as British producers.

There were a good many German agriculturists at the Royal Show at Derby.

One of them writes to the *Journal* of the German National Agricultural Society that he was much impressed by the enthusiasm of the general body of visitors.

It seemed to him a clear indication of the pleasure produced by the presence of the show once more in the provinces.

And a sign that the Royal has not lost its hold in agricultural circles, in spite of the difficulties through which it has passed.

Is the Argentine to be permitted to send live cattle to Alderney?

There is an illuminating article on the subject in last Tuesday's *Times*.

The farm labourers in an important agricultural district of France have been indulging in a "strike."

Wandering bands of labourers, with a red flag in front, and encouraged by the beating of a drum, have been scouring the country.

The carters and cowherds receive £44 a year, the shepherds £4 8s. a month, and the day labourers 2s. 8d. per day, but, like Oliver Twist, they want more.

And so they march and sing "Aux armes Citoyens" in the good old revolutionary style.

"The romance of the rabbit." This is not the title of a novel, but is descriptive of a phase of Australian animal life.

Casually introduced from this country into the colony, it has become the terror of the stock farmer and the tiller of the soil.

But now it is being recognised that the prolific bunny contains elements of commercial success.

TUESDAY, AUGUST 7.—Welbeck Agricultural Tenants' Show at Welbeck—Chepstow Show—Compton Stud Show at Templecombe, first day—Hamshire Down Sheep Sale at Salisbury—Hackney Sale at Market Weighton—Trowbridge Great Fair, second day—Derby Cheese Fair—Entries close for Agricultural Show at Chester—Cirencester Fair—Special Sheep and Ram Sales at Cirencester.

WEDNESDAY, AUGUST 8.—Erdington Horse Show—Yorkshire Show at Middlesbrough, first day—Brize Norton Sale of Oldhamshire Down Sheep and Rams, first day—Oxford Great Ram Fair—Strides Sale of Southcoats at Guildford—Dunstable Great Fair—Compton Stud Show at Templecombe, 2nd day—Aberystwith Show, first day—Entries close for the Blackpool Show—Fickering Agricultural and Floral Show.

THURSDAY, AUGUST 9.—Tring Agricultural Show—Kewstoke Agricultural Show—Market Bosworth Show—Denbigh Show—Middlesbrough Show, second day—Brize Norton Sale, second day—Chichester Market—Sale of the Duke of Richmond's Southdowns—Aberystwith Show, second day—Isle of Man Show at Ramsey—Madresfield Agricultural Show—Exmouth Show, first day—Brendon Hill Sale of Exmoor and Somerset Sheep—Lyndhurst Pony Fair—Entries close for the Ulverston Show, for the Penistone Show and for the Birmingham Shorthorn Show and Sale.

FRIDAY, AUGUST 10.—Middlesbrough Show, third day—Crewe Horse Sale, second day—Pedigree Sussex Cattle Sale at Petworth; the Earl of Winterton's Hereford and Shorthorn Cattle Fair—Entries close for Penrith Show.

SATURDAY, AUGUST 11.—Warminster Cattle and Cheese Fair—Whitworth Show—Agricultural Fair at Newton, Lancashire—Entries close for Lytham Show, for Halmfirth Show, and for Castleton Show.

MONDAY, AUGUST 13.—Britford Great Sheep Fair—Bridgnorth Sheep Fair—Carmarthen Horse Fair—Dudley Horse and Pig Fair—Hesham, Hailsham and Glastonbury Agricultural Fairs—Ludlow Saddle Horse and Pig Fair—Macclesfield Horse, Cattle, and Hired Fair—Stowmarket Lamb Fair—Entries close for the Bakewell Show—First Day of the Horncastle Horse Week.

TUESDAY, AUGUST 14.—Ipswich Horse Sale—Leigh Horse Sale—Cattle Sales at Leominster, Denbigh, Haverfordwest, Hay, Haslingden, and Penrith—Sheep Sales at Ashburton and Hay—Entries close for the Bedford Show—Pig Sales at Hay and Haslingden—Horse Sale at Denbigh—Second Day of the Horncastle Horse Week.

REPLY TO CORRESPONDENT.—The term "Agricultural Fair" means that horses, cattle, sheep, and pigs are at customarily sold thereat. The term "Great Fair" does not by any means necessarily imply that the fair so named is bigger than other fairs held elsewhere that do not have reference is always to other fairs held at the same place.

So that Australia is becoming divided into two camps. One side want to do away with bunny by every means, and the other, thinking of the sale of tinned rabbit and skins, desire to encourage its breeding.

The innocent little animal has become one of the burning political questions of the day. Little causes lead to great events!

Essex Farmers in Scotland.

A party of about thirty practical Essex agriculturists recently had a most interesting tour in Scotland extending over about ten days, during which they must have gathered many useful hints. Further, at no time did the weather interfere with the tourists' comfort or upset arrangements, so the organisers, Mr. B. W. Bull, Agricultural Instructor of the County Technical Laboratories, Chelmsford, must have been particularly gratified with the complete success of the tour.

The Scottish methods necessarily differ in many points from those in use in Essex, and although several of the methods obtaining in Scotland could not be adopted advantageously and profitably by the visitors in their districts, this circumstance had no detractive influence on the interest manifested throughout the tour. Amongst the farms included in the itinerary were such famous stock-raising grounds as Coyne's, Cluisse, Allanfean, Roschard, and several of the holdings on the Ardross estate. In East Lothian they inspected the best examples of arable land, whilst in the west dairying and market gardening were the chief studies.

If SHEEP DIPS were more extensively advertised, there would be a far wider distribution of the trade. The "Mark Lane Express" is a good medium for such.

Notes and Jottings.

THE hot close summer weather that is still with us is very trying to all kinds of live stock, and not less trying to their owners, many of whom on the thin soils of the country that burn so quickly are at their wits end to know how to keep matters progressing. The abatement of milk and butter has been very rapid and great during the past fortnight and there will be but little chance of getting it back again now with the cows that have been in milk since the spring. While there has been a good supply of green food available to mow and give the cows, either in the byres or on the pastures, the abatement has been much less and the animals maintain their condition much better, so that the grain upon seeing to it that a supply of this kind of food is provided is doubly advantageous.

WHERE there are new milched cows coming in every care should be taken to see that they have an abundance of milk-producing food. It is very short-sighted policy to allow them, even if they will do it, to keep a good milk yield on nothing but such pastures as are available at the present time on the dry lands of the country. Where there is no supply of green food available probably the next best and cheapest substitute is brewers' grains. Where these can be obtained fresh from the breweries they are very helpful both to condition and milk yield, and at a very moderate cost, and where they cannot be obtained fresh the dried grains form a very acceptable change when steeped in boiling water for a time before using, and these can always be obtained whether near the breweries or far away.

WITH the fattening beasts probably the best aid upon short, dry pastures is cake of some kind or other, and where a little green food can be had a very small quantity of cake will be necessary to enable a steady gain of weight to continue. If no green food is available, and more bulk than the cake will make is needed, a very cheap and excellent help will be found in a little cut hay moistened with a small quantity of molasses dissolved in hot water, and with this add three pounds per beast per day of cottonseed cake and two pounds of locust beans. The mixture works well in practice, and it is much better than allowing the fattening stock to lose time, and consequently lack of ripeness when selling time arrives.

FROM the various agricultural and stock papers, as well as in conversation when travelling, one finds that that wretched and ruinous pest, house or louse in calves and young stock, is busier than usual, and in many cases playing sad havoc with the year's pen of calves. When once the epidemic gets hold it is very difficult to deal with, and very often every attempt to effect a cure is entirely fruitless. When the first cough is heard is none too soon to begin treatment, a day must not be lost; and there are many drinks advertised that are beneficial, and, indeed, effect a cure at this early stage; possibly if these drinks were used as a preventive before the complaint makes its appearance, they might assist in warding it off. Either such drinks are referred to, however, or some similar ones from the veterinary, should be obtained.

THE breeder, however, who is troubled with this disease in his herd must use every effort to keep up the strength of the animals, and nothing is better for this purpose than the best quality of linseed cake so long as they will eat it, it has a soothing effect upon the bowels, as well as being most nourishing, and is altogether a great help. The cough that causes the trouble and loss arises from the presence of a very small threadlike worm that finds a home in the windpipe and the air vessels of the lungs, and appears to increase very rapidly when once it has become established. After being drenched we have sometimes seen calves disgorge such quantities of the worms as to appear almost like a small ball of white cotton.

IN addition to the linseed cake advised as being of great assistance in keeping up the strength, a little sweet green hay is very suitable, and they should have access to a little fresh grass that has

not been grazed by cattle previously if possible, but on no account should they be turned out afterwards, at least that has been the experience of the writer more than once. An other very important matter is the water they are drinking, this should by all means be from a running stream, or otherwise they should be watered with pails and the utensils swilled out after each calf has drunk. Troughs are a terrible source of infection in this as well as in many other diseases. The area in a trough is almost invariably so small that the animals drinking after each other are certain to take up what they ought not to do.

I BELIEVE that in the case of tuberculosis the infection is communicated more quickly and certainly from the drinking trough than from any other source, and there cannot be sounder advice given with regard to any disease than to see that sound animals are not allowed to drink from the same water after diseased ones, unless it be at a rapid running stream, where all microbes or bacilli are washed away down stream forthwith. The water, too, it is needless to say, should be strictly pure. In the present day there are such numbers of sewage farms, especially in all thickly populated neighbourhoods, that many streams are much affected by the effluent from them, which, though considerably purified in ordinary times,

ence would be proved in other countries. Then it often happens that upon the same farm cattle are reared for widely different purposes and for different grades of food. For the best and stoniest feeding the Shorthorn has, and probably will continue to have, the pre-eminence the world over, but upon large holdings it is not often that the whole of the land, even if assisted with artificial feeding, will be found good enough for the larger breed. At such times the Scotch or Devon are found to be admirably suited to the weaker pastures.

VETERINARY.

Dog Tick.

Please examine insect enclosed, and inform me in your correspondence column what it is? It was found on the head of a Yorkshire terrier, and made a wound. What should be used to disinfest?—M. G.

Answer: The "insect" sent for identification is very much alive and quite active—is a splendid example of the *Ixodes ricinus*, the common or dog tick; indeed, we have rarely seen a finer specimen. Did you note the beautiful lavender colour? It is not stated whether or not the dog harbours

SHORTHORN BULL, "JEWELLER."

This three year-old bull was bred by Mr. T. R. Wilkins, The Grove, Longton, Preston, is a winner of many prizes, and has been sold to Mr. F. Miller, for exportation to South America.

often flows in its crude state at the time of thunder rains.

THE American markets for beef appear to be in a fairly satisfactory condition, especially for the better class of cattle, which are in good demand at prices that are leaving a fair margin of profit, and the reported future prospects point to a continuation of this brighter state of things. In England the profits on the heifers are certainly not high by any means, especially in some districts. The demand for light-weight cattle is not at a paying price. Your butcher says, "I want small joints through this excessively hot weather," but what is he willing to pay. The 70 stone steer or heifer that cuts this neat small joint that is spoken of realises about £14 10s. in the auction, where does the profit of such size come in? Neither breeder or feeder can find it.

EXPORTERS seem still to be busy amongst the white faces, and a few more Angus are also finding their way to other lands, but we still hear little of the exporting of any other breeds. The Galloway and Highlander one seldom hears of being taken abroad, and Red Polls, Sussex, and Devon are also amongst the breeds that do not find many friends abroad who are desirous of buying new blood or of testing the abilities of these breeds to make a profit in their countries. As we intimated last week, it would not be energy wasted if some means were taken to place representatives of these breeds before foreign buyers much more frequently than is done at present, and we trust some effort will be made to do so.

IT has been proved over and over again in England that in many parts of the country some one of our breeds pays much better than any other, and there is no doubt the same experi-

any more, but a search should be made, to see that no more specimens are attached to the skin. Sporting dogs, on whom the insect is most commonly met with, often harbour them in considerable numbers. If "what should be used to disinfest?" applies to the wound on the head, caused by the removal of the tick, there will be no need to do anything—it will have disappeared long before you see this reply. If it refers to the removal of other ticks, we cannot do better than quote you Neumann's account of the method of dealing with them. He says ("Parasites and Parasitic Diseases of the Domesticated Animals"):—"Animals do not appear to notice the presence of these parasites: the quantity of blood they extract is not sufficient to injure their health, and the wound they leave after they fall off heals quickly and spontaneously. Nevertheless, it is advisable to immediately remove all ticks from dogs, which have brought them in from hunting, as the fecundated female, falling on the floor of the kennel, there brings forth a population of parasites which may be very troublesome to get rid of. The ticks may be removed by gentle, gradually-increasing traction, the pain caused to the dog being insignificant. When the tick has been too forcibly withdrawn, it is often ruptured, and the rostrum remains in the wound, but is eliminated therefrom in a few days by a process of supuration. It is, therefore, the best plan to compel the parasite to drop off by touching it with a drop of benzine, petroleum, or oil of turpentine. When the kennel is infested with ticks, it may be freed from them by washing it out with boiling water, which should be applied to every corner, and especially the ceiling, which these insects prefer." We generally get rid of ticks by pulling them off, and dropping them into a vessel containing paraffin oil or turpentine.

Notes and Jottings.

"He doth nothing but talk of his horse."
"Merchant of Venice."

A LETTER in the *Field* on the colour of horses certainly raises some very interesting questions. The writer suggests that the reason of the increase of chesnut horses may be due, not to the fact that chesnut is the fashionable colour, but to the fact that the kind of work in most demand at present is best done by horses of that colour. He divides colour into three classes:—(1) Greys and blacks, which he says are noted for stamina; they are not famous for their speed, but they can go on for ever. (2) Chesnuts, which he says are distinguished for their speed and their excitable temperaments, and (3) bays and browns, whose qualities, according to the writer, lie between those of the other colours, the bays favouring more the chesnuts and the browns favouring the blacks more in disposition. He holds also that with the disappearance of four mile heats black and grey racehorses began to decrease rapidly, whilst with the introduction of short distance racing chesnuts increased. The writer then goes on to say that Shire horses and Clydesdales are more bred for size, knee action, and energy than for endurance, and asks if it is surprising to find so many chesnuts amongst Hackneys, as no breed is so distinguished for excitability and lack of staying power.

THE theory is a very ingenious one, but when we come to examine it closely, we find that there is a great deal we have to take on trust. For example, it is quite as likely that the prepotency of a stallion has quite as much to do with the colour of his stock as anything, and certainly there have been both grey and black horses that have been remarkably speedy as well as chesnut horses that have been great stayers, whilst some of the stoutest of our horses have been bays. Indeed, it is frequently claimed for Arabs that they are possessed of more endurance than any other breed, and whether this is the case or no, it is generally admitted that they are distinguished for their stamina. But there are no black Arabs, not many grey ones, and bay is the pre dominating colour.

THEN, again, it is rather begging the question to say that Hackneys are the most excitable, and have the least endurance of any of our breeds of horses. There are plenty of Hackneys which cannot go a long journey with comfort to themselves, but then, again, there are plenty that can, and I have, within the last few weeks, seen a hind mare than one Hackney that it was a very desirable harness horse, merely taking into consideration the question of getting over the ground. Perhaps

the lack of stamina, with which some horses are troubled, and the prevalence of gaudily-marked chesnuts proceed from the same cause—the craze for extravagant and forced action. It stands to reason that a horse that is highly trained, that is a horse that is taught the knee and curb chain business, and that perhaps is a little short of shoulder action, must tire. High stepping is necessarily tiring, there is a great expenditure of force for very little progressive result. Then, again, many of the fashionable steppers—prize-winners—have been chesnuts. Hence the number of chesnut Hackneys is easily accounted for, whilst the expenditure of unnecessary force in the action is quite sufficient to account for the lack of stamina shown by some of the breed. And with relation to this lack of stamina I would point out that many of the stoutest Hackneys I have known have been chesnuts.

THE argument about Shire horses and Clydesdales falls to the ground at once, for though there are a few chesnut Shire horses, I do not remember ever to have seen a chesnut Clydesdale, and chesnut Shire horses are few and far between. If we take the catalogue of the last Shire Horse Show in London we find that out of 213 stallions shown in the classes for yearlings, two-year-olds, and three-year-olds there were only eight chesnuts. There were four greys and fourteen blacks, so the "endurance" coloured horses were more than twice as many more than the "energetic" coloured ones. Of roans there was one, of browns there were fifty, and of bays 123. If these figures represent the average colour of the Shire horse as they do the average colour of the best of them, the argument about chesnuts falls to the ground at once. Then again in the question of temperament, the Suffolk Punch, who is always a chesnut, requires consideration. I have had little experience with the Suffolk Punch, but from the little I have had I should say they were the steadiest and most docile of drought horses. It has been said of them that for a steady pull they cannot be beaten, and that "they would pull against a standing tree." An excitable, nervous, energetic horse would scarcely do this.

OUR ancestors had their own opinions about the colour of horses, and it is interesting to refer to them when the question of colour is being discussed. Gervase Markham, who was the most indefatigable collector of fact and fiction concerning all our live stock, his it that "the best colours are brown bay, dapple grey, round, bright bay, black with a neve white foot behind, white far foot here, white rache, or white star, chesnut or sorrel with any of those marks, or dun with a black list." Charles Etienne and Jean Liehault in their curious book, "Maison Rustique," which was translated by an English doctor, and published in 1691, give the colours which a stallion shall possess in the following order, viz:—"By, brown, red, dapple-grey, watchet or mouse colour, which is a certain note of an active and courageous horse." From this it will be seen that these eminent French writers held chesnut in nearly the same estimation as bay and brown, and they did not mention black at all.

LEONARD MASCELL, in his book "The Government of All Cattle," printed in 1695, has the same opinion; as the French writers quoted above as to the value of the Brown Bay, which, he says, is counted the best colour for a horse. Next to him he puts the "Sad Sorrell with flaxen mane

and tail," but he curiously enough insists on a wall grey and a black hoof. Dapple grey comes next in his estimation, and then the flea bit, and he says having "black eine, black hoofs, then is he like to labour and dure long time." The "dunne horse with a blacke list on the b ecke" comes next in the category, with the recommendation "that he is like for to do well." The white horse, he says, is "commonly of long life, but he has a nise and tender body, and dangerous to keepe; or if he be not well cherished and cleane kept, he will soon alter and decay."

FOR the mouse dunne he has a good word, and then in rotation comes the hack horse, who is likely to do well if he have "a white in the forehead, or a white feather on his nose, or else th further foot white behinde." It is curious to compare Markham and Mascell on this point of white markings on a black horse, and probably Markham appropriated what Mascell had written on the subject. It was a way he had, but then if he had copied Mascell in one particular he would most likely have copied him in another, and it will be noticed that Markham puts the chesnut a long way back in the list, and also that he has nothing to say about the whole coloured black horse and the iron-grey—colours which the writer in the *Field* associates with staying.

ABOUT these Mascell has a good deal to say. "The cole-black, having no white spot on him (as some horse-masters say), is perilous to keepe; for if he continue long to a man, it is marvell if he drawe him not, or hurt him by some other way, or else the horse to come to small profit." So evidently in the time of James I. black horses were not in very good repute. Nor has Mascell anything to say in favour of the iron-grey. "Next him," says he, "is the yron gray, which is counted the worst colour, for the yron gray horses are commonly faint to labour and ill at all assais; for although he be faire of bodie, he may in no wise away with any great labour." It is curious that what our twentieth century writer considers one of the stoutest of horses the seventeenth century writer speaks of as of no account. Other colours are spoken of in a few words. "As for other colours, skewe or spotted horse, some chance to be good and some bad, wherefore there is no certainte in them, but if the sire be good, the other may follow." And after all, the proverb that a good horse cannot be a bad colour has much to recommend it, and the only colour I should avoid, personally, is the washy chesnut, which, so far as my experience goes, never quite stands the pinch, however good the horse may be. But some of the stoutest and hardest horses I have ever known have been chesnut, either red or liver, and I have never noticed any difference in the way of stoutness between the two colours. I have also had some very hardy bay horses, and if I had to say which was the best and hardest horse I had ever ridden, I should be hard put to it whether to name a red chesnut or a bay. Both were fast, and both could stay for a week. And both were excitable, energetic horses, one of them being a grandson of the Flying Dutchman, and the other a great grandson of Tarnisan—was quite sufficient to account for it. And I may say that all the good weight carriers I have known have been irritable and energetic. This, however, has nothing to do with colour, which is an interesting subject, and which may be a more important one than appears on the face of it, especially that branch of it which deals with heredity.

Sheep Notes and Jottings.

WEATHER which has been favourable to the hastening of harvest has been less favourable to the development of sheep-keep, and it is to be hoped that very shortly in those districts in which the corn harvest has begun there will be sufficient rain to stop cutting for a few days, or there may be a more serious check to the autumn and winter food and fodder supply than is desirable. Wet weather at the beginning of harvest does little harm to the corn crop unless it bashes it down. It is when it is cut and matured, and ready to grow at small provocation that loss comes; and very little loss in quality occurs during the early part of harvest. It is the wet carting time that has to be feared. If wet holds off long there is fear that it may be delayed until the corn is in a dangerous condition, and when green crops will have lost ground they are not likely to make up. Roots and young seeds require rain where there have not been something more than slight showers, and with the yearling seeds drying off the keep for the next few weeks is getting shorter daily.

AS mentioned last week, there is likelihood of the need of any extra help that can be obtained from the early sown autumn catch crops to produce autumn sheep feed, and with such weather it becomes more necessary to provide it whilst each day shortens the visible food supply. Some districts, however, are more fortunate in their rainfall, and there is less urgency in respect to them.

REPORTS from manufacturing centres are not unfavourable to the wool grower. Trade has steadied in the country districts, and buying is not keen in all the centres. Yet it is sufficiently strong to show a sound demand. Buyers have not launched out in a speculative manner, but the least that can be said is that there is little likelihood of prices receding. Americans are not buying in a highly speculative manner, but they are buying consistently, and from all accounts are likely to have to buy freely for a long time; so that there are no apparent signs of the trade declining. There is, moreover, an inner feeling that prices will strengthen, and holders need not have to give way now that they have felt the market during the last few weeks and realised how they stand. It took some courage to stand out against the reservation on the part of buyers, but now the situation is gauged there is good reason to believe that growers have not held on in error. A giving way during this period would have brought the market lower than the supply warranted, and now it is not likely that any wool will be sold below its value. The seller stands in rather the stronger position at present, even though prices may not become sensationally high. Harvest wages may cause some holders to take a price which is against their opinion as to the trade, and this may keep prices in check for a time, but apparently only temporarily.

SHEEP sales are going on well, as is not unusual in hot weather. Sheep trade has been a little slow in some markets, and the shifting of the population bent on the summer holidays disturbs the local demand in many places; but with best Downs up to 5s. 8d. per stone, and 10-stone half-breeds at 5s. 4d. in the London market, there is nothing to grumble at. It is not unreasonable to expect a dragging trade for breeds which run to a considerable amount of fat, for it takes a keen appetite to face it with temperature around the eighties. On the whole, it is satisfactory that the trade keeps so good at this season. Lamb is in greater demand, partly from shortened supply, and partly from the fact that it is more in keeping with the desires of a jaded appetite.

THE prospects of the sheep farmer are good enough to make the ram sales go well; and the good opening to the season has been well maintained. It is difficult for a man to have to see most of the animals he marked on his catalogue go for a higher price than he feels justified in giving; though it may be a gratification to him

that his judgment has not erred. Those which come his way are often those which have some blemish he may have overlooked; so long as he wants an animal for crossing, minor blemishes, such as would be dangerous in a highly pure-bred flock, are not necessarily so for him, and it is among such as these that the best bargains are made, though they cannot be looked to to maintain a true type. It is quite the thick of the Down ram season, with Binford fair on the 13th, which is the zenith of the Hampshire sales; and Chichester sale on the 9th, following Mr. Ellis, of Summersbury's flock sale on the 8th, marks the Southdown season. The Oxford ram sale of Oxford Downs, also on the 8th, is a strong centre, but some of the sales come later to suit the convenience of cross-breeders, who do not mate so early as the pure breeders.

IT is always well to grow a crop which, failing its first incursion, may be profitably utilised for another. This is a strong argument in favour of developing the sugar beet industry, for beet, which is only a mangal of lighter bulk but of higher feeding value, is a very suitable sheep food. Evidently the Sleaford people mean to go through with their project of establishing a factory. It would probably induce more farmers to support the new industry if they recognised that there need be no such thing as a dead loss on the crop, and that they are not thoroughly dependent upon the factory. The hauling of mangels, even on a farm, is an expensive matter, and it is a point in the favour of beet that one ton may contain more feeding matter than two tons of mangels.

Sale of Longhorns.

The draft sale of pedigree Longhorn cattle, belonging to Lord Gerard, held at Eastwell Park, Kent, attracted a good company of buyers, but prices were not particularly high, although considered satisfactory. Messrs. Lythall and Walters were the auctioneers, and the following were the chief sales:—Cows: Dido, Baroness Kinloss, 25 guineas; Cowslip and b.c., Mr. R. T. Bowers, 33 guineas; Countess of Stowe, Mr. J. Riley, 28 guineas; Coronation Lucy and b.c., Mr. J. Riley, 36 guineas; Lady Emily and b.c., Mr. W. F. Garland, 51 guineas; Heifers: Betsy Susan, Mr. W. L. Riley, 21 guineas; Ethel of Eastwell, Mr. J. Riley, 22 guineas; Bentley Brindle, Baroness Kinloss, 20 guineas; Posy, Mr. J. Riley, 23 guineas. Bulls: Eastwell Elegant, Mr. H. Leney, 16 guineas; Eastwell Emblem, Mr. Swinerton, 17 guineas. The steers and cross-breeds sold at up to 20 guineas each.

Suffolk Horse Society's Sale.

The eleventh annual sale of Suffolk horses at Ipswich, held under the auspices of the Suffolk Horse Society, took place on Monday, and proved one of the largest and most successful yet held—a result no doubt largely due to the fact that the famous Bentley stud was included in the catalogue. These animals being so well known naturally attracted numerous breeders, but the other animals entered were also high-class specimens of the breed, and altogether the society must have been largely gratified by the excellent entry, the large attendance of buyers, and the good prices realised.

Mr. Alfred Preston and Mr. F. Smith, secretary of the Suffolk Horse Society, were the auctioneers, and they had no difficulty in getting bids, for competition was keen, and all the lots were quickly disposed of at good prices. The best figure of the day was 100 guineas, which the president of the society, Sir Cuthbert Queller, Bart., gave for the stallion Bentley War Cry, by Bentley Warrior. Sir Cuthbert also gave 150 guineas for the famous mare Bentley Duchess by Border Minstrel (the only animal on which a reserve was put), and 125 guineas for the blood mare Perfect; whilst Mr. Gough gave 150 guineas for Bentley Comet, a very fine stallion by Hewitts Mars, and Mr. A. J. Smith 106 guineas for the mare Bentley Clea, foaled in 1901, and by Lord John. These were all the three figure prices recorded, but one or two others came very near that figure, mares making up to 75 guineas, three-year-old fillies 60 guineas, two-year-old fillies 64 guineas, stallions up to 90 guineas, geldings up to 52 guineas, and foals to 24 guineas. The Bentley animals made the average of a little over £55 5s. for fifty-three animals, which, considering that many foals were included, is a remarkably good one.

SITUATIONS WANTED AND VACANT.

Those to whom this column appeals, if intending in some way with a publication, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a nom de plume, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

THE 'BIBBY' CAKE IN THE FORM OF 'CAKETTES.'

"Send me two tons o' they nobb same a' Mr. Brown is a usin'?" was the colloquial way in which a new customer gave an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown who had often spoken favourably to him of our Cake, and on looking over his stock and noting the extreme handiness of the "Cakettes" for Simmer Feeding, he at last resolved to give us a trial order, and did so in this wise just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it: the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY.' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

THE WEEK'S SHEEP SALES.

Our reports of the week's Sheep Sales will be found in our Market Supplement.

SOCIETIES.

R.A.S.E.: Next Year's Show.

The last monthly meeting of the council of the Royal Agricultural Society, before the autumn recess was held on Wednesday at 13, Hanover Square, Mr. F. S. W. Cornwallis (president) in the chair, when three governors and 151 new members were elected.

LINCOLN OR IPSWICH.

The most important business before the council was the selection of a place at which the society's meeting of 1907 should be held. Invitations had been received from the towns of Ipswich and Lincoln, and a committee of inspection which had visited both places, reported on the sites which could be placed at the disposal of the society at each town.

Deputations from both towns attended, that from Ipswich consisting of the mayor, the Earl of Stradbroke, Mr. Petyman, Mr. Herman Biddell, Mr. Paul, Mr. Goody (general manager of the Great Eastern Railway Company), and Mr. W. Bantoft (town clerk). The Lincoln deputation, who were introduced by the Earl of Yarborough, were the mayor, Mr. C. W. Pennell, Mr. W. Frankish, and Mr. W. T. Page, jun. (deputy town clerk).

The claims of Ipswich were supported by the mayor, Lord Stradbroke, Mr. Petyman, and Mr. Herman Biddell, and those of Lincoln by the Earl of Yarborough and the mayor. A long debate ensued, and eventually Mr. Adeane, in moving that the invitation from the authorities of Ipswich to hold the show of 1907 in that town should be accepted, pointed out that in doing so the society would be visiting an absolutely distinct part of England to that visited in the previous year, and the mayor was prepared to give a guarantee that the society should not incur any loss if they went to Ipswich. The resolution was seconded by Mr. Richardson Carr.

IPSWICH CHOSEN.

Mr. William Harrison moved as an amendment that the show of 1907 should be held at Lincoln, and said that he would be ungenerous if he did not recognise that Ipswich had come forward when they were in want of a site. He was of opinion that in considering the question they must put sentiment on one side. The facilities which Lincoln offered were much superior to those obtainable at Ipswich, and he had no doubt that Lincoln had the better of the two sites offered, and would suit the society's purpose admirably.

Sir Gilbert Greenall, in seconding the amendment, endorsed what Mr. Harrison had said, and was of opinion that in holding the show at Lincoln the society would tap an entirely different district from Derby. On a show of hands it was decided by twenty-seven votes to eleven that the invitation to hold the show of 1907 at Lincoln should be accepted. It was decided to hold the Lincoln Show in the week commencing June 24, 1907.

Sir Nigel Kingscote, in presenting the report of the joint meeting of the Finance and House Committees, explained that as the Harewood House debenture holders had approved of the council's proposals for the disposal of the house, it had been decided to acquire the lease of 16, Bedford Square, for the offices of the Society.

Other business having been transacted, the council adjourned over the autumn recess until Wednesday, November 7 next.

Bath and West.

A meeting of the council of the Bath and West and Southern Counties Society was held in London on Tuesday, the Marquess of Bath in the chair, when one life and seven ordinary members were elected.

A communication was read from Lieut.-Colonel Sir Arthur Bigge, K.C.B., stating that His Royal Highness the Prince of Wales had received the intimation of his election as president of the society for the year 1906-7 with much satisfaction.

Special Resolutions. The secretary formally reported the death of Mr. F. G. Farwell, a member of council for the Central Division, a steward of arts and also of cider, and chairman of the Science and Art Committee; and also of Sir G. T. Brown, C.B., who had been the society's veterinary inspector since 1864, and resolutions of regret and sympathy with their relatives were passed.

The finance committee recommended that, in view of the special strain upon the resources of the Swindon Victoria Hospital, caused by the tram accident during the show week, the society make a donation of twenty guineas to the funds of that institution, and it was carried.

NEWPORT SHOW.

Captain the Hon. J. C. Best, on behalf of the show dates committee, reported that the committee recommended that the 1907 exhibition at Newport be opened on Wednesday, June 5, and closed on Monday, June 10. These dates had been approved by His Royal Highness the president, and were also considered to be the most suitable by representatives of the town and district embraced by the show.

On the motion of Captain Best, seconded by Mr. Edwards, the report was adopted.

SWINDON SHOW.

The following resolution, unanimously passed at a meeting of the Corporation of Swindon, was read:—"That the Corporation express to the president (Lord Radnor), the council and the members of the Bath and West and Southern Counties Society, their most cordial appreciation of their recent visit to Swindon, and of the great and good work they are doing, and trust that the society will experience continued and increasing success; also that the Corporation will be extremely glad to again welcome them to Swindon."

The Chairman moved, and Colonel the Hon. C. Byng seconded, that the cordial thanks of the council be conveyed to the Corporation, together with an assurance that the council highly appreciate the kindly feeling expressed in the resolution.

DAIRY CONGRESS.

A communication was read from the Consul General of the Netherlands, inviting the society to appoint a representative to act on the British committee for the purpose of insuring that the dairying interest shall be properly represented at the Third International Dairy Congress to be held at the Hague in September, 1907, and it was resolved to ask Mr. G. E. Lloyd Baker to act in this capacity.

AGRICULTURAL RESEARCH.

Sir C. T. D. Acland, as chairman of the Experimental and Education Committee, reported that the committee had had under consideration a draft scheme submitted by the Board of Agriculture and Fisheries, for the establishment of a National Council of Agricultural Research, and that, after carefully considering it, the committee unanimously resolved that, although a purely consultative committee might with advantage be appointed by the Board of Agriculture to promote co-ordination of experiments, the committee does not see its way to recommend the Society's Council to support the suggestion for the appointment of the proposed council, as it considers that the Board of Agriculture should remain in immediate touch with the various bodies engaged in experiments throughout the country, and that money granted by the State for agricultural research ought to be distributed by a State department.

On the motion of Sir C. T. D. Acland, seconded by Mr. Story Maskelyne, F.R.S., this recommendation was unanimously adopted.

Smithfield Club.

Mr. James Hornsby, president-elect, occupied the chair at the last council meeting of the Smithfield Club, at which it was announced that his Royal Highness the Prince of Wales, president of the club, had graciously presented the magnificent challenge cup for sheep which was on view, to replace the cup won outright at the late show, and on the motion of Earl Winterton, seconded by Mr. J. Cridlan, it was unanimously resolved that the thanks of the council be conveyed to his Royal Highness, the president, for his gracious gift.

A letter was read from the Butchers' Company, of London, offering a challenge cup for the best pig carcase, to replace the cup won outright at the last show, and on the motion of the Chairman a unanimous vote of thanks was passed to the Butcher Company.

The Chairman then said it was his painful duty to report the deaths of three valued colleagues on that council in Mr. A. F. Milton Druce, Mr. H. D. Marshall, Mr. James Biggar, and Sir G. Brown, and after referring to the valuable service of each, it was agreed to send letters of condolence and sympathy to their families.

Earl Winterton reported that the stock prize committee had selected judges for the forthcoming show, with reserve judges in case any of the gentlemen selected were unable to act; such list to be published when all the judges had signified their acceptance, and this report was adopted.

Mr. J. G. Barford reported that the rules and regulations and form of application for space at the forthcoming show had been considered and passed by the committee.

Mr. Sanders Spencer reported the arrangements which had been made for the work of the carcase competition at the forthcoming show, which was agreed to; whilst a letter was read from the Pooled Cattle Societies with reference to the conditions of entry applying to the Aberdeen-Angus cattle at the club's show, and after some discussion it was referred to the next meeting of the council.

Circular letters were read from the Irish Cattle Traders' and Stockowners' Association with reference to foreign meat for the Army and foreign forage for troop horses, and asking the club to join a deputation to the Minister of War on the subject, but the council decided to take no action thereon.

Finally it was resolved to petition the railway companies in favour of a reduction of fares to members of the club visiting the club's show, and the council adjourned till November 7.

SHOWS.

Sedgefield.

The Sedgefield Agricultural Society seem to be having a turn of bad luck, for their show in West Park, Sedgefield, on the 28th ult., was nothing like so successful as in other years. In the first place the entries were only 429 as against 652 last year; and, secondly, although the weather was perfect, the attendance was disappointing when it is considered that the show was held in the centre of a big agricultural district. The cattle classes were larger in number, but every other section of the show was smaller, dogs, poultry, and farm produce especially showing a substantial decline. In point of quality the exhibits were admirable, and the show as a whole was unquestionably a creditable one for a district exhibition.

Whalley.

Showery weather somewhat spoiled the attendance at the show of the Whalley Agricultural Association, held on the 28th ult., but notwithstanding this there was a remarkably good gate. That the society, which was established as far back as 1810, is still going strong was proved by the entries, which totalled no fewer than 1,246, and made a record, being over 150 more than in any previous year. Quality, too, was of a very high standard, and the exhibitors of the society are to be congratulated on providing such an interesting show; they certainly deserved better weather.

Meltham.

The Meltham and District Agricultural Society were not altogether fortunate as regards the weather for their fifteenth annual show, held on the 28th ult., for although it was beautifully fine at the outset, showers of rain fell later in the day and had a bad effect on the attendance, which, whilst the weather remained fine was very good, but naturally dwindled when rain made its unfortunate appearance. Over 600 entries were received for the show, which for a local exhibition was a highly creditable one, there being a very good display of horses, and also fair shows of cattle, sheep, pigs, poultry, pigeons and dogs.

Beamish.

For their thirty-seventh annual show near Lanchester, on Wednesday, the Beamish, Pontefract, and Consett Agricultural Society received the record entry of 734, divided as follows:—Horses, 203; sheep, 28; cattle, 14; butter, 9; dressed fowl, 1; horse-shoeing, 11; eggs, 8; poultry, 114; pigeons, 164; rabbits, 97; dogs, 83; and implement stands, 2. The largest increases were in the horses and rabbits. Amongst the horses the eight animals were an "excellent show," and included winners at both the Royal and North-berland county shows. The brood mares, both open and for tenant farmers, were a splendid lot; while the hunters and leapers fully maintained the reputation of the society. Cattle, though small in numbers, were of the best quality, and sheep made a fairly good display, whilst the poultry department was considered to be the best seen at this show.

Darlington.

The South Durham and North Yorks Horse and Dog Show at Darlington took place on Wednesday for the forty-seventh time, and was favoured with fine weather and a large attendance, but the entries, though they numbered 1,220, were disappointing from the fact that there was once more a decrease in the number of horses shown. This section of the show has been on the decline ever since 1898, when the total was 480, whilst this year it was but 205 or twenty-three less than last year. The chief reason of this decline is, we think, the smallness of the prizes offered as compared with many other societies, and the consequence is they fail to attract breeders other than local or near ones. No fewer than six classes had to be cancelled, and the society would do well to see whether they cannot once again draw the respectable entries of other years. The quality of the horses, however, was good, and to some extent made up for the smallness of numbers. Cattle introduced last year were a highly creditable display of about fifty, or twelve more than last year; whilst dogs, which were not quite so numerous as in 1905, upheld the big reputation of this show.

Ainwick July fair for horses and cattle was held on Tuesday, when there was a good offer of horses, with a lucrative inquiry for the better qualities. Good draught horses sold up to £65, useful cab and harness horses £15 to £25; ponies, £5 to £15. In the cattle market there was a large offer of two-year-old grazing heifers of a good class, which sold up to £12 10s., and lean cattle from £8 10s. to £10 10s.

The Farming Outlook.

THOUGH the summer is by no means over yet, we have arrived at a period when we may make a survey of the condition of crops in general, and also venture some kind of a forecast as to the outlook for the future. When the time comes for writing the history of 1906 it will be described as being anything but a bad year for farmers. We have had better seasons, of course, but we have also had worse, and, all things considered, we have not a great deal to complain about. Haymaking has been a long time about, and even now it is not quite finished, but although the weather has been somewhat "catchy," it has been good as a whole, and hay crops have turned out a good deal better than we anticipated at one time. Just at one period we feared for the welfare of the roots, but the rain came just in time, and we have the satisfaction of seeing excellent pieces of mangold about. Turnips are not quite so good, as the fly has been troublesome in many places, but corn looks well, and both wheat, oats, and barley should do good crops. The reaper and binder is now at work in the cornfields, and under the influence of the glorious sunshine straw and ear have changed quickly from green to golden yellow. If fine weather continues there is every prospect of the corn harvest being one of short duration this year.

The Hops.

WHILE writing in a cheerful strain of the farming outlook, we must not overlook the gloomy reports which come from Kent respecting the condition of the hops. Of course, hop culture only affects a small proportion of the farmers in the country, but to those whom it does affect, it is of very great importance. All through this season the hopgrowers have had to spend money freely on cultivation, knowing all the time that he must do it, or lose his crop altogether. It has been blight, blight, blight and wash, wash, wash until no wonder if the hopgrower has got sick of the whole business—and what is going to be the end of it all? The grower knows only too well what he has had to spend per acre on his hops. What will he get in return? It is too early yet to speak with any degree of certainty about this, but the outlook is ominous, and we have one more illustration before us of the uncertainty of hop culture. Fortunately, growers know all about it, and they possess an optimistic spirit which prompts them to look hopefully for a good season next year, while they make the best of the shortcomings of this.

Insecticides.

MOST farmers and gardeners are acquainted with the individual who calls from time to time to press the sale of some wonderful insect exterminator which is supposed to do extraordi-

nary things in the eradication of common pests. The curious part of it is that in spite of insecticides the pests are not eradicated, but, on the other hand, they increase and multiply. Of course, the depredations of the insects may be checked for the time being, but eradication is another thing altogether, and if that came about what would become of the insecticide business? In our last issue a county court case was reported in which it transpired that a special chemical fly exterminator was a composition of soot, gas lime, and cinder ashes, and for this £2 a ton was charged. If the mixture had served its purpose it would have been cheap at the price, simple as it was, but it would have been just as well to make a commercial commodity of very finely sifted road dust, which is as good as anything to scatter over seedling turnips when they are wet with dew as a preventive of fly.

The Exportation of Pedigree Stock.

THE keen demand on the part of foreign buyers for pedigree bulls raised in this country, and the high prices paid for some of them, have been topics of general discussion of late, and doubts are expressed in some quarters as to the wisdom of sending so many high-class animals out of the country. Money tempts the stock breeder just the same as it does anybody else, and when the foreign buyer comes to this country for stock it would appear as if money is no object to him. For our own part we do not think there is any great danger of the standard of our pedigree stock being deteriorated through the export trade, because, happily, we possess the all essential germ and are not likely to lose it; but at the same time we are not without sympathy for the fears expressed by pessimists in regard to the future. The real value of a bull for breeding purposes can never be estimated until the animal has been tried and proved, and if the foreigner's gold has the power of tempting breeders to part with their best bulls, let something be got out of them before they go. It is easy enough to sell a good bull and comfort yourself that you can get another one just as good, but this is where the doubt comes in, and before sending an animal abroad the breeder should be quite sure that he has got another that can carry on his work. It is quite obvious that if the very best of the stock is sold for export, we shall be short of material at home to keep up the standard, and though we do not fear anything of the kind, we simply voice the fears of some people whose opinions are worthy of consideration.

The "Mark Lane Express" is a
SPLENDID MEDIUM
for the Disposal of all kinds of Farm Seeds and Plants.

Bank Holiday Shows.

RAIN fell in some places on the morning of bank holiday, but as a rule the day was gloriously fine and scorchingly hot. Indeed, it was an ideal bank holiday, and all the world and his wife seemed to enter into the spirit of it. Amongst the numerous attractions provided for holiday-makers, there were a good many agricultural shows on August 6, and, for the most part, they were well attended. Bank holiday shows are mostly of a local character, and they possess an aspect which is quite different to the big events of four or five days' duration. Things are taken very leisurely and seriously at the big county show, and the local magnates have a day to themselves when the price prohibits the attendance of their poorer neighbours. There are none of these class distinctions at the one day bank-holiday show. The big-wigs of the district attend, of course, if only from a sense of duty, and they rub shoulders with the working fraternity to whom bank holiday is a day out, that has to be enjoyed at any cost. But the enthusiasm of the local bank-holiday show is its greatest feature. One feels a personal interest in knowing who has won the prizes because one is acquainted with the prize-winners, and the agricultural side of the whole business is excited by a holiday spirit which does away with any possibility of dullness.

Protection for the Pig-keeper.

JUST at the present moment everyone who buys bacon for breakfast is beginning to realise that there must be a scarcity of pigs somewhere if the price asked for the homely rasher is anything to go by. Just so, and in connection with this matter the pig-feeder is deserving of sympathy. The law says, and rightly so, that the consuming public must be protected, and to stamp out swine fever and other troubles keen inspectors are appointed who do not hesitate to sign the death warrant of the farmer's pigs. In the interests of the public this is as it should be, but is not the producer deserving of protection as well as the consumer? A farmer may get disease amongst his pigs through no fault of his own, but the law which demands the destruction of valuable animals can offer nothing in the way of compensation. Probably the present scarcity of bacon is due in a measure to this state of affairs, and surely in a country like this, where pigs are confiscated in the interests of the public, something could be done to compensate the unfortunate owner.

Sparrows.

THE homely sparrow has been enjoying a time of freedom from persecution of late, but now that the corn is ripe and hosts of twittering brown chirrupers play havoc amongst the oats, both

hands, tongues, and pens of agriculturists are turned once more against sparrows. In the months that have intervened since the birds stole the spring corn and devoured the fruit buds sparrows have been breeding, and, goodness, how they can breed to be sure! We have the families as well as the parents to contend with now, and the only course is shooting and scaring. Fortunately a wise education system, which keeps country lads at school at an age when they might be getting a better education outside, does not prohibit summer holidays about harvest time, and during the vacation the youngsters may be usefully employed in bird tending. The time, however, for keeping the sparrow population within reasonable bounds is in the winter.

Shoeing Competitions.

At a good many agricultural shows there are competitions for shoeing in which local smiths pit their skill against each other in making and fixing

shoes. We take it that competitions of skill in anything connected with agricultural pursuits are good things to encourage, and it is an interesting sight to watch a lot of sturdy smiths in a show-yard earnestly engaged in making shoes and manipulating the feet of the horses. There seems to be an impression on the part of some competitors, however, that the most important item of the business is the making of the shoe, and fitting it to the horse's foot is a secondary matter. The other day we watched a man in a shoeing competition who deftly manipulated his iron and made a splendid looking shoe; but he did not pay sufficient attention to the foot of his horse, and when the shoe was fixed the animal went lame. Local smiths, even some with years of experience behind them, are in many cases deficient in points of knowledge respecting the horse's foot, and as most county councils now employ expert farriers to give instruction on these matters, they cannot do better than take advantage of the facilities offered.

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, Mr. JOHN HOWARD, 57a, Pall Mall, London, S.W.

lordships. Personally, I am sorry that this incident should be made the basis of this misinterpretation. "Perhaps, however, Lord Lansdowne was not altogether wise in making this the tocsin to sound to duty; but that far-reaching legislative ambitions which vitally affect personal interests can pass the House of Lords the acceptance of the Irish Labourers' Act evidences. I ought, by the way, to have included this measure in those legislative achievements of the session which are of direct significance to the rural areas. In a sense it initiates an economic revolution; and Mr. John Burns has plainly told us that he is not afraid of reproducing it in England and making it a part of our own agrarian economy. But to return to our mutton. Did Lord Lansdowne mean this reference as a menace? If his lordship did, and that menace is realised, he will only have served to give a new force and vitality to the Government's Crofters' Bill, which measure embodies a tenure-scheme of an infinitely more emphatic character than Mr. Agar-Robartes' measure. I see that the Duke of Portland evidently interprets Lord Lansdowne's reference in this sense. Well, better bear the ills we comprehend than invoke those we wot not of. Better the Land Tenure Bill—even from the landlords' point of view—than an English edition of the Scottish measure! And such an English edition would be, I can assure their lordships, infinitely more to the taste of assertive Radicalism!

The Last of a Great Order.

The Duke of Rutland was a relic—an echo of a dim past. There were people who pretended to laugh at the feudal-cum-philanthropic ideals that once possessed him; but at least those ideals were something more than a senseless anxiety to revive an impossible yesterday. They were an attempt to associate with the maintenance of the old order a generous personal sympathy which should make the mansion of the landlord a radiating centre of kindly paternal interest. Feudalism was to be alloyed by the territorialism of benevolent oversight. As if to lend it romance, it was to have also associated with it a religion which should be something warmer than what one of the Duke's own associates described as the "drab coldness of Puritanism." And, strangely enough, one of the incidences of this ideal to-day possesses men whom it would be ridiculous to regard as feudalists or as the advocates of the revival of a dead past—I mean the anxiety to recall the yeoman-class. The Duke's idea was to govern a dependent community—dependent, that is, on the favour of the overlord—by means of the two sentiments of chivalrous sympathy and of readily-accepted allegiance rather than to have the life of that community regulated by the mechanism of a rigid economy, which would be indifferent to personal relations and inherited family traditions. It was a quaint, fragrant, impossible dream, and in its picturesque chivalry epitomised a good, courtly, romantic aristocrat. If, however, his idea was Quixotic, it was nobly Quixotic.

At a meeting of the Federation of Dairy Farmers' Associations of Scotland, held at Kilmarnock, the following resolution was carried unanimously:—"That in the opinion of this federation the administration of the Food and Drugs Act in the case of milk prosecutions is often carried out in a harsh and unfair manner, and this meeting earnestly recommends the various branches to forward to the Board of Agriculture reports of all cases where they think prosecutions have been instituted against persons who were apparently innocent."

Agricultural Politics.

BY A LOBBYIST.

Lord Carrington's New Policy.

Earl Carrington will—this I verily believe—accomplish more, in the mild economic revolution on which he is intent, by means of his Crown lands' example than he will by legislation. Even to-day it cannot be said that the small holdings' problem has altogether passed out of the region of experiment. If they are to become an assured and vital part of the agrarian system of this country it will only be as a sequel to the conviction on the part of landlordism that they are remunerative. It is not fair, in days when the commercial spirit is growingly asserting itself in our agrarian areas—this is unavoidable and inevitable, is in fact, an actual offspring of the characteristic of the age—to expect that landlords should cultivate a method of unbusinesslike philanthropy and generosity. Experiments are expensive, and not unseasonably ruinous to the individual, and it is thus well that in a matter of this kind they should be undertaken by the nation. This is the meaning of Lord Carrington's resolution. He will, in all probability, provide a desirable object-lesson—this, in fact, the Earl has avowed to be his hope—of the admirable possibilities of the small-holdings' principle, and of its actually being calculated to heighten rather than to depress the value of the land to the owner. Moreover, the scheme should provide useful material upon which to base a logical appreciation of the particular soils most suited to this method of culture.

Why not National Experiments?

May I make a suggestion to the Minister for Agriculture? The Earl has, in all, at his disposal something like 70,000 acres. He meditates largely utilising them for experiments both in a system of cultivation and in economy, for remember that he hopes to be able to convince that generous conditions of tenure are also the most profitable. Why should not a part of these 70,000 acres, a small part of course, be utilised for the purpose of discovering new forms of culture, of widening the scientific area of British agriculture, of adding to its products hitherto unknown fruits? At this moment a good deal of attention is being centred upon the possibility of sugar-beet culture in this country. Whether this can be satisfactorily and remuneratively pursued can only be proved by experiments, the cost of which no individual should be called upon to personally bear. Why should not these be undertaken upon Crown lands under the *agris* of the Board of Agriculture? Small holdings are not possible with all soils and in all districts. It may be that it will be found unwise to seek to adopt certain of these Crown lands to this purpose. Why should not these lands be utilised for experimental culture? Of course, the class whence comes the small holders is a most desirable one, but it is not the only human element in the rural situation which deserves the State's compassionate consideration.

The Agrarian Work of the Session.

It certainly cannot be said that we have any reason for dissatisfaction with the past session. On the personal side we have every reason for

gratification. Earl Carrington has revealed himself to be one of the most sympathetic, receptive, and practical-minded men who ever presided at the Board of Agriculture, a statesman who is not only catholic in his administration, but who has shown a power of initiative and unconventionality of independence which mark him out as one of the most distinctive men in the Ministry. Sir E. Strachey, as the spokesman of the Board in the Commons, has realised all the expectations formed of him; and this is a tribute to his zeal and ability more complimentary than paeans or adjectives. What is equally as gratifying is that the output of the Session has included three Acts of definite interest to the rural areas—the Justices' of the Peace Act, the Fertilisers and Feeding Stuffs' Act, and the Dogs' Act—and that among the measures hung up for the consideration of the autumn session is the Land Tenure Bill. Two of these measures reflect a keen and practical and, I would add, an unanimous anxiety on the part of the farming and rural interest, and if there be some divergence of view as to the necessity of all the clauses of the Justices' of the Peace Act, or as to the wisdom of all the suggestions of the Land Tenure Bill, at least both may be accepted as an evidence of interest and anxiety. Better even an interest and an anxiety that may not be altogether in harmony with rural settlement than a disquieting somnolence and an apathetic indifference. I am not going to say that Codlin's the friend and not Short; and this I will say, that in point of legislative and administrative achievement this session stands out distinctive and eminent in the Parliamentary record of the last decade. The Dogs' Act and the Fertilisers' Act have transformed a promise into a definite legal actuality. No partisan prejudice can disguise this fact.

Is this a Threat?

Does Lord Lansdowne intend a threat? This question possessed me as I read his lordship's reference to the Land Tenure Bill, which he included in his letter to the Conservative Peers in anticipating the autumn session. His definite selection of this measure for specific mention cannot but be ominous. Is it an ill-omen? Does his lordship's reminder that the measure is pregnant with far-reaching effects mean that it will be the duty of the Conservative peers to counteract and checkmate that influence? At all events, this is how it is interpreted in certain Liberal circles, and I have even heard it adduced as an illustration that the House of Lords is so prejudicially anti-Liberal as to render it absolutely impossible to secure therein a dispassionate consideration for any Liberal legislative progeny, more particularly when it may also affect the personal interest of their

SITUATIONS WANTED and VACANT.

Those to whom this column appeals, if identified in some way with agriculture, will have no difficulty in obtaining employment or filling a vacancy if their requirements are advertised in the "Mark Lane Express," which is best done under a *nom de plume*, and addressed to this office. The charge is only a penny for every three words, but the cash must be remitted at the time of ordering the advertisement.

Yorkshire Show at Middlesbrough.

The weather was most unfavourable for the Yorkshire Show, which opened at Middlesbrough on Wednesday last and continued over the Thursday and Friday. Rain and sea fog on the first day culminated in a heavy thunderstorm, and very soon the showyard was practically deserted. The two following days were also dull and inclement, with heavy soaking rains, so that it is not to be wondered that the attendance was below that of last year. The total receipts for the three days reached £2,739 4s. 6d., as compared with £3,175 2s. 6d. at Hull, and £3,434 4s. 10d. five years' average. The following table shows the attendances on various days:

	1st Day	2nd Day	3rd Day	Total.
1901, Middlesboro'	3,024	28,686	10,760	42,722
1905, Hull	4,145	32,887	12,719	49,751
1904, Huddersfield	5,398	30,860	16,649	52,907
1903, Sheffield	5,548	31,739	14,635	51,913
1902, Leeds	8,271	32,717	7,218	48,206
1892, Middlesboro'	6,703	44,751	13,290	64,744

The show in other respects was a good one. The prize fund was the magnificent one of £2,278 10s., as compared with £2,060 15s. at Hull, and £2,041 1s., the average for the last five years, and this drew 1,196 entries, of which 930 were live stock. The gross total was ninety-nine more than at Hull in 1905, when 1,097 entries were received, livestock then numbering 867, while the respective totals of the last five years' average are 1,074 and 444.

HORSES.

The county of broad acres, which has for all time been noted for its horse-loving population, has of late years found no little difficulty in keeping pace with some other counties further south; in fact, in heavy horses, there are many shows in the Midlands and the south that far out-distance the Great Yorkshire, and in Hackneys, too, the classes at this great northern festival have little to

boast of, but when we come to the Hunter classes, the Cleveland Bay, and Coach horses, it is then that the Yorkshire show has to be reckoned with, and this year, had it not been for these latter sections, it is quite probable that it would have had to be dubbed an indifferent display, more particularly as regards numbers. There are many reasons now why numbers should be a little short of the numbers of years gone by. In the first place, such numbers of shows clash during Bank Holiday week that it is impossible for all to be supported liberally. Then there is the further fact of its being rather late in the season, and many of the animals have tried conclusions more than once, so that owners who are exhibitors of those animals that have been worsted upon many previous occasions feel that they may as well save themselves the chagrin of another defeat as well as the heavy expenses incurred with exhibiting, and which, in the case of the Great Yorkshire this year, would have (for southern breeders) been very heavy, the show being held so far north. However, it is not always that paucity of numbers makes an indifferent show, and it was the case this year, the reduction in numbers being confined almost exclusively to the medium class of horses, and this in all breeds. On this account, quality was of a very high standard, and there were several, indeed, many classes in each section which were so even and of such high merit as to give the judges quite enough to do to decide the positions of the competitors, and a number of first-class animals that had been sent up from the south, where they had been in many cases at the head of affairs, found themselves sailing under inferior colours at Middlesbrough.

Hunters.

The Hunter section takes precedence in the Yorkshire catalogue, and this was probably the most meritorious one, as well as the most numerous, which is generally the case nowadays. Thoroughbred stallions are first in this division,

and these are restricted to having served half-bred mares in the county of York during 1906 at a fee not exceeding 3 guineas, or which shall serve half-bred mares in the county of York during 1907 at a similar fee, the prize not to be paid under the latter condition until fulfilled. Notwithstanding these restrictions, seven entries were catalogued in this class, and some capital stallions were included in their number. The first honour very deservedly fell to the well-known sire Wales, from Lord Middleton's stud, whose progeny were so good as to head the family class at Islington last March, and the number of first-class young Hunters by this sire that one continually meets with at various shows gives ample proof that he is not only deserving his prize from his own personal merit, but also on account of his very great impressiveness as a sire. Another good stallion stood second in Roe O'Neil, and it speaks volumes for the English Thoroughbred when the fine old sire Red Eagle, now nineteen years old, is still sound and able to take a third prize. The two brood mare classes also brought out a number of notable animals, Mr. Swallows Beatrice, Mr. Wilkinson's Laurista, and Mr. Grainger's Lady Greylock, the latter fourteen years old, won the prizes in the heavy-weight class, all of them are roomy mares fit to breed the most valuable class of horses that can be produced. In the light-weight class Mr. Wilkinson's beautiful quality mare, Glasspore, managed to head the list, but Mr. Mullen's very good mare from Surrey, Secret Sign, had to give place to Lord Middleton's Sornful and Clare Girl. In the younger classes of Hunters, which were well filled, a number of well-known colts and fillies were found in the posts of honour; generally, too, there seems a tendency to get more bone in these horses, which will be of advantage so long as their breeding and quality is maintained. The first and second prize yearling colts were both sired by Pax, shown by Mr. Cholmondeley and Mr. Wickham

PRIZE WINNERS AT THE YORKSHIRE SHOW, MIDDLESBROUGH.

1. Sir Walter Gilbey's Hackney Brood Mare, Mitre, by Royal Dangler, first in the class for Hackney Brood Mare and Foal. 2. Lord Rothschild's Shorthorn Cow, Red Rose 3rd, winner of first prize in the class for Shorthorn Dairy Cow, in milk, four years old and upwards. 3. Mr. G. Grandage's Coaching Filly, Woodland May, first prize for Yorkshire Coach Horse Fillies, two years old. 4. Mr. G. Grandage's Woodland Duke, first prize for Yearling Colts in the Yorkshire Coach Horse Section.

Boynton, and Marioni and Wales were best sires of yearling fillies to Messrs. Rickaby and Lord Middleton. In very strong classes of two-year-old geldings and fillies Mr. Rickaby, Mr. W. B. Swallow, Mr. Heslop, and Mr. John Lett were the chief winners with the get of such famous sires as the Irish horse, Red Prince II., Pantomime, Lifeboat, and Red Eagle.

Three-year-old geldings were a strong entry, but females of this age were weaker in numbers, some of them, no doubt, having found their way to stud purposes. Mr. Hodgson and Mr. Rickaby had the best in these classes, got by Vales and Palmer. In the older classes of Hunters there were a great many Irish-bred animals at the front, Mr. W. Simpson's Silver Thorn, first in the 15 stone class and champion Hunter, being bred in Dundalk and sired by Slievegullion. Some of these made Hunter classes were exceptionally strong, and many animals well worthy of a first prize were performed left outside the honour list entirely.

Hackneys.

This section, as already intimated, did not fill well in its entirety, though one or two of the classes brought out a good lot. Stallions four years old and upwards started five entries, in which Mr. Hill's St. Thomas was first as well as medalist. He is well known, and a fine level mover, and Mr. W. Ashey's Buckthorpe Victor managed to score over Sir Walter Gilbey's stylish Kirkburn Sensation, which says a good deal for him. Stallions of two or three years are coupled together, and Mr. Arthur Hall's Copmanthorpe Performer was the best of them, so that Garton Duke of Connaught had the honour of siring the first prize stallions in both classes. Mr. Stephen Cliff's New Told by Goldfinder VI. was second, beating Sir Walter Gilbey's Dashing Lad. There were two or three very beautiful mares in the brood class, Sir Walter Gilbey's Mitre, Mr. H. Moore's sweet old mare Lobelia, wearing uncommonly well, and Mr. Cloppinson's Bright Dorothy, being the winners. Yearlings of both sexes counted up but a total of nine entries in their two classes. Messrs. Wilstrop's Silver Star, by Royal Denmark was the best of the males, and Sir Walter Gilbey's Lively Beeswing, by Royal Danegelt, first in the fillies.

The class for two-year-old geldings was entirely blank, and two-year-old fillies were a short entry of five. Mr. John Lett's Kirkburn Gem, Mr. C. E. Cooke's Lilithora, and Mr. J. R. Brown's Roans Empress were the winners. There were four entries each of three-year-old geldings and fillies, Garton, Duke of Connaught, and Rosador being the best geldings for Mr. Hall and Mr. Colin Craggie, and Mr. F. W. Buttle's first-prize three-year-old filly, which was also a special prize winner, was sired by Rosador. Boquhan Sunrise was bred by Mr. Mitchell, and gave a capital account of herself in the ring. Mr. Astley's Kirkburn Lily by Cedar King was the next best. Hackneys for five years up to 15 stone were catalogued to the number of five. Messrs Carr and Co.'s Yaphan Molly by Compactor was awarded the first prize, and Mr. Jebson's Yaphan Princess by Royal Denmark second; rather a remarkable circumstance that the first and second prizes for heavy-weights should both have been won by mares. In the light-weight class up to 12 stone, Mr. Tenant's well-known horse Authority was accounted the best, and there is no doubt he is well up to the specified weight. Where the conditions of the class are regulated by height, frequent disputes arise as to measurement, but the question of "up to weight" appears to have no regulation order except rule of thumb.

Cobs and Ponies.

Three classes were allotted to this section, which show a total of nineteen entries. There were a number of very fine stppers amongst them, and the winners included some well-known animals. Mr. T. B. Sykes' Fyldle Forester, Mr. Jebson's Latest Fashion, and Mr. Rodwell's Holly King, were the winners in the classes between 12-2 and 12 hands. Mr. Franklin's Grand Duchess (Gobang), Mr. John Forbes' MacGregor, and Messrs. Carr and Company's Clyde Vale Surprise won in the 12-2 to 13-2 hands class, and the last class which was for ponies suitable for children and not exceeding 12-2 hands, there were two or three exceptionally nice ponies.

Cleveland Bays.

These classes, which numbered four, and contained a total of twenty-six entries, were a very great credit to this northern breed of horses which we have many times mentioned as being worthy of more extended notice, and it is satisfactory to be able to state that there appears quite an inclination amongst southern breeders of light horses to go in for them. The exhibitors were in rather few hands, Mr. George Grandage's Woodland Pride was the best aged stallion, a stylish and capital horse, Mr. F. Wilson Horsfall's Potto Hutton and Mr. John Lett's Rillington Reliance following; and in the combined class of two or three-year-old stallions Mr. Frank H. Sterrick's Radium by that fine old sire Pitch and Toss was first and the winner of Special Challenge Cup, for which Mr. Frank Bateman's Beadlam Fred was reserved.

There were two or three especially fine brood mares in their class, Mr. Bateman's Woodland Rose, and Mr. Wilson Horsfall's Lady Salton and Potto Queen were the winners, whilst Mr. Alison's Lady Swan and Mr. George Grandage's Woodland Star were the best in the filly classes.

The sister breed of Yorkshire Coach Horses was also capably represented. In the adult class of stallions Mr. Sylvester Leaf's Star of Yorkshire was first and also champion, followed by Mr. F. Stericker's Bathurst and Mr. Burton's Willoughby Emperor. The most important in the younger stallions were Mr. Stericker's Granville (reserve medalist), Mr. F. B. Betti's Banner, Mr. Scoby's Beadlam Alfred being third. Brood mares and fillies were also very good, Mr. Grandage's Woodland Briar, Mr. Horsfall's Perseverance, Mr. Elder's Aislaby Winner, Mr. Scoby's Beadlam Beauty, Mr. Grandage's Woodland Mag, Mr. Webster's Harome Belle II. were among the best of them, but the three-year-old produced the champion in Mr. Lett's beautiful filly, Madeline.

Shires.

The Shire classes, though not filling well numerically, at the same time made a very good show, inasmuch that there was not even an indifferent animal amongst them; their general quality was both good and uniform. Of the four aged stallions Lord Rothschild's Ringway Harold, a capital built horse, with weight and character, was first, Messrs. Forsham and Sons and Lord Egerton following on. In the two or three-year-old class Lord Egerton's Tatton Dray King, still in good form after his many victories, was first, Lord Rothschild and Mr. Grandage showing capital colts for the other places. The brood mare class was an exceptionally good one, Lord Rothschild's Princess Beryl (London champion) stood first, Mr. Smith Carrington and Mr. Keans being second and third with splendid mares. For yearling colts, a good class, Mr. Dodd's Rustic Friar and Lord Rothschild's Fire King were first and second, two very fine colts; and yearling fillies, a small class, were also good. Two-year-old fillies were very strong, and we need not wish to see better than Lord Egerton's Tatton May Queen, Mr. Jackson's Knottingley May Queen, or Mr. Burton's Sandilife Daisy, which won the prizes. Three-year-olds were also very good. The best of these—Lord Rothschild's Belle Cole, Earl Egerton's Dunsmore Nougat, and Mr. Burton's Sandilife Flower, to which the prizes were awarded—are all fillies of great power and stamp; and perhaps Lord Middleton's Bird-sall Silvern, which was reserved, would be considered by many quite as good as any of them.

Cattle.

The twelve classes of Shorthorns were filled by 141 entries, and although there were a fair number of absences, it was a better show than at Hull last year. Considerable interest centred in the family group, the three calves from the first pregnancy in awarding the prize to Lord Calthorpe, of Elveltham Park, Hampshire, whose roan cow, Sweetheart, nearly six years old, was followed into the ring by two of her offspring, a fine young cream-coloured bull, Elveltham Monarch, born in 1903, and Elveltham Sweetheart, a roan youngster of February last. Sweetheart was also placed first in her class, beating Mr. Geo. Harrison's Ursula Raglan, a somewhat older cow. A point not without its interest here is that Mr. Geo. Harrison paid 300 guineas for one of the offspring, Elveltham Sweetheart, that came third in awarding the prize to Lord Calthorpe. In the two-year-old bull class, Lord Middleton's Illustrious Count, third at the Royal, was placed first, and a Malton exhibitor, Captain Clive Behrens, was awarded second, and Mr. Richard Booth, of Warblay, Northallerton, third with Viking Meteor, Sir R. Cooper's white bull, was placed first in the class for bulls above three years. Mr. George Harrison was first in Class 3 (bulls two or three years old) with Royal Ensign; Lord Calthorpe was second, and the Earl of Ancester third. In the three-year-old bull class, Lord Rothschild's Favourite, a year-old roan, found favour with the judge in the young bull class; Lord Middleton was second, and Mr. J. W. Barnes, of Wigton, third. The Shorthorn Society's county prize of £10 for bull calves in 1905 was secured by Mr. Richard Booth with Viking.

Shorthorn cows were headed by Lord Calthorpe's Sweetheart and Mr. George Harrison's Ursula Raglan, third honours going to Mr. William Bell's Ratchegh Witou. Among pedigree Shorthorn dairy cows in milk, four years old, Lord Rothschild's child was the first and third resettes with Red Rose 3rd and Moppy 1st 5th, and Mr. George Harrison took the second premium with Rosaline 2nd, which gave 28 lb. of milk in the ring. Two-year-old heifers cannot be said to have been a strong entry, but the quality was in every way up to the mark, and Mr. George Harrison's shapely Towy Princess claimed the premier award, while Mrs. Cuss won in the yearling heifer class.

There were only sixteen entries in the Jersey classes, the Blythwood silver challenge trophy, offered for the best cow or heifer in milk, was won by Lord Rothschild's exhibit, in a class where his

lordship carried off the three prizes. The bowl winner was third. Having been won three years in succession by Lord Rothschild, the bowl becomes his property. Captain L. G. Gisborne, as well as Lord Rothschild, took a number of awards for Jerseys.

Five classes, containing twenty-two entries, were the exhibits of the Aberdeen-Angus cattle. The champion gold medal of the Polled Cattle Society, offered for the best animal, was secured by a Bedford exhibitor, Mr. W. B. Greenfield, while the silver medal for the best animal of the opposite sex to the animal awarded the prize above was also secured by Mr. Greenfield. Other awards went to Mr. T. H. Bainbridge, Mr. J. J. Cridlan (reserve for the gold medal), and Mr. R. C. Swan.

Sheep.

There was a fair entry of sheep, about equal in numbers to the average, and rather better than at Hull. Four breeds only were represented, these being Leicester, Lincolns, Wensleydales, and Blackfaced. Among Leicesters, Mr. George Harrison, of Gainsford Hall, Darlington, and Mr. Ernest Jordan, of Eastburn, Driffield, practically shared the principal prizes. Mr. Jordan won in the yearling class, while second place was taken by Messrs. J. E. and C. H. Simpson, of Pimoor House, Hunmanby. With a pen of three shearing rams, which had not been out before, Mr. Jordan got the first prize, and Mr. Harrison second and third, also with novices. In the class of this year's ram lambs, Mr. Harrison came out first and third in the prize list. The second award went to Mr. Jordan. Mr. Jordan was first and second with gimmers, and Mr. Harrison first and third with lambs.

For Lincoln sheep Messrs. R. and W. Wright, of Notton Heath, took the bulk of the prizes in this section. In the shearing ram class they take first and second. Messrs. Wright also got the first and second awards for pens of three shearing rams, and first and second for three shearing gimmers. The first prize for two-shear rams was given to Mr. Chas. E. Howard, of Notton Rise, Lincoln. In this class the second place was secured by a big useful ram shown by Mr. Robt. Dixon.

For Wensleydales, Lord Henry Bentinck, of Underley Hall, Kirkby Lonsdale, carried off all the principal prizes. His lordship, who took the first and champion prize offered by the Wensleydale Sheep Breeders' Association for the best pen of three shearings long-wool rams, got the white ribbon for this year's ram lamb, and also for pen of three shearing gimmers. The executors of the late Mr. Thomas Willis, of Manor House, Carperby, got the premier award for shearing rams.

The three classes of Black-faced Mountains were filled well. With a well-fleeced two-year-old, Mr. J. Robson, of Newton, came out first in the any age ram class. The same exhibitor was successful with three shearing gimmers, taking first and third prizes.

Pigs.

There was a splendid entry, but the large number of empty pens detracted from the interest. By far the most successful exhibitor in the White Breed classes is Sir Gilbert Greenall, Bart., who took six first prizes, two seconds, three thirds, and two reserve tickets.

Berkshires were quite up to Yorkshire Show form. The four-year-old boar shown by Mr. G. T. Inman, which has been winning all round, is still unbeaten, although it has two dangerous competitors from Ganton Hall and Dunsley Hill. The young boar from Lord Bolton's farm made a successful first. The Warrington baronet took premier honours with a boar of Middle White breed, beating Ho-y-well Royal Viscount, a Royal winner, which was also reserve for the championship at Derby. In the class for Middle Whites under twelve months Sir Gilbert again took the chief prize, with the Holywell Manor first second, and in the class for old sows Mr. Leopold C. Paget with Holywell Barbara, which was credited with Royal successes, only secured second place, to the surprise of many. The decisive of the judges was in favour of Sir Gilbert Greenall's Walton Rose 13th. Spencer and Son's Holywell Victoria Duchess, which was at Derby a few weeks ago, was only placed third, as she is now suckling a litter of pigs. Sir Gilbert likewise received the white ticket in the class for white sows under a year old, Messrs. Spencer and Son taking second and third honours. For old Berkshire boars Mr. G. Tafford Inman, of Henley-on-Thames, easily secured the white ribbon with his massive Highmore Mikado, which has been winning at many recent shows. The four classes of Tamworth pigs were filled solely by Mr. Robert Ibbotson, the well-known Warwickshire breeder.

Judges.

CATTLE.—Shorthorns: Arthur S. Gibson, Ruddington, Notts.; Richard W. Barratton, the Buffing, Newport, Notts.; John Lord, Skipton; Robert Metcalfe, Spruce Gill, Finghall, N. Jersey; T. H. Westman, Rose Hill, Atherstone, Warwickshire, Aberdeen Angus: Mr. S. S. Baggall, Bedford. Jerseys: Mr. R. C. Swan, Bedford. SHEEP.—Leicester: George England, Rise Grange, Hall; J. J. McGinnison, Twickenham, Fingher Station, York; Lincoln: R. C. Beaumont, Atherstone, Atherstone, Fingher Station, York; Wensleydale: Long, Wad; R. B. Wood, Ellington, Masham; N. Black-faced Scotch Mountain: John Craig, Invergillie, Centre, Perthshire.

PIGS.—Thos. Daniel, Spring House, Baskell, Easingwold; J. H. Newland, Estate Office, Romsey, Hants.

HORSES.—Hunters: Eustace Barlow, Hasketon, Woodbridge, Suffolk; G. M. Prior, Adstock Manor, Winslow, Bucks.; C. W. Lister-Kaye, Osberton, Wootton, W. H. Robson, The Red House, Purton, Wilts. Hackneys, Colm and Ponies, and Harness Horses: Arthur E. Evans, Braughly, Wrexham; T. D. Reed, Bedford Grange, Driffield, Cleveland Bays, Yorkshire Coach Horses, and Harness Horses: F. P. Baker, Ingmanthorpe Grange, Wetherby; Andrew Moscrop, Thorngay Hall, York. Shire and Agricultural Horses (any breed): William Horrold, Thorney, Peterborough; John Nix, Alfreton, Derbyshire. Polo Ponies: Mr. J. Wornald, Wetherby.

Next Year's Show at Barnsley.

The president of the society (the Marquess of Zetland, K.T.), presided at a meeting of the council, held in the pavilion. The secretary (Mr. J. Maughan) intimated that he had communicated with the Town Clerk of Barnsley, who stated that a deputation had been appointed to wait upon the council, and formally extend the invitation. The Mayor of Barnsley (Councillor Rose) and Alderman Wray attended, and acted as spokesmen. The Mayor, extending the invitation to the council of the society to visit Barnsley, said it would be known to the council that the Yorkshire Show was held at Barnsley twenty-six years ago, and that since that time the population of that town had increased enormously. They had every con-

fidence that if the society visited Barnsley the show would be a success.

Lord Middleton said the Sites Committee were fully satisfied with the site placed at their disposal.

Replying to Mr. G. C. Whitwell, the Mayor of Barnsley, said the local show would not be held next year if the Yorkshire Society decided to visit Barnsley.

The deputation having withdrawn, the Hon. G. E. Lascelles proposed that the invitation of the Barnsley Corporation be accepted. Mr. G. C. Whitwell seconding, said the offer was a most liberal one, and to raise £1,000 was exceedingly good for a small town like Barnsley. The council unanimously decided to accept the invitation, and when this fact was intimated to the Mayor he returned the thanks of the Corporation to the council.

Swine Fever.

A private conference of the Executive Committee of the North, East, and West Ridings of Yorkshire was held in the pavilion under the presidency of Lord Middleton to discuss swine fever. The conference was held at the show for convenience, owing to the fact that the members of the committees would be at the show. The committees will report to their respective councils the result of the conference.

TRING SHOW.

The annual show of the Tring Agricultural Society is perhaps the most important one day fixture of the year, held as it invariably is on the Thursday after August Bank Holiday, it attracts large numbers of visitors. The attendance last week we understand broke all records, reliable estimate showing that there were close on 25,000 visitors. In addition to the usual attractions of agricultural shows there are a number of competitions, including hurdle-making and sheep dog trials, sheep shearing, horse shoeing, &c. The entries showed a decided increase in all classes with the exception of pigs, which showed a slight falling off, as will be seen from the following comparative statement:—

Entries.	1905.	1906.
Light Horses ...	214	233
Curt Horses ...	186	206
Shorthorns ...	94	117
Jerseys ...	114	107
Sheep ...	60	61
Pigs ...	59	54
Milk and Butter Tests ...	85	104

Some excellent animals were seen in the Shire horse classes, and resulted in some keen competition on all sides. His Majesty the King was as usual among the exhibitors in these classes, securing a third prize for a mare foaled previous to 1903. Sir P. A. Muntz was placed first for Albby

Lady Jameson, Dunsmore Picturesque, and a filly foal by Dunsmore Jameson; whilst Mr. Max Michaelis won with Pailton Sorais, Mr. F. Farnsworth with Ratcliffe Conquering King, and a colt foal, and Mr. J. Bradley with Halstead Duchess III. Other prize-winners included the exhibits of Mr. C. Morbey, Sir P. A. Muntz, Mr. M. Michaelis, Mr. W. T. Everard, Mr. E. E. Pearson, Sir A. Henderson, Mr. H. Towgood, Mr. J. Bradley, and Mr. R. W. Hudson. Captain Smith-Neill's challenge cup for the best filly was won by Messrs. Flowers with Beachendon Emerald, the medal being taken by Mr. T. T. D. Fraine's Chartridge Rose. Messrs. Flowers also won the Blundell-Maple Cup with Beachendon Forest Queen, Mr. J. Brandon's Chiltern being reserved. Mr. H. Towgood's Rolleston Fuchsia won the Shire Horse Society's medal, for which Dunsmore Picturesque was placed as reserve.

The judges of the hunters, hacks, and jumping were the Hon. A. E. Parker, Derby, and Colonel J. F. Hatfield Harter, Woburn Sands, R.S.O. In these classes the Hunters' Improvement Society offered three silver medals, one for the best Hunter filly, one for the best Hunter mare or gelding of any age, and one for the best Hunter yearling entire colt, by a thoroughbred or registered Hunter sire. In the first class there was no award, and in the third class there were

no entries, but for the best Hunter mare or gelding of any age, Mr. G. A. Elliott was the winner, and also gained a reserve. In the class for three-year-olds, Mr. C. F. Sibley, of Harpenden, carried the premier honour. Some very fine animals were shown in the pony classes, the judge being Lady Hope, of Sevenoaks. A medal was offered for the best Shetland brood mare or gelding, and this was won by Mrs. A. J. Beale, of Cudham, Kent, who also carried off a first, second, and third prizes in the class for that breed. The harness horses were judged by Mr. C. E. Cooke, of Pyrgate House, near Baldoak, and Mr. W. S. Hall, of Norfolk, and were a very smart lot. Two silver medals, offered by the Hackney Horse Society, for the best mare or gelding, and the best Hackney or pony mare, filly, or filly foal, went to Mr. J. S. Hignett, and Mr. F. Dickinson, of Wheathampstead, respectively, who also took a first in Class 46 for a mare or gelding not exceeding 14.2. In the next class for novice, mare or gelding any height, Mr. F. Dickinson secured first prize.

There was an excellent display of cattle. Among the Shorthorns first prizes were taken by Mr. G. R. W. Adlam, Mr. A. D. Achard, Mr. J. G. Williams, Mr. H. S. Leon, and Mr. W. Simmons, several of whom sent cattle that have done well in other showyards this summer. First prizes for Jerseys were taken by Lady de Rothschild, Mr. A. Miller Hallett, the Earl of Rosebery, Mr. J. Joicey, and Captain L. G. Gisborne. The champion prize was awarded to Captain Gisborne's Glorious Lad, to whom Lady de Rothschild's Whitewood V. was placed as reserve. In the open milking test for cows not exceeding 900 lb. live weight Captain J. W. Smith-Neill's wonderful twenty-four-year-old cross-bred Doctor added another to her long list of successes with a yield of 558 lb., the same owner's Jersey Geraldine taking second, Mr. W. B. Roderick's Jersey Gooding Flo third, and Mr. J. H. Smith Barry's Nellie Beresford fourth. In the same class Mr. W. Newman's Aaron was first for tenant farmers. In the class for cows over 900 lb. live weight, Mr. W. P. Vosper's South Devon Primula 2nd, Mr. D. Kelly's Shorthorn Muriel, Dr. Watney's Red Maple, and Lord Rayleigh's Rachel 2nd were the prize-winners. The winners in the butter test classes were Captain Smith-Neill's Geraldine and Mr. R. Barclay's Poppy, both of them Jerseys.

The judges in the sheep classes, Mr. J. H. Guy, Tetsworth, Oxon., and Mr. J. Flower, of Salisbury, had a very unenviable task as a result of keen competition. The challenge cup for the best pen of sheep was won by Mr. R. Barclay, who also gained the reserve. Mr. H. F. Woolf, of Wheathampstead, secured first and second, and other well-known exhibitors were Lady de Rothschild, Mrs. R. Barclay, the Right Hon. T. F. Halsey, Sir Richard Cooper, and Mr. J. G. Williams.

Pigs were judged by Mr. J. Jefferson, of

CROSS-BRED COW, DOCTOR.

This cow won first prize in the Milking Trials at Tring last week for Captain J. W. Smith Neill. She is now twenty-four years old.

Chester, and Mr. S. Spencer, of St. Ives. The National Pig Breeders' Association offered two medals, one for the best sow, and another for the best boar, Mr. T. Henson gaining the medal for the best sow, and Mr. C. J. Tong the medal for the best boar. A champion cup went to Mr. R. E. Horwood, of Tring, and the Hon. A. H. Holland Hibbert, Mr. R. A. Ayre, and Mr. R. E. Horwood were also very successful in this section of the show.

Mr. R. S. Pigginn, of Long Eaton, Notts, judged the sheep dog trials. Mr. J. Moses gained a first and two fourth prizes, Mr. T. Dixon second and two thirds, and Mr. Geo. Barcroft a first.

Butter was judged by Mr. Thomas Latham, of Dorchester, Oxon. Amongst the most successful competitors were Mrs. C. McIntosh, Lady de Rothschild, and Mrs. E. Smith-Neill.

The hurdle-making competitions formed an interesting item, the first awards being given to Mr. C. Plater and Mr. T. Austin. In the hurdle-setting competition, Mr. H. Hodges, Mr. J. Barlow, and Mr. J. Burch carried off premier honours.

Border Union.

The pretty little border town of Kelso was crowded to excess on Monday, for there was held the show of the Border Union Agricultural Society, who have a very large following. The entries numbered in all 615, which number is 84 short of that of last year, when a record was obtained, but the number is a good average one. This, together with the usual high standard of excellence and the large attendance of visitors, made the show a complete success. The horse and sheep sections especially contained some outstanding good animals, which had taken prizes at leading shows in the country; and in the cattle classes some exceedingly good cows and heifers were shown.

Welbeck Tenants'.

The show of the Welbeck Tenants' Agricultural Society is without doubt one of the most pleasing in this country, for it is an example of a large landowner taking a keen interest in the welfare of his tenants; further, it provides unmistakable evidence of the good feeling which exists between the Duke and his tenants; in fact, a spirit of mutual respect and co-operation pervades the show, the showground is delightful, and all the arrangements are on a generous, in fact a dual, scale. The show itself, too, is always a large and most interesting one on account of its varied attraction, and it is, therefore, not to be wondered at that it draws visitors from all parts of the country. Indeed, it would be hard to find a more popular one-day show. The show held on Tuesday was in no way behind that of any previous year, despite the fact that a reduction had been made in the prize schedule. As the committee made up their last year's accounts with an adverse balance of about £500, a policy of retrenchment was adopted this year, and instead of prizes amounting to over £700, as last year, this year's prize list only amounted to £524, to which the Duke contributed £300. Nevertheless, the entries totalled 1,062, as against 1,018 last year, and this speaks for itself as to the popularity of the show.

Horses numbered 302, as against 281 last year, and they made a good show, the agricultural section naturally being the feature. The champion cup, given by the Duke for the best animal in the heavy section, was awarded to Mr. Arthur Stretton, of Sibthorpe, Newark, for Lady Xerxes, an eight-year-old chestnut mare, of magnificent size, with a grand set of legs and plenty of feather. It won, as well, the silver medal of the Shire Horse Society. Half-bred horses by a Thoroughbred stallion are very much encouraged by the Duke, and in this section there was an admirable display of useful animals, though some of the classes were scarcely up to previous years. The foals were perhaps the best feature of the section. Two classes for Hackneys and Harness horses were fairly well filled. Entries of cattle were good in numbers, and the quality reached an unusually high standard, whilst sheep made a creditable display. Shepherd dogs, too, were capital, whilst the many other sections all proved attractive to numerous visitors.

Felton and Warkworth.

At the Felton and Warkworth Agricultural Society's thirteenth annual show, held at Amble on Monday, the entries were not quite so large as at some former shows, but some of the classes were better filled, and, taken as a whole, the show was quite up to the average. The total number of entries was 294, against 289 of the last show held at Amble in 1903; but the entry fell short of last year's show held at Warkworth, the number being 327, which was a record entry for the society. There was a fine show of bulls, while the grazing cattle made quite a feature of the show, some splendid animals being forward, but dairy cattle were only moderate. Sheep made a good display, the classes in this section being well supported, as were also the horse classes, the agricultural animals being some of the best ever seen here. Altogether

the show was a highly creditable one to all concerned.

Wem.

Although only in its fourth year, the show of the Wem and District Agricultural Association has made such rapid strides in popularity, thanks mainly to the progressive policy of the society, that it is now a highly creditable show of good quality, and certainly a most interesting one. The society places a Shire horse at the service of its members, and the good result of this was manifest in the classes for Shire horses, which showed a marked improvement on previous years, thus proving that the efforts of the society to induce farmers to produce the best in heavy horses hereabouts, as well as in the Oswestry district and in Montgomeryshire, is rapidly bearing good fruit. A good case in point was the three-months-old bay colt of Mr. Charles Frank, of Pentre Perva. The colt is by Nyn Hitchin Duke, the horse hired by the association in 1905. It quite outdistanced the others in the class, and before it left the ring it was sold for £100. Hunters and Hackneys were well represented, and the cattle classes were on the whole strong in numbers and character. The first prize in the class for those calving in or prior to 1904 was taken by Mr. E. Powell, Wem, with a long, level, roan Shorthorn, which has the distinction of having been bred by the King. In the Shropshire sheep classes the prize-winners included Mr. Frank Bibby, Mr. S. F. M. Nevett, Mr. Blatherwick, and Mr. Walford. Cheese and butter made good sections, and the cottagers' classes for butter, dressed poultry and eggs, brought a large number of entries. Further, there were interesting shoeing competitions and a good show of dogs. It is satisfactory to be able to state that the gate receipts showed an improvement on last year, the total being £74 as against £67 in 1905, and this should encourage the society to proceed with their present enlightened policy.

Clumber.

The annual show of the Duke of Newcastle's Estate Tenants' Society at Clumber took place on Monday, when the entries (563) created a record, and the quality all round showed a great improvement, particularly in horses and cattle. The attendance of visitors was also larger than ever, and the show was the most successful of the series from every point of view. The Duke and Duchess of Newcastle once again showed their great interest in the show and agriculture by contributing handsomely to the prize schedule—a sum of over £250 was offered in prizes—and also brought a large and distinguished company to the showyard.

Royal and Central Bucks.

The show of the Royal and Central Bucks Agricultural Association, held at Aylesbury, was a good one all round, and deserved a better patronage than it received, and would doubtless have been more largely attended had the fixture not clashed with other attractions. The agricultural horses were a good lot. The Ferdinand de Rothschild Memorial Cup for the best Shire gelding or mare, which is given by Miss Alice de Rothschild, was won by Messrs. Flowers, of Beachendon, with Barrow Madam, the same owners' Beachendon Forest Queen taking the champion award for best tenant farmers' horse, and their mare Beachendon Sapphire the champion prize for the best animal in the county of Bucks. In the Hunter section the Meyer de Rothschild Memorial Cup, given by Lord Rosebery, went to Mr. L. J. Shirley, of Woughton, who also took the champion prize for the best cow in the showyard. Mr. H. S. Leon was awarded the champion prize for the best animal in the horned stock classes; and Mr. Walter Hazell won the silver cup for the best Shorthorn bull. There was an excellent show of sheep, which were quite the feature of the day, Mr. Smith, of Towcester, taking the champion prize. In the pig classes, Mr. T. Henson, of Peterborough, obtained the champion prize. There was also a good exhibition of butter, poultry, and eggs, the latter especially being very fine.

North Somerset.

The show of the North Somerset Agricultural Society at Yatton was somewhat marred by heavy rain in the afternoon, but there was a good attendance of visitors, and the event proved a fairly successful one. The entries were not quite so good as when the exhibition has been held more centrally in the society's area, but in many of the classes gratifying quality was shown, and the judges had some little difficulty in one or two instances in deciding between the claims for premier position. Cattle were a mixed lot, but on the whole creditable. Sheep generally were satisfactory, and the tenant farmers' cart horse competition brought out several really useful farm workers. The harness classes, and the saddle events excited the customary amount of interest; but, unfortunately, rain interfered considerably with the enjoyment of the spectators. There were

also good displays of butter and poultry, the former being especially good.

West Gloucester.

The forty-fifth annual show of the West Gloucester Farmers' Club, held at Durdham Down on Monday, was in every respect the most successful yet held by the society, for the entries were large and of high-class quality, whilst the attendance of visitors was exceedingly good. Horses numbered 203, six less than last year, but above the average, and they formed a most attractive feature of the show. Of cattle there were no fewer than 132 entries, as against 89 and 86 in 1903 and 1904 respectively, and it was the general opinion that this section was the best ever seen at this show, the quality all round being very good. Sheep and pigs made an average display, as did also the butter and cheese. Prizes were this year for the first time offered for the best-cultivated farms, and the new feature proved a success, whilst the pony and galloway gymkhana was an attractive feature of the day's proceedings, supplementing, as it did, some interesting jumping and driving classes.

Tyneside.

The show of the Tyneside Agricultural Society, held in brilliantly fine weather at Hexham on Monday, was in many respects the most successful exhibition yet held by the society. The entries—1,750 in all—constituted a record, beating that created last year by about sixty. The increases were mainly in the classes for cattle, horses, and dogs. As is invariably the case at Hexham Show, horses were the strong feature, but all the other classes were up to the usual standard of merit. The attendance of visitors was on a very large scale, and a total of over £300 was taken.

Lydford Pony.

The eighteenth annual exhibition of the Brentor and Lydford Pony Society was held at Lydford on Bank Holiday, when the entries numbered 256, or forty-two less than in 1905; in point of quality, however, there was considerable improvement. The strongest classes were the yearlings and two-year-old ponies. Mr. J. Harrison Watson's cup for the best foal sired by a sire bred by the society was won by Mr. H. Redcliffe, of Peterbury, with a beautiful dark-brown filly, the dam of which was Queen of the Moor. Six dogs were entered for the sheep-dog trials, but none were considered of sufficient merit to receive a prize.

Tutbury.

The sixteenth annual Shire horse and cattle show promoted by the Tutbury Shire Horse and Meynell Hunt-Society was held at Tutbury on Monday in lovely weather. The entries were almost up to the standard of the best of previous years, while in the cattle classes, which were included for the first time last year, there was a gratifying increase in numbers and an improvement in quality. The prize list amounted to 500 guineas, and included four challenge cups, the Shire Horse Society's gold medal, and the silver medal by the Hunters' Improvement Society. The gold medal was won by Mr. Smith Carrington with Hendre Crown Prince, for which he gave 1,100 guineas at Lord Wantage's sale some years ago. The Hardy challenge cup, for the best Shire animal two years old and upwards, fell to Messrs. J. and M. Walwyn's Bearwardete Fashion, the Ratcliffe challenge cup, for the best yearling filly, to Mr. Orme's Comberstone Abbey, the challenge cup, for the best Shire foal, to Lord Egerton's Tatton Settler, and the Eadie challenge cup to Mr. Orme's bay by Dunsmore Jameson.

Brigg.

The twenty-fourth annual horse and foal show at Brigg took place on the 4th inst., and received an entry slightly in advance of last year, but, unfortunately, the attendance of visitors was not so good. The Hackney class was a very strong one, but Hunters, although of good average quality, were disappointing, considering what a good hunting country Brigg is the centre of. The riding and driving classes, however, attracted a capital entry. Shires, too, were good, and in this section Mr. J. R. Duck Scotton, with a bay filly by Nailstone-Cœur-de-Lion, carried off the champion prize for the best foal in the show, and also the Shire Horse Society's medal.

Ludlow.

The entries at the fifty-seventh annual show of the Ludlow Agricultural Society, held in Ludford Orchard, on Monday, were considerably in advance of those received last year, both in quantity and quality, and the judges had no easy task in making many of their awards. Cattle consisted of a good type of farmers' cows; sheep, mainly of the Shropshire breed, and a very good lot too, whilst there were highly creditable displays of Hunters and agricultural horses. Being held on the Bank Holiday, the show attracted a large company, and should prove a financial success.

[Other shows will be found on pages 195 and 196.]

SHOW GOSSIP.

The Durham County Agricultural Society will hold their show at Wolsingham on Wednesday next, and everyone is looking forward to an even more successful event than when the society last visited the town. This was in 1892, when a record was practically established both as regards entries and attendance, so that there are no small expectations which those interested in the Society hope to be realised, but given fine weather we should think they will not be disappointed. Though a comparatively small town, and not particularly easy of access, Wolsingham has many points to justify its selection as the venue of the Durham Show. Besides being centrally situated amid charming surroundings in the valley of the Wear, it has a local show which claims the distinction of being the oldest organisation of its kind in the North. The schedule has this year undergone some wise revisions, amongst other things being the inclusion of a field produce section for the first time, while Mr. J. E. Rogerson, M.F.H., the president of the society, is providing another 25 guinea championship challenge cup for the best horse in the hunting classes, in place of the cup won outright last year. The appearance in the schedule of sheep-dog trials will be appreciated in Weardale almost as much as the classes for dale ponies. The district is famous for these hardy little animals, which are sure to attract attention.

The Doncaster Agricultural Society must feel very satisfied with the result of their experiment with this year's show—i.e., making it really two separate shows rather than one show spread over two days, for it resulted in a profit of £32, as compared with a loss of £112 on last year's shows.

The Royal Cornwall Agricultural Society has accepted the invitation to hold their show next year at Liskeard, the people of which town are perfectly unanimous in their invitation, and will do all they can to make the visit a success. Three sites have been offered the society, and a committee has been formed to visit them and report as to which would be most suitable.

At a meeting of the local committee in connection with the Norfolk Agricultural Show at Harleston, held last week, it was reported that the balance-sheet showed receipts amounting to £390 5s., of which £387 15s. was subscriptions, and £2 10s. rent of a sub-let portion of the ground. The expenses totalled up to £356 15s. 7d., and there was thus a balance in hand of £33 9s. 5d. This balance it was resolved to dispose of as follows:—Grant to the Royal Agricultural Benevolent Association, £26 5s.; a grant to Porter Blandfield, who was injured at Harleston shortly after the show; the remainder to be retained to meet possible further claims.

The Okehampton and District Agricultural Association's sixteenth annual show will be held at Okehampton, Okehampton, on Thursday, September 13, when prizes amounting in value to nearly £300 will be competed for, in classes for horses, cattle, sheep, wool, pigs, dairy produce, roots, cottage garden produce, &c. Last year no fewer than 1,104 entries were received, the best since

SHOW SECRETARIES.

Mr. H. M. CLARK,
East Surrey Agricultural Association.

1901, but the society hope to eclipse that total this year, and there seems no reason why they should not do so. Anyway, we hope they will. Entries close September 1 with the Hon. Sec., Mr. C. J. Fletcher, Fairfield, Okehampton.

As a result of the decision to hold the Royal Agricultural Society's Show at Lincoln next year, the Lincolnshire Agricultural Society have decided to postpone their show, proposed to be held at

Stenford, and co-operate with the Royal Agricultural Society.

An Agricultural, Market Gardeners', and Cottagers' Industrial Show for Bredon's Norton and District (area, a four-mile radius) from Bredon's Norton Post Office, will be held in Norton Park, Bredon's Norton, near Tewkesbury, on Tuesday, the 21st inst., and if the good prize schedule attracts anything like the number of entries it deserves, a most interesting show should be the result. The hon. secretary is Miss Edith Bradley, Bredon's Norton, near Tewkesbury.

About four hundred entries have been received for the Bournemouth Horse Show to be held on the 21st and 22nd inst., and they include the championship and prize winners at New York and Continental, the I.A.S.E., the Royal Agricultural Hall (London), Dublin, Scottish and Welsh shows, thus making the exhibition of an international character. The classes for Hunters, Polo ponies, Hacks, New Forest ponies, Shires, riding, jumping, driving, tent-pegging, lemon-cutting, and horse shoeing competitions have all filled exceedingly well, and with fine weather the show should prove a great success. In any case, it will not be the fault of the Bournemouth Corporation if it is not, for all arrangements are well in advance, and everything has been done to command success, and it is certainly deserved.

At a meeting of the council of the Royal Lancashire Agricultural Society, held in the showyard at Lancaster, a deputation attended from Bolton and invited the society to hold their 1907 show in that town. Alderman Nicholson, who headed the deputation, said he was Mayor of Bolton in 1893 and had the pleasure of asking the society to go there in 1894. The show then was the first after the society's reconstruction, and it was so successful that they had never since looked back. He guaranteed a site, and in the matter of enthusiasm and subscriptions he promised that Bolton would do as well as it did in 1894, and he believed, even better. After other members of the deputation had spoken, the president moved that the invitation be accepted, and the resolution was cordially carried. A vote of thanks was subsequently moved to the local committee, and the corporations of Lancaster and Morecambe were also thanked for their generous assistance. In response, Mr. George Jackson, chairman of the local committee, said that the local subscriptions to the society's finances came to exactly £1,600, and the committee had abundantly carried out their promise.

ALL MISCELLANEOUS ARTICLES of FARMING NECESSITIES certainly find a Ready Sale when advertised in the "Mark Lane Express." The charge is very moderate, and consistent with the profit such small goods yield.

SOCIETY ANNOUNCEMENTS AND FORTHCOMING SHOWS.

ROYAL JERSEY AGRICULTURAL & HORTICULTURAL SOCIETY.

Agricultural Department.
President—W. DURET ARBEN, Esq.
SUMMER Show of Bulls, Cows, Heifers, Horses, &c., at Springfield Grounds, Jersey, AUGUST 22 and 23, 1906. JOHN A. PERREE, Secretary.

BATH HORSE SHOW.

SEPTEMBER 5 and 6, 1906.
Nearly £700 in Prizes.
Great Jumping Competitions.
Entries close August 18.
Schedules and all particulars to be obtained of—
LEWIS C. MUNDY, Secretary,
41, Milson Street, Bath.

CHILTERN HILLS & SOUTHERN BUCKS AGRICULTURAL ASSOCIATION.—The 17th ANNUAL SHOW will be held at HIGH WYCOMBE on WEDNESDAY, SEPTEMBER 12, 1906. OPEN CLASSES for Shire Horses, Hunters, Jumping and Driving, Shorthorns, Jerseys, Butter and Honey.—For Schedules and Entry Forms apply to JOSEPH BLISS, Secretary, 26, High Street, High Wycombe.

MERIONETHSHIRE AGRICULTURAL SOCIETY.

GREAT SHOW at TOWYN, FRIDAY, SEPTEMBER 14, 1906.
Over £300 in prizes. Dogs under Kennel Club Rules. Open Leaping and Trotting contests. Entries close August 29.
R. ROBERTS, Secretary.
Rhydygarnedd, Towyn.

THE EARL AND COUNTESS OF COVENTRY have kindly consented to open the BREDON'S NORTON AND DISTRICT AGRICULTURAL SHOW to be held in Norton Park, Bredon's Norton, by kind permission of Miss Woodmull, on TUESDAY, AUGUST 21, at 2 p.m. Parade of Turn-outs, Sports, Rifle Range, Demonstrations, Auction Sale, Dancing. Entries close on Wednesday, 15th. Hon. Sec., Miss EDITH BRADLEY.

HUNGARIAN BARLEY.

BEER BARLEY MARKET will be held on AUGUST 23, in Miskolcz, near Budapest, Hungary, arranged by the Association of the Hungarian Farmers, supported by the Government.

The Farmers' Association (31, Alkottmány Street, Budapest) accepts commissions to purchase, and also sends samples if desired.

The barley return of this year is in every respect excellent.

OKEHAMPTON AND DISTRICT AGRICULTURAL ASSOCIATION.

THE 16th ANNUAL EXHIBITION of Horses, Cattle, Sheep, Pigs, Dairy and Garden Produce, Poultry and Pigeons, will be held at Okehampton on SEPTEMBER 13.
Prizes about £300.

Schedules and Entry Forms of CHARLES J. FLETCHER, Hon. Sec., Fairfield, Okehampton.
Entries close September 1.

BUXTON HORSE SHOW, SATURDAY, AUGUST 25, 1906.

President:
The Rt. Hon. THE MARQUIS OF GRANBY.

Over £300 in Prizes, including Challenge Cups and Gold and Silver Medals. Fifty-guinea Challenge Cup for Best Hunter. Entries close Thursday, August 16, 1906. Military Exhibitions by Cheshire and Derbyshire Yeomanry. Entry forms and all particulars from HAMESON BROS., Secretaries, 3, The Quadrant, Buxton.

WHITWORTH (Lancashire) AGRICULTURAL SOCIETY, SATURDAY, AUGUST 11. Judges: Horses, Cattle, Sheep and Pigs, J. Hutehence, Esq., J. Thompson, Esq., J. P. G. Dewhurst, Esq., and F. McCall, Esq. Dog entries close August 6, other exhibits August 7. Schedules.—E. A. STOTT, 561, Market Street, Whitworth.

ABERGAVENNY HORSE SHOW and AGRICULTURAL ASSOCIATION.—Annual Exhibition of Horses and Agricultural Stock (Total Prizes, £400; Special Jumping and Trotting Prizes, £40; Special Timbering Prizes, £24) will be held in Bailey Park, Abergavenny, on THURSDAY, SEPTEMBER 6, 1906. Special Attraction—The Tillery Colliery Prize Band (Aberlillery) has been engaged for the day. Entries close August 21 (double dogs, September 1).—Messrs. JAMES STRAKER & SON, Auctioneers, Valuers and Estate Agents, Abergavenny.

HAY HORSE SHOW, September 20, 1906. Entries close on September 6; double fees September 12.—REECE MORRIS, Secretary, Broad Street, Hay, Hereford.

LEIGHTON BUZZARD and LINSLEDE FOAL SHOW SOCIETY
Are holding their
FOAL SHOW
On TUESDAY, SEPTEMBER 18, 1906,
At LEIGHTON BUZZARD.

SCHEDULES now ready, and can be had on application to either of the Secretaries.

Entries close September 4.

WALTER C. PREDAVES, } Hon. Secs.
W. GRAVELLY W. WILLIS, }

GUILDFORD AGRICULTURAL ASSOCIATION.

President: Leopold Salomons, Esq., J.P.

THE ANNUAL HORSE AND CATTLE SHOW will be held in Stoke Park, Guildford, on WEDNESDAY, AUGUST 29, 1906.

Prizes, value £600 will be offered. The Entries close SATURDAY, AUGUST 11.

GEORGE ESTERMAN, Secretary, Bridge Street, Guildford.

Northern Notes.

HARVEST has come upon us much earlier than we anticipated, and from the Humber to the Tyne much of the acreage devoted to oats and wheat, with some of the barley, was fully ripe. Grain has matured quickly. In West Yorkshire we observed haymakers carrying on their work briskly in the heavy woollen district on Bank Holiday. The crops were bountiful, and were being won in perfect condition. The farms are small, and mainly grass, in that manufacturing neighbourhood; and it is interesting to see on a fine summer day a most lovely landscape of hill and valley dotted here and there with tall mill and colliery chimneys, all indicative of wealth-producing agencies. In the East Riding the crops are more forward still, and some wheat was actually in "stook" on Monday; numerous fields of oats were ready for carting, and many fields of barley of a rich colour were fit for the reaper. In these circumstances there is not much time for "play" between the hay and cereal harvests, as the latter will be general in Yorkshire by the 13th.

OVER such a wide area the variations in the weather, and especially in respect of the rainfall, are very considerable. In some districts the land is parched, the result of drought and the excessive heat; in others the rainfall has been normal and sufficient. No rain has fallen for several weeks in the Stokesley district, and under the influence of sun and wind the bogs and pastures present an appearance of having been burnt, and water in many cases is having to be "led" for considerable distances to supply the stock. The gardens are in a worse plight; potatoes are a complete failure, and the pea crop is ruined. On the other hand, the hay crop has been won in splendid condition, and the crops of wheat and barley give promise of an over average; oats are only moderate. Grub has been prevalent, and there is a deficiency of straw. At Northallerton the authorities are restricting the water supply. In the Richmond district of the North Riding of Yorkshire, as a result of the drought, small birds are attacking fruit crops, the ground being too hard to permit of their finding natural food. Farmers are obliged to employ "scarecrows" to moderate the destruction that sparrows are causing. Wild pigeons are also very hurtful to the crops of pulse.

THE success of the Northumberland Society's show at Newcastle has once more forced to the front the oft-repeated suggestion that the meeting should be held every year in the city. One of the arguments against the proposal is that the society would lose its "county" character. Many supporters would on that ground oppose its permanent location. Newcastle is increasing in importance every year, and it is extending its borders at an enormous rate. It could provide an adequate site for the Royal Agricultural Show, and there seems little doubt that the Finance Committee, to which body the Corporation referred the matter, will recommend an invitation to be extended for 1908. The north has strong claims to be chosen for an early visit. Nowhere is agriculture and stock breeding more prosperous or carried out on more practical lines. At any rate, it was a matter of certainty that the premier agricultural organisation would be able to pick and choose, if necessary, from several invitations from towns eager to house the Royal. New life and interest has been imported into it as the result of emancipation effected after the disastrous policy culminating at Park Royal in 1905. Newcastle would draw probably more thousands than Derby; it has many attractions, and it is one of the most beautiful of our English cities.

THE agricultural department of Armstrong College is doing a work of which northerners are justly proud, and the staff would, no doubt, prepare a programme of great interest to visitors to a Royal Show meeting on line more extended than was done at the recent county show. There was to be seen on that occasion a most interesting exhibit, including diagrams and reports illustrating its agricultural work in the north of England. Two maps showed in detail the soils and subsoils of Cockle Park, the Northumberland Agricultural Experiment Station. Other diagrams indicated the effect of feeding on the quality and quantity of milk, these being chiefly taken from the Olferton Dairy experiments. Another table showed the variation in the composition of swedes. The forestry section contained a number of specimens of wood and forest seedlings.

GRAZING lambs are selling at high prices in Yorkshire, and are at the opening of the sale season fully three to four shillings in advance of last year. The excellent prospects of keep are a ruling factor. The root crop in the Huddersley country promises better things than for many years past, and before November lambs will no doubt be at high prices. Leicester gimmer sheedings for breeding purposes made to 35s. per head in pens of five at Driffield cattle

market. Farmers able to carry a good many sheep on their holdings have done exceedingly well this summer, after reckoning up their receipts from wool and mutton.

THE rainfall in the east of Yorkshire during July was liberal, the total being given as

2.410 in. Thirteen days were "rainy," temperature in the shade varied from 77.8 deg. over the 28th to 41.0 degs. on the 12th. The rainfall exercised a marvellous effect upon the turnip crop, the wonderful progress of which is the current topic among farmers.
August 10, 1906.

CORRESPONDENCE.

Sheep in Sussex.

SIR,—When recently reading White's "Natural History of Selborne," I came across the following interesting remark relating to sheep in Sussex, and I shall be glad if one of your readers will report whether the fact still holds good and if you will publish the letter for my information.

"One thing is very remarkable as to the sheep; from the westward till you get to the river Adur, all the flocks have horns and smooth white faces and white legs; and a hornless sheep is rarely to be seen. But as soon as you pass the river eastward and mount Beeding Hill, all the flocks at once become hornless, or, as they call them, poll sheep, and have, moreover, black faces with a white tuft of wool on their foreheads, and speckled and spotted legs; so that you would think that the flocks of Laban were pasturing on one side of the stream and the variegated breed of his son-in-law Jacob were canted on the other; and this diversity holds good respectively on each side, from the valley of Bramber and Beeding to the eastward and westward, all the whole length of the downs. If you talk with the shepherds on this subject they tell you that the case has been so from time immemorial, and smile at your simplicity if you ask them whether the situation of these two different breeds might not be reversed."

—Yours truly,
August 9, 1906.

URBANUS.

British or Foreign Meat for the Army?

SIR,—Through your widely-read and influential paper I desire briefly to invite the attention of the agriculturists of Great Britain to the prevailing system of supplying the Army and Navy with imported meat and the troop horses largely with imported forage. This means the transference of enormous customs to those who do not contribute to the upkeep of the Army or Navy. Surely the tax-paying farmers of the three kingdoms are entitled to receive the support of the authorities whom they sustain by the payment of Imperial taxation, besides paying local rates, rents, and giving employment. It is to be hoped that those interested in Great Britain will back up the action of the Irish Cattle Traders' and Stock Owners' Association, who have already interviewed the Secretary of State for War on the subject.—Faithfully yours,

WILLIAM FILLIS,
President Irish Cattle Traders' and
Stock Owners' Association.

Blacknock, August 7, 1906.

The Board of Agriculture Weakness.

SIR,—Earl Carrington has done well by his appointment of Mr. R. H. Rew to succeed Major Craigie at the Board of Agriculture. Mr. Rew's many Midland friends recognise him as essentially a practical man, with the sound knowledge of rural problems and aspirations that come only in the hard school of experience; and his promotion is hailed as earnest of Earl Carrington's intention to make the Board a really practical body. Yet among thinking men who realise what foreign Governments are doing already for agricultural science, the present Board is never likely to be very highly esteemed. What it does it does "nicely," so much all are ready to concede. But how much there is that it does not do, never do, so long as the present patrician grail is all that is allowed! The opening of the Mason Laboratory at Rothamsted reminds us of the great things that are expected from the study of agricultural bacteriology, but there is no bacteriologist of eminence at the Board; nor is it to Whitellall one looks to take the lead in the wonderful experiments in hybridisation which promise to increase the produce and strengthen the constitutions of cereal and other crops. So also with entomology; there are important discoveries being made and yet to make in regard to insect pests on fruit and field crops; but it is not the Board of Agriculture that is doing the work. We look for that to the Ormerods, the college teachers and University lecturers outside.

It is not so in Canada, as anyone may convince himself who cares to procure the Appendix to the Dominion Minister of Agriculture's report, with its entirely practical communication from the official agriculturist, horticulturist, chemist, cereal expert, poultry manager and entomologist and botanist. The Canadian Department is a power

in the land, because it is an efficient, thinking department and it is that, because the Canadian Government is willing to pay for the needful brain power. When will it be possible to say as much of our own?

Yours faithfully,
L. H.

Half-Holidays for Farm Labourers.

SIR,—In the first place, let me sympathise with "Another Rose" in his misfortune at being put out of the ranks of manual labour through an accident, though, with the same breath, I congratulate him on being still able to live comfortably in spite of his misfortune. I also extend my congratulations to the labourers in his district who get 18s. per week all the year round, cottage and garden free, extra pay for overtime during harvest, a plentiful supply of beer, land on the farm provided to grow sufficient potatoes for the year, enough grass land at a nominal rent to keep a cow, besides the free use of their master's team for hay carrying, coal drawing, &c. Happy labourers! I willingly assent that in "Another Rose's" district they are better off than labourers in other vocations, and would that I could think they were as well treated everywhere. If such generous treatment had been general throughout the country during the past decade, I do not think many good men who have done so would have left the time-honoured calling, and there would certainly have been no need for me to plead the cause of the farm labourer. I should like to have seen the views of some actual members of the farm labouring fraternity in this controversy, but, of course, these men are more at home in wielding the scythe on the hay fork than the pen.

August 7, 1906.

RED ROSE.
[This correspondence must now cease.—Ed.]

Liquid Manure and Other Topics.

SIR,—I see in yours of this week, in referring, or rather I should say inserting, my few remarks as to "Liquid Manure," I am made to say, "the better the season," etc. It should have been "the wetter the season," etc. I can only say that if I said "better," when I should have said "wetter," I must, though shearing time is over, have been "wool-gathering" at the time!

In page 127, in speaking of the advance in the price of wool, you say "most flocks yielded on an average 2s. 6d. to 4s. more value in wool than last year." I fancy this is much over-valued; the average advance per lb. is certainly not over 2s., and I think in the West of England 6lb. is a full average clip, and this amounts to 1s. a head—some difference this between 2s. 6d. to 4s.

I feel sure you will take my remarks in the spirit in which I write you and not put me down as a critic. I notice you refer in yours this week to the "2,003 pieces of wheat." Of course the misprint was evident, but I have been much "chaffed" about it, but all in good humour.

I am just returned from a visit into Dorset, having been to see an old friend who, with his son adjoining him, has 1,500 horn ewes, and has also a dairy of nearly 200 cows—I mean the father and son together.—Yours truly,

DEVIZES, August 3, 1906. W. FOOKES.

[Our correspondent's calligraphy, to put it politely, is not of the plainest, hence the errors to which he draws attention.—Ed.]

Devon Cattle in Japan.

SIR,—I notice in your cattle page of this week, speaking of exporters, you say that "Red Polls, Sussex, and Devons are amongst the breeds that do not find many friends abroad who are desirous of buying new blood, or of testing the abilities of these breeds to make a profit in their countries."

Probably a good many sales are not publicly reported, but I know that our enterprising allies the Japanese have already given Devons a trial, and in case it should interest you to know it, I may mention that I have just sold for export to Japan three Devon bulls and a three-year-old Devon heifer, with four Berkshire boars and ten gilts, also a Sussex ram and ewe from the well-known herds and flock of Viscount Portman at Bryanston.—Yours faithfully,
Bryanston, Blandford,
August 8, 1906. JAMPS FORRESTER.

Agriculture in Sweden—III.

A Model Estate—Feudal Conditions.

Our next visit was to the estate of Mr. Oscar C. Eekman, at Bjärka Saby, who, being a wealthy proprietor, devotes his time and attention to rendering the estates and buildings as perfect as they can be kept. A large proportion of the estate, however, is let to small tenants, who pay their rent in kind. The bulk of the payment comes to the proprietor in the form of milk, although a considerable portion is paid by giving so many days' work to the owner of the soil. The principle involved is precisely the same as the old feudal system which at one time existed in this country.

To revert to the estate itself, the land is managed on strictly scientific principles; an eight years' rotation being enforced.

1. Fallow, enriched with stable manure and fertilisers.

2. Winter grain, rye, or wheat, according to the quality of the soil.

3 and 4. Grass and clover.

5. Two-thirds grass, one-third (about 15 hectares) is ploughed the preceding autumn and sown with mixed grain, which is allowed to ripen.

Four-fifths hectares of the third rotation are left unploughed in the autumn in order to produce a crop of potatoes next year.

6. Mixed grain (barley and oats) on 15 hectares for green fodder and potatoes on 4.5 hectares. The potatoes are planted according to a method first used in Sweden at Bjärka Saby. The soil is left unploughed in the autumn. In the spring it is harrowed and ploughed thoroughly and manured with potash and phosphate. Then the planting is performed by means of two ploughs, the one shallow, the other deep. The potatoes are laid into the shallow furrow, and covered by turning over the deep furrow, and then the field is rolled. This method has very great advantages, and the planting may be done before any other spring labours, as soon as the soil has thawed. The potato crop is thriving, and the products are sounder and of a better quality than those grown in the usual way.

8. Oats and mixed grain. All sowing is performed by means of sowing machines after the fields, by intense labour for removing stones, have been made proper for the use of such machines.

The result of this cropping has been to greatly improve the soil and render it more fertile.

The catt'e kept are all Ayr-hires; the stock is principally for breeding purposes, and it is found there is a keen demand for the young bulls, which are sold at an average of £25 apiece. Considerable attention has been paid to freeing the herd from tuberculosis, and they have all been examined by means of tuberculin. In order to ensure freedom from the trouble every summer the cow houses, &c., are washed out with hot soda and lysol solution, and then whitewashed.

During the last few years the herd has taken part in a competition controlled by the State to ascertain the milk yield. According to these figures the cow yielding the highest quantity of milk gave 11,539 lb. with 3.31 per cent. of fat, while the cow showing the highest proportion of

butter gave 10,524 lb. of milk, which, however, showed 3.92 percentage of butter fat. In the summer the cows are grazed, and the principal milk production is confined to the winter. It is generally managed that they should calve down in sequence, beginning in the autumn, and the food during the winter consists of roots, straw, and cake. Milking cows get daily about 44 lb. of roots and 10 lb. of hay and straw, while cake is given to the cows according to how long they have been in profit.

The number of horses kept is not very large, and the principle purpose is the provision of remounts for the army. Of pigs a large number are kept, most of them being by a Yorkshire boar crossed on the native stock, an average litter of ten being obtained from each sow. They are sold out fat at the age of nine months at weights ranging from 180 to 220 lb., either for export or home consumption.

An Unique Small Holding.

We were much interested on this estate to see a survival of a small holding held under the feudal system, which in this instance gave admirable results and satisfactory terms to both landlord and peasant.

The holding consisted of two and a-half hec-

tares, or just over six acres, and in payment for this the tenant had to work two days a week for his landlord; the remaining four days being left for him to cultivate his own home. Inquiry showed that the average rate of wages in that locality was approximately 2s. 6d. per day, a figure which will be found to work out something like an annual rent of 10s. per acre. The tenant in this case was a remarkably able and hard-working man, and the fertility to which he had brought the soil was a striking testimony to his courage and endurance in overcoming natural difficulties.

The land in all places was well worked, and the crops promised a better return than on adjacent soil, which was cultivated by a larger farmer. There was a very comfortable house that had been recently put up, the work, we believed, being principally done by the tenant, while the out-buildings provided accommodation for the stock, which consisted of five cows, four sheep, and three pigs.

The visit to Bjärka Saby was of an exceptional interesting character, showing us, as it did, on one hand what science can do to aid in farming and on the other end of the scale a relic of feudalism, which to an Englishman's mind was a survival for a remote age.

MIDSUMMER DAY FESTIVITIES.

In Sweden festivities similar to the Old English Maypole dances take place on Midsummer Day. They are still general in all parts of the country, and even in the towns many of the houses are decorated with greenstuff and flowers.

A Day at Berkeley Castle.

The members of the Gloucester Root, Fruit, and Grain Society had a rare treat on August 5, when they had their fifth annual field day, a visit this time being paid to Berkeley Castle, the historical home of Lord Fitzhardinge. The party left Gloucester in brakes, and on arrival at Berkeley was met by Mr. Jas. Peter, Lord Fitzhardinge's popular steward, who is so well known throughout the agricultural world as a judge and breeder of shorthorns. A visit was first paid to the castle, once a grim fortress, now a comfortable residence, and amongst other interesting things the visitors were shown the bed on which King Edward II. slept when kept in solitary confinement at Berkeley, and the room where he was eventually murdered. The old-world gardens round the castle were much enjoyed, and while the sporting members of the party showed a lively interest in the kennels and stables, the farmers were naturally more taken up with the shorthorns, of which there is a fine herd at Berkeley. The luncheon came next, at which over a hundred sat down as guests of the noble Lord of Berkeley, and they drank his health in a style that none but farmers can drink healths. Mr. Jas. Peter responded on behalf of Lord Fitzhardinge, and not the least enjoyable item of the day's proceedings was the crisp, witty, and soundly practical speech delivered by his lordship's agent. Feeling sympathy was intermingled with pointed criticism, for when Mr. Peter speaks he talks straight, and during the drive back to Gloucester Mr. Peter's very-much-to-the-point remarks were the subject of general comment. Altogether it was a pleasant as well as an instructive day, the arrangements made by Mr. Starr, the energetic secretary, were perfect, and it will be a long time before the members of this flourishing society will forget their outing to historic Berkeley.

AYRSHIRE COW, "MARY IV.," BRED IN SWEDEN.
In 1904-5 she yielded 9,900 lbs. of milk, with a fat percentage of 3.31.

The Approaching Harvest.

We are drawing very near to the days when the pickers will be seen in the plantations, and we shall soon be at the end of our doubts and anxieties as to the results of our labour. But I fear we shall not be able to follow the example of our rural ancestors, of whom the poet sings, telling us that they celebrated their ingathering "with feasts, and offerings, and a thankful strain."

Unhappily, the experience of our planters this year has been the reverse of joyful. They have fought through the whole of the months since the starting of the growth, with the most persistent blight that has been known for many years. All their efforts to conquer it have been practically in vain. Their skill and outlay have been beaten by the forces of Nature, and they come to the harvest with lightened pockets, which they have but little hope of replenishing by the proceeds of their market business. For the prospects have not improved this week: washing has ceased, not because the enemy has been defeated, but because the further development of the plant stops the machines. I have analysed many reports and find that in Kent there are over thirty that say there is no perceptible improvement, and only twenty that can trace even slight advancement in the crop prospects. I cannot see one that speaks hopefully or confidently, while very many report the presence and run of mould.

With respect to the yield there are one or two cases in which the possibility of 10 cwt. is mentioned, but the greater proportion are evidently not expecting an average, and in some parishes estimates do not go beyond 4 to 5 cwt. Some exceptional plantations are, of course, to be found, where lavish expenditure, aided by good judgment, will be rewarded by a fair crop. Such action deserves reward, and will, I trust, gain it in the final results; but looking broadly over the prospects of the premier hop county, I fear that disappointment will unfortunately attend the majority.

The outlook for the Surrey planters is also very poor. While some few gardens have advanced a little, others have gone back, and the crop for the Farnham district is estimated at not more than 3 to 4 cwt. per acre.

The Sussex reports are practically similar. The hot sun, here as elsewhere, has helped some gardens and damaged others, several of them being beyond recovery. Of Herefordshire it is generally said, that her deep clay soil can stand a drought better than any part of the hop plantations. But this season we do not find confirmation of the usual experience, the latest news being that only 2 cwt. per acre will be the average, and many yards will not even give that small yield.

In Worcestershire the burr is generally out, but the blight is not conquered, well-washed grounds are making progress, and here and there fair crops will be gathered. The average must, however, be low, and the whole of the Midlands will not exceed what I mentioned last week, viz., 3 to 4 cwt. per acre.

THE CONTINENT.—Reports from Germany are, on the whole, rather more favourable. In Spalt an average crop may be gathered, and in Hallertau the outlook is also encouraging. But only small crops will come from the districts of the market hops, and the Aischgrund. A friend, who is a grower in Alsace, writes me as follows:—"Hops have improved during the last fortnight, and I believe that many of our plantations will give an average crop. Rain would be a great advantage, but is not yet urgent. Three weeks ago it appeared that we should have a very small crop, and some of the early ones still give poor results, but the Fuggles are flourishing, and the Bramblings also, but not to the same extent."

AMERICA.—The glowing accounts of the condition of the growing crops on the Pacific Coast have been recently modified. The following extract from a private letter from an expert in Oregon throws some light on the present position:—"Having just returned from the country, where I have made a thorough inspection of hop yards in various parts of the State, I am sorry to say that the intense heat that has prevailed for the last two or three weeks has been very detrimental to favourable growth and the development of our hops. They do not seem to arm out as well as expected,

and in the wired yards, especially, the hot wires have cut into the branch vines to such an extent that they are hanging limp and drooping. Taking an average view of existing facts, I am inclined to say to-day that we shall hardly, after all, have more than last year, if we can reach that, and should the hot spell continue for any length of time without occasional refreshing showers, we shall have to cut down our estimates still further." The above is confirmed by a cable I received this week from Washington, which says that the weather is too hot and dry, and that estimates are being reduced.

The Markets.

LONDON.—Although the holidays have interfered with business, and the limitation of stocks prevents any very important transactions, there is sufficient trade moving to maintain firmness in values, there being a decided tendency towards advancement, which has been established in many cases. As far as I can ascertain, the transactions of the past fortnight have mainly been of a speculative character between Borough holders, the demand from consumers being very moderate. The position demonstrates the faith held by traders, in the future effects of the short crop that is now accepted as inevitable. The only question that remains unsettled is the actual yield, concerning which there is, of course, some difference of opinion. Estimates have been recently much reduced, and to-day I find that the highest does not exceed 320,000 cwt. But even this low figure is discounted by those whose ideas of the crop vary from 280,000 to 300,000 cwt. Judging by the reports that have reached me, I am inclined to think that we shall see rather better results than those predicted by the extreme pessimists, and that an average of about 6½ cwt. per acre will be harvested. Taking the known condition of the English plantations into account, together with the moderate crop expected from the Continent, and the reduced estimates we are now getting from America, we are justified in looking for strength in the opening of our near market. With the recollections of last season in their minds, brewers will probably be shy at first, and will point to their supplies as their excuse. Our growers will, however, know how to deal with such arguments, and will be well advised in being firm in holding their own—at least until they have ascertained the actual position of affairs.

BRUSSELS.—A large business, considering the period of the year, has been passing at full prices. The demand for export continues, buyers for this direction paying 40s. to 50s. for mediums, and 55s. to 65s. for better sorts. Local consumers have also been in the market, and have paid from 70s. to 95s., according to quality.

Samples of new hops have arrived from Styria and Tettnang. The quality of the former is as usual not very satisfactory, and they remain unsold at the price at which they were offered, 2s. per lb. The earlier from Tettnang are more attractive, and have been disposed of at fancy prices.

The scarcity of choice lots, and the demand for such by local brewers, has raised their value considerably, sales having been made as high as 100s.

BRUSSELS.—A certain calmness has come over the hop market, and the trade in 1905 hops is for the moment suspended. There are sellers at 60 to 70 francs, but buyers are holding off. A fall of several points has taken place on the Bourse in the value of 1906's. The latest quotations were 115 francs for Alosts and 105 for Poperinghes. Traders are wing further developments with respect to the new crop.

AMERICA.—In sympathy with the European markets an upward movement has commenced, which promises to progress. In a cable message received this week, I am told that it is expected that the market will go higher, and in a letter from Portland, Oregon, dated July 21, the writer says:—"Our local market is much excited and active of late, dealers trying to make contracts for the coming crop. Ten cents was the opening price, but it has moved on, and 12 and 12½ cents have been freely offered, even 13 cents being reported this morning." From another source of information I learn there has been some contracting for N.Y. State hops at 15 cents. The position is very firm, with an upward tendency.

Imports and Exports.

The returns of the Board of Trade for July show that our imports of hops are again heavier than expected. We have received 11,249 cwt. from America, and 3,000 cwt. from other countries, making a total for the month of 14,249 cwt. Looking back over the eleven months that have passed since the commencement of the present season, we are faced with a total importation of 187,661 cwt., of which America has sent us 92,075 cwt., and the Continent 95,586 cwt. Against this big figure, we can only put the small one of 20,327 cwt., the total of our exports for the same period, therefore the balance of load

upon our market is no less than 167,334 cwt. Our great crop of 1905 was more than sufficient for our requirements. It is clear that our industry must have suffered by this large addition to our stocks, without the slightest benefit to the general public, who consume our produce.

The answer of the Government to the Canterbury Farmers' Club concerning this matter savours of contempt. Attention was called to the serious position of the hop-growing industry, owing to the unfair competition from foreign countries, and Mr. Marks, M.P. for Thunet, was curiously informed, that with regard to the proposal that foreign hops should be marked, or that an import duty should be imposed, the Government could not take action in either direction. Thus we must continue to "grin and abide by" the unjust conditions under which we are compelled to try to exist. I trust that some of us may live to see a more patriotic and enlightened policy, supposing that we have not, by that time, lost our position as hop growers, and resigned it to our favoured foreign competitors.

Hop Acreages.

Our Agricultural Statistics for 1905, recently issued, gives some interesting details, from which I extract the following, having reference to hops. The English area of 49,867 acres in 1905 shows a loss of over 2,200 acres in the past five years. Canadian growers do not appear to have been much encouraged, despite the advantages of their climate and soil, as they have reduced their acreage from 2,514 to 1,997 acres. On the other hand, Tasmania and New Zealand are extending their operations, the former having increased from 665 to 737 acres, and the latter from 790 to 894 acres. The returns for South Australia, where some hops are also grown, are not given, but I understand that owing to the advantages found in Tasmania, the South Australian plantations are rather reduced than otherwise.

Turning to the Continental returns, the following figures appear:—

	Present.	Previous.
Austria.....	50,000	48,444 acres.
Hungary.....	1,720	1,047 "
Germany.....	97,592	90,567 "
France.....	7,212	6,700 "
Belgium.....	5,795	5,340 "
Holland.....	123	188 "

It will be noted that with the small exception of Holland, all the Continental districts are extending their hop areas, the total of the above figures, 162,412 acres, exceeding the previous returns by over 10,000 acres. In the agricultural returns for Russia, hops are not given as a separate item, but I suppose they may be taken as about 15,000 acres, with a tendency to increase, as planters receive subsidies from the Government, and the industry is being promoted by other means.

Carlisle Harvest Hirlings.—The quarterly or "Lammis" hirings at Carlisle were held on the 4th inst., when a fair number of both masters and men turned up, and almost all the men were engaged. The best men were hired at £7 to £9, and up to £10 for the quarter; less experienced men, down to £4. There was a good demand for woman servants, who were scarce, and those for hire commanded high wages, almost equalling the men's, while girls got from £3 10s. to £5.

Midland Notes.

LAMMAS saw a beginning of wheat cutting in early districts, and by the Saturday before Bank Holiday many fields in Worcestershire were in sheaf, while a day or so later cutting had become fairly general in Warwick. It should be a cheap harvest, for there can have been few seasons necessitating so little hand cutting, and year by year the self-binding harvester attacks a larger acreage. Nevertheless, there are complaints already of the scarcity of hands, and the difficulty is not relieved to the extent it might be by the migratory labour, which naturally gravitates to districts where most corn is grown or average earnings run highest, leaving other parts hardly better supplied than in the ordinary times when work is only normal. There is, however, another source of labour open now to farmers. For some time past the Labour Bureau run by the Distress Committee of the Birmingham Corporation has been offering unemployed workmen "suitable for haymaking, fruit gathering, hop-picking, &c." and doubtless for the cornfields also, and while such labour is not of the finest quality it is better than nothing in times of emergency.

RECENT correspondence on rural schooling reminds one of the efforts which are being made in Staffordshire for the education of farmers' sons in the science of their profession—for such and no less is modern agriculture become. The Staffordshire County Council's Directory for Higher Education, 1906-7, has been sent to me within the last few days, making pleasant reading for the rural districts. Stafford, of course, is one of the counties which subscribe towards the cost of keeping up the Harper-Adams College at Newport. But it provides for young people also, for at the Brewood Grammar School, whose agricultural side is helped by county grants, lads of twelve years old and upwards are put through a three years' course, giving them opportunity for actual work upon the land, and learning everything from butter making and hedge layering to surveying and farm-accountancy. Beyond that there are, of course, the agricultural classes at evening schools, the lectures on agricultural, veterinary, and dairying topics which can be given here, there, and everywhere as required; and the evening gardening classes which are doing much, one hears to interest lads and young men in work upon the land. The Staffordshire educational work, by the way, has just sustained a severe loss by the death of Mr. Robert Cook, F.R.H.S., whose lectures on poultry gardening, and bee-keeping since 1892 made him a familiar figure all over the countryside. Mr. Cook was no theorist, but a thoroughly practical man, and it is but a few weeks since a movement was set on foot for presenting him with a testimonial on account of his services to the county.

THE figures in the latest agricultural Buff-book relating to the letting of farms in 1905 are less pleasant reading for the Midlands than for other parts of the country. Taking the Kingdom as a whole, the proportion of owner-farmed land is still decreasing, and that of tenant-cultivated land increasing, and Major Craigie is no doubt right in accounting for the change by greater readiness to hire agricultural land to-day than prevailed during the years of extreme depression, in which comparison is made. But in that part of the country the last twelve months appear to have brought practically no improvement. Taking a dozen Midland counties, not as they are classified in the return (along with other parts of England), but by themselves, I find that they account for some 5,281,000 acres of the cultivated area, while last year the net gain in Midland tenant-farmed land was the mere trifle of 380 acres. There were, indeed, considerable improvements in Derby, Leicester, Rutland, Salop, and Warwick, but three counties—Northants, Notts, and Oxford—account for a decrease of 8,290 acres in the tenant-cultivated area, and an advance of over 9,200 acres in the extent of that "in hand." Such changes are too big to be explained to any extent by sales of farms to occupiers, although when any large Midland estate gets broken up nowadays one generally finds a fair number of agricultural tenants bidding for their own holdings. On the other hand, the agents one meet in that group of counties do not give one the idea that any noticeable number of farms are being given up, and only this week the Duke of Newcastle has taken the opportunity afforded by the Clumber Show to hail an improving tendency in agriculture. But then the Dukeries have always fostered agriculture, which should flourish on the Welbeck and Clumber Estates if anywhere.

August 9, 1906.

PUMPING MACHINERY

is always required amongst the class of readers who regularly take the "Mark Lane Express"—the larger farmers and estate owners.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Water Rate Assessment.

Str.—Will "Barrister-at-Law" tell me the proper and legal method of assessing house property to water rate assessment? The company here assess upon the annual value, and how is the annual value arrived at? Are there any legal deductions which can be claimed from the rent actually paid to the landlord? RATEPAYER.

July 31, 1906.

[If the water rate is payable on the annual value of the house, then the annual value is easily arrived at. It is the net annual value. First, as to repairs, the average annual amount must be deducted; secondly, the rates and taxes. Annual value is not the same as the poor rate value, but is something between the gross estimated rental—that is, what the house would let at before the deductions were made, and the poor rate. In London, however, under Torrens' Act, it is the poor rate valuation on which the water rate is fixed. The whole matter was discussed in the case of Dobbs v. The Grand Junction Waterworks Company in the House of Lords some years ago, and this is the leading case on the meaning of annual value in Water Companies Acts.—BARRISTER-AT-LAW.]

Changing a Name.

Str.—I am desirous of changing my name, and should be glad if you will tell me how to set about it. CONSTANT READER.

August 1, 1906.

[Change of name is often given by the insertion of advertisements in the newspaper, or by telling one's friends and acquaintances when the name has been changed. Another way, because it perpetuates evidence, is by a deed-poll declaratory of the fact. This is enrolled in the central office of the Supreme Court of Judicature. Public notice to members to be given by advertisements. The deed stamp is 10s., and advertisements, &c., another £5. Another way is by Royal licence, but this is an expensive process.—BARRISTER-AT-LAW.]

Tithe.

Str.—I should be glad if you will tell me the exact meaning of tithes.—A NEW READER.

July 31, 1906.

[Tithe is the tenth part of the fruits, predial, personal, and mixed, due to the ministers of the church for their maintenance. Tithes arise from the profits and stock of lands, or from the personal industry of the inhabitants of a parish. The former class are either predial, among which are tithes of corn, grass, hops, and wood, or mixed, as of wool, milk, pigs, &c. The latter, personal, as of occupations, trades, fisheries, and the like. Of predial and mixed tithes, the tenth must be paid in gross; but of personal tithes, only the tenth part of the clear profits is due. Nor are tithes of this latter kind generally due at all except so far as the particular custom of the place may authorise the claims. Tithes are divided into great and small tithes. Small tithes include tithes mixed and personal, whereas tithes of corn, hay, and wood are generally comprised under great tithes, but no clear line of demarcation seems to have been drawn between the two. All tithes *prima facie* by presumption of law belong to the rector; but any part of the tithes may be shown by evidence to belong to the vicar. Tithes are now annuited into tithe-rent charge, which is payable by the landlord. I think this explanation will satisfy you on the point of the origin and nature of tithes.—BARRISTER-AT-LAW.]

Fences.

Str.—From enclosure award, dated September, 1850, No. on map 120, extent 60a. 2r. 10p., *Fence to be made and maintained by owner of allotment.* As B says he will not make the fence, will Barrister-at-Law say in your next issue if A has a valid case at law, and if in the county court or at the county magistrates' court for the division? —A FORTY YEARS' SUBSCRIBER.

[The object of fencing is to keep the land so enclosed that cattle may not stray and do damage. In the present case it does not appear that A is suffering any damage for the fact that B refuses to make and keep up the fence, but if any damage does occur to him at any time from B's negligence, A would most certainly have a right of acting in the county court or the High Court, according to the amount of damage.—BARRISTER-AT-LAW.]

The Framlingham Agricultural Co-operative Society, which makes a speciality of the egg trade, has during the past six months gathered in its district of Suffolk 330,615 eggs, an increase of nearly 130,000 over the same period of last year. The farmers benefited to the extent of £300, £400, this representing the difference between the prices formerly paid by dealers and those given by the society.

THE 'INKOOS' MILL

Designed

The Cheapest and Best in the Kingdom.

Intending purchasers should send for our Book of unopinioned testimonials and read what the public say.

These houses are built in Sections of best seasoned Deal, and the sides, ends, and floors are made from best 3-boards, tongued, grooved and mitred, and planed. The roof is match boarded and covered with Best Asphaltic Felt, easily put together in a few minutes, perfectly draught proof. Properly Ventilated at Ridge and Eaves, very strong and superior finish.

Mounted on 4 strong 13in. diameter iron wheels and wrought iron axles. Fitted with outside movable Nest Boxes, strong floor, movable perches, ladder, glass window, slide, lock and key, complete. Prompt Delivery.

Fertilisers and Feeding Stuffs.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date, besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Super-phosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equivalised.	Phosphatic.	Dissolved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 15 0	s. d. 12 6	s. d. 15 0	s. d. —	s. d. 10 6	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
„ in Sulphate of Ammonia	—	—	—	—	—	—	—	—	—	12 6	—	—	—
„ calculated from Nitrogen in Nitrate of Soda	—	—	—	12 6	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	2 0	—	2 0	—	—	—	1/10-2/	—	2 0	2 0	—	—	—
„ assimilable	1 3	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
„ insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

Similarly with cakes and other feeding stuffs. In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

June, 1906.

	s. d.	s. d.
Albuminoids	2 8	3 0
Oil or fat	2 8	3 0
Carbohydrates	1 1	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.	Feeding units.
Albuminoids	22.1 x 2½ =	55.2
Oil	5.2 x 2½ =	13.0
Carbohydrates	33.2 x 1 =	33.2
Total feeding units		101.4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

Note to Regular Subscribers.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a *nom de plume*, in the paper.

We are also willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Grass Mixtures.

It is essential that good clean seed should be used. Many failures are due to the result of using cheap seed, much of which is either dead or imperfectly formed and weak. No satisfactory result can be obtained unless nearly every seed will grow and grow vigorously. Weaklings never make good plants.

It is also necessary that the land to be sown down should be thoroughly clean and as free from weeds as possible. This is especially important where permanent pasture is being sown down, for many of the best grasses for this purpose are small and slow in growth at first and are easily smothered if they do not get plenty of light and air.

Another point of great importance is the need for a finely worked seed bed. Unless a fine tilth is obtained and the surface is level and well rolled down the finer seeds do not germinate satisfactorily.

Moreover, land to be laid down should be in good condition. A light top dressing of 2 cwt. of superphosphate where lime is abundant on the soil or 2 cwt. of phosphatic guano where lime is deficient assists the germination and growth of the clovers.

In establishing newly laid down permanent pasture the safest plan is to mow the first year, graze with young stock the second and third years, keeping sheep off the land until the fourth season.

British Association.

At the meeting of the British Association at York, several problems connected with agriculture were discussed from a scientific point of view.

Prussic Acid in Plants.—In the chemical section, Professor Wyndham Dunstan opened a discussion on this subject. He said it had been known for some time that prussic acid had been formed by plants, and it was first discovered in the bitter almond. There had been a view from the botanical standpoint that the acid was one of the first substances to be formed by the plant, and that it existed in a free state. Professor Dunstan mentioned that there was a vetch-like plant which grew on the banks of the Nile which, when crushed with water, formed prussic acid, and there was also a species of haricot bean in the East Indies which contained the poison, it being responsible for the poisoning of a whole family in the Isle of Mauritius. Linseed and flax plants supplied the acid in small quantities. Referring to the glucosides which entered into the formation of prussic acid, he said their significance for botanists was somewhat complicated. What they really found in the plant was glucoside, a compound chemical structure, which, so far as they could go, appeared to be the origin of prussic acid.

Nitrogen from the Air.—In the botany section, Mr. T. Jamieson, Director of the Aberdeenshire Agricultural Research Association, read a paper on the "Utilisation of Nitrogen in the Air by Plants," in which he explained his well known views. The chairman of the section said he could not endorse Mr. Jamieson's propositions, and remarked that the last word had not yet been spoken on the assimilation of nitrogen by plants, but, as a chemist, he was bound to say that the very important conclusion which Mr. Jamieson had drawn from his investigations did not appear to him to be supported by adequate chemical evidence.

Oxidation in Soils.—Mr. F. V. Darbyshire and Dr. E. J. Russell contributed a paper on "Oxidation in Soils and its Relation to Productiveness." The contents of the paper were of a highly technical character, but went to show that oxidation is mainly due to the activity of micro-organisms, and that the productiveness of a soil is proportionate to its rate of oxidation.

Composition of Turnips.

In the report on turnip experiments issued by the Aberdeen and North of Scotland College of Agriculture there are some observations on the above subject. The bulb of the turnip or swede is not uniform in composition, and it is generally supposed that the part of the bulk which is covered by the soil is richer than the part which is above the soil. The investigations show that this assumption is incorrect, and that—

1. The upper half of a turnip contains a higher percentage of dry matter than the lower half. This is in direct opposition to the common opinion that the lower half is the richer.

2. The outside part next the rind is richer in dry matter than the inner part. As we proceed from the outside towards the centre the dry matter decreases. This is true, no matter in what direction we proceed, but the difference from crown to centre is greater than the difference found in any other direction.

It is well known that individual roots of the same species grown on the same land side by side vary considerably in composition. Generally speaking, large bulbs are lower in dry matter than small ones, but both large and small vary very much among themselves.

Co-operation in Germany.

There are 700 farmers' clubs, which co-operate in the purchasing of farming implements and necessities, chemical manures, feeding stuffs, seeds, machinery, and so on. Their turnover is over £100,000 per annum. This co-operation has accounted for £10,000 alone in discounts and £2,000 allowances for stuff delivered below the guaranteed chemical constituents.

Hand in hand with the co-operative system there are fire and hail insurance companies throughout the province; gradually life insurance is spreading too. Farmers are beginning to insure themselves against liabilities in cases of bodily harm being done to their farm hands, for which the State makes all employers directly responsible.

There are about 1,000 local cattle insurance companies insuring farmers against contagious diseases.

Use of Lime.

Formerly, before the introduction of artificial fertilisers, liming was a regular practice, and there is no doubt that much land would be vastly improved by an application of this material.

In a report of the University College, Reading, it is pointed out that lime has a many-sided action upon the soil. It is primarily an essential constituent of plant food, which is taken from the soil by all kinds of crops. Moreover, it is necessary for the very important process of nitrification, by which the nitro-gen of organic manures, such as dung and humus, is made available to plants. Lime also liberates potash from clay in the soil and corrects sourness of the land where drainage is defective or where good tillage has been neglected. In addition to these properties, lime has a remarkable power of destroying the puddled state of stiff clays, and rendering them more open and more easily worked to a good tilth, which improved condition lasts some years.

Finally, liming promotes the early ripening of crops, and is a specific for finger-and-toe or club-root of turnips, swedes, cabbages, and other cruciferous plants.

Lime may be applied in various forms—viz., as (1) quicklime or freshly-burnt lime, (2) raw chalk, and as gas lime.

On stiff clays and sour peaty lands, quicklime is much the best kind to use. It may be placed in small heaps for two or three weeks in order to slake and break up into fine powder, after which it should be spread uniformly over the soil. From 1 to 2 tons per acre every six or eight years is better than applying larger doses at longer intervals. Big dressings of quicklime on light sandy soils may do much mischief in making such soils still lighter than they are, and destroying the humus which is so essential for the retention of moisture in dry seasons. Nevertheless, in cases of sandy land subject to finger-and-toe, quicklime is necessary to obtain good results; otherwise, chalk is to be preferred for application to light soils deficient in lime.

Gas lime, as it comes from the gasworks, contains sulphur compounds and other substances which are highly injurious to crops of all kinds, and until these are destroyed it is very inadvisable to use it. Gas lime should be left in a heap for at least twelve months, during which time it should be moved or turned over once or twice to allow of free aeration. It may then be applied to the land, and will act in practically the same manner as a dressing of chalk.

Clover will assist in providing nitrogen in the soil, but potash and phosphate are necessary before the land will grow clover. Even the free nitrogen of the atmosphere cannot be had for nothing.

No farmer should send money away from home for the purchase of any article that can be grown upon his farm.

New Method of Calculating the Root Crop.

In the year 1904 the Danish Statistical Office introduced an important change in the method of calculating the total feeding value of the root crop, taking as a basis the average dry substance in the roots. The credit for this new system is due to Dr. Helweg, director of experimental stations, and it is believed that the result approaches nearer to reality than the old system in vogue up to 1903, according to which a ton of roots was assumed to possess a uniform relative value in proportion to oats. Thus one ton of forage beet root, kohlrabi, or swedes was estimated to equal one-tenth of a ton of oats, and a ton of turnips one-twelfth of a ton of oats.

For the year 1905 the contents of dry substance in the roots was found to be as follows in England:—

	Dry substance percentage.	Number of analyses made to test it.
Beetroot ..	12.8	323
Kh. labi ..	12.4	312
Turnips ..	9.6	213

This new method of estimating the total feeding value of the root crops is based on the assumption that the feeding value stands in direct relation to the dry substance, and that a pound of dry substance in roots is practically equal to a pound in oats. The dry weight of a ton of beetroot or kohlrabi is taken to be 180 lb., or turnips 161 lb., and of a ton of oats 190 lb. According to a calculation made on this basis, the total weight of the root crop works out at 67.9 million tons, with a total value of 73.5 million kroner. This is a higher feeding value than it would have shown under the old method.

Denmark is the first country to introduce the system of calculating the value of the root crops for statistical purposes according to the average percentage for the year of dry substances as ascertained by numerous tests made by the different agricultural stations in the country. It is considered to be an advance on previous systems and will be more generally adopted.

British Oil and Cake Mills, Ltd.

The interim report states that the improved conditions which were apparent early in February were maintained in the succeeding months of March, April, and the first half of May, after which, as is usual at that period of the year, the demand for feeding stuffs of all kinds fell away very considerably. It will be a satisfaction for the shareholders to know, however, that the volume of trade over the whole six months shows a considerable expansion compared with the corresponding period of 1905, or, indeed, any half-year since the formation of the company.

Potash Salts.

According to the annual report of the German Potash Syndicate the deliveries for 1905 were in considerable excess of those for previous years.

The deliveries of murate of potash were 251,710 tons, against 253,297 in 1904. The United Kingdom took 19,801 tons, while 90,796 tons went to the United States, and 89,867 tons were used in Germany; 42,420 tons sulphate of potash 90 per cent. were sold, against 39,146 in the previous year; 194,181 tons of lower-class salts were prepared, of which the United Kingdom took 21,678 tons; while of kainit and sylvinite, the most common form of potash for agricultural purposes, over 2,000,000 tons were raised, of which Germany alone consumed 1,238,829 tons.

The proposal of the German Government to limit the quantities shipped abroad by putting on a stiff export duty has been abandoned in consequence of the Taxes Committee of the German Parliament having reported against the proposal, but the general question of raising the export prices is still under consideration.

Basic Slag Exhibits at Agricultural Shows.

A striking object lesson of the usefulness of basic slag as a means of improving the permanent character of poor grass land has been afforded by the turfs exhibited at the different shows. One of the most instructive exhibits at the Newcastle-on-Tyne Show was formed by a couple of turfs cut from the town moor of Newcastle, which were kindly contributed by the chairman of the Stewards Committee of the Freeman of Newcastle. One part of the moor was dressed with 9 cwt. slag per acre and the turf cut from it shows a thick growth of white clover, whereas another turf cut from the adjoining part of the moor shows only a brownish growth of wiry grasses, the contrast being very effective.

Most of the exhibited turfs represented grass land and pastures, but at Newcastle there were also two turfs of oats, which illustrated the remarkable effect of slag on this crop on some soils. The slagged oats appear much more vigorous and might be taken for another and improved variety.

Experimental Plots at Rothamsted.

In a summary, published in the *Field*, of the results of the trial grass-for-hay plots at the Rothamsted experimental station, it is stated that, as a general rule, in order to keep up the quality of a pasture cut for hay every year, it is desirable to give a dressing of about 10 tons farmyard dung once in every four years, and in the intermediate years an application of 3½ cwt. of superphosphate, or 5 cwt. of basic slag with 4 cwt. of kainit, and combined with these not more than 1 cwt. nitrate of soda. If bulk of produce is required rather than quality, then the quantity of nitrate of soda may be increased to 2 cwt. per acre.

6 FEEDS FOR ONE PENNY INTERNATIONAL STOCK FOOD.

KEEPS HORSES HEALTHY AND STRONG.

It is equally good for Cattle, Sheep, Pigs, because over One Million Farmers have used it for over 15 years, and pronounce it "An extra money-maker" in raising all kinds of stock. It is sold by over One Hundred Thousand Dealers. One Ton will make you £72 net profit.

All goods will be sold with the Positive Guarantee that money shall be refunded in case of failure. The user to be the judge. Write for full particulars to the Sole Importers for the United Kingdom—

MILK RECORDS.

OFFICIAL TESTS under the auspices of the HIGHLAND & AGRICULTURAL SOCIETY of SCOTLAND

These, the most extensive official Milk Record Tests carried out in this country, are doing capital work in showing the best methods of profitable milk production. We have always contended that **A GOOD COW** and **A GOOD CAKE** are necessary for securing the best results, and our opinion, founded on practical experience from many tests made at our experimental farm, is daily receiving ample corroboration from dairy farmers among our numerous customers.

THE GOOD COW & THE GOOD CAKE.

The tests above-mentioned made at the farms, under ordinary conditions, extended over 34 weeks, and 12 herds were entered. The first place was secured by our esteemed customer, Mr. A. M. Baird, Garclaugh, New Cumnock, Ayrshire, with the following record:—30 cows averaged 909½ gallons per cow; butter fat 3.94% (during August 4.32%). One cow yielded 1,267 gallons, and ten cows averaged over 1,000 gallons. The feed was 4 lb. of Silcock's Dairy Cake and 4 lbs. Silcock's Dairy Meal per day.

Our Customer writes:—"I am highly pleased with the result of your Meals and Cakes; in the H. & A.S. Milk Record List we came out at the top of the list, one cow giving 1,267 gallons of milk in 34 weeks, and ten cows over 1,000 gallons of milk in the same period; these were fed on Silcock's Cake and Meal."

Many of our Customers have won 1st Prizes for Milk Yield and Butter Tests at various shows, including the Royal this year. If you are to secure the best results, you must use the best Cake as well as the best Cow. The combination pays.

SILCOCK'S DAIRY CAKE & MEAL are carefully compounded, well-balanced foods, which will improve the quality and quantity of the milk yield, maintain the condition of the cow, and produce the highest results at the lowest cost. Others have found it profitable to use these foods; we simply ask you to give them a trial, they are sold at a price to meet the economical production of milk.

BAGSHAW'S FOOT-ROT DRESSING

To be obtained from all Chemists or post free from Proprietors, in bottles 1/6, 2/6, 3/6, and 11 sufficient for 20, 40, 70, & 350 Sheep. As originally made by J. Bagshaw, Belstead.

See Proprietors & Dealers, also R. Silcock & Sons, Ltd., 40, Abchurch Lane, London E.C. 4, and Princes St., Ipswich. Never known to fail. Testimonials sent on application. Use also many cases of other diseases of the Farm, and of the Garden.

BAGSHAW'S FOOT-ROT DRESSING

HAYWARD'S "YELLOW PASTE"
For Summer Dipping.

Keeps off the maggot-fly. Mixes with cold water. 1/- for 50 sheep; 5/- for 150 sheep. Sold by Agents. Approved by Board of Agriculture. **TOMLINSON & HAYWARD, Ltd., LINCOLN.**

WHITEWAYS' PURE DEVONSHIRE CYDERS.

The most throat-quenching and healthful drink of all. Special **HARVEST** brand, 15 pints, 12/-, 28 pints, 22/6, 50 pints, 45/-, (cash with order). Cidering said, cork returnable. **WHITEWAYS, Whimpey, DEVON.**

LEARNER'S PATENT FOOT-ROT CURE

Guaranteed to cure & leave the hoof soft & pliable.

TINS 3/- & 1/6 EACH. POST FREE.

ALFRED J. LEARNER, REDHILL, SURREY.

5s. 11d. with £3 10s. Od. 5,000

Free Wheel Cycles to be sold. Worth £7. As a huge Advertisement. Approval. Workmanship guaranteed. Free on Rails. Monthly Payments 5/- extra. Send for particulars. Established nearly 20 years. **Dereham Road Cycle Co., Norwich.**

PHEASANT AND POULTRY REARERS.

COLD WEATHER BRINGS ON GAGES, DIARRHŒA AND CRAMP.

You can cure and prevent this by using **GEORGE SMITH'S Gape Powder**, tins 1/9 post free. **Diarrhœa Elixir**, tins 2/9 post free. **Spinosa**, for Cramp, 6 pkts., 3/6 post free.

Numerous testimonials genuine only. Direct from **GEORGE SMITH'S GAME FOOD FACTORY, NORWICH.**

Appointed by Royal Warrant Manufacturers of Agricultural Machinery to His Majesty King Edward VII.

RANSOMES, SIMS & JEFFERIES, L^{TD}.

MANUFACTURE THE BEST THRASHING MACHINERY.

TRACTION ENGINES.

These Engines are well proportioned, simple, and easy to manage, and are suitable for drawing and working Thrashing Machinery, for Steam Cultivation, Sawing, Pumping, &c.

THRASHING MACHINES.

These Machines produce a perfectly uniform sample of full-size grain, free from tail corn, and make all the usual separations in the most perfect manner.

FARM HORSES IN HARVEST TIME.

Before the advent of reaping machines the teamsters not unfrequently were allowed a long holiday, carters and plough-boys, together with every hand on the farm, being urgently required either for reaping or tying the grain into sheaves. Very generally the working horses under such circumstances were turned into a grass field where they could get access to water, and no further care was taken of them until they were wanted to cart the sheaves to the stackyard. In exceptional cases, it is true, if there were any lads on the farm who could plough, the advantage of turning up the soil for the destruction of weeds, or that a piece of stubble-turnips might be sown, caused them to be kept on working, and sometimes they were made to plough up the stubble between the rows of stools.

Now, instead of having holiday while reaping is in progress they have to perform the latter operation, and are often worked harder in doing it than at any period in summer. The saving in cost by employing a self-binding reaper is so great that few farmers having a large acreage of corn omit to avail themselves of it. If the corn stands up well it does not cost half as much to cut and sheaf it by a self-binding reaper as to perform the two operations by hand. There are numerous cases of the saving in labour being sufficient to repay the entire cost of the reaper in two seasons. Nor is this saving the only one, the advantage of despatching harvest work quickly being very great indeed, especially when all the crops ripen at once, as so often happens.

In olden times it was impossible to deal with them all at the proper time. There was over-ripening of oats, with the result of a great deal of corn being shed and wasted by high winds, and the over-standing of wheat led to coarse, horny grain, such as millers dislike, because it yields a large proportion of bran. When the harvest is a protracted one, there is always the risk of bad weather being experienced before it is over. By being able to cut and sheave the corn by machinery, even the largest farmers are now able to cry "harvest home" within a fortnight after commencing, whereas in olden times it always took a month and sometimes six weeks to get the work completely finished. That it may be sooner put out of hand, farmers sometimes keep the self-binder in action from early dawn to nightfall, having two relays of horses to relieve one another so as to prevent them being over-fatigued, the machine itself, of course, never tiring.

The teamsters have, of course, to be kept well during the period, and it is of essential consequence to have some good green fodder

to soil them with when off duty, but at nightfall they should be turned out into the grass field instead of being stabled, and this course of procedure should not solely be pursued in harvest time but be carried out throughout the summer. Horses are much more healthy in the fields than when stabled on warm, summer nights. When the corn is laid it can often be cut and sheaved by machine by driving the latter only one way, and a statement appeared last year that one of the newest attachments to a reaping machine is an automatic adjustment placed just in advance of the cutting bar to pick up the laid crop and raise it high enough for the knives to go underneath.

When we hear praises of the good old times sounded in our ears it is well to remember that modern farmers, however handicapped by low prices, are able to cheapen their labour bills very considerably by means of machinery, and in nothing have they had such immense gain as that afforded by this modern revolutioniser, the self-binding reaper.

Crown Lands for Small Holdings.

The first Ministerial utterance on the new Crown Lands Act, by which the land held by the Crown is to be allotted to small holders, was made by the President of the Board of Agriculture and Fisheries (Earl Carrington) in the course of a speech at a horticultural fête at Broughton Castle, Oxford, on Monday. He said:—

I hold very strongly that the State in the management of the land at its disposal should set an example to private owners in its dealings with its tenants, and also in the adaptation of its arrangements to meet the growing and urgent demands by the labouring classes for means by which they can get access to the land and for a chance of improving their social condition. Under the Crown Lands Act the President of the Board of Agriculture will be, *ex officio*, a Commissioner of Crown Lands, and he will be specially charged with the administration of the 70,000 acres of agricultural land which are comprised within the Crown domains. The task of dealing with these lands will be a heavy one, and existing arrangements and engagements will have to be respected.

The opponents of small holdings—and there are many—are fond of saying: "They are out of the question in my district." This may be perfectly true in some districts and of certain classes of land, but it does not justify the condemnation of small holdings generally, for there are many districts in all parts of the country and thousands of acres of land where they are not only possible, but profitable. I cannot hope, and do not desire, to effect anything in the nature of a *coup d'état*. But I shall steadily keep in view the two principles to which I have referred, the fair and liberal treatment of the tenants and the increase of the number of those who draw their livelihood from the land.

I hope to put before the landowners of this country a series of object-lessons which will show them that our programme is not one of spoliation and robbery, but that if intelligently carried out by men whose hearts are in the business it will tend to the increase of happiness and prosperity of all classes of the community.

The First Allotments.

The first Crown farm to be cut up into small occupations, in accordance with the announcement made by Lord Carrington on Monday, is a farm of nearly 1,000 acres, mainly arable, situated at Burwell, between Cambridge and Newmarket. The farm has been on the lands of the Commissioners of Woods and Forests since it was given up by a tenant two years ago. Mr. C. D. Rose, M.P. for the Newmarket Division, has accepted the responsibility of taking the estate on lease, and has arranged for the Crown to expend about £1,500 upon the enlargement of the labourers' cottages where required, the construction of dairies, stables, &c., and the adapting of the buildings for the use of small holders.

The estate is to be let to selected applicants, and fifty applications have, it is stated, already been received from Burwell and the surrounding villages. Preliminary arrangements have been made to divide the estate into fifty lots, to apportion grass land and the buildings, and to allot at least ten of the cottages on the estate to tenants of the larger holdings.

ADVERTISEMENTS

received after Friday cannot appear under Classified Heading, so are inserted on the last pages of this late

MARKET SUPPLEMENT.

DAIRY.

National Diploma in Dairying.

The National Agricultural Examination Board announce that the eleventh examination of candidates for the National Diploma in the science and practice of dairying will be held, for English students, at the Midland Agricultural and Dairy College, Kingston, Derby, from September 24 to 27, and for Scottish students at the Dairy School for Scotland, Kilmaronock, from October 1 to 5, 1906. The last date for the receipt of applications to sit at either of these centres is August 31 next. The subjects of examination are the general management of a dairy farm, the management of a dairy, chemistry and bacteriology, practical skill in dairy work and capacity for imparting instructions to others. Forms of entry and copies of the regulations may be obtained from the Secretary of the Royal Agricultural Society of England, 13, Hanover Square, London, W., or the Secretary of the Highland and Agricultural Society of Scotland, 3, George IV. Bridge, Edinburgh.

The Midland Agricultural and Dairy College.

The report presented at the annual meeting of the Midland Agricultural and Dairy College, Kingston, showed that the past year had been one of steady progress, and it was felt that a record amount of work had been done, and that the value of the work was gaining fast in the confidence of the farming population. The aggregate of attendances on the courses exceeded all previous records. In agriculture there were sixty students, in the dairy 224, and in the study fifty-three, a total of 337, making the total since its opening 2,297. A pleasing feature was that practically the whole of the agricultural and dairy students were either sons or daughters of farmers whose intention it was to make farming their profession.

During the year experiments were in progress in connection with every kind of crop on the college farm. The department stood in a fairly satisfactory position, and but for the shortage in the hay and oat crops caused by dry weather, the farm account would have shown a profit. As it was there was a small loss, which was more than accounted for by the extra labour involved in keeping everything in first-rate order, ready for inspection at any time, and by the loss incurred in carrying out a large number of field and other trials.

Lord Belper, in moving the adoption of the report, which was carried, said the governing body had every reason to be satisfied with the work which the college had been doing, and it was satisfactory to feel that the purposes for which the college was established were being carried out, and that the farmers were appreciating the work and sending their sons and daughters to it. They also hoped that the college would be of real practical benefit to the farmers themselves, and they made a special point of giving advice to farmers on all questions connected with agriculture. If the farmers found the college could help them and give them hints, and they appreciated their work, all they had to do was to insist that the college should keep its place in the highest possible class of agricultural education, and the farmers and the agricultural population would reap the benefit.

A big effort is being made to get farmers in Aberdeenshire, Kincardine, and Banffshire to adopt agricultural co-operation.

The Storms and Harvests.—A severe thunderstorm, with deluging rain, broke over North Northants, North Hunts, North Cambs., and South Lincs. on Wednesday afternoon, driving the harvest men from the fields, and summarily stopping the work of cutting and carting. In the evening another heavy storm was experienced, torrential rain again falling, and still further dashing down the wheat crops. Matters are becoming serious for the farmers, and good crops in the fens are being ruined.

Included in the sale of Lady Meux's North Wilts estate, held at Swindon on Monday, was the property known as the Marlborough Down Estate, which comprises 9,200 acres, and produces a rent of about £2,000. There are upon the estate many dairy and sheep farms, turf training gallops, and several fine old residences, the most important being Lockeridge House. The total realised was over £20,000. The principal lot was the sporting estate known as West Woods, with several adjoining farms, which were offered together, the area being 5,000 acres, and the rent roll £2,800. At £44,000 it was withdrawn, but was immediately purchased privately by Mr. Alec Taylor, the well-known trainer, at a figure considerably in advance of that mentioned. Other lots disposed of were Wick Down Farm, £6,500, and Weir Farm £6,200. The Manor Farm, Berwick Bassett, was withdrawn at £7,500.

Notes of the Week.

The number of shows during the August Bank Holiday week is infinite, but there is practically only one of first-rate magnitude.

This is the Great Yorkshire, which opened on Wednesday at Middlesbrough, although the Welsh National threatens to run it close.

The run down from London showed that the crops looked well, wheat especially.

Grass was all burned up, and the keep prospects are terrible; there was not a bite for the stock the whole way.

Beans were remarkably promising and free from blight, while we saw no trace of potato disease.

The run from Doncaster to York passes through a well-known potato district, and seldom have we seen better promise.

There had been a heavy thunderstorm up north, and the rain which fell was very welcome.

Now as to the show. Many people were afraid of the hotel accommodation—and the prices—at Middlesbrough, and we heard of visitors coming from all parts.

Several picked on York, but the visit of the British Association rendered accommodation impossible at the Minster City.

Other places selected were Leeds, Darlington, Saltburn, Redcar, &c.

What a loss this must have meant to Middlesbrough, but there they have none of our sympathy.

The way in which prices are put up on occasions of this kind are out of all reason.

The show was hardly up to Great Yorkshire records. The showyard was too diffuse.

The collection of stock was large, and quite equal to Hull last year, but there was a lamentable falling off in the implement section.

The weather, too, was against the attendance; heavy rain all the morning, and so thick that at times one could barely see across the big ring.

Some said it was sea fog, others the result of the black smoke unceasingly belched forth from the foundries.

Probably it was the result of an unhappy mixture of the two, fortified by a thunderstorm.

Anyway, it was noisome and objectionable, and we thought principally due to the smoke.

It really is disgraceful the way in which these huge stacks throw out volumes of smoke.

The arrangements for the show were good, and the showyard bore the effects of the large quantities of rain well, although in parts almost impassable.

We heard that there were seven feet of ashes below the top soil, and if this was so, it would easily account for the water draining away rapidly.

A severe thunderstorm on Tuesday, the day before the show, struck one of the stands, and stunned four men. Fortunately there was no fatality.

What was the price of the Implement catalogue?

The one in my possession is distinctly marked "one shilling."

A friend's had the word "sixpence" pasted over the "one shilling."

The two catalogues were obtained within one minute of each other at the secretary's office.

Again I ask, What was the price of the Implement Catalogue?

And how much did you pay?

A departure in the catering section was a notice prominently displayed by one firm, who said "no canned, tinned, frozen, or chilled meat was used. All home fed and home killed."

One wonders what the Royal Show caters for

would do if they were asked to fulfil this condition.

The thought arises that we should like to entertain the Royal Show authorities to one of their half-crown luncheons.

Six weeks later do the same at the Yorkshire Show.

Things would be very different at Lincoln, wouldn't they?

Why shouldn't they be?

It has always seemed strange to us why English breeders of Aberdeen-Angus cattle should invariably employ Scottish auctioneers to dispose of their stock.

Surely in England there are many "Knights of the Rostrum" whose identity with this particular breed of cattle might do much to popularise it south of the Tweed.

We often hear complaints from English Aberdeen breeders about small attendances at sales.

Does this suggest in any way the cause?

The heat during the past few days has been of such a sweltering character that it deserves to be recorded in a note of the week.

In this country it has been tropical, but on the Continent and in America it has been tropiclier, if the word may be excused.

In Paris, Berlin, and Vienna, the thermometer has registered over 100 degrees in the shade.

Five hundred pigs arrived at the Central Market, Berlin, dead from heat and thirst.

In Saxony at a marriage ceremony both bride and bridegroom, overcome by the heat, fell asleep in the midst of the clergyman's address.

The weather forecasts published at the beginning of the year are rather wide of the mark, at least so far as August is concerned.

The forecast was—August, mild 5th, 24th, 25th, and 28th to 30th; other days cold (cold month, only seventeen days over 70 deg.).

Everybody is complaining of the plague of flies brought by the continuance of the muggy, hot weather.

They are a nuisance to people, but a source of real suffering to animals. Farmers should not neglect to protect their stock as far as possible by the use of suitable smears and ointments.

We are sorry to hear that farmers will have to pay more for fertilisers next season.

The demand all over the world seems to be greater than the supply.

Nitrate of soda is dearer than it has been for years, and phosphatic material has advanced in value substantially.

There is no scarcity of these substances at the deposits, but the difficulty is to raise them quickly enough to satisfy the demand.

There are not sufficient labourers, and the men are claiming more pay.

It seems to be with labour as with wealth, it wants better distribution.

While we in this old country are over-run with unemployed, in other centres of industry there is a great scarcity of men.

There is no end to the writing and talking, debating and discussion on the subject of education, but will it all lead to the introduction of a practical system?

Life is real, life is earnest, and children should be taught the rudiments of common knowledge.

The Royal Lancashire Agricultural Society re-

Best Sporting Powder is Normal.—The new illustrated catalogue proves this, copy of which, as well as gratis samples, will be sent to all sportsmen on application to THE NORMAL POWDER AND AMMUNITION CO., LTD., Renter's Lane, Hendon, London, N.W.—[ADVT.]

TUESDAY, AUGUST 21.—Eansley Agricultural Show at the Queen's Ground, Parnsley—North Lonsdale's Agricultural Show at Ulverston—First Day of Bournemouth Horse Show—Great Harwood Agricultural Fair—Rugby and Stroud Cattle Fairs—Appleby Cattle and Sheep Fair—Agricultural Fairs at Carmarthen, Kington, and St. Laurence—Sheep Fairs at Hungerford and New Romney.

cently offered prizes to school children for the best essays on farm animals.

The remarks made by some of the children illustrate that the present methods fail to awaken their powers of observation or to teach them elementary knowledge.

Here are a few extracts from the essays. They are amusing, but at the same time raise a feeling of dissatisfaction.

One is apt to say, Why not be done with all this talk, talk, talk about education and get to work at it?

"A butcher kills a cow for its heart and lights."

"Everything that lives on a farm are called cattle."

"When a cow is alive it is used for to get milk, but when it is dead it is used for to get butter."

"The flesh of the lamb is called veal."

"Some cows have horns and are called bulls; the male bulls are called heifers."

"The pig is a very useful animal to a woman."

"Mad cows are called male cows."

"A young cow is sometimes called an ox."

"One of the stomachs of the cow is shaped like the leaves of the bible."

Roumania's Crops.—The estimates of the Roumanian crops show that, in addition to enormous yields of oats, barley, peas and beans, there will be 10,000,000 hectolitres of wheat. The export of maize is expected to be unprecedented. In spite of the fact that the Government has bought ninety-six locomotives and 3,000 trucks for the purpose of moving the crops, complaints are already being made of the lack of means of transport.

The death is announced, in his eighty-first year, of Mr. John Wright, of Silloth Farm, Cumberland, an agriculturist who in his day was well known in all parts as a breeder of Clydesdale horses. Among other prize-takers which he bred were Jewell of Hart Head and Jess of Park Head, two mares which were purchased by Mr. Brockbank, of Crosby, and used very much by him in strengthening his famous stud. About twelve years ago, Mr. Wright experienced considerable loss from an outbreak of anthrax upon his farm, and such was the esteem in which he was held among his brother agriculturists that a subscription list was started and £100 raised, which was presented to him to recoup him for his losses.

SHEEP.

Notes and Jottings.

THE Royal Show at Lincoln next year will receive a specially hearty welcome from the breeders of Lincoln Longwools, who for a second time have the national show in a position favourable for their interests. The southern breeds had a specially favourable opportunity at the Park Royal Shows, and therefore cannot complain if they are neglected for a time. The Suffolk breed will also have a fair opportunity of exhibition, though the hope that they would have the show in their midst has been destroyed. One thing is evident, and that is, no matter where the show is held, the best animals of the breed will be there, even if those of lower grade are left at home, because the certainty of expense in taking them would far more than override the prospects of sharing in the prize money. West countrymen will, however, look forward to the time when they will have the show amongst them again. Meanwhile, they are well served by the big societies which perambulate the Western counties, when those societies stay reasonably at home.

ON mixed farms there is no time of the year when the sheep are so likely to be neglected as during the corn harvest; as in the endeavour to get the corn quickly harvested the shepherd is often taken from his ordinary work to give a helping hand. Possibly the farmer, or his son, or a lad may be left to look after the flock, but beyond hurdle setting and caking, the work is frequently done in a very casual manner, and the shepherd comes back to his ordinary routine to find that neglect has left him with the flock in anything but a satisfactory condition. For want of careful observation the fly has made many of the sheep look disreputable, as the maggots have got firm hold before they were detected, the amateur not having noted the early signs of attack, such as a twitching tail, a wet streak, a small patch of broken wool, an inclination to bite the irritated spots, and a tendency to draw apart from others, while inaccuracy in counting or neglect to count the sheep has resulted in the oversight that one or more of the flock has strayed away and become entangled in briars or lost in undergrowth in ditches where the maggots are taking their course unhindered. It is a time, too, when foot rot is often neglected, and foot-paring is allowed to stand over, with the result that when the autumn rains set in foot-rot readily runs through the flock. In a flock of such size that a shepherd's whole time ordinarily is required, it is very doubtful if it is profitable to let the shepherding be done by a substitute; it certainly is not unless an intelligent substitute is found.

WHEN hot July and August suns have baked the herbage and deprived it of its succulence, there is the greatest need to supply sheep with water. Water carting where the horses are required in the corn-fields is an annoyance, and it is surprising that small portable wind-motors are not more often used in conjunction with Abyssinian pumps. Except on downs, deep sands, and thick

clay beds, water is almost always sufficiently near to the surface for an Abyssinian pump to be used, and as it takes little time to set them down or take them up, they can save much expense where ponds or water-courses are not conveniently near. In the dry years of the early seventies they were common in some districts, even though the water had to be pumped by hand, as the modern light, portable disc wind-motor was not in use then.

THE lambing season covers a long period, even when the abnormally early lambing Dorset Horns are taken out of consideration, for whilst in northern exposed hilly districts the lambs are still small, in others the ram has been turned into the flock with the expectation that lambing will con-

working binder leaves little grain on the ground, unless the crop has been storm twisted. Part of the day on a piece of good grass land, which has not carried stock previously during the season, is very valuable at this period; and if the three kinds of food are provided a good crop of lambs may reasonably be expected without having to have recourse to cake feeding.

THE strong demand there has been for Cheviot wool calls attention to this hardy and, in many ways excellent, sheep. It does not gain popularity in the southern dry, arable districts so much as it does in moister ones, but its influence when crossed has made it a potent force in Scottish farming. Still, where used on some southern breeds, notably the Kentish, it has exercised most beneficial effects. From what it has done there seems good reason to think that there are other breeds in moist districts where it might be used advantageously. It is not necessarily as a first cross that greatest good would be effected, but subsequently where after careful selection and

T. Dixon and his dog, Swallow, driving sheep through the Maltese Cross.

men by Christmas. There is no doubt that any ewe is likely to be more productive if she is in a vigorous condition when she receives the ram than when she is in a declining state; and the percentage of twins is raised when the flock is in a steadily improving condition. Cabbage or rape are excellent food for ewes at this time, as supplying succulent food at a time when other fodder crops are getting stale. The run of the stubbles also provides sound food, although the clean

breeding it was graded so that there was a small percentage of its blood remaining. As a pure bred, or even after a cross or two, it is often a source of trouble to the shepherd to keep it in small folds, and this doubtless has been a reason which has told against its adoption in many districts.

Hampshire Downs for South America.

Mr. Gilbert H. H. Kennedy shipped to the Argentine a selection of Hampshire Down rams purchased from the well-known flock of Mr. James Flower, of Chilmark, Salisbury. The consignment included the two grand two-shears, winners all through the summer shows, and six grand shearing rams, altogether one of the finest lots that ever left England, and they should, indeed, bring credit to the Hampshire Down breed. Mr. Flower sent by the same boat, ss. *Velasquez*, three very choice ram lambs to a client who yearly repeats his order, together with a specially selected Middle White boar. Two excellent shearing rams have recently been shipped to Valparaiso, and a strong consignment of good flock shearing rams to Germany have also been supplied from the Chilmark flock.

Cowhill fair was held on the Town Moor, Newcastle, on Wednesday, when there was a falling off both with respect to numbers and quality of the horses compared with previous years, and though the fair was well attended business was very slow. The supply was much greater than the demand, and few horses changed hands. Prices varied from £20 to £35, but these were only obtainable for the better class animals, the poorer kinds bringing anything up to £10. There was also a falling off in the number of cattle, but the quality was quite up to the average. As with the horses, so with the cattle, and practically no business was transacted. One dealer, however, was regarded as fortunate—disposed of some few heads at prices varying from £10 to £12. The fair, it was stated by old attenders, was one of the poorest ever held.

THE SHEEP DOG TRIALS AT TRING.
A General View, showing J. Moses' Gem and Nip at Work.

SHEEP SALES AND FAIRS.

Isley.

The annual sheep and ram fair at Isley was as well attended as ever, whilst there was a large supply and a fairly good demand, prices being about the same as at recent fairs; ewes made from 30s. to 52s., and lambs 25s. to 38s. Messrs. Waters and Rawlence as usual conducted some important sales of rams and lamb rams, including the annual letting and sale of ram lambs from Sir W. G. Pearce's Chilton flock of Hampshire Downs. Six lambs were first let as follows:—To Mr. Kerr (for Mr. H. C. Stephens) at 60 guineas and 11 guineas, Mr. G. Judd at 36 guineas, Mr. J. H. Dibben at 29 guineas, Mr. J. Pain at 19 guineas and 15 guineas; average, £23 3s. The selling lambs made 5 guineas to 15 guineas, Mr. J. Pain buying at 15 guineas, Mr. Eyston at 10 guineas, 7½ guineas, and 6 guineas, Messrs. Hobbs (for Mr. Mackenzie), E. Hobbs, Eady (for Lady Wantage), Edmonson, Bixendale, Keen, and others, at from 5 guineas to 8 guineas, the average for forty-four let and sold being £9 15s.

Immediately after the above, the same auctioneers offered twenty-five lambs of great size and good breeding from the Hon. D. C. Bouvier's Colshill House flock, and twenty-two found purchasers at from 5½ guineas to 17 guineas, Mr. Hurford (for Mr. T. F. Buxton) buying at 17 guineas, Mr. T. Hobbs at 9½ guineas, Messrs. E. Hobbs, Thatchers, Ormond, Clark, Blake, Gauntlett, and others at 5½ guineas to 8 guineas, the average being £7 3s.

Salisbury.

Messrs. Waters and Rawlence brought under the hammer at their Market House Yard, Salisbury, forty-eight ram lambs up from the Chitstone flock of Mr. J. Dean, and a very excellent lot they proved to be. Mr. H. Corner purchased at 23 guineas, 16 guineas, 14½ guineas, and 10 guineas; Mr. Deane-Willis at 11 guineas, 10 guineas, and 6½ guineas; Mr. W. H. Dean at 10 guineas; Mr. H. Hooper at 9 guineas, 8½ guineas, and 7½ guineas; Messrs. Edwards, Garton, Frank, Harris, Osmond, &c., at from 5 guineas to 8 guineas. A few lambs were unsold for lack of sufficient buyers, but the average of those disposed of was £8 10s. Sir A. Henderson, who is president of the Hampshire Sheep Breeders' Association, also sent a small consignment of fifteen ram lambs of more than usual merit from his Buscot Park flock, and all but one met with a ready sale. The letting lambs let at an average of £7 1s., lots 1 and 2 being let at 19 guineas each to Mr. C. Coles and Mr. J. Flower respectively, whilst the selling lambs made from 5 guineas to 11 guineas each.

Sutton.

The second lamb sale of this season held at Sutton by Messrs. Robert Bond and Sons took place on the 3rd inst., and though it was not so important as the first sale, it was nevertheless a fairly good one. The pens consisted largely of crones, some of them the dams of the grand ewe lamb which was sold for 120s. at the first sale. Mr. Vivers secured a nice lot of ewe lambs, the property of Mr. John Cracknell, Wickham Market, at 38s., and other lots of ewe lambs by other consignors went to Mr. Creasey, Mr. Tibbenham, Mr. Abbott, Mr. Wm. Blois, jun., and Mr. Wright. Mr. Vivers was a considerable buyer also of crones, and he gave 46s., 45s. 6d., and 43s. 6d. for three lots of Suffolk full-mouthed ewes, and 31s. 6d. for a score of crones belonging to Mr. D. Burrows, Dallinghoo, and Mr. Thompson gave 33s. for a score of Mr. Alfred Smith's crones. Mr. Vivers purchased a lot of 12 ewe lambs, of which the Suffolk ewes, with good bags, at 36s. 6d., Mr. J. Toller taking another pen at 32s.

Mr. Carey Cole's Hampshire Downs.

The annual letting and sale of ram lambs at Winterbourne Stoke has long since become one of the chief events in the Hampshire Down world, and that which took place on the 3rd inst. was a record one so far as this particular flock is concerned. The ninety grand lambs placed in the ring were probably the best lot ever produced by Mr. Coles, and the result was therefore fully merited. The large company of breeders from all parts of the country, fully testified to the high esteem in which the flock is held. As usual, an excellent plain luncheon was taken of, at which Mr. George Blake ably presided, the customary loyal and other toasts being duly honoured.

Business commenced with the letting of eight ram lambs, and of these Nos. 1 and 2, the twin produce of a favourite ewe in the flock, realised no less than 325 guineas, Mr. J. Flower securing No. 1 at 205 guineas, and Mr. A. F. T. Drake No. 2 at 120 guineas. Mr. Dibben hired No. 3 at 24 guineas, Mr. Lambert No. 4 at 45 guineas, Lord Rothschild No. 5 at 95 guineas, the Marquis of Winchester No. 6 at 92 guineas, Mr. Holman No. 7 at 54 guineas, and Mr. G. Judd No. 8 at 30 guineas, the average being £82.

Of the eighty-two selling lambs, Mr. C. B. Big secured No. 15 at 60 guineas, Captain Morrison's agent buying at 40 guineas, 39 guineas, and 13 guineas, Mr. Holman at 24 guineas, Mr. B. Hunbury at 23 guineas and 20 guineas, Mr. Hurford at 31 guineas, Mr. J. Brown at 23 guineas and 22 guineas, Mr. T. N. Coles at 18 guineas, Mr. R. E. Coles at 17 guineas, Mr. Calker at 10 guineas, Mr. A. Elwells at 16 guineas, Captain Lano at 21 guineas, 13 guineas, 12 guineas, and 10 guineas, Mr. J. T. Gay at 15 guineas, 13 guineas (twice), and 8 guineas, Messrs. Inkpen at 13 guineas (twice), the Hon. Louis Greville at 15 guineas, Mr. Molyneux (for Mr. W. H. Myers) at 40 guineas, 39 guineas, and 13 guineas, Mr. Lunn (for Lord Ashburton) at 23 guineas, 15 guineas, and 14 guineas (twice), Mr. Kerr (for Mr. H. C. Stephens) at 36 guineas, Mr. Ovey at 39 guineas, Mr. Harding (for Sir W. G. Pearce) at 42 guineas and 40 guineas, Mr. Fridly at 11 guineas, Mr. J. E. Rowlands at 18 guineas and 12 guineas, the Marquis of Winchester at 21 guineas, Lord Wolverton at 24 guineas, and Mr. G. C. Waters at 16 guineas. Every lot was disposed of at the satisfactory average of £21 10s. per head.

Messrs. Treadwell's Oxford Downs.

Messrs. Treadwell's flock of Oxford Downs is well known throughout the country for its high-class breeding and success at shows, so that the large attendance at the annual sale held at the Miel Farm, Upper Winchendon, was only to be expected. Messrs. Paxton and Holiday were the auctioneers, and they brought an excellent lot of rams under the hammer. Mr. J. T. H. Hobbis, Maisey Hampton, paid the top figure, namely, 51 guineas, Miss Alice de Rothschild took one at 21 guineas, Mr. Hawkins, London, another at 27 guineas, Mr. Hawkins, Bedford, one at 22 guineas, and Mr. Horlick, Cheltenham, another at 21 guineas, whilst the other prices ranged from 8 guineas to 11 guineas. The average of the fifty-eight lots was £12 13s. 3d. The top last year, when forty-nine rams were sold, was an average of £16 19s. 9d. In 1904 the average was £14 19s. 7d.; in 1903, £11 12s. 2d.; and in 1902, £10 7s. 7d. It will therefore be seen that although the average worked out at less than last year, it exceeded that of the two previous years, and was therefore fairly satisfactory.

Lockerbie.

Messrs. R. Harrison and Son's opening sale of sheep and lambs in connection with their Lockerbie auction mart took place on Thursday, when the consignments numbered 2,550 feeding sheep and 11,500 half-bred lambs. The stock was presented in good bloom, and the lambs generally were in better condition than last year. There was a large attendance of buyers from the southern parts of Scotland and northern and midland districts of England. The sale opened with feeding sheep, and these were quickly bought up at a rise of 2s. to 3s. on the corresponding sale of last year. For lambs a very strong demand prevailed, the best lots making 35s. to 42s., the latter figure being obtained for three lots, two of Oxford cross lambs and one of half-breds. Prices may be quoted from 5s. to 6s. higher on the year.

Newtown St. Boswells.

The annual "Lamas" lamb sales within the Newtown St. Boswells auction marts, and which are the most extensive of the yearly series were held there on Thursday, when there were brought under the hammer at the two enclosures a grand total of nearly 30,000 lambs of various classes. Buyers were present in large numbers, and an active trade was experienced, the stock, quality considered, selling quite as well as at the July sale. Messrs. John Swan and Sons Ltd., brought under the hammer about 21,000 lambs, and the top price realised was 47s. 9d. per head, got for a very choice lot of cross-Oxfords from Wester Ulston, the purchaser being Mr. J. A. Howie, The Grange, Kinross, Fife; and another lot of the same class and from the same place sold at 38s. 9d. apiece to Mr. James Wood, Sherry Hatton. The second highest price was made by the Bettyfield cross-Oxfords, which sold at 40s. 9d. per lb. Boazman, Kelso; and Mr. Shanks, Chollerford, got the Smallhorn Mains consignment at 38s. apiece. For three-quarter breeds the price list was headed by the Roxburgh Barnes lot, which were bought at 39s. 6d. per head by Mr. Ridley, Chollerford; other good lots of the same class from Bowerhouse and Bettyfield selling at 37s. 6d. and 37s. 3d. per head respectively.

Messrs. A. Davidson and Sons' catalogue included about 8,000 lambs of different classes and some 200 feeding sheep. The highest price of the sale was 41s. 6d., realised for a remarkably good lot of three-quarter breeds from Friarshaw, which sold to Mr. Young, Chester-le-Street. A lot of very nice cross Oxfords, consigned by Mr. Cree,

Whitelee, St. Byswells, brought the best price in their class, viz., 33s. 9d. per head, at which figure they were taken by Mr. Shanks, Chollerford, who also got the Millmacton consignment at 33s. 6d. apiece. Half-bred welder lambs sold up to 32s. 6d. in the case of this Bowsbank lot.

Blandford.

The great summer sheep fair at Blandford was held on Thursday, when some 6,000 sheep and lambs were present. Down ewes ranged from 42s. to 47s. 6d. for 3½-ging lots; two-tooth ewes, 52s. to 55s.; grazing ewes, 31s. 6d. to 41s.; very fresh ewes, 45s. to 47s. 6d.; best Down wether lambs, 40s. to 52s. 6d.; seconds, 27s. 6d. to 38s.; store lambs, 30s. to 38s.; mixed Down lambs, 23s. 6d. to 32s.; cross-bred lambs, 23s. 6d. to 32s. Ram lambs sold well, the best making 15 guineas to 32 guineas, others 4½ guineas to 12 guineas.

Lindfield.

The well known and popular sheep fair at Lindfield, noted for its supply of Southdown sheep, took place on Wednesday, and was very largely attended, but the supply was some 4,000 less than last year. There were 6,798 lambs, 800 tegs, and 570 ewes, a total of 8,168, against 12,267 last year. Trade was not brisk, and prices were slightly down in comparison with last year. Some of the flockmasters did better than they expected, and some realised their last year's figures, but generally spiking quotations were down. The top price ascertained was 33s. for best lambs, ranging down to 23s., and lower for culls. Tegs sold from 45s. to 50s., and ewes from about 40s.

Dorchester August Fair.

Dorchester August Fair took place on the 4th inst. in favourable weather and was largely attended. Messrs. T. Eraser and Son and Messrs. H. Duke and Son held their customary sales, and they brought some splendid sheep under the hammer. Trade was good for horn ewes and also for Down wether lambs, but horn wethers and horn lambs met a very dragging trade at prices scarcely so good as of late. Best draft horn ewes sold at from 47s. to 53s. 6d.; two-tooth ewes, 53s. to 58s.; grazing ewes, 38s. 6d. to 41s.; couples, 50s. to 62s.; wethers, 41s. to 33s.; wether lambs, 31s. to 35s. 6d.; cross-bred lambs, 23s. 6d. to 29s. In Down sheep draft ewes made 41s. to 45s. 6d.; grazing ewes, 31s. to 33s. 6d.; couples, 45s. to 50s.; wethers, 38s. to 43s.; wether lambs, 27s. to 31s. 6d.; cross-bred lambs, 27s. 6d. to 23s. 6d.; mixed lambs, 23s. 6d. to 23s. Southdown wether lambs made up to 33s. 6d. Dorset Down rams made from 4 guineas to 10 guineas, though Mr. Henry Duke, of Mirtinstown, who adopted his accustomed method of offering his lambs shorn, obtained 15 guineas and 17½ guineas. A few Hampshire Down rams were also offered and sold up to 6½ guineas.

Mr. J. H. Dibben's Hampshire Downs.

The annual letting and sale of the first selection of ram lambs and ewe lambs from Mr. J. H. Dibben's well-known Bishopstone flock took place at the Market House Yard, Salisbury, on Tuesday, when eighty excellent lambs, two shearlings, and one three-shear were submitted by Messrs. Waters and Rawlence. The catalogue commenced with eight lambs to be let, Mr. H. Waters (for Lord Lawrence) hiring No. 1 at 11 guineas; Mr. C. J. Waters, No. 2 at 10 guineas; Mr. J. K. Waters, No. 3 at 12 guineas, No. 7 at 8 guineas, and No. 8 at 13 guineas; Messrs. S. Parsons and Son, No. 4 at 10 guineas; Mr. C. Coles, No. 5 at 23 guineas; and Mr. C. J. Ball, No. 6 at 29 guineas; average, £15 2s. Of the selling lambs, Mr. W. H. Cobb bought at 15 guineas; Mr. W. H. Brown, at 11 guineas; Mrs. Follitt, at 18 guineas, and 10 guineas; Mr. J. Flower, at 15 guineas; Mr. Hitchings, at 17 guineas and 8 guineas; Mr. Nosworthy, at 13 guineas, 10 guineas (twice), and 9 guineas; Mr. Jno. Stevens, at 18 guineas and 17 guineas; Mr. Jno. Sprake, at 15 guineas and 12 guineas; Mr. Maslen (for Sir R. N. Rycroft, Bart.), at 12 guineas and 10 guineas; Mr. H. Waters, at 17 guineas, 10 guineas, and 13 guineas; Mr. C. J. Waters, at 17 guineas, 12 guineas, and 10 guineas; Mr. Warner (for Colonel Hanington Lee), at 15 guineas, 11 guineas, 10 guineas, and 9 guineas; and Mr. B. J. Waters, at 18 guineas. Other purchasers paid up to 11 guineas, and the total average of let and sold worked out at £11 10s. per head.

The Cocum Hampshire Downs.

The twenty-fifth sale of Hampshire Down ram lambs, belonging to Mr. G. Judd, of Cocum Farm, took place on the 3rd inst., and, as usual, attracted a very large company of breeders, the quality of the animals having earned for the flock a widespread reputation. The lambs offered on the present occasion were of excellent quality, showing the superior type and character of the highly-bred Cocum flock; in fact, the auctioneer, Mr. James

Harris, said he considered it was one of the best lots, if not the best, that he had offered there. The proceedings commenced with the letting of six ram lambs, and the first lamb to enter the ring was a splendid animal, with good body and general character. Bidding started at 10 guineas, but it quickly rose to 50 guineas, when it was let to Mr. J. Flower, of Chilmark. The next one was secured by Mr. Falconer, of Long Sutton, for 30 guineas; the third to Mr. Donald Nicoll for 15 guineas; and the fourth to Mr. T. Lavington at 16 guineas. The remaining two were withdrawn. Mr. Harris then offered for sale 100 fine ram lambs, all of which were sold. The top price was fetched by a fine animal, which was secured by Mr. A. E. Hayter for 16½ guineas, while the ram owned by Mrs. Judd was bought by Mr. Ovey for 16 guineas, which the auctioneer declared was to go towards a holiday with her husband. One ram fetched 12½ guineas, two made 12 guineas, another one 11½ guineas, and another 11 guineas, and others made prices ranging from 5 guineas to 10½ guineas. Altogether the rams made an average price of a little under 29, which was most satisfactory. At the end seven shearing rams were sold, and prices for these ranged from 6 guineas to 7½ guineas.

Mr. Lambert's Hampshire Down.
The twenty-first annual sale of Mr. Lambert's Hampshire Downs, comprising eighty Hampshire Down rams and ram lambs, took place on Thursday in a field close to the railway station and cattle market at Cambridge, the auctioneers being Messrs. Chalk. There were eight lambs let for the season, which averaged £12 18s. 7d. Mr. Carey Coles, of Winterbourne, securing Lot 1 for 25 guineas. The other lots of these lambs were secured by Messrs. Jas. Welch, Woods, Goodchild, and H. J. Briggs. Fifty-two ram lambs were then sold, and the highest price was 17 guineas, the Rev. C. H. Brocklebank paying this sum. The average price for the whole of the sale worked out at £8 7s. 10d.

Mr. E. Ellis's Southdowns.
One of the most important sales of Southdown sheep that has taken place for some time was held on Wednesday, when the entire flock belonging to Mr. E. W. Ellis, of Summer-bury, Shaftford, Guildford, was brought under the hammer by Messrs. Stride and Son, Chichester, in conjunction with Messrs. Stride, Son, and Ellis, of Guildford.

Having taken as his model in breeding the real true Southdown type, Mr. Ellis was one of the most successful exhibitors at all the great shows, as well as at the great exhibitions of the United States, Canada, and France. The flock, which was established in 1879, comprised 630 head, and all were brought out in the best condition. There was naturally a very large company present at the sale, and bidding proved brisk, some satisfactory prices being realised, although sold without reserve.

The shearing rams came in for a good deal of attention, and sold at high prices, the representative of H. M. the King paying 70 guineas for one; Sir J. Gooch, Wrentham, Suffolk, bought one at 65 guineas; Messrs. Ellis Bros., New Zealand, one at 50 guineas; Mr. Davenport, Northumberland Avenue, London, one at 46 guineas; Earl Manvers, one at 42 guineas; Mr. Jeremiah Colman, Gatton Park, one at 35 guineas; and one at 25 guineas; the Earl of Suffolk, one at 25 guineas; Mr. E. Carter, Ryde, Isle of Wight, one at 25 guineas; Mr. J. R. West, one at 27 guineas; and others were sold at prices ranging from 17 guineas to 10 guineas each. Four-teeth rams made up to 62 guineas, this sum being paid by Sir Julius Berner, Bedford, whilst two others went at 20 guineas, one at 22 guineas, and others at from 10 to 14 guineas each. As to the ram lambs, the Duke of Devonshire bought one at 38 guineas; Messrs. Ellis Bros., one at 30 guineas; Mr. Cazelet, Tonbridge, purchased five, including first prize winner at Royal Show, Royal Counties Show, Tunbridge Wells Show, East Kent Show, at £14 each; five at £12 each; and others up to £6. Messrs. Ellis Bros., New Zealand, five at £6 each. Earl Manvers secured five, including first prize winner at the Royal Counties, the Royal East Kent, and Tunbridge Wells Shows, at £6 15s. each, and five others at £6 5s. each. Messrs. Bowron, Sevenoaks, paid £7 each for five, and others made up to £6. Four-teeth ewes: His Majesty the King bought five, including second prize winner at Royal Counties Show last year, at £5 each, and the Duke of Richmond and Gordon five at £6 5s. each, others selling up to £5 15s. Six-teeth ewes: His Majesty the King bought five, including winners at East Kent, Tunbridge Wells, and Sussex County Shows, at £15 each; the Duke of Devonshire five at £10 each; Earl Manvers five, including two winners at Tunbridge Wells and Sussex County, Bath and West of England Shows, at £11 10s. each; and others made from £4 to £5 10s. Full-mouthed ewes made £3 10s. to £11; draft ewes up to £4 5s.; and ewe lambs to £5 each.

Oxford Fair.

Oxford Ram Fair took place on Wednesday in brilliant weather and was very largely attended, whilst the supply consisted of about 1,000 rams and 4,000 ewes, chiefly Oxford Downs, but Hampshire Downs were also well represented. Trade was very satisfactory throughout, and for the rams high figures were reached in several instances. Messrs. Franklin and Jones achieved the distinction of securing the highest bid of the day, that of 57 guineas, given by Messrs. J. and S. Trentwell, Upper Winchendon, for a grand shearing from the flock of the late Mr. John Worley, of Brize Norton. There was an exceptionally brisk trade for medium-priced shearing rams and ram lambs, particularly Oxford Downs, and purchasers for these included gentlemen from Perth (West Australia), the Argentine, and Germany.

Messrs. Franklin and Gale's consignments were somewhat larger than in the past few years, the entries comprising some 280 Hampshire Down rams and ram lambs from the flocks of several well-known breeders; also upwards of 1,000 stock ewes from flocks in the district, and in addition to this they were instructed to conduct the dispersal sale of the renowned Shifford flock of Hampshire Downs, comprising 181 stock ewes, 80 choice two-tooth ewes, and 64 matching ewe lambs.

Trade for the better specimens of the ram lambs was decidedly brisk, and with very few exceptions the smaller ones were cleared at fair prices. Amongst the stock ewes and lambs there was good competition, and a good trade prevailed all round.

The sales opened with a selection of 40 ram lambs from the flock of Mr. R. L. Ovey, Harnes,

Henley-on-Thames, which were all sold at prices satisfactory prices, those lots from registered flocks creating the keenest competition. Four two-tooth ewes from the flock of John Thomson, Esq., Woolpery, made 55s., full-mouth ewes from the same flock, 43s. to 50s.; two-tooth from the flock of Sir A. Henderson made 19s. and 56s., full-mouth ewes, 41s. and 46s. Mr. R. L. Ovey's full-mouth ewes made up to 54s. Two-tooth ewes from the flock of the Hon. D. P. Bouverie reached 53 and 51s., four-tooth 54s. and 53s., six-tooth 48s. to 54s. Forty-five full-mouth ewes from the flock of A. Dore, Esq., Shilton, made 70s., 71s., 72s. Full-mouth ewes from other flocks reached 49s., and lambs reached 17s.

The dispersal of the Shifford flock, as a matter of course, attracted considerable attention, and some high prices were made; 41 draft ewes made from 49s. to 45s.; 30 full-mouthed ewes, 45s. to 59s. The six-tooth ewes were much admired, and two lots were purchased for the Hon. D. P. Bouverie at 70s. and 65s., while other pens made 51s. to 55s. Amongst the four-tooth ewes one pen reached 71s., Mr. A. C. Hall being the purchaser, and another pen was sold to the Hon. D. P. Bouverie at 61s., others making 51s. to 58s. The two-tooth ewes also made good prices, 82s. being given by Mr. Slocock, 75s. by the Hon. D. P. Bouverie, and 70s. by Mr. A. C. Hall. The ewe lambs realised 69s., Mr. A. C. Hall being the purchaser, while others made up to 55s.

Messrs. Paxton and Holiday, as usual, had an excellent lot of drafts from several well-known flocks, among them being the following: Sixty ram lambs, the property of Mr. G. Adams, Faringdon, averaged £11 13s. 8d., the best prices

MR. J. FLOWERS'S FIRST PRIZE HAMPSHIRE DOWN RAM, at the Royal Agricultural Society's Show at Derby.

ranging up to 5 guineas. Fifty ram lambs and 1 shearing from the flock of John Thomson, Esq., as usual attracted considerable attention, and biddings were freely given, 2 lambs making 10 guineas and several others nearly reaching this price, every lamb being sold with an average of £5 11s. 10d. The selection from Mr. H. L. Cripp's flock comprising 40 ram lambs and 7 shearlings were next offered, and nearly every one was disposed of at prices which reached 9 guineas in the ram lambs, and 13 guineas in the shearlings, with an average of £5 15s. 6d.

The next selection offered was 30 ram lambs and 4 rams from the flock of Sir A. Henderson, Bart., 14 guineas being reached, while 5 others made 9, 10, and 11 guineas, and top average of the day, viz., £6 10s. 8d. was secured. Thirty ram lambs and 2 shearlings from the flock of Basil Hanbury, Esq., Kingston, Warwick, reached 7½ guineas, with an average of £4 8s.

Mr. A. C. Hall's selection of 20 ram lambs was keenly competed for, 13½ guineas being reached, many making 5 guineas, 6 guineas, and 6½ guineas, the average being £6 3s. 10d. Twenty-five ram lambs and six shearlings from the flock of Sir W. G. Pearce, Chilton Lodge, Hungerford, were next offered, and made an average of £4 5s. 1d. The selection from the Hon. D. P. Bouverie's flock consisting of 25 ram lambs and two shearlings sold at an average of £3 10s. 6d., one shearling making 26 guineas, and the other 10 guineas. Fifteen ram lambs from the flock of A. Dore, Esq., Shilton, sold readily, 7 guineas being reached, and the average was £4 10s. 3d.

The sale of stock ewes and store lambs was unusually well attended, and every lot was sold at

being 22 guineas and 20 guineas, Poles, Brewster, and Co., for the Argentine; 18½ guineas, Mr. A. Bennett, East Dereham, and 17 guineas, Mr. J. Matthews, Bristol, and Mr. W. Arkell, Kempford. Others made up to 15½ guineas. Thirty-five ram lambs, the property of Mr. S. W. Jeffreys, Black Bourton, Faringdon, averaged £9 5s. 10d., 15 guineas being given by Mr. F. Faulkner, of Kempford, and 13½ guineas by Mr. H. Shacklock, Mansfield; others selling up to 13 guineas. Of the fifteen down ram lambs sent by Mr. W. A. Troweek, Ryne Hill, Chipping Norton, the highest price was 7½ guineas, which was also the average. Twelve Down ram lambs and eighteen shearing rams from the flock of Mr. E. Gillett, Bampton, averaged £7 10s. 8d., the highest price for a ram lamb being 6½ guineas, given by Mr. T. May, Baynards Green; for the shearlings the highest price being 10 guineas, given by Major Knox, Morden, in Marsh. Twenty-eight shearing rams from the Heythrop flock of Mr. Albert Bessley, Chipping Norton, realised £11 12s., 30 guineas being given by Mr. Overman, Norfolk, who also gave 28 guineas for another, whilst Mr. T. A. Barton, Norfolk, gave 22 guineas, and Mr. H. H. Durlington, 17 guineas.

Twelve shearing rams from Mr. H. W. Stulzow, Banbury, were submitted, and one made 17 guineas (Mr. J. W. Lowe, Ertington, and Mrs. Thompson, Bedford); another, 16½ guineas (Mr. Graham); and others up to 14½ guineas, the average working out at £12 10s. each. The forty-five shearing rams sent by Messrs. J. Bryan and Son, Southleigh, Witney, were considered to be the best lot of Oxford Downs in the

fair, being a good matchy lot. The highest price was 40 guineas, given by Mr. F. J. Wildon, of Wootton, Oxon., whilst 16 guineas was given by Mr. Gask, of Northleigh, and Mr. A. Brussey, and others sold up to 14 guineas, the average being £12 8s. Ten shearing rams, bred by the Earl of Camperdown, sold up to 8 guineas, and averaged £7 12s. 3d.; whilst ten ram lambs from the Hon. R. Hardinge, Burford, averaged 5 guineas.

Twenty-five breeding ewes, fifteen shearing ewes, and twenty ewe lambs, the property of Mr. R. C. Swan, sold in consequence of Mr. Swan having disposed of his estate, were a good type of the Oxford Down, and realised very satisfactory prices. Twenty ewe lambs were sold to Mr. Watts, of Wansford, at 50s.; fifteen thieves were purchased by Dr. Harley, of Bitchley, Mr. Dewhurst, of Poulton-le-Fylde, and Mr. Ridley, of Bridgnorth, at an average of 70s.; twenty-five ewes were sold to Mr. Ridley, Dr. Harley, and Mr. Watts at an average of 65s. Ten Oxford Down thieves from the flock of Mr. W. A. Tweedie, of Chipping Norton, were sold to Mr. Ridley, and the executors of Mr. T. Sirett, of Middle Aston, at an average of 57s. Messrs. Franklin and Jones' entry comprised nearly 3,000 stock ewes, thieves, store lambs, and Oxfordshire and Hampshire Down ram lambs, forming a record as regards this firm's sales. A very large number of buyers supported the general sale-rings, and, on the whole, excellent business resulted. The rams came from the following:—Thirty from the flock of Mr. A. H. Wilden, Dorford Park Farm, Woodstock; highest price, 14 guineas, purchaser, Mr. Gooch, W. Australia, thirty sold average 5 guineas. Forty-four from the flock of the late Mr. John Worley, Brize Norton. Every lot sold. Highest price, 57 guineas, purchased by Messrs. J. and S. Treadwell, Winchendon; average, 12 guineas. Amongst this consignment the figures reached were 24 guineas, Mr. Case, Bertram Abbey, Norfolk; and 20 guineas, Mr. H. Stigloe, Adderbury. Ten from the flock of Mr. William Arkell, Kempford, Fairford; highest price, 6 guineas, Rev. C. R. Powys; average, 5 guineas. Thirty from the flock of the Rev. C. R. Powys, Rofford; highest price, 5 guineas, at which figure several ewes sold; average, 4 guineas. Twenty-five from the flock of Mr. Henry Akers, Black Bourton Manor, near Faringdon; highest price, 18 guineas, given by Mr. Griffin, of Bruern Grange, Milton-under-Wychwood; average, 9 guineas. Twenty-five from the late Mr. Percy Timms, Hordley, Woodstock; highest price, 10 guineas, given by Mr. Arthur Bartlett, Bletchington; average, 4 guineas. Mr. Thomas Smith, Campfield, Woodstock, sent thirty, and a number of thieves were sold at 4 guineas, the whole lot averaging about 4 guineas.

1,625 stock ewes, thieves, and store lambs, comprising drafts from various well known herds, were then offered by Messrs. Paxton and Holiday, and they sold well at the following prices:—Ewes, 30s. 6d. to 54s.; thieves, 45s. 6d. to 58s.; and lambs, 30s. to 48s. An important disposal was the sale of Mr. Herbert Parsons', Elsfeld, flock, comprising eighty thieves, which made 51s. to 52s. 6d.; eighty four-tooth ewes, sold at 46s. to 48s. 6d.; and 140 six-tooth and full-mouth ewes, which realised from 38s. to 45s. 6d.

Mr. A. F. Hobbs had about eight Oxford Down ram lambs for disposal, comprising fifteen from the Right Hon. Lord St. Aldwyn, William-strip Park, Fairford; twenty-five from Mr. W. J. Reading, Langford, Lechlade; twenty from Mr. John White, Ham Court Farm, Bampton; twenty from Mr. J. R. Akerman, Grafton, Camfield. Lord St. Aldwyn's averaged 5 guineas; Mr. Reading's made up to 14 guineas. The average for Mr. John White's entry was £7 1s.; the highest price, 15 guineas, being paid by Mr. Henry Overman, of Weisshaus, Norfolk. Another went for 13 guineas to Mr. Tweedie, of Chipping Norton; Mr. Akerman's consignment averaged £5 10s.

Mr. James W. Taylor submitted a score of pure-bred Oxford Down ram lambs belonging to Mr. James Herlick, of Cowley Manor, Cheltenham, and being a very nice lot met with a good trade. The highest price realised was 11 guineas, that sum being given by Mr. Gooch, of Perth, Western Australia, who is starting an Oxford Down flock there. The average of the twenty sheep was 7½ guineas.

Chichester.

Messrs. Stride and Son held their great annual show and sale of Southdown sheep at Chichester on Thursday last, when about 5,500 ewes and lambs and 500 rams and ram lambs were entered. The auctioneers offer for competition three challenge cups for fifty regular draft ewes, for the best five yearling rams, and for the best five ram lambs, and it is evident from the large entries secured for these cups that the institution of such competitions has been fully appreciated by the Southdown breeders. For the Regent Duke Cup, where less than 500 ewes were entered, ten lots of fifty with grand class, and to win in such a class is an honour any breeder can well be proud of. His Grace the Duke of Richmond won the cup with a grand pen, which were subsequently purchased by Mr. J. Jones to go to North Wales, where he will mate

them with some notably good rams purchased from the Duke of Devonshire. Mr. B. Tribe won the second or run place in the cup competition, and Mr. John Tompkins was the hc. The yearling Ram competition was equally keen, no less than thirteen lots of five were in competition, and here again the unquestionable merit and quality of the Goodwood flock again secured the lead, and first honours were awarded that splendid pen, one of which, fourth in its class at the Royal Show, was sold in the sale for the high price of 105 guineas to go out to Messrs. Lavin and Company, Wellington, New Zealand. The Earl of Cadogan's choice pen were made rn, and an he recognised the grand merit of Mr. J. Tompkins' pen that when sold realised the second highest average of the sale. The last-mentioned breeder won with a real good pen of ram lambs the challenge cup, and the award was in a striking degree confirmed by the capital average these ram lambs realised when sold.

The general demand for the ewes was perhaps slightly less than in the previous year, but fully 5,000 head were sold, so that it may be said that practically the whole of those offered were disposed of. The Duke of Richmond's yearling ewes made from 90s., the top price of the age, and the same vendors' challenge cup winners made the top price for the draft ewes, 61s. The Earl Manvers, the Hon W. Portman, and many of the leading Southdown breeders were included in the purchasers' list.

The supply of rams and ram lambs was much in excess of the demand, with a result that a larger proportion than usual were passed, and as a result a lower average was realised than the excellent one made the previous day at Mr. E. Ellis' dispersal sale led one to anticipate.

The yearling rams were sold first, and the start was a poor one, two only of Mr. Sawtell's being sold at an average of £4 4s. The Duke of Richmond's followed, and here the 105 guineas paid for No. 1 helped the average, so that the ten sold made £22 12s. 6d. The other leading prices were: 24 guineas, Mr. T. W. Ashton, 21 guineas to Mr. Story, 14 guineas, Mr. W. P. Hampton (two), and 10 guineas to Sir Nigel Kingscott, Lieut. Colonel W. W. Hammond (two), twenty-five rams at £8 18s. 1d. His best prices were 25 guineas to Mr. Hale, 12½ guineas to the Duke of Norfolk, who also purchased two others, 12 guineas to the Hon W. Portman, 11 guineas to Mr. Bird, 10 guineas to Sir Nigel Kingscott, &c. Lord Northbourne sold sixteen at £7 4s. 4d., best prices: 12 guineas to Mr. Bailey, 9½ guineas to Mr. Bradbridge, and 9 guineas to Messrs. Pasmore and Gorringer. Mr. J. Tompkins had five present which were in good demand. The Duke of Portland took two 25s and 11½ guineas, Mr. Singer one at 24 guineas, Lord Northbourne one at 13 guineas, Mr. Elmer Speed one at 14 guineas, and the other went to Mr. Ashton at 10 guineas, making an average of £17 10s. for them. The Earl Cadogan's five averaged £9 0s. 7d.; 20 guineas to Sir T. Gooch was the best price. Mr. A. Heasman averaged 7 guineas for eight, Mr. Dare paying 13 guineas, the top price. A grand two shear from the Duke of Northumberland's made 10 guineas, a poor price for so good a ram, to Mr. Fitzwater Plumptre. Mr. C. H. Barnes found good demand for his ten, which averaged £8 6s. 10d. The Duke of Richmond paying 23 guineas for one, and Mr. Stanford 10 guineas for another. The Duke of Devonshire's consignment sold well, averaging 9 guineas for nine, two making 12 guineas each to Messrs. Bailey and J. Jones, the latter taking at this low figure the first prize ram at the Bath and West of England Show at Swindon, and the remainder of the consignments realised such prices as brought the aggregate total of the sale to £1,368 11s. 6d., which gives an average of £7 1s. 6d. for the 176 rams sold at the auction, a considerable number of those passed in the auction ring were sold after, and thus it is computed that somewhat more than 200 were disposed of. The ram lambs sold late in the day were not in so good demand as last year, the three best lots were the following:—Mr. J. Tompkins' eleven that averaged £9 4s. 2d., Mr. Singer paying 16 and 13½ guineas for two, and the Duke of Richmond 13 guineas for another; Mr. A. C. Paul's, whose ten averaged £6 10s. 9d., making 8½, 8, 7 guineas, &c.; and Mr. G. Pells, whose ten made £3 16s. 4d., Mr. Stone taking two at 10 guineas, the remainder making such prices as gave an average of £4 11s. 6d. for 101.

On the same day Messrs. Hobson Bros held their seventeenth annual ram sale in the Chichester Market, and satisfactory prices were realised. The highest price obtained was 25 guineas for a ram belonging to Mr. A. Heasman, Court Wick, Littlehampton, which was bought by the Duke of Devonshire. This ram was, however, not qualified for a prize, value £10, pre-ented by the auctioneers to the owner by the shearing ram, realising the highest price, and the award therefore went to the Duke of Devonshire for a shearing ram, which was sold for 21 guineas to Mr. Maitland, of Friston Place, Eastbourne. One of Earl Cadogan's lot realised 11 guineas; Mr. J. E. Allen, Canter-

bury, got 16 guineas and 13½ guineas, the buyers being respectively the executors of the late Col. McAlmont and the Earl of Ellesmere; the Duke of Richmond and Gordon sold Mr. Wyatt, Cissbury, Worthing, two at 14½ guineas; Mr. Searce Dickens one at 14 guineas, and Mr. Drummond one at 10½ guineas; whilst the Duke of Devonshire, in addition to the 21 guineas mentioned above, sold Mr. G. Peel, Wymmering, Hants, one at 15 guineas; Mr. F. W. Rudwick, Wittering, one at 12 guineas, and Mr. Drummond, Hythe, Southampton, one at 11½ guineas. Numerous other lots from various consignees and including those mentioned sold up to 10 guineas.

Cirencester.

Mr. J. W. Taylor brought under the hammer thirty Oxford Down shearing rams from the flock of Mr. James Horlick, of Cowley Manor, and they sold readily, the satisfactory average of £11 18s. 6d. for the thirty rams being obtained. The highest price was 24 guineas, paid by Mr. Kennedy, who also gave 19 guineas; others being sold at from 7 guineas to 13 guineas each. Mr. Taylor also submitted eighteen exceptionally good Cotswold rams from Mr. Charles Barton, of Fyfield. One of them made 30 guineas to Mr. J. P. Wakefield, of Signett Hill, and Mr. J. Fowler, of Aston, and Mr. E. Craddock, of Eastington, bought others at 12 guineas each, but the rest did not meet with the demand they deserved. Mr. W. Houlton, of Broadfield, sent fifteen Cotswold shearing rams, and Messrs. W. T. Garne and Son, of Aldworth, bought one at 26 guineas; Mr. Davis Brown, of Norfolk, bought another at 15 guineas; and Mr. F. W. P. Matthews, of Fyfield, Chipping Norton, was a purchaser of a third at 14 guineas, the average being about 9 guineas each.

Mr. C. F. Moore also sold a number of choice lots as follows:—Cotswold shearing rams for Mr. Russell Swanwick, of the Royal Agricultural College Farm, average 45 12s., top price 8 guineas; Mr. J. Fowler, Aston, sixteen Cotswold ram lambs, average 4½ guineas, top price being 6 guineas; Mr. H. Baker, Chedglov, six Oxford Down shearing rams, average £7 9s., top price 10 guineas; and five Oxford Down ram lambs, average £6 15s., top price 9 guineas; Mr. J. H. Large, of Crudwell Manor, Oxford shearing rams up to 11 guineas, and Oxfordshire Down ram lambs up to 5½ guineas.

Cirencester Ram Fair on Tuesday trade was the best experienced for many years past. Mr. A. F. Hobbs, the well-known auctioneer for the district, disposed of fifty-five pure-bred Oxford Down shearing rams bred by and the property of Mr. James T. Hobbs, of Maisey Hampton, Fairford, at decidedly good figures. The highest price realised was 41 guineas, whilst the average worked out at £16 17s. 8d. The ram for which 41 guineas was paid was bought by Mr. Elliott, of Galashiels, who also bought two more at 36 guineas and 25 guineas respectively. Mr. Savage paid 22 guineas for one ram, 21 guineas for another, 20 guineas each for four, while other prices he paid were 18 guineas (two), 17 guineas (two), 16 guineas (two), and 15 guineas, 14 guineas, 13 guineas, and 10 guineas; Mr. McLean, from the Argentine Republic, South America, bought at 12, 11, 13, 12, 9, and 10 guineas; Mrs. Rowe, Windrush, near Burford, paid 18 guineas; and other principal purchasers were Mr. John Bryan, Southleigh, 17 guineas; Mr. T. Rich, Aldsworth, 18 guineas; Mr. R. Hobbs, Kelscott, 27 guineas; Mr. Austin, 21 guineas; Mr. George White, Stratton, 23 guineas and 12 guineas; Mr. Clem Barton, Williamstrip, 18 guineas; and Mr. W. Barton, 22 guineas. Other buyers paid prices up to 14 guineas. The same auctioneer also sold fifteen Oxford Down rams, the property of William Arkell, of Kempford, the average price being £6 15s. 3d., whilst the highest price, 9 guineas, was paid by Mr. Stevens, of Ranbury, and Mr. Charles Barton, for Lord Ledbury. Mr. W. T. Stevens' Oxford Down rams realised on an average £4 15s. 7d.; Lord St. Aldwyn's realised an average of £9 14s. 3d., the highest price being 11½ guineas, paid by Mr. Charles Barton for Lord Ledbury, while Mr. T. Dancer, for Lord Eldon, bought two at 10½ guineas each. The Hampshire Downs, the property of Mr. F. J. Horton, of Uffcot, near Swindon, averaged £5 7s. 9d.

Bicester.

Messrs. Paxton and Holiday held their customary sale of Oxford Down sheep at Bicester Fair on the 4th inst., the catalogue comprising upwards of 2,300 sheep. There was a good attendance, though not so large as usual, and trade was better than for many years past at good prices, ewes making from 25s. to 55s. 6d., thieves 38s. to 50s. 6d., and lambs 25s. 6d. to 46s. In addition to the above, Messrs. Paxton and Holiday submitted six ram lambs, the property of Mr. E. Slater-Harrison. The highest price was 4½ guineas, paid by Colonel Gosling, of Stratton Audley Park, whilst the average was 3½ guineas.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

MAJOR WHYTE MELVILLE was wont to say that the best possible Hunter was a Thoroughbred with brains. It is not my intention to go into the question of the intelligence of the horse in general, or the Thoroughbred horse in particular, on this occasion, but I think we may fairly allow that he possesses as much of the limited intelligence of his kind as any breed of horses. Probably he possesses a little more, for he seems more inclined to assert his independence. There can, I think, be little doubt that Major Whyte Melville's proposition, taken broadly, describes the situation accurately, and Yorkshiremen will remember the magnificent Thoroughbred Hunters which Sir George Cholmley and Sir Charles Strickland used to breed not so very many years ago.

IT may well be asked why others do not follow in the footsteps of these famous breeders, and the answer to the question is that the small breeder has but scant encouragement to do so. The extreme value of the Thoroughbred has been given as a reason why Thoroughbred Hunters are not more extensively bred, but this is only one reason. It is only necessary to look down the sale lists to see that there are hundreds of Thoroughbreds—and not very bad ones either—that are quite within the means of any breeder, and these mares would be more profitably employed in breeding good Hunters than in breeding indifferent selling platens.

IT is a well-known fact that at the Doncaster yearling sales there are a number of yearlings which are sold for 25 guineas and even less, and some of these have developed into fine 14-stone Hunters. I have in my mind now a chestnut mare that cost 20 guineas as yearling at Doncaster—not the price of a good half-bred foal—that made a fine hunter and that is sure to develop into a high-class Hunter brood mare.

NOW there are plenty of mares of this class to be found if they are carefully looked for, but when they are found there is scant encouragement for their owners to try to breed Hunters from them. One breeder, a man who has had considerable experience as a breeder, and who has bred yearlings that have brought big prices, told me the other day that he has a Thoroughbred mare which no man with any knowledge of breeding would ever think of attempting to breed a racehorse from. As he put it, "You might do your best, get the yearling well up and send it up to a good lot, and you would not get the price of the service fee." But the mare would, he thinks, breed a very good Hunter. At any rate, he is quite willing to give her a good trial. But he is handicapped from the very start. Every Thoroughbred sire of any merit has a special fee for Thoroughbred mares the average minimum being 45 guineas. As my friend points out, the average of barren mares is pretty considerable, and his foal may cost him £10 10s. and two years' keep on the mare before ever he sees it, and then he may not be worth much. And this extra fee for Thoroughbred mares obtains with the King's Premium horses as well as with others.

OF course we shall be told that every Thoroughbred mare is the possible breeder of a Derby winner, or, at any rate, of a high-class racehorse. Well, to a certain extent this is true, but only to a certain extent. The twenty volumes of the General Stud Book contain the pedigrees of thousands of horses, but the Fandangos and the Robert the Devils are few indeed. There is a Romance of the Stud Book, and people love to dwell on it, but, taken on the whole, the Stud Book is a record of prosaic facts, not to say stern ones. But even if this possibility were a greater one than it is, it seems a pity that Hunter breeding should be discouraged on account of it, and it also seems unreasonable. Suppose, for example, that a mare of the kind alluded to were by any chance to breed something of exceptional value, the owner of the sire would receive as much or more benefit than the owner of the mare, and his fees would soon rise. Indeed, it would seem to be to the interest of the owners of stallions to encourage the owners of Thoroughbred mares that are useful and sound, though not in the foremost ranks according to the Thoroughbred standards.

THERE has been, during the last few years, a growing custom of crossing Cleveland and coaching mares with Hackney sires, and I am bound to say that very admirable specimens of the harness horse have been the result. That is to say, good geldings which would sell at a good

price. But it is certainly unfair to exhibit horses bred in this way in classes for coaching geldings. The little extra snap of the knee which they get from their Hackney progenitors gives them a pull when shown against Cleveland Bays and coaching geldings, whose forte is shoulder action rather than knee action, especially when the fashion is in favour of the knee and curb chain business, as it is in the present day. Only the other day I saw a class of coaching or harness geldings in which one-half were of the Yorkshire Coach Horse type and the other Hackneys. Indeed, some of the class came out of the Hackney ring. It is, I think, essentially unfair to ask a man to judge such a class. The Coaching Horse and the Hackney have not a single thing in common. In the class in question the judges had not a great deal of difficulty, as the Coaching Horses were of good quality, and were of a fine, commanding type, whilst the Hackneys, with one exception, were moderate movers, and the exceptional Hackney was little if any better than a pony. But if the Hackney had been of a big, outstanding character, if Boquhan Sunrise, for example, had been shown, the task would have been a difficult one. It would have been more, it would have been impossible to judge it and do justice. For if Boquhan Sunrise had won, the Coaching Horse would have been unfairly put back, for he would have been beaten on a point which he could not be expected to possess. And what a noise there would have been had Boquhan Sunrise been put back!

HERE I must apologize to Mr. Buttle for using his fine mare to illustrate a hypothetical case, but it was necessary to take something out of the common to show how unreasonable the classification is that admits of two breeds so diametrically opposite to each other being shown in one class. Of course, when it is a case of the best mare or gelding in single or double harness, it is a very different matter. But in the breeding and young classes it is certainly essential that breeds should be kept distinct. The whole trend of breeding during the last twenty-five years, at any rate, has been in the emphatic type, and this should be kept in view by prize stock committees when drawing up their prize schedules.

I HAVE heard it urged that it does not much matter about mixing the breeds up in classes for geldings, but that is a position which cannot be accepted. All the horses bred cannot be kept entire, and if a breed is worth preserving—and it may be taken for granted that a breed which has existed for generations is worth preserving—some consideration should be shown for the geldings. Besides which, if many shows of geldings and fillies are shown together in the young classes, and I have seen the anomaly of a Royal winner being beaten by a half-bred horse, solely because he had a bit more snap of the knee than she had.

THE Yorkshire Agricultural Society, with the practical insight into the practical minutiae of horse breeding which might be expected from the representatives of a county with which so many horse-breeding traditions are associated, has solved the difficulty by having three distinct classes for three-year-old geldings, one for Coaching geldings, one for Hackney geldings, and one for Harness geldings; and, as at the Yorkshire Show, no horse can be shown in two classes, the arrangement answers very well, and there are no complications. It goes without saying that only horses which are entered in the Stud Books of the respective societies are eligible for the Hackney and Coaching classes. In the Harness classes there are no restrictions.

THE entries in these three classes at the recent show of the Yorkshire Agricultural Society at Middlesbrough are interesting. Of Hackneys there are four, whilst of Yorkshire Coach Horses there are nine. This is highly satisfactory, as showing that there are yet bred a good proportion of high class coaching horses. When we come to the Harness class, we find seven entries, and a very good class they in make. Of these two are by Hackney sires, one is by a Thoroughbred, and two are by Coaching Horses, whilst the pedigrees of the other two are not given, which is much to be regretted. Of those by Hackney sires one is a pure-bred Hackney, and the other is from a famous and well descended Cleveland Bay mare. Of those by Coaching sires one is from a well bred Hackney mare that strains back to Denmark; the dam's pedigree of the other is not given.

A CLASS like this could not fail to be an interesting one, especially as it was judged by the Coach Horse judges, and consequently, to a certain extent, from the Coach Horse standpoint. But the very fact that there was such a

strong class, bred and crossed in so many different ways, is proof sufficient that the Yorkshire Coach Horse is unfairly handicapped when called upon to meet Hackneys or horses that have Hackney blood. If the old Yorkshire Coach Horse lines were insisted upon, things would not be quite so unfair—if stallions, elegance, size, and power received as much recognition as is their due. But now action—and with the modern school action too frequently means snap of the knee, without very much heed being paid to where a horse puts his feet—is the one thing looked at in a harness horse, and under such conditions care should be taken that the Coaching Horse is not swamped by horses with a Hackney cross.

THE LOOKER-ON.

Sale of Hackneys at Monmouth.

The first sale of Hackneys belonging to Mr. W. R. Lysaght, who it will be remembered took over the Amberley Stud Buildings when Earl Llangattock dispersed his Shire stud two or three years ago, took place at Amberley Court, Monmouth, on the 1st inst. in the presence of a large company of breeders and buyers. The animals were a very choice lot, and included a consignment from Mr. F. Wrench, Ballybrack, Dublin. The bidding was brisk, but the sale being unreserved some of the animals went at prices which could hardly be considered satisfactory. On the other hand, one or two very good prices were realized. For instance, Mr. R. Forbes, from South Africa, had to bid 250 guineas before he could secure the brood mare Moss Rose by Chocolate Junior, and for her colt foal by Blaze II. gave 32 guineas, and 185 guineas for Gold Flash by that famous sire Goldfinder VI. Mr. Graves, Cottenham, gave 230 guineas for Mandora, a bay brood mare foaled in 1902, and by the celebrated Rosador; whilst Mr. Smith secured Haleyon, a two-year-old filly by Ganton Duke of Connaught, for his Shirley stud, but not until he had bid 200 guineas. These were the only three-figure prices realised, the other figures ranging from 11 guineas to 78 guineas for brood mares and foals, 21 guineas to 65 guineas for three-year-old fillies, 12 guineas to 52 guineas for two-year-old fillies, 18 guineas to 35 guineas for yearling fillies, 16 guineas to 65 guineas for yearling colts, and 48 guineas to 60 guineas for the two-year-old stallions. A special tandem show team, entered by Mr. James Mitchell, Hereford (by permission), were put up at the end of the sale. They were withdrawn at 200 guineas.

The Londesborough Stud Hackneys.

The sale of a number of Mr. Robert Whitworth's first-class Hackneys drew a large company of breeders and others from all parts of the country to the Londesborough Stud Farm on Tuesday, and a satisfactory sale resulted. Messrs. F. Lloyd and Sons, who were the auctioneers, brought under the hammer between seventy and eighty animals, and they came in for brisk bidding. The best price obtained was 300 guineas, given by Mr. Carr, of Carlisle, for Riot II., a chestnut gelding by Polonus. Mr. Carr also bought Jack Spratt, a three-year-old pony stallion, for 200 guineas, and gave 110 guineas for the five-year-old pony Oak Apple by Forest King. Mr. Howell, of Cardiff, bought four yearlings, the highest priced one being a filly foal by Polonus, and which changed hands at 130 guineas. He also gave 115 guineas for a colt by the same sire, and 72 guineas and 52 guineas for other yearling fillies. Two-year-olds sold up to 52 guineas, three-year-olds to 90 guineas, and brood mares to 68 guineas.

Miss Langworthy bought a five-year-old gelding by Edemynag for 100 guineas, a similar sum being given by Mrs. Hunt for another gelding by the same sire. Mr. Miller, of Edinburgh, went to 160 guineas for a pair of bay geldings, and also gave 150 guineas for two black five-year-olds; whilst Mr. Whitman was another of the chief purchasers of match pairs, he giving 110 guineas for a pair of five-year-old bays and 102 guineas for a four-year-old harness gelding, and 60 guineas for a five-year-old gelding by Edemynag.

The Sedgemere Hackney Stud.

An unreserved sale of pedigree Hackney ponies and a few Shires belonging to Mr. Sam Woodliffe will take place on Thursday at the Sedgemere Stud, Graveley, Great Waltham, Chelmsford, Messrs. H. Manley and Sons, Ltd., Crewe, being the auctioneers. When founding the stud ten years ago, Mr. Woodliffe spared neither trouble nor expense in his endeavours to obtain ponies with pedigrees dipping deep down into the richest and most fashionable strains of pony blood obtainable, with the result that, through judicious crossing, he has bred ponies which combine the very best

FARM MACHINERY and IMPLEMENTS

have for so long been closely identified with the "Mark Lane Express," that the Journal's position as a means of bringing Maker, Agent, and Customer together is unique.

THE 'BIBBY' CAKE IN THE FORM OF 'CAKETTES.'

"Send me two tons of 'they nob's same as Mr. Brown is a using,'" was the colloquial way in which a new customer gave us an order the other day through our Market Representative.

This buyer had often thought he would like to try the "Bibby" Cake, but he belonged to the old school of farmers who are not easily led along untrodden paths.

He had, the previous week, been paying a visit to his neighbour, Mr. Brown who had often spoken favourably to him of our Cake, and on looking over his Stock and noting the extreme handiness of the "Cakettes" for Summer Feeding, he at last resolved to give us a trial order, and did so in the words just quoted.

It was doubtless the good condition of Mr. Brown's Cattle and the manifest handiness of the "Cakettes" which had finally broken down this buyer's conservatism; and now we have received a trial order we shall take good care to retain his business. Our method is a simple one: We put such value into all our Cakes and Meals as will insure the best results obtainable.

THIS IS THE TRUE SECRET OF OUR SUCCESS.

It is, perhaps, hardly needful to point out in this place that the "Bibby" Cake is the most popular brand of Cake that has yet been made, and no other explanation but the one above mentioned will explain this fact.

It is not well, therefore, for buyers to be put off with a Cake which is offered as something "just as good"; it is much better to say to the Cake merchant: "I want 'Bibby,' please," and if he refuse to supply the genuine article, you had better drop us a line, and we will put you in the best way to obtain it.

The "Bibby" Cake has steadily won its way to

THE PREMIER POSITION IN THE PUBLIC FAVOUR,

and of all the Cakes on the market is admittedly the best. In the form of "Cakettes" it is also the handiest; there is this further to be said about it:—the more carefully it is tested against other competing Cakes, the more certainly and with increasing emphasis will be the reply to those who offer a substitute:—"I MUST HAVE 'BIBBY,' PLEASE; THAT IS THE CAKE I WANT, AND I WILL TAKE NO OTHER."

Sole Manufacturers—

**J. BIBBY & SONS,
EXCHANGE CHAMBERS,
LIVERPOOL.**

properties of the parent strains from which they have sprung; in fact, the choicest Old Norfolk blood runs through many of their pedigrees combined with the strains of the Marquis of Londonderry, Sir Walter Gilbey, Sir Gilbert Greenall, Mr. A. S. Day, Mr. Christopher Wilson, Mr. John Jones, Dinarth Hall, and many other famous pony breeders.

The animals now offered for sale include many prospective prize-winners, but Mr. Woodiwiss has for the last few years been content to confine him-

self to breeding only, and has not practised exhibiting. A few animals were, however, exhibited prior to then, and premier honours were secured in both male and female classes at the London and leading provincial shows. The whole of the lots are for unreserved sale with the exception of two, and only a moderate reserve will be placed upon these animals. The Shires included are highly-bred, and include the big weighty stallion Nailstone Orthodox 15742, a prize winner at the London Shire Horse Show.

CATTLE.

Notes and Jottings.

UP to the time of writing little relief has come to the cattle-keeper in the shape of rains; in fact, the situation has become very serious in many parts of the country. Travelling over a great extent of area during the past week in districts where a art there seems absolutely no difference, except on some limited areas where irrigation has been practised, on some very deep soils, and low lying, or otherwise, where the showers that had been so partial had fallen more heavily; for the rest of the matter it may be said without exaggeration that the pastures are completely burned up, the stock drying up in milk and flesh, and the farmers' pockets drying up from the above causes.

ROOTS, too, particularly swedes, are beginning to look a little blue and inclined for mildew. Mangels are a redeeming feature, as these are now swelling out wonderfully, and in most places there is a very good plant. What struck the writer most in very long travel recently as being helpful at this trying time, were the very thick and useful crops of lucerne that were being cut upon lands lying wide apart and varying in the nature of the soil as well as in climatic influences. This succulent and hardy plant is not being grown nearly as plentifully as it might be, with very great benefit. In our own country those who grew it first are still its greatest friends, whilst in Buenos Ayres and the United States it is proving little less than a bank to its supporters, and enabling those countries to produce beef and milk much more cheaply than they otherwise could in spite of favourable conditions.

OCCASIONALLY we hear the weatherwise people in our country saying that the seasons go in cycles of wet and dry, but there is no doubt that the dry cycles become of greater duration and the wet ones less frequent during recent years. In one particular district of the country, the writer was informed recently that the rainfall had been gradually decreasing for over twenty-five years successively, and in that neighbourhood, extending over a great many square miles, the difficulty of finding sufficient water for the requirements of the population and the farms has become a most serious one, and is likely to become intensified as time goes on.

IN addition to the troubles of want of grass and shortness of rain and water, one hears whilst travelling that the abortion scourge is more virulent than ever this year, and the shortage of cattle is very evident as seen from the railways which almost invariably run through some of the most productive valleys in the country where cattle ought to be seen in abundance. It is not enough that our Board of Trade returns should show an increase; they ought to show a sufficient bovine population to be proportionate to the quantity and productiveness of the land of the country. To enable this to be done, it is quite certain we shall have to turn our attention more to the providing of extra or emergency foods.

THESE can only be provided upon mixed or tillage farms, and it is quite reasonable to suppose that the mania for seeding land to pasture has been the cause of a great many needs amongst farmers in all parts of the country. The saving of labour has not been in proportion to the loss in cattle through the smaller quantity of winter food provided. A great deal of land that has been converted into pasture has not turned out at all well or profitable. The first two years most of it is profitable enough, or, at least, yields a plentiful supply of grass or fodder for converting into beef and milk, but after the first two years are gone the quality is lost and much land is worth little or nothing for a period of some years.

NEVER during the present very extensive show season has the tendency on the part of breeders to pay greater attention to the milking properties of their cattle been more marked than during the past fortnight. In each one of the many shows that have taken place, the number of what may be culled dairy cattle, dairy Shorthorns, or whatever we please, has been far greater

in proportion than in any previous season. In deed, it is quite apparent that between the dry season's preventing a supply of succulent food to maintain the milk supply and the increasing demand for an increasing population, cattle that show no inclination to give a good yield of milk have become very much shorter in number.

THE many local and very small shows that have taken place, as well as the county shows of the past two or three weeks, have given a good deal of room for complaint as to the quality of many of these milking Shorthorns and their crosses that have been exhibited. Some of these—indeed a great many—have been simply execrable, and the exhibition of such inferior animals is no benefit to the district from whence they are exhibited. The bad quality as seen in these strongly leads to the conclusion that inferior bulls must have been used, and to a further conclusion on the part of visitors to such shows that it is no use to look for good steers in such a neighbourhood, or for calves for rearing purposes.

THE thoughtful farmer who is bent upon either of the prospects named, and visits a district show where the quality of these, the general cattle of the neighbourhood, is good, at once makes up his mind to attend the auctions or to visit the farms in that district, knowing that he will be able to buy steers or calves for rearing that will pay him for his trouble. They will develop well and cheaply, or at least more cheaply than the bad-bred ones, and when selling time comes, whether they are steers for the butcher or heifers for the dairyman, they are pretty certain to find a market, and at a much better price than the bad-bred ones. How important it is, then, that those farmers who exhibit at these local shows should not do so unless they have stock that are fit to show.

I AM led to make these somewhat adverse remarks from hearing from a farmer the other day that there are many hundreds of far better animals within the radius, some of these small shows are allowed more than those that have been chosen for exhibition. This is not owing to error in judgment, but to apathy on the part of those who own these better animals, but have no energy or enterprise to exhibit them, thus leaving the exhibiting to the keener man, who knowing that the classes will only be moderately filled, simply seizes the opportunity of getting a prize that really ought not to be awarded. As noted above, to show good animals quickly gives an enviable reputation to a neighbourhood, whilst to exhibit bad ones is most damaging.

Sale of Guernsey Cattle at Godalming.

The entire herd of Guernsey cattle, the property of Col. H. W. Shakerley, of Burgate, Godalming, as well as a selection from the first-class herd belonging to Mr. E. A. Hambro's of Hayes Place, Kent, were disposed of on Thursday by Messrs. Thornton and Co. Col. Shakerley has been a breeder of Guernseys for over twenty years, the herd being originally started at Fairlight, near Hastings. Prize bulls have been used and had left very good stock, some of the young animals by Picton, third prize bull at the Royal Show last year, being particularly good. The Hayes Place herd is one of the most celebrated in the country, prizes having been won at all the principal shows, both in the inspection and butter-test classes.

There was a good company, and the animals sold remarkably well, the average for Col. Shakerley's being £24 1s. 2d., and Mr. Hambro's about £18. The first cow, Maid of Calais, made 21 guineas to Mr. W. E. Horne, who also gave 39 guineas for Marie des Prevosts, another of Col. Shakerley's. Mr. J. C. Drew paid 23 guineas for Mr. Hambro's Duchess of Kent, 23 guineas for his Bob 20th, 24 guineas for Ma Charmante 5th, and 31 guineas for Golden May of the Grön 2d, a nice four-year-old cow, the latter being from the Burgate herd. Mr. F. Hargreaves paid 20 guineas for Mr. Hambro's Felice, and 43 guineas, the highest price of the sale, for Col. Shakerley's May Paradox 5th. Beauty of the Knoll, from the

Hayes selection, went to Mr. Twoyoung Parsons at 20 guineas, and also the yearling Golden May of the Gron 3rd at 20 guineas. Hayes Biloq was taken by Mr. Henwood, 31 guineas, and Mr. G. J. Shakerley gave 41 guineas for Maid of Calais 4th, a sweet heifer of his brother's. The thirty-six head realised an average of £21 17s. 3d., and the total of the sale was £786 19s. 6d.

British Pedigree Stock for the Argentine.

The growth and expansion of the live stock industry in Argentina is certainly of a most phenomenal character, and when we hear of one South American estanciero coolly embarking his thousands in the purchase of Shorthorn cattle and Lincoln sheep, with no more ulterior object in view than the improvement of his flocks and herds, it speaks volumes for the optimistic opinions held in that vast country as to the future of the live stock trade.

Mr. F. Miller, so well known in connection with this great industry, has indeed been busy on Mr. Cobo's behalf, and his selections in Shorthorns include Broadhook's Champion, the first

prize bull at Perth, for which 1,500 guineas was paid; Ruddington Prince Christian 8997, bought at the Ruddington sale for 1,100 guineas. This bull is of the valuable Farewell family, so much admired at Mr. Hills' sale, his dam being Countess Farewell 5th, sold for 600 guineas, and whose calf at foot sold for 400 guineas. Mr. Cobo also gets Mr. Deane-Willis' champion bull at Derby Royal—viz., Captain Viceroy—for which £3,000 was paid. Several other bulls, costing from 500 to 1,000 guineas, complete Mr. Cobo's selection, and accompanying these are twenty Shorthorn cows and heifers, costing 300 guineas and upwards.

In Lincoln sheep, Mr. Cobo has also gone for the best, and Mr. Miller's purchases on his account include Mr. Dudding's champion ram and first prize pen of rams at Derby Royal, costing at auction respectively 1,450, 580, 350, 300, 130, and 500 guineas each, as well as Mr. Dudding's unbeaten pen of shearing ewes at a cost of 90 guineas; Messrs. Wright's second prize ram at Derby Royal purchased for 500 guineas, the second prize pen of rams at same show costing 1,000 guineas, and in addition 1,500 Lincoln shearing ewes, selected regardless of cost from most of the leading flocks of the breed.

SHOWS.

Keele.

The Keele Agricultural and Horticultural Society's fifty-fourth annual show was held in Keele Park on Thursday in fine weather, and was very largely attended, whilst the entries were more numerous than last year, totalling 717 as against 623.

The cattle were for the most part an indifferent lot, but the Shire horses and the Hunters were very good. Sheep and pigs made moderate displays, whilst dogs were not so strong as usual, but there was a large and highly creditable horticultural section.

Madresfield.

The Madresfield Agricultural Club is to be congratulated upon the all-round success of their show at Madresfield Court on Thursday. In every department the entries were satisfactory, and the quality, especially in the cattle classes, showed marked improvement, whilst fine weather attracted a very large company of visitors. In fact, the show proved, as Earl Beauchamp remarked at the luncheon, that the club is adequately meeting

Further Particulars of many of the above Sales will be found in our Advertisement Columns.

the requirements of the neighbourhood. The club, aided the Earl, had every symptom of vitality, and every year the stock shown got better and better. The judges were emphatic in speaking of the great improvement that had taken place in the quality of the exhibits since the club begun its operations. The work of the club in promoting classes for the various branches of agriculture had also been of the greatest value.

Bridgnorth.

The first annual show of the Bridgnorth and District Agricultural Society took place on Thursday, and for an initial event was a very creditable one. Horses numbered over 100 and made a good show, as did the cattle, which numbered forty-six. The sheep and pig classes had thirty-five and thirteen entries respectively, and included some first-rate animals, whilst in addition there were thirteen entries of turnouts, and fairly good displays of butter, eggs, and poultry. The success of their first show should encourage the society to still bigger efforts.

Welsh National.

That the Welsh National Agricultural Society's show is fast becoming one representative of the whole of the principality was evident at the exhibition held at Aberystwyth last week, for the entries number over 1,700, and were from every county in Wales, whilst numerous prize winners were forward from other parts of the kingdom, with the result that the show was a good and interesting one. Mid-Wales Shires, especially the big-boned, broad-chested animals of Montgomeryshire, are noted the world wide, and the class was particularly strong. The prize for any age stallion was given to Hendre Baronet, the property of Mr. Humphreys, Welshpool, the second and third prizes going to Mr. Edward Green, Welshpool. The first prize for stallions foaled in 1904 was taken by Oak Apple, belonging to the Earl of Powis, whilst Messrs. E. Jones and Sons, Welshpool, took first for Shire mares. The silver challenge cup given by Sir Charles McLaren for the best Shire mare or gelding owned by farmers in Carnarvon, Flint, and Denbigh, was awarded to Mr. W. Jones, Chwilog, and the Shire Horse Society's gold medal to Messrs. E. Jones and Sons.

The Hackneys, ponies, and cob classes, which had a much larger entry than even this year's Royal Show, find an excellent breeding ground in the county of Cardigan. The chief honours were shared by animals owned by Viscount Tredegar; Messrs. N. B. Owen, Llandiloes; Joseph Edwards, Llandovery; Marshall Dugdale, Llanfyllin; J. M. Phillips, Cardigan; E. E. Williams, Verlon, Montgomery; E. Jones, Llandilo; and W. A. Pughe, Llanfyllin. The Welsh Pony and Cob Society's silver medal was awarded to Milton Culet, owned by Viscount Tredegar, whilst Mr. Arthur Sowler, Oswestry, carried off the Hunters' Improvement Society's gold medal for brood mares. The same gentleman shared first place in other classes with Messrs. David Davies, M. P.; J. Williams, St. Clears; J. C. Harford, Lampeter; James Moore, Wellington; and Willoughby Cotton, Clirk.

The cattle section was again one of the most attractive features of the show, the black cattle of Wales being especially noticed. Linkfield Champion, with which Mr. F. Miller, La Belan, Birkenhead, has been winning all round, was forward in the class for Shorthorn bulls, and was once again put at the head, and was also given the Shorthorn Society's champion prize, Mr. Stratton, Newport, and the Earl of Powis taking second and third. Handicraft, owned by Mr. Millington Knowles, Bingham, captured the first place for bulls under two years. The first and third prizes for the best bull calf were awarded the Earl of Powis. Other noted winners were Viscount Tredegar, Captain W. B. Harrison, Lichfield, and Sir A. C. Stepany, Bart., Mr. R. M. Greaves, Vern, Portmadoc, whose herd of black cattle provide some of the finest specimens of this useful type, took several prizes. Other winners were Lord Stanley of Alderley, and Mr. Thomas Roberts, Aber. The challenge cup for the best bull was awarded Messrs. Davies, Thomas, and Howells, St. Clears, and the silver medal of the Welsh Black Cattle Society to Mr. R. M. Greaves. Herefords were not a big class, but a nice lot of animals were shown. Prizes were awarded to bulls the property of Messrs. Frank Bibby, Shrewsbury, A. E. Hughes, Loomister, D. A. Thomas, J. P., and W. B. Tudge, Onibury.

The classes for sheep of any pure breed attracted some of the principal breeders in the country, honours going to the exhibits shown by Sir Richard Cooper, Bart., Messrs. John Rees, Llan-y-Bryher, and Richard Raywood, Much Wenlock. The fashionable Kerry hill sheep, which turn out so

profitably for the butcher, were strongly represented, and Montgomeryshire breeders captured the chief prizes, premier places being taken by exhibits from the farms of Messrs. Thomas Green, Montgomery; J. R. Bache, Knighton; James, Churchstoke; J. Venables, Kerry; and T. E. Linsey, Caersws. The challenge cups of the Kerry Hill Flock Book Society were taken by Mr. T. Jones, Great Weston, Montgomery, and Mr. James, Churchstoke.

Compton Stud.

The twenty-first annual horse show in connection with the Compton Stud was held at Horsington Park, near Templecombe, on Tuesday, and turned out a huge success in every respect. The weather was exceedingly fine, with the result that there was a large and fashionable attendance. On the whole the number of animals forward was less than last year; there were not quite so many brood mares and foals, but the depreciation was only in numbers, as the quality was quite equal to the exhibits in recent years. Foals were about one-half last year's total.

The class devoted to tenant farmers' brood mares was strong numerically. The winner of the Hunter's Improvement Society's gold medal, Messrs. Harding and Co.'s chestnut mare, Chorus Girl—was the winner of the first prize and £50 challenge cup at the Hunter's Improvement Society's show, London, 1900 and 1901; first prize as a four-year-old heavy-weight Hunter at Sherborne, 1903; and first prize in Hunter's brood mare class at the Somerset County Show, 1905. In the yearling class, the winner (Mr. J. C. Taylor's exhibit) was a grand, well-grown colt, but she was so big that the judges were doubtful whether she would ever make a good hunter. The second-prize winner, belonging to Mr. W. Bown, of Yeovil, was a nice, shapely animal, short-legged and very likely to be a capital hunter. The two-year-olds were a small but good class. The prize winner was Mr. W. Bown's exhibit, which had plenty of bone and size.

On Wednesday Messrs. Tattersall held the customary sale of stock. There was a large attendance, and the following prices were realised:—Mares and foals: Mr. W. D. Barter's filly by Pantomime, 20 guineas; Messrs. Harding and Co.'s Chorus Girl, 70 guineas. Yearlings: Mrs. A. R. Poole's Highlander, 20 guineas. Two-year-olds: Mr. H. M. Reddycock's Pennant, 4 guineas. Ponies: Mr. A. Tyrwhitt Drake's Dormouse, 20 guineas. Harness horses: Mr. W. Warry's Warriena, 45 guineas. Hacks and Light-weights: Mr. G. Ford Tilley's Primrose, 35 guineas; Mr. H. Hinks's Poppun, 38 guineas; Mr. Courtenay B. Wilson's Gordon, 36 guineas; Mr. G. Clark's Merriman, £51 9d.; Mr. W. Bown's Beaming, 26 guineas; Mr. R. J. Conway's gelding, 37 guineas; Mr. B. Bond's Murzipan, 27 guineas. Heavy-weights—Mr. C. M. Moody's Marine, 84 guineas; Messrs. Willcocks and Rew's Lifebuoy, £39 10s.; Mr. G. Ford Tilley's Sandgill, £194 5s.; Mr. G. Ford Tilley's Rally Ho, 45 guineas; Mr. Cecil Clark's Speculation, 105 guineas; and Mr. F. H. Dowling's Pansy, 25 guineas.

Perthshire.

The annual show of the Perthshire Agricultural Society was held on the South Inch, Perth, on the 4th inst. in weather that was all that could be desired, and, consequently, was visited by a very large number of people from the town and country, the attendance being one of the largest on record. The entries numbered 1,013, and compared favourably with former years. In most respects the exhibition was rather better than any of its predecessors held on the same ground. Clydesdale made a very strong all round appearance, while the show of light legs, so far as they went, was capital. The cattle section made an exceedingly fine display, notably the cross-breeds, whilst flockmasters agreed that the display of Border Leicester and Blackfaced was in every respect worthy of Perthshire, while those who took an interest in fat stock held that the cross-bred sheep were fully as good as anything they had seen.

Berwickshire.

The Berwickshire Agricultural Society were not altogether fortunate as regards the weather for their show at Duns on the 2nd inst., for the morning was a gloomy one and a heavy fall of rain was experienced, but later in the afternoon the sun came to the rescue, and the attendance turned out most satisfactory, being in advance of that at the last show. The entries totalled upwards of 400, or about thirty more than last year, and the quality of the stock all over was equal to that of any former show. Dairy cows and grazing cattle were the chief features of the cattle section, and several grand lots of blue-grey Polled cattle were forward. Border Leicester sheep made a good and much-admired display, whilst the Cheviots, though not numerous, showed good quality. Of horses for agricultural purposes there was a large and most creditable show, whilst the display of Hunters was better than in former years both in point of numbers and quality, several of the prize-

winner being animals of exceptional merit. In addition to the ordinary attractions, there were a display of shepherds' dogs, a working trial exhibition of shepherds' dogs, horse-leaping, sports by Lothians and Berwickshire Yeomanry, shows of butter, honey, and eggs, and a whippet race. The visitors therefore had much to interest them.

Berkeley Hunt.

Beautiful weather favoured the fifth annual show of the Berkeley Hunt Agricultural Society, held on Monday in a large field under the shadow of the ancient castle, and lent by Lord Fitzhardinge. The promoters have established classes for all departments of agriculture, which have been greatly appreciated by the farmers of the district, with the result that the entries for this year's show proved a record, and the exhibits were uniformly good. The cattle especially were good, and the dairy products—cheese in particular—were creditable to a degree, whilst the classes for horses were well filled. By way of innovation, in the interests of those who wanted to see something going on in the big ring beyond the hunting, harness, and jumping classes, there were the Victoria Cross Race, in which competitors rode over hurdles, dismounted, picked up a dummy soldier, remounted, and rode over hurdles to the winning post, wrestling on horseback in sections of four, and three pony races.

Herefordshire Horse.

The Herefordshire Horse Show Society chose Bank Holiday for the date of their annual exhibition, and it attracted a goodly company of spectators, who had good value for their money. Nine classes of Hunters drew seventy-three entries, the best of which were perhaps the foals, for hacks there were three classes and twenty-three entries, and of polo ponies thirteen entries in two classes. Shires made a very good display indeed, seeing that the classes were only open to the counties of Hereford, Worcester, Monmouth, Brecon, and Radnor. Peter Coats was one of the chief winners, so that the quality can be imagined.

Liskeard Town Council and the South Devon Sheep Sales.

To-day (Monday) was appointed by the South Devon Flock Book Society for holding their annual sales of registered rams at Liskeard, and the breeders of the district were looking forward, as in former years, to a pleasant and successful day's business. An unfortunate difference has, however, arisen between the society and the Town Council, which threatens to have a detrimental effect not only on to-day's gathering, but may affect the whole future of the sale.

Even before the formation of the Flock Book Society these annual sales took place at Liskeard, as at Totnes and Truro, and they were invariably held in a field close to the railway station, the convenience of both buyers and sellers being studied by this arrangement. Last year, however, the Corporation opened a new and well-constructed cattle market for the accommodation of the agriculturists of the locality, and the Town Council naturally thought the annual ram sales would be removed thither as a matter of course. Those connected with the Flock Book Society, however, felt their convenience would be better studied by continuing to use a field close to the railway. Nevertheless, last year they yielded to the representations of the Town Council, and the sales took place in the cattle market.

This year the same difficulty has arisen in an aggravated form, the members of the society feeling so strongly on the subject that they have announced their sale to be held in its old location close to the station, in spite of a refusal by the Town Council to sanction such a course. If the sale takes place as advertised, we understand that the Town Council, sitting in committee, have decided to proceed against all persons selling or exposing for sale, under the provisions of the Markets and Fairs Clauses Act, 1847.

Should such proceedings be taken, it would necessarily result in a most serious and unfortunate conflict between the corporation and the neighbouring agriculturists, and it is sincerely to be hoped that some means will be found to obviate such a conflict.

It may be pointed out that no question of the payment of tolls enters into the matter, as we understand that the Flock Book Society have tendered the corporation payment of all legal tolls.—*Western Morning News.*

SOCIETIES.

Royal.

Owing to the early hour at which we had to go to press with our last issue, in consequence of the Bank Holiday, our report of the Royal Show was not so complete as we wished for, and we now make good the omissions. These include the report of the Finance Committee, who stated that the accounts for the period ended July 28, 1906, as certified by the society's accountants, had been submitted. The balances at the bank on May 26, 1906, were—Reserve fund, £2,181; ordinary account, £11,118 11s. 7d. The total receipts for the period had been £14,063 12s. 11d., and the expenditure £6,023 5s. 6d. The balances then standing to the credit of the society's accounts were—Reserve fund, £2,924 1s.; and the ordinary account, £18,415 18s.; making a total credit balance of £21,339 19s. Accounts amounting in all to £15,568 1s. 11d. had been passed and recommended for payment. Since the last meeting of the council promises of additional subscriptions and donations amounting to £511 2s. had been received.

The committee recommended that the directors of Park Royal, Ltd., be requested to take the necessary steps to wind up the company as soon as practicable after the completion of the sale of the estate. The quarterly statement of subscriptions, arrears, and property as at June 30, 1906, was laid upon the table.

In presenting the report, Mr. Adeane announced that a statement of accounts connected with the Derby Show had been prepared, from which it appeared that the result would be a financial success. Approximately the profit would be £2,000, in addition to the society's contribution of £2,000 from members' subscriptions.

On the motion of Mr. Adeane, it was resolved that authority be given to the president, the chairman of the Finance Committee, and the secretary, to issue during the recess orders upon the society's bankers for payments of accounts connected with the Derby meeting.

Then followed a long discussion on the site for next year's show, which, as reported in our last issue, resulted in Lincoln being chosen.

Herd.

Sir Nigel Kingscote (chairman) reported that various accounts connected with the house had been passed for payment, and the schedule of interest warrants on Harewood House debenture stock payable on August 1, 1906, had been submitted and approved.

The arrangements for carrying out the transactions connected with the disposal of Harewood House, as approved by the Council, could now be proceeded with. The committee regretted that they could not recommend the council to adopt the suggestion to alter the interest payable to the debenture stock holders from 2½ per cent. to 4 per cent. The Joint Committee had recommended that the Finance Committee be requested to make the necessary arrangements for defraying the cost of the purchase of the lease of 16, Bedford Square, and the incidental expenses connected with the transference of the offices. They further recommended that the president be authorised to sign on behalf of the society the agreement for taking the lease of 16, Bedford Square, on the terms arranged, and that the arrangements for the removal of the society's offices be left to the sub-committee to carry out.

JOURNAL.

Mr. Adeane, in the absence of Sir John Thorold, reported that the committee had decided to make a temporary arrangement for the reproduction of the forthcoming volume of the Journal, and recommended that Mr. Ernest H. Godfrey be appointed to undertake the production of Volume 67. The committee had again considered the question of reviving the farm prize competitions which were discontinued by the society in 1892, but, having regard to the cost which these competitions would entail upon the society, they regretted that they could not then see their way to recommend the council to again offer prizes for these competitions.

STOCK PRIZES.

Mr. Reynard (chairman) reported that the committee had considered the suggestion made by one of the judges of poultry at the recent Derby Show, that the second prize in class 345 for black Orpington pullets should be awarded to Mr. James Crocker for his exhibit No. 2,885, and recommended the adoption of the suggestion. The committee had appointed a sub-committee, consisting of Sir Gilbert Greenall, Bart., Sir Richard Cooper, Bart., Mr. Reynard, Mr. Richardson Carr, Mr. Crutchley, Mr. Hobbs, Mr. Mathews, Mr. Minton, Mr. Rea, and Mr. Rowell, to prepare a draft prize-sheet for the show of 1907, for the consideration of the committee at its next meeting. Various matters arising out of the recent Derby Show had been considered, and instructions given thereon.

IMPLEMENT.

Mr. Greaves (chairman) reported that the committee had considered a recommendation from

the judges of miscellaneous implements as to trials of swath turners and side delivery mowers, and recommended that such trials should take place at next year's show, the first prize to be the society's silver medal and the second prize the bronze medal. The committee recommended the publication of the report on the trials of suction gas plants in pamphlet form, the charge to non-members of the society to be 1s. per copy. The report to be issued, if possible, before the end of September. They had considered a protest which had been made by one of the competing firms against the awards of the prizes in the suction gas plant trials, but did not see their way to interfere with the awards made by the judges.

SELECTION.

Sir Nigel Kingscote reported that for the vacancy on the council caused by the resignation of Sir John Gilmour, Bart., three nominations had been received. The committee recommended the appointment of a Sites Committee to make the necessary arrangements for holding the society's show for 1908 in the West of England, and for 1909 in the North, to consist of the following:—Sir John Thorold, Sir Gilbert Greenall, Sir Richard Cooper, Mr. Adeane, Mr. Greaves, Mr. Reynard, Mr. Wm. Harrison, and Mr. Richardson Carr, with power to add to their number.

DAIRY AND PRODUCE.

Col. J. Curtis-Hayward (in the absence of the chairman) reported that various accounts relating to the dairy at Derby had been passed for payment. Copies of the revised "Simple Rules for Butter-making" had been laid upon the table, and the committee recommended that for the next edition of these "Simple Rules" the temperature of the churn should be given as 52 deg. to 58 deg. in summer, 56 deg. to 60 deg. in winter. Various suggestions made at the general meeting in the Derby Showyard and other matters connected with the show of 1907 were under consideration, and would be finally settled at a later date.

MISCELLANEOUS.

On the motion of the president, seconded by Mr. Crutchley, it was resolved that the society's seal be affixed to the supplemental trust deed effectuating certain modifications of the rights of the holders of Harewood House debenture stock, against the society and its property, and certain modifications of the trust deed dated August 2, 1893, for securing the said stock, as proposed by the society, recommended by the present trustees of the trust deed, and assented to by the stockholders at the meeting of stockholders convened by the society, and held on July 20, 1906.

On the motion of the president, seconded by Mr. Crutchley, authority was given for the society's seal to be affixed to the building agreement with reference to No. 13, Hanover Square, intended to be made between the society of the first part, Sir Walter Gilbey, Bart., and Sir Robert Nigell, Fitzhugh, Kingscote, of the second part, Sir Walter Gilbey of the third part, and John B. Purchase, E. K. Purchase, Alfred Grace, and P. E. Stanley May of the fourth part.

Mr. Wheeler announced that at the next meeting of the council he would move a resolution with reference to a rearrangement of the Standing Committees.

On the motion of Mr. Pilkington, seconded by Mr. Ingram, a sub-committee, to consist of Mr. Harrison, Sir Richard Cooper, Sir Gilbert Greenall and Mr. Pilkington, was appointed to confer with the secretary with a view to bringing up a scheme for a conference with representatives of local societies.

Other business having been transacted, the council adjourned over the autumn recess until Wednesday, November 7th, 1906.

Sussex Herd Book.

The report presented at the annual meeting of the Sussex Herd Book Society showed that the year commenced with a balance of £243 1s. 2d., and closed with £267 3s. 2d., of which £157 14s. 9d. is in the Post Office Savings Bank and a sum of £90 is invested in Consols. The membership roll now contains the names of four life and 109 annual members, whilst the last volume (No. 21) of the Society's Herd Book contains entries of 100 bul's and 665 cows with produce, the largest number recorded in any one year, and includes many animals accepted after inspection by members of the Editing Committee appointed for the purpose.

The report was considered very satisfactory and was adopted, whilst Lord Northbourne was elected president for the ensuing year.

Barley Destroyed by Fire.—A field of barley, belonging to Mr. Hempsom, late of Good Hall, Ardleigh, situate by the side of the Great Eastern Railway, was totally destroyed by fire on the 4th inst.; the origin is believed to be due to sparks from an engine. The hedge for some distance was also burnt, and another field, belonging to Mr. Girling, of Bound's Farm, became ignited, but by the strenuous efforts of a number of labourers, who put a breach, the extension of the fire was checked.
